promptly turn from the error of their ways, but it appears that they did not. The testimony was taken at a public hearing, and was reported at the time (in October) by the press. It has recently been printed with the Commission's report and recommendations. Repeated violations of the law appear to have been admitted. If up to that time the leading officers of the company had been kept in ignorance of these unlawful and iniquitous practices, they must have been enlightened by the widely published reports of the testimony taken by Mr. Lane, and they could easily have directed and compelled their subordinates to avoid such injustice in the future.

Following this exposure, the shippers in California who had had no secret preferential freight rates organized an association and carried on the work which Mr. Lane had begun. They procured additional evidence, obtaining the assistance of the State's Railroad Commission and Attorney General. According to dispatches from San Francisco, this officer asserts that the Southern Pacific did not permit Mr. Lane's investigation to impair its "extensive system" of unlawful rebates, but has continued defiantly in its evil ways since October last.

Mr. Harriman is one of those railroad officers who deplore what they call the unfriendly and unsympathetic attitude of the people toward railroad corporations. He has quite recently been talking for publication, speaking of "unwise Government interference," and saying that the President's suggestion that the Commission inquire about railroad wages "is certain to be harmful because it stirs up strife and animosity."

Has it not occurred to him that animosity is stirred up inevitably by such injustice as his Southern Pacific has practised in California, and that the people cannot regard with sympathy and affection a corporation that thus exhibits its contempt for law and equity? Everybody knows how great Mr. Harriman's power is in the railroad companies of which he is the chief officer. Why did he permit this rebating on the Southern Pacific? Why did he not end it when the Hepburn law went into effect, or after the hearings before Commissioner Lane in October?

A "Heavy Burden"

Only one word of question do we raise as to Dr. Jefferson's admirable and eloquent protest in our issue this week against a big navy, and that is when he says, as to the Philippines:

"They are one of the heaviest burdens this nation has ever tried to lift. They have been a drain on us from the day we bought them. They would be a millstone about the neck of any nation. We could afford today to pay any nation a hundred million dollars to take them off our hands, and then we should be a gainer by the bargain."

Yes, they are a heavy burden. It is a heavy burden to assimilate millions of uneducated immigrants to this country, but we will undertake it. It was a heavy burden to liberate three million slaves, and it is still a heavy burden to make worthy citizens of them, but we have not shrunk from it. It is a heavy burden to Christianize a Pagan world, but we take it up. It is a heavy, very heavy, burden to send a thousand American young men and women to establish the public school in the Philippines and teach the English language and liberty. It is a tremendous task to give those islands self-government and free institutions, a task such as no other nation has ever tried, to a people of the East long under foreign rule. England, France, Germany, Holland, have never tried it, and it is a heavy burden we have assumed. But it is a glorious burden, worthy of a Christian nation. We would not resign one of these burdens above mentioned for a hundred million dollars, for ours is a Christian people.

The Boyertown Catastrophe Again

We did not say all not long ago that might have been said as to the problem of evil involved in the Boyertown catastrophe, when we asked why God could not have influenced that little child's mind not to move the curtain and tip over the lamp. We left something to the reader, and readers have thought about it and written us. Meanwhile the grand jury has been at work, and it finds that there was criminal carelessness, and indictments have been brought. It would be a strange and foolish world in which God was required to correct all the blunders of careless people. It is better education to let them

suffer and learn. Besides, as a correspondent writes, in this case it would be giving foresight and wisdom to youth and innocence, which would be another absurdity. We might as well demand of God that He control vicious and ignorant impulses, and where would free will go? As our correspondent writes, in order to have any true idea of the divine government of the world and the reason for the existence of evil, "we must compare the life of man when he was yet a savage with what it is in civilization; and he has reached it thru conflagration, floods, wars, famines, pestilence, horrors and crimes of all sorts." It is *per scelera* as well as *per aspera* that we reach *ad astra*.

A Dethroned Hero Three years ago this month the world was ringing with the praise of General Stoessel, the hero of Port Arthur, who, for five long months, had defended that fortress against the Japanese fleet on one side and the Japanese army on the other. He was decorated for bravery by his own sovereign and by Emperor William of Germany, who is one of the foremost authorities of the world on the art of war as he is on sculpture, religion, architecture, ballet dancing, etc. But today General Stoessel is condemned to death by a jury of his peers for cowardice and incompetence. Whatever may be thought of the justice of the verdict, the evidence proved that the garrison were far from being in such desperate straits as we used to think, and his own testimony exposed his incapacity. This was a case where it was a soldier's duty to dispute every inch of ground at any sacrifice, for the Japanese could not advance into the interior of Manchuria and leave this fortress in their rear. But as soon as Port Arthur surrendered, Nogi's army joined Oyama's and defeated Kuropatkin in the battle of Mukden and forced the Russians to make terms of peace. If the fortress could have been held five weeks longer, as General Smirnoff, its commandant, says, it might have made a great difference in the result. But the exposures of the trial have also robbed the Japanese of some of their laurels. General Kuropatkin testified that Port Arthur was in the beginning so feebly fortified that the Japanese could easily have carried it by assault in-

stead of sitting down before it for a long and expensive siege. The world had admired the Japanese for the celerity of their movements and the intrepidity of their charges, and now it appears that they lost the greatest opportunity of the campaign by timidity and excessive caution. In spite of the numerous volumes that have appeared it is evident that the history of the Russo-Japanese War has yet to be written.

It is almost impossible to keep up with the unions of denominations that are going on in the foreign mission field. One of the last is in Korea, where four different Presbyterian missions, American, North and South, Australian and Canadian, have united their churches. They have forty Korean ministers and elders; and nearly 40,000 communicants and catechumens. The rapid progress of Christianity in Korea is the present marvel of missions, especially as the mission policy there is what it was in the first Christian century, to expect the converts to pay their own church expenses. The creed adopted by this union is so simple that there is no reason why other missions in Korea should not join with this one to create one great United Church of Korea, and this is the desire and aim.

It is a matter of ecclesiastical record that when the Devil was sick the Devil a monk would be; and now we have the report from Albany that the Jockey Club will reform betting at the races by a compromise to prevent the betting of "the youthful and irresponsible" at the race track. August Belmont says he will call a meeting of the Jockey Club to consider the matter, and August Belmont and James R. Keene, when they meet, smile like the Roman augurs. They are afraid of the strength of the protest even from the farmers' associations against race-track gambling. If they can succeed in their wool-pulling game, then, when the Devil was well the Devil a monk was he. It is too thin a screen to blind any but those who purposely shut their eyes.

There is hope, or at least reason, that the exposure of the illegal oppression of convicts in the convict camps of Georgia will lead to reform. A convict has se-

cured damages of \$2,500 against a coal mining company for cruel treatment and for being compelled to work hours overtime every day. It was proved that the State wardens in the camps, whose business it was to see that the convicts were properly treated, received a double salary, one from the contracting company and one from the State. It was testified that this was the case in all the convict camps in the State, and that the head State warden knew it. It is an outrageous scandal, and ought to bring to an end the whole abominable system of convict camps.

The Southern soldiers fought bravely in the Civil War, but there is indication of a loss of courage. The other day a Jackson, Miss., military company and a posse of officers in charge of a prisoner were "overpowered" by a mob which took the prisoner from them and hanged him to a telegraph pole within less than a hundred yards from the court house where he was to be tried the same day, and in the presence of the judge who was to try him. Such cowardice is matched by that of a mob of two hundred masked men at Eddyville, Ky., who took a county judge and nine tobacco buyers from their homes, stript them and tied them to hitching posts, and lashed them till the blood flowed. Wild savages could hardly do a more cowardly deed.

We had hoped that Bishop Satterlee might live to be the Archbishop or Primate of the Episcopal Church in this country, when that denomination should have rounded out its polity. He was not only placed in the center of public influence as bishop of the diocese of Washington, and by his effort to erect a great cathedral at the national capital, but he was one of the ablest and most broad-minded and useful of the American clergy, and was a famous worker for the physical as well as the spiritual advancement of the people for whom he labored both as rector and bishop.

Judge Gunnison, of Alaska, has a curious notion of what makes civilization. By the territorial law civilized residents only have the right to send their children

to certain schools. A man wanted his children to go to the civilized schools. They had white blood, and their father rents a post-office box, has a cash register in his store, and wears white men's clothing, and thinks this is evidence that he is civilized; but Judge Gunnison decided that no one is civilized who lives in a village with other Indians. That would be bad for a white missionary's children.

The Italians are worrying because the wine crop is so great that the wine cannot be sold, and they are begging the people to drink less mineral waters and more wine. They have the same fear that the brewers have here, that the people are getting too sober for the profit of the makers of intoxicating drinks. There is another alternative; in Italy they can grow less to drink and more to eat, and in America the breweries can be turned into factories. That will be more for the comfort of the people.

Unfortunately the printers are beginning to give us—it is an infection from England—*someone* and *anyone* for *some one* and *any one*, but we are yet saved from *noone*. A new combination begins to creep in, probably from Germany, of *insofar* for *in so far*, the German *insofern*. We have just met it in a series of published sermons from which we choose another tidbit:

"An over-pastorized congregation, like over-pasteurized milk, is likely to be safe, but likelier still to be ineffectual."

It was no more than was to be expected that the House of Representatives last Saturday, by a vote of 140 to 59, defeated a proposal to require the street railways to run Jim Crow cars. It was a party vote, with the Democrats in the negative. That vote will count in the coming election.

The report made by the Republican committee that in Manhattan 30,000 fraudulent votes are habitually cast is startling enough. That number will vitiate an election. It is a first duty to see that somehow this wrong is ended. In some way voters must be identified, if we have to resort to thumb prints, as we do in the case of criminals.

INSURANCE

President Peabody Challenges the Fleming Report

UPON carefully reading the report made by Matthew C. Fleming, Governor Hughes's representative to investigate the New York Insurance Department, one has difficulty in dodging the impression that Mr. Fleming felt constrained to make as much out of the material as was possible for a capable lawyer to do while preserving an appearance of impartiality. On the face of the document, the careful reader cannot fail to detect evidences of the investigator's consciousness of his real mission, which was to produce a record that was expected would serve in renewed proceedings before the Senate for the removal of the present Superintendent of Insurance. In this, however, the Fleming report does not seem as effective as the charges prosecuted by the Governor last year, which failed of their purpose.

Except in one instance, Mr. Fleming's findings have not been publicly challenged; but this exception probably foreshadows the treatment to which the whole report will be subjected when it reaches the Senate for discussion. Charles A. Peabody, president of the Mutual Life Insurance Company, has found matter in Mr. Fleming's report which he regards as "a great injustice" to that company. Mr. Peabody observes that altho the investigation made by Mr. Fleming was solely an examination of the insurance department, "nevertheless a very large part of the report is taken up with facts elicited from the companies." Such a proceeding would be beyond criticism if the information secured from the companies was of such a character as to prove incompetency or neglect on the part of the Insurance Superintendent. But that does not seem to be true. After a careful consideration of Mr. Peabody's protest, the latter seems to be fully justified in the assertion, that so far as the Mutual Life is concerned, "all the comments made upon it by Mr. Fleming are entirely erroneous." That being so, the further conclusion is inevitable, to wit: "The impression produced as a result upon the ordinary reader of this report would be that this company,

during Mr. Kelsey's administration, has been guilty of repeated violations of the insurance law, which he failed to detect, altho, upon careful and minute reading of the report, it cannot be discovered that Mr. Fleming takes the responsibility of charging a single instance where the law, even inadvertently, has been in fact violated." Mr. Peabody then takes up certain specific instances to sustain his protests against the animadversions indulged in by Mr. Fleming, and scores heavily on every count.

In the course of several voluminous paragraphs, for example, Mr. Fleming starts out to discuss five collateral loans made by the Mutual Life during 1906 and 1907; drops four of them along the way and trains his batteries on one of \$1,600,000 to the Northern New York Development Company—a loan that is guaranteed by the Delaware & Hudson Company and secured by first mortgage bonds of the Hudson Valley Railroad Company, having a par value of \$1,920,000. Mr. Fleming himself admits that the loan "is unquestionably well secured, and the only question is whether the market value of the collateral is such as to render it valid under Section 100 of the insurance law." Mr. Peabody, who is a distinguished member of the New York bar, flatly asserts that Section 100 contains no provision whatever "which makes the validity of investments by life insurance companies in bonds or obligations, or which makes the validity of loans upon such bonds or obligations, dependent upon market values."

Lack of space precludes a discussion here of the other statements made by Mr. Fleming that are challenged by Mr. Peabody, but in every instance the latter has just as clearly shown their weakness. Undoubtedly an erroneous impression has been created in the report respecting the management of the Mutual Life; and it is difficult to feel that in the investigator's efforts to "make a case" against the present Superintendent of Insurance, he has not wrenched and strained many circumstances in an effort to discharge his mission. If this is so it is most unfortunate, for it merely exemplifies how hard, even under the most favorable conditions, it is to divorce important governmental functions from politics.

The Independent

VOL. LXIV NEW YORK, THURSDAY, MARCH 5, 1908

No. 3092

Survey of the World

Inland Waterways

In a message to Congress accompanying a preliminary report from the Inland Waterways Commission appointed by him a year ago, the President, on the 26th ult., discussed at length the questions involved. The Commission had been appointed, he said, in response to a widespread interest and demand from the people; and "the basis of this demand lay in the general and admitted inability of the railroads to handle promptly the traffic of the country." The subject of the Commission's report was one of critical importance:

"Our river systems are better adapted to the needs of the people than those of any other country. In extent, distribution, navigability, and ease of use, they stand first. Yet the rivers of no other civilized country are so poorly developed, so little used, or play so small a part in the industrial life of the nation as those of the United States. In view of the use made of rivers elsewhere, the failure to use our own is astonishing, and no thoughtful man can believe that it will last. The report indicates clearly the reasons for it and the way to end it. The commission finds that it was unregulated railroad competition which prevented or destroyed the development of commerce on our inland waterways. The Mississippi, our greatest natural highway, is a case in point. At one time the traffic upon it was without a rival in any country. The report shows that commerce was driven from the Mississippi by the railroads. While production was limited, the railways, with their convenient terminals, gave quicker and more satisfactory service than the waterways. Later they prevented the restoration of river traffic by keeping down their rates along the rivers, recouping themselves by higher charges elsewhere. They also acquired waterfronts and terminals to an extent which made water competition impossible. Thruout the country the railways have secured such control of canals and steamboat lines that today inland waterway transportation is largely in their hands. This was natural and doubtless inevitable under the circumstances, but it should not be

allowed to continue unless under careful Government regulation."

Intelligent regulation of the relations between rail traffic and water traffic would be required. Every stream should be utilized to the utmost. The plans should involve regard for municipal water supply, power, forest preservation and irrigation:

"The development of our inland waterways will have results far beyond the immediate gain to commerce. Deep channels along the Atlantic and Gulf Coasts and from the Gulf to the Great Lakes will have high value for the national defence. The use of water power will measurably relieve the drain upon our diminishing supplies of coal, and transportation by water instead of rail only will tend to conserve our iron. Forest protection, without which river improvement cannot be permanent, will at the same time help to postpone the threatening timber famine, and will secure us against a total dearth of timber by providing for the perpetuation of the remaining woodlands. Irrigation will create the means of livelihood for millions of people, and supplies of pure water will powerfully promote the public health. If the policy of waterway improvement here recommended is carried out it will affect for good every citizen of the republic."

The Mississippi should be made a loop of the sea, and work upon it should be begun at the earliest possible moment. Only less important was the Atlantic inner passage, parts of which were already under way, and not less pressing was the need for developing Pacific Coast rivers. We should guard against the creation of water power monopolies:

"The improvement of our inland waterways can and should be made to pay for itself so far as practicable from the incidental proceeds from water power and other uses. Navigation should, of course, be free. But the greatest return will come from the increased commerce, growth and prosperity of our people. For this we have already waited too long. Adequate funds should be provided, by bond issue if necessary, and the work should be delayed no

longer. The development of our waterways and the conservation of our forests are the two most pressing physical needs of the country. They are interdependent, and they should be met vigorously, together and at once. The questions of organization, powers and appropriations are now before the Congress. There is urgent need for prompt and decisive action."

—In the course of an address to delegates attending the convention of the National Educational Association, on the same day, the President said:

"Fundamentally this country is sound; morally no less than physically. Fundamentally, in its family life and in the outside activities of its individuals the country is better and not worse than it formerly was. This does not mean that we are to be excused if we fail to war against rottenness and corruption, if we fail to contend effectively with the forces of evil, and they waste their time who ask me to withhold my hand from dealing therewith. But it is worth while to smite the wrong for the very reason that we are confident that the right will ultimately prevail."

He wanted to see our education directed more and more "toward training boys and girls back to the farm and the shop, so that they will be first-rate farmers, first-rate mechanics, fit to work with the head and with the hands, and realizing that work with the hands is just as honorable as work with the head."

The Discharged Negro Soldiers

For more than a year the Senate Committee on Military Affairs has been considering the testimony relating to the negro soldiers who were discharged on account of the shooting affray at Brownsville, Tex., in August, 1906. On the 26th ult. action was taken. In the committee there are eight Republicans and five Democrats. All were present. At the beginning of the proceedings Mr. Lodge offered the following resolution, which was ultimately adopted:

That in the opinion of this committee the shooting in the affray at Brownsville on the night of August 13th-14th, 1906, was done by some of the soldiers belonging to the Twenty-fifth United States Infantry, then stationed at Fort Brown, Texas.

Before the members voted upon this Mr. Foraker offered several substitutes, one after another. Those saying that the testimony failed to identify the individuals who participated in the affray; that it failed to show that the discharged sol-

diers had entered into any conspiracy to withhold information as to those who took part, and that, at all events, many of those discharged were innocent, for the reinstatement of whom in the army Congress should provide, were lost by votes of 5 to 8. In the majority were Senators Lodge, Warner and Warren (Republicans), and Foster, Frazier, McCreary, Overman and Taliaferro (Democrats), while the five in opposition were Senators Foraker, Bulkeley, Hemenway, Scott and Du Pont, all Republicans. On another of Mr. Foraker's resolutions, asserting that the testimony was so contradictory that it was not sufficient to sustain the charge that any of the negro soldiers took part, the vote was 4 to 9, Mr. Du Pont standing with the majority. On one saying that the weight of testimony showed that "none" of the soldiers took part, the vote was 2 to 11, with only Mr. Bulkeley and Mr. Foraker in the affirmative. Mr. Scott's resolution declaring that the persons who did the shooting were unknown to the committee was lost, 4 to 9. Then the original Lodge resolution was adopted, 8 to 4 (Mr. Du Pont not voting), and there was added the following from Mr. Warner:

That the testimony fails to identify the particular soldier or soldiers who participated in the shooting affray at Brownsville, Tex., on the night of August 13th-14th, 1906.

On this the vote was 8 to 0, the five Democrats remaining silent. Majority and minority reports will soon be laid before the Senate. Mr. Foraker will make a long speech upon a bill which he has introduced, providing for the restoration to the army of any of the dismissed men who shall make oath that they are innocent, that they do not know of any soldiers who took part in the shooting, and that they have withheld no information which might lead to the identification of the guilty.

Hudson River Tunnels

The two northern tubes of the McAdoo system of tunnels and subways, connecting New York City and the adjacent parts of New Jersey, were formally opened on the 25th ult., when a train carrying the Governors of the two States and other distinguished guests past from

the station in New York, at Nineteenth street and Sixth avenue, under the Hudson River, to Hoboken. President Roosevelt turned on the electric power by pressing a button in Washington. In Hoboken, addresses were made by Governor Hughes,

WILLIAM G. McADOO.

Hughes, Governor Fort, Walter G. Oakman, William G. McAdoo and others, and a letter of congratulation from Mr. Roosevelt was read. Mr. McAdoo is president of the railway company operating the several lines of the system, and to his energy the successful completion of the great project will mainly be due. The line now in use is 2.85 miles long, and the running time is twelve minutes. By the end of the coming summer, two tubes further south, crossing the Hudson from Cortlandt and Fulton streets to Jersey City, will be open. The entire system includes subways to connecting points in New York, a subway from one terminal to the other on the New Jersey side (connecting with all the great railway stations there), a line to Newark, and the great twenty-two story terminal buildings, in New York, which cover two blocks. Its cost will be \$70,000,000.

Railway Rebates and Wages

In its appeal from the imposition by Judge Landis of a fine of

\$29,240,000 for accepting rebates or unlawful rates, the Standard Oil Company relied in part upon the plea of its counsel that the Hepburn Rate law repealed the penalty provisions of the Elkins law, under which the indictments were found. The Supreme Court disposed of this plea, on the 24th ult., in a decision upon the appeal of the Great Northern Railroad Company concerning a fine (for rebating) imposed under similar conditions, saying that the penalty sections of the Elkins act were not repealed by the new law.—It is reported that the St. Louis

& San Francisco Railroad Company will soon be indicted for rebating, upon charges which are substantially duplicates of those in the Standard Oil case, evidence as to the offenses having recently been discovered.—To meet the requirements of the new law designed to prevent railroad companies from continuing in the coal business as owners as well as carriers, the Louisville & Nashville will turn over its coal property to a new company and distribute shares of this company pro rata among its stockholders.—Thirty-five railroad companies ask the Commission for an extension of time with respect to the new nine-hour law concerning telegraphers (which goes into effect on March 4th), alleging that they cannot find the additional operators required and that business depression makes the increased expenditure inadvisable. The telegraphers' union asserts that the operators can be found, because thousands of them are out of employment.—The Baltimore & Ohio, New Haven and one or two other companies have reduced salaries by 5 or 10 per cent., but reduction of general wages has thus far been avoided. Many railway workmen, however, have been discharged and work hours have been reduced for a large number remaining in the service. Owing to the appeal of its engineers to the Commission for mediation, the Louisville & Nashville has rescinded its order for a reduction of their wages. Having failed to reach an agreement with its employees concerning a proposed reduction, President Finley, of the Southern Railway, has asked for mediation by Chairman Knapp and Labor Commissioner Neill, as provided by the Erdmann law.

The Islands Leaders of the Liberal party in Cuba intend to oppose the reported purpose of the Conservatives to ask the United States for additional guarantees designed to prevent revolutionary movements after the transfer of power to a Cuban Government. It is expected that Loynaz del Castillo will go to Washington and argue there against the imposition of any restrictions. Señor Quesada, the Cuban Minister at Washington, said last week,

in a telegram answering inquiries from Havana, that he had been in conference with Secretary Root, and that no additional guarantees had been proposed by our Government. Such guarantees are demanded by the newspapers of largest circulation in Cuba.—A newspaper in Havana which represents the ultra-Spanish element asserted on the 17th that "the world and many honest Americans" believed "that the 'Maine' was blown up by direct orders from the War Department at Washington, for the purpose of justifying a plan to despoil Spain of Cuba," and that the wreck of the battleship had not been raised because it would exhibit proof of this.—Santo Domingo is about to settle with her foreign creditors by paying them 20 per cent. in cash and the remainder in new bonds. The cash will be provided by the fund, now amounting to about \$4,000,000, which has accumulated in a New York bank since American agents began to collect the Dominican customs revenue, and which consists of 55 per cent. of the money thus collected.—In the Senate there has been reported favorably a bill to remove from trade between the Philippine Islands and the States all restrictions imposed by our coastwise navigation laws.

Various Topics By the Kentucky Legislature, on the 28th ult., ex-Governor William O. Bradley, a Republican, was unexpectedly elected United States Senator to succeed Senator McCreary on March 4th, 1909. There were 126 votes in all, and he received 64 of them. Four Democrats voted for him. They had opposed ex-Governor Beckham, the leading candidate of their party, who had been endorsed at the State primaries. After the decisive vote had been taken and before the result was announced, efforts were made by those who had voted for Beckham to induce the four bolters to support some other Democrat, but they would make no change. One of them remarked that he thought "the time had come to break the machine." Mr. Bradley, a lawyer, born in Kentucky sixty years ago, was the candidate of the Republicans of the State in 1896 for the

Presidential nomination, and for many years has been the Kentucky member of the Republican National Committee. Mr. Bryan, who recently made several speeches in the State, says that the election of Mr. Bradley is "a great misfortune."—President Roosevelt has sent to the Senate copies of thirteen treaties and one declaration adopted last year by The Hague Peace Conference. Among these are the amendments to the arbitration convention of 1899, the agreement concerning the recovery of contractual debts, and the provisions for the establishment of an international prize court. The scope and meaning of all have been set forth heretofore in our columns. Ten which were signed by the American delegates are now submitted to the Senate for ratification; the remaining three relate to the treatment of the enemy's merchant ships at the outbreak of hostilities, the conversion of merchant ships into ships of war, and the rights and duties of neutral States.—The Illinois Supreme Court has decided that a labor union's "unfair list" practically means a boycott and may be enjoined.—An Oregon statute forbidding employers to require women to work more than ten hours a day has been sustained by the United States Supreme Court.—By the Supreme Court of Iowa the constitutionality of the Des Moines plan of municipal government by commission has been affirmed.—In Sausalito, Cal., the school trustees decided last week that no persons over school age should have the privileges of the local public schools. This action was due to the appearance of a Japanese twenty-one years old for admission to the primary grade.

Anti-Saloon Legislation in England

The new licensing bill was introduced into the House of Commons by Mr. Asquith, Chancellor of the Exchequer, on February 27th. It is a somewhat radical measure, having two objects, one the reduction of the number of places where liquor is sold, and the other the bringing of the traffic under the direct control of the Government. At present the general average for England and Wales is one retail liquor establishment for every 370

inhabitants, but this was to be gradually reduced in the course of twenty years, until in the towns there will be only one to every 750 and in the country districts one for every 400. This will involve the cancellation of 32,000 licenses at the present time in force, about one-third the total number. At first compensation will be allowed for any licenses cancelled, to be paid for by those continuing in business, but after fourteen years no compensation will be allowed. The granting of any licenses in the future will be under local option, and if a majority of the voters are opposed to it, the proposal cannot be renewed for a period of three years. All clubs selling liquor must be registered annually, and be subject to the inspection of the police at all times. This includes the most fashionable London clubs as well as those organized for the purpose of evading the liquor laws. Public houses outside of London will be allowed to keep open on Sunday not more than one hour at midday and not more than two hours in the evening. Justices of the peace will have power to exclude children from barrooms entirely, to prohibit the employment of women as bartenders, and to close the saloons on election days. This attack upon the liquor business, in which in England nearly \$1,200,000,000 is invested, has caused great alarm to those interested. The stock in the brewery companies fell rapidly, causing a shrinkage in the nominal values of about \$250,000,000 in two days. The breweries propose to increase the price of beer, so as to arouse the opposition of the workingmen to the Government in the hope of either overthrowing it or preventing the passage of the bill.

Other Parliamentary Measures

Sir Henry Campbell-Bannerman is still too ill to transact any business, and several other members of the Cabinet are incapacitated thru grippe, but Herbert H. Asquith, Chancellor of the Exchequer, is showing great energy in pushing forward the Government measures. Against him he has the united power of the three vested interests of the landlords, the Church and the saloon, so few, if any, of the important measures

past by the House of Commons will be accepted by the Lords. Next to the Anti-Saloon bill above mentioned, the most important measure is probably the new Education bill introduced by Reginald McKenna, president of the Board of Education. This is similar to that presented by Mr. Birrell in 1906, which was rejected by the House of Lords, and is meeting with similar opposition by the clergy. Under this bill there will be two kinds of schools receiving state assistance. The first, the public elementary schools, will be completely under the control of the locally elected boards, and no denominational tests for the appointment of teachers will be permitted. Local authorities must provide simple Bible instruction in all elementary schools, but after school hours the buildings may be used for denominational instruction by volunteer teachers for those pupils who choose to remain. In addition to the public schools certain denominational schools not carried on for profit will receive exchequer grants, but no support from other rates. Mr. McKenna stated that the failure to pass this bill would give a powerful impetus to the movement for the total abolition of religious instruction in the schools.—Herbert J. Gladstone, Secretary of State for Home Affairs, has introduced a bill limiting the working hours of coal miners to eight hours a day.—The Government estimates for the army and navy ask for a total increase in expenditures of \$4,500,000. The army will need \$154,185,120, which will provide a total of 185,000 men in the home and colonial establishments, irrespective of India, a decrease of 5,000 from last year. The naval budget called for \$161,597,500 to maintain the same number of officers and men as last year. The shipbuilding program as originally contemplated has been reduced somewhat. There will be one warship of the "Dreadnought" type, instead of three; besides this there will be built one large armored cruiser, six fast protected cruisers, sixteen destroyers and some submarines. The increase in expenditures is necessitated by the increase in cost of coal and provisions and the higher pay of the men, and by the subsidy of \$750,000 which is now granted to the Cunard Company for the

"Lusitania" and the "Mauretania."— Besides these Government measures several private bills of the progressive kind are before the House. One of them is for the relief of the sweated industries, especially the three trades of tailoring, dressmaking and shirtmaking, altho the Home Secretary is given power to extend the measure to other trades. A board composed of an equal number of persons elected by the workers and by the employers will have power to fix the minimum rate for any single kind of work and of regulating the conditions of employment as to locality, the kind of work and the persons employed. The discussion of the bill in the House of Commons brought out sad accounts of labor in the sweatshops and the incapacity of the unorganized workers to protect themselves against the reduction of wages to the starvation point. For the making of a shirt only three farthings are paid.—The bill granting suffrage to women past its first reading in the House of Commons by a vote of 271 to 92. This expresses the personal views of the members of the House, but does not insure its passage, because, as a private bill, it must give way to Government measures, and the reference of the bill to the Committee of the Whole without giving it priority will prevent it from passing at this session. Party lines were not drawn in the voting. Six members of the Government, including Chancellor of the Exchequer Asquith, opposed the bill, and twelve members, including Foreign Secretary Grey, Indian Secretary Morley, War Secretary Haldane, Home Secretary Gladstone and President of Local Government Board Burns, supported the measure.

The Kongo Question

The deadlock in the Belgian Parliament over the transfer of the Kongo Free State from the King to the country is likely to be broken by the announcement that the British Government is contemplating active interference in case of a longer delay. On February 26th Lord Fitzmaurice, in the House of Lords, and on the following day Sir Edward Grey, in the House of Commons, gave emphatic

expression to the dissatisfaction of the English people in the condition of affairs in the Kongo and their desire for a speedy and satisfactory settlement. Sir Edward said that Great Britain had done her utmost to encourage a genuine transfer to Belgium, and in that case would discuss with Belgium the questions arising from the British Treaty rights in the most friendly way. It would be impossible for Great Britain to take the initiative while the Kongo was before Parliament, but he added:

"This government will always welcome the co-operation of the other powers, and if at the close of the Belgian parliament session we have to deal with the existing government of the Kongo unchanged we must be free to deal with the questions arising out of our own treaty rights in our own way. I welcome the co-operation of the United States. That, at any rate, we have, and the House cannot value it too highly. After all, the great weapon that has been of value so far in the Kongo controversy is publicity, and the fact that the American Consul has issued a report corroborating everything our own consuls have said concerning the government of Kongo must influence European opinion. I rejoice that we are found working with the United States in such a cause, and trust that the co-operation already begun between our ministers at Brussels will be continued and carried further."

The resolution which was under discussion by the House of Commons and was past unanimously calls upon the Government

"to do all in its power to secure the transfer of the control of the Kongo Independent State, and, failing such transfer within a reasonable time, assuring the government of Parliament's hearty support of any measures that it might be necessary for the British government to take, either alone or in conjunction with the powers that signed the Berlin act, to insure the effective carrying out of its provisions."

This action of the British House of Commons created a great sensation in the Belgian Chamber of Deputies. M. van der Velde, the Socialist leader of the opposition to the treaty, demanded that the Government translate and publish the reports of cruelty and oppression in the Kongo, in the British and American official documents. Prime Minister Schollaert refused, saying that Belgium was her own mistress and responsible to nobody, and she would not accept advice concerning Belgian affairs. The proposal to publish the British parliamentary

paper was defeated by a vote of 76 to 56; the Clericals, altho they had opposed some features of the treaty, rallying to the support of the Premier in this crisis. The Treaty of Annexation under discussion in Parliament was concluded between the Secretaries-General of the Kongo Free State and the Belgian Ministry, November 28th, 1907, and has been in the hands of the Colonial Committee of Seventeen ever since its reference to the Chamber, December 3d. The King demands about \$40,000,000 for his private interests, the money to be expended according to his direction in public works in Belgium and the Kongo Free State. This will mean the maintenance and extension of many palaces and estates, and the erection of magnificent public buildings in Brussels and Ostend for artistic, scientific and social purposes.

Foreign Notes The dispute between Japan and China in regard to the seizure of the Japanese steamship "Tatsu" at Macao by Chinese customs officials on February 7th has been settled by the agreement of China to surrender the steamer in accordance with the Japanese demands. The "Tatsu" was found discharging a large consignment of rifles and ammunition in Portuguese waters, nominally to be delivered to a Portuguese merchant, but supposed to be destined for the Chinese revolutionists. It was taken to Canton by a Chinese cruiser and three gunboats, and the Japanese Government promptly demanded an apology and indemnity from China. The Chinese Foreign Office wished to refer the question to a mixed court, but the Japanese refused to consent to this unless the vessel was first released and an apology made for the insult to the flag.—The long trial of Signor Nunzio Nasi, former Italian Minister of Public Education, for embezzlement and misappropriation of public funds while in office, has resulted in his conviction and sentence to eleven months and twenty days' imprisonment and a fine of \$50 and costs. He is debarred from holding public office for four years. The eight months' nominal imprisonment in his own residence during

the trial will be counted as part of the sentence. His secretary, Signor Lombardo, was acquitted of complicity. The Sicilians still ardently support Signor Nasi, and regard him as the victim of oppression. The proposal introduced into the Italian Chamber of Deputies by the Socialists to abolish religious instruction in schools of Italy was defeated after a riotous debate by a large majority. Signor Rava, Minister of Education, said that the schools were practically secularized already, for there was a regulation providing that religious teaching should only be given to those children whose parents wished it.—Another attempt was made on February 28th to assassinate the Shah of Persia. Two bombs were thrown at his automobile from the roof of a house on the narrow street thru which he was passing. One of the bombs exploded in the air, and the other struck the ground near the automobile, killing the three outriders, and wounding the chauffeur and many bystanders. The Shah, however, had taken the precaution to ride in a carriage at the rear of the procession instead of in the closed automobile at the head, which was supposed to contain him, and he escaped unhurt. The Persian troops under Prince Firma, Minister of Justice, who has been appointed Governor of the Province of Azerbaijan, are deserting him in such numbers that he has no protection against the Kurdish hordes invading the province from the Turkish frontier.—King Manuel of Portugal has ordered a general election on March 5th and the convocation of the regular Cortes on May 29th. The decrees of ex-Premier Franco increasing the civil list and liquidating the advances from the treasury to the royal house have been annulled by the King, and an announcement made that the Court finances of King Carlos will be open to investigation by the Cortes, and any abuses corrected.—The expedition under Major-General Sir James Willcocks against the Zakka Khels in the Bazar Valley has succeeded in punishing the rebellious tribes and destroying their fortifications. The head men of the Afridis have begged for mercy and have promised to punish the offenders in the recent raid on British territory.

A Plea for Definitions

BY BRANDER MATTHEWS, LL.D.

PROFESSOR OF DRAMATIC LITERATURE IN COLUMBIA UNIVERSITY

THERE are now in course of publication two series of literary manuals, having each its sharply defined plan. One of them, now approaching completion, is Prof. George Saintsbury's "Periods of European Literature." The other, just started on its career, is Prof. William A. Neilson's "Types of English Literature." And there is profit in contrasting the two schemes as outlined by the two editors.

Professor Saintsbury's series is intended to cover the literature of every modern language; and it has for its motto Matthew Arnold's declaration that the only criticism likely to be helpful in the future "is a criticism which regards Europe as being, for intellectual purposes, one great confederation, bound to a joint action and working to a common result." In other words, the series is an attempt to rewrite Hallam's great work according to modern co-operative methods, assigning each of twelve periods to the scholar best fitted for dealing with it. Altho the scheme may seem attractive at first glance, it has proved itself impossible of execution. The editor has not been able to find men properly equipped to deal with all the literature of any epoch; and in the successive volumes we have seen how the special studies of the several contributors have led to disproportionate treatment of the literature or two that they really know and to a compression of second-hand material about the literatures with which they were less familiar. Of course this was only what might have been predicted, since no one nowadays is really competent to deal with the salient books of all the modern languages in any half century. Whoever essays this must often rely upon others and cannot escape the perfunctory, since his labor lacks the zest of personal research. Perhaps an American critic may be pardoned for pointing out also that the writers of the later volumes have taken European literature in

too narrow a sense, which has led them to neglect Jonathan Edwards and Benjamin Franklin; the author of the volume on the "Romantic Triumph," covering a large part of the nineteenth century, actually passes over Cooper and Poe and Hawthorne.

Only too often have the several contributors to Professor Saintsbury's series given us mere snippets of biography sandwiched with snippets of criticism; and only too rarely do we find any real insight into the larger movements. They have made few contributions to comparative literature and few fertilizing generalizations. Above all, have they revealed a general inability to see the importance of tracing the development of literary species. What they have not sought to do is the main effort of the several contributors to Professor Neilson's series, which is confined solely to English literature, including both its branches—the earlier British and the later American. While it is impossible for any scholar, however varied his attainments, to know all that ought to be known by any one who may strive to embrace all the modern literatures during any period, it is quite possible for a scholar to have mastered the full history of the ballad, the short story, the novel, the masque, the pastoral and the essay, as these have been evolved in English. If we were to pick out a motto for Professor Neilson's series to contrast with that borrowed from Matthew Arnold for Professor Saintsbury's series, we could find it in the prefatory note of the editor:

"It is proposed to devote each volume to a consideration of the characteristics of a single formal type, to describe its origins and the foreign influences that have affected it, and to estimate the literary value and historical importance of all the chief specimens that have been produced in England and America."

With only one word in this quotation can fault be found; and that is the word *England*, which might seem to exclude the writers of Scotland and Ireland—an

exclusion which is certainly not intended by the editor.

The task imposed upon the contributors to Professor Neilson's series is well within the range of human achievement, and more than one model can be recalled. The late Sir Richard Jebb dealt exhaustively with the oratory of the Greeks; M. Le Breton has written the history of the French novel; and

picaresque romance. The essay will be set off from character writing on one side and from literary criticism on the other.

While this task is possible, it is not without its difficulties and its dangers, since any two of the several forms may tend to impinge on one another; altho each of them has always its essential quality, two of them may seem for a lit-

BRANDER MATTHEWS.

Professor Schelling has given us a full account of the English chronicle play. But these were sporadic and individual efforts; and what gives significance to the "Types of English Literature" is the fact that the intent of the undertaking is to focus attention upon the lines of separation between the several species and to discuss their relations to each other. The novel will be sharply differentiated on the one hand from the short story and on the other from the

the while almost to coalesce. Great works will sometimes demand discussion in more than one treatise. As Professor Neilson himself points out, the "Faerie Queene" must "be viewed as a link in the history at one time of allegory, at another of romance, at another of didactic poetry." But altho Spenser's poem can be considered in all three aspects, allegory is one thing, romance is another and didactic poetry is yet a third. And the history of every one of

the three has an interest of its own, even if the poet did not suspect that literary historians of a later generation might be tempted to separate his work into its constituent elements by the methods of qualitative and quantitative analysis.

It is for our own convenience as critics that we undertake this operation, so that we may be enabled to see the thing as it is, and so that we may understand its relation to other things. We have no right to assume that the author ever gave a thought to the specific name the historians of literature might one day bestow on his masterpiece. Often he would have been puzzled himself to declare the literary type to which it properly belonged. Rare, indeed, is the writer who sets himself down deliberately to compose an allegory or a pastoral which should be only and strictly an allegory or a pastoral. These questions of terminology are for critics only; and the creators are careless in the matter. They are seeking to express themselves in one of the forms popular at the moment, never hesitating to stretch this form till it cracks or to contaminate it with some other type.

In M. Paul Stapfer's suggestive comparison of Shakespeare and Molière, the acute French critic tells us that

"dramatic poets write their plays for the theater, and they are not interested to know the particular esthetic category into which these plays may be put. If any one had told Molière that his two masterpieces, the 'Misanthrope' and 'Tartuffe' stepped out of the domain of pure comedy and crost over into that of tragedy, I imagine that this revelation would have worried him very little; and Shakespeare made fun of the mania for classification when he had the pedantic Polonius present to Hamlet a company of actors the best in the world for tragedy, comedy, history, pastoral, tragic-al-historical, tragical-comical, historical-pastoral, scene undividable or poem unlimited."

In Professor Baker's book on the "Development of Shakespeare as a Dramatist," he makes the point that the great tragedies of the great English dramatists probably seemed to the public of their own day "not tragedies at all, but merely more masterly specimens of dramatic story telling than the things that had preceded them." The Elizabethan audience, accustomed to the loosely-knit chronicle plays, found the tragedies more interesting without ever

stopping to think that they were different in kind as well as in degree. "There was in the public mind of 1603-1608 no such sharp break as we feel between Shakespeare's chronicle plays and what posterity distinguishes as his tragedies." Perhaps we might go farther and suggest that there was no sharp break even in the mind of Shakespeare himself. To him "Macbeth" may well have been only a chronicle play more effectively constructed. It was his editors after his death who classified his plays as tragedies and comedies and histories. Quite possibly Shakespeare himself might have made a wholly different classification. Quite possibly also he might have carefully refrained from any attempt at grouping, satisfied to let his plays speak for themselves, careless as to how they might be labeled. In "Macbeth" he had written the kind of play he wanted to write and the public had liked it; neither party cared to raise any question about the type to which it might belong.

When M. Rostand had written a part around M. Coquelin and had invented a story to carry the part, he found himself confronted by the difficulty of classifying his novel play composed of humor and romance, for at the end of the nineteenth century the poet is perforce more or less a critic also; and he solved the puzzle by devising a new name for the new type. He declared that "Cyrano de Bergerac" was a heroic-comedy. Goldsmith called "She Stoops to Conquer" a comedy, and when certain critics insisted that it was only a farce, and that it contained some scenes "too mean even for farce," he might have shrugged his shoulders, since the public had laughed at his play, not asking whether their risibles had been excited by a farce or a comedy. And Mark Twain would probably be surprised if it should be pointed out to him that "Huckleberry Finn" is really a picaresque romance, a direct descendant of "Gil Blas" and "Lazarillo de Tormes." He might be surprised, but the statement would not greatly interest him, since "Huckleberry Finn" would remain thereafter just what it had been before.

But if those labels matter little to the creators, they have their importance to the critics. We may modify Pascal's

dictum and declare that half of the art of criticism lies in the precision of the definitions. It may be of little interest to Mark Twain that his best story exemplifies the type of the picaresque romance; but it is of real interest to us critics when we find a contributor to Professor Saintsbury's series, Mr. Vaughan, the writer of the volume on the "Romantic Revolt," twice making the startling blunder of describing "Tom Jones" as a picaresque romance! It seems almost inconceivable that any student of English literature could liken Fielding's prose-epic, with its closely constructed plot, to the lax and inconsequent tale of roguery which the picaresque romance was in Spain and in France, and which it is in Great Britain and the United States.

In the arts, wherein emotion dominates and individuality is all important, we cannot hope for the exact vocabulary of the sciences wherein fact rules and the personal equation is cautiously eliminated. Horse power, foot tons, kilowatts—these are all terms of precision absolutely independent of the user's own feelings, whereas tragedy, romance, imagination, are all words which may call up different ideas in the mind of every individual writer and reader. A writer cannot make sure that any reader will take any one of the words in the same sense that he himself employs it. Professor Gummere, tracing the history of the popular ballad in the first volume of "Types of English Literature," has to devote many of his early pages to the definition of the type itself, pointing out clearly just what he holds it to be. Probably he would be the first to admit that he has no right to impose all the elements of his definition upon every other historian of literature who shall hereafter consider the popular ballad; and certainly the other historians would be emphatic in denying his claim if he had insisted on it.

In like manner we find the opening chapter of Professor Beers's account of romanticism occupied by the author's effort to reconcile the manifold meanings of the word romanticism and to discover, if possible, the essential element common to them all. Part of the inadequacy of the volume on the "Romantic

Revolt," in Professor Saintsbury's series, is due to the inability of its author to perceive the extraordinary complexity of the word romanticism, a very chameleon changing color while one gazes at it. He credits it with two meanings only, altho Professor Beers's analysis would have revealed to him that it has a dozen at least. As a result of this failure to compare and to weigh all the many meanings that the word has had in the mouths of men, Professor Vaughan has failed also to perceive the real meaning of the thing itself—the essential thing which is more or less intended in every use of the word. Altho his volume is entitled the "Romantic Revolt," he does not bring out that clear note of revolt which is the tocsin of all modern romanticism, whether in England or Germany or France—the essential characteristic of the movement, its abiding trait, is impatience with restraint and resistance to authority. Thiers proved that he perceived this when he asserted that the Communists of 1871 were only the Romanticists of 1830.

Here we discover the disadvantage of not insisting upon a resolute definition. Even if scientific precision is not to be hoped for, every writer gains by the sturdy struggle to make sure that at least he knows exactly what he himself intends by the words he employs. He cannot be certain that the majority of his readers will always take these words in his sense; but if he can impose his definition upon only a few, others will follow in due season until the terminology of the art is made more precise. We all recognize now the value of Coleridge's distinction between the imagination and the fancy. We can all appreciate the distinction between true romance, perennial and eternal, and the neo-romanticism which was aping it a century ago. We are most of us ready now to admit that the short story is a type by itself, differing from the novel, as the lyric differs from the epic, not in its brevity only, but also in its object. Some of us have been led to a clearer understanding of the development of the Elizabethan drama by the devoted labors of the scholars who have revealed to us the existence of the types which they

have called the chronicle play and the tragedy of blood. These names for groups of plays hitherto lost in the immense mass of our older drama are not merely convenient; they are positively helpful to every student of the stage.

When we set out to investigate the slow evolution of the drama in our language we are entitled to feel that we have taken a long step in advance as soon as we have attained to a knowledge of the special characteristics of the mystery, the morality, the chronicle play, the tragedy of blood, tragi-comedy, the comedy of humors, the heroic play, the ballad opera, sentimental comedy, the closet drama and the problem play. We have gone still further forward when we have learnt how tragedy was developed out of the tragedy of blood, as the tragedy of blood had been developed out of the chronicle play. And in like manner any one undertaking a study of the history of fiction cannot fail to find profit in the history of the rise and fall of the pastoral romance, the romance of chivalry, the picaresque romance, the Oriental tale, the short story, the detective story, the sea tale and the novel with a purpose.

These names may mean little or nothing to the several authors, each bent on expressing his vision of life as best he could; nor need they be pressed unduly on the attention of ordinary readers, content to enjoy without question. But every critic can find his profit in keeping them in mind. As Professor Neilson has pointed out in his prefatory note, we are likely to make not a few surprising discoveries if we consider literature from this point of view and with a desire to grasp the identity of the several types. This mode of approach will reveal an unexpected flourishing of forms in periods when they have been supposed to have practically disappeared. Thus "the picaresque is generally regarded as having culminated in the eighteenth century in writers such as Defoe and Smollett, while on more minute investigation it is found to be extremely active at the present moment and to have recently produced at least one interesting new variety." But these discoveries were not possible until there had been an agreement on the definition

of the picaresque romance, and a frank recognition of the fact that it is an individual species, sharply set off from all other ways of telling a story.

It would be easy to give other instances of the survival today of types which had their vogue yesterday and were supposed to have disappeared forever. There is the chronicle play, for example, which flourished abundantly in Shakespeare's youth and which has had its rise and fall narrated by Professor Schelling. Its historian thinks that it died out when it ran its course in the seventeenth century; and no doubt the name has departed from ordinary speech; but the thing can be found again and again in the dramatic literature of the nineteenth century, and two striking examples are visible already in the first decade of the twentieth century. The writer of a chronicle play applied to a lay subject the practices of the mystery which set forth the gospel story; and he sought to put into action and dialog all the episodes of the career he dealt with. He took it as a whole and presented it as it came to him, without selection or suppression or climax. He felt no call to focus interest on an essential struggle and to make every scene converge toward a central point. His method was only externally that of the drama, for what he wanted to do was only to show a narrative in action for the benefit of those who could not or would not read the original story.

When we have once grasped the characteristics of the type, we can see easily enough that this is in fact the method of the elder Dumas in his "Napoleon" and of Giacommetti in his "Marie Antoinette." It is the method also of Mr. Stephen Phillips in his "Ulysses" and of Mr. Percy Mackaye in his "Jeanne d'Arc." Tennyson's "Queen Mary" and "Becket" are both of them chronicle plays—histories, if we prefer the Shakespearean term. They are modeled on the loose and straggling pieces written by Shakespeare before he had learnt how to compact a tragic plot. And there is no denying that the chronicle play is likely to be discovered more than once in the next decade, since it is a lax and easy form, forever tempting to poets who are unwilling to take the trouble to

master the technic of the theater of their own time.

Sometimes the author himself ventures to revive a forgotten classification to suggest his intent more clearly. Longfellow chose to call his "Christus" a mystery; and Mr. Henry Arthur Jones has described his latest play, the "Evangelist," as a tragi-comedy. For various reasons the nomenclature of the theater is inadequate; and perhaps tragi-comedy is a term which might now be revived with advantage to describe a serious play with moments of tragic intensity, but without a tragic termination. The word has high antiquity. It seems to have been first used by Plautus in the prolog of his "Amphitruo," because he commingled serious and comic effects, introducing gods and kings by the side of slaves. Sir Philip Sidney held that its distinguishing quality was to be found in "mingling kings and clowns"; and he despised it because its authors did not hesitate to "match horn-pypes and funeralls." Here we perceive the survival of the now exploded belief that tragedy could properly present only exalted personages and that it ought to be free from all admixture of the comic, altho the "Alcestis" of Euripides has both a humorous character, the intoxicated Herakles, and a happy ending. Nowadays we take a larger view of tragedy, and we are ready to see it even in the humblest of families. Few would be disposed today to deny the term to the somber and austere "Ghosts" of Ibsen. Altho it is in plain prose, altho it presents plain people, and altho it does not actually end in death, we feel in it the largeness of a truly tragic theme.

In view of the immense variety of type in the modern drama, any attempt to confine classification to the old antithesis of comedy and tragedy is now hopeless. Even if comedy is a word large enough to cover all the manifestations of the comic spirit, tragedy is not broad enough to embrace every possible species of non-humorous play. The more satisfactory antithesis would be between the comic drama and the serious drama, of which tragedy is only one sub-species. Comedy may well include the comedy of humors, the comedy of manners, farce, the ballad opera and

many another type, while the serious drama must cover tragedy, melodrama, the tragedy of blood and their fellows often sharply differentiated.

And this may help us to a better understanding of the relation between the higher types of the comic and the serious drama on the one hand, and on the other farce and melodrama, the most persistent of the lower types. In the comedy of manners, in its present examples, and in the loftier serious drama, including true tragedy, we find the action of the play caused by the clash of character on character; the plot is what it is because the personages of the play are what they are, and the spectators are interested quite as much in what the characters are as in what they do. In farce and in melodrama, which are thus seen to be curiously alike, the plot is all in all and the characters have no independent being. They exist for the sake of the story and they are conditioned by the situations. In other words, the action in farce and in melodrama is arbitrary, since the personages do not move of their own volition; they are obviously controlled by the author for the sake of his story. That is to say, the action is not inevitable; it is not what it is because the characters could not do other than they did, as they must do in the higher types of both comic and serious drama.

It would be easy to give many another example of the advantage of applying our definitions rigorously. For instance, if we once lay hold of the fact that the closet drama is by its definition a play not intended to be played, a dramatic poem meant for the library and not the theater, we are forced to declare that Tennyson's "Becket" and Browning's "Blot in the 'Scutcheon" are not closet dramas, since they were both of them designed for the stage. And if we should accept the definition of the novel with a purpose as a story written to argue in favor of one side of a mooted question, we should find "Robert Elsmere" and "Lay Down Your Arms" and "Ten Nights in a Barroom" falling within the definition, whereas "Uncle Tom's Cabin" would lie outside of it, since Mrs. Stowe did not write her story for the sake of the discussions

her characters might indulge in. Her original intent was to avoid all argument and to picture slavery as she had seen it, in its good aspects as well as in its evils. She was striving to show the thing as it actually was, free from all discussion, leaving the reader to draw his own conclusions from the scenes she presented. Toward the end of the novel, it may be admitted, the hereditary temptation to preach was too much for the author; and she yielded to it, with an undesirable loss of power in the final third of the book.

It is satisfactory to observe that in the new series of "Types of English Literature," the essay is to be set apart both from character writing and from literary criticism, each of the three species being assigned to a separate contributor. And it will be interesting to see how one contributor, having shown us that Cicero's familiar correspondence may have served as a suggestion to

Montaigne, as Montaigne certainly supplied a model to Bacon, will have to make it clear that the influence of the character writers is partly responsible for the broadening scope of the essay in the eighteenth century at the hands of Steele and Addison. Probably also the contributor who has to trace the rise of the novel will in his turn dwell on the service which the enlarged eighteenth-century essay rendered to fiction, by perfecting a more elaborate and a more effective method of presenting character. In fact, the discussion of the relations of the several types is not one of the least advantages which we may expect from Professor Neilson's series. He and his contributors, and, let us hope, his readers also, cannot be counted among those whom Ben Jonson scorned because they "seeme to mock at the termes, when they understand not the thinges, thinking that way to get off wittily with their Ignorance."

NEW YORK CITY.

"The Church I Am Looking For"

FROM VARIOUS CORRESPONDENTS

[We published in our issue of February 13th an article entitled "The Church I Am Looking For," by "A Church Home-Seeker," which has attracted a good many replies and offers of assistance. From them we select only a few that are representative.—EDITOR.]

After reading "Church Home Seeker's" article in your issue of 13th I feel it but fair to suggest that it might possibly be that he has found similar shortcomings elsewhere, viz., Are his family relations perfect? Does he not differ at times with the management of his clubs? Are the dividends from life insurance always satisfactory? And so on "*ad lib.*" Why crucify the Church?

THOS. M. ARNOLD.

CLARION, PA.

I wish to thank the editor of the INDEPENDENT for that excellent article published in the last issue, entitled "The Church I Am Looking For." I consider that article alone worth all the magazine has ever cost me. My experience with the churches is much the same as the writer sets forth, and I believe there are many more who hold the same views. Hoping the INDEPENDENT will continue to publish this kind of articles, I beg to remain,

JULIUS HOLMQUIST.

NEW RICHMOND, WIS.

The INDEPENDENT's editorial comment on the want of its contributor who is seeking for a Church adapted to his needs is very good, but scarcely goes to the root of the matter. The trouble with the contributor is this: The churches are for the help of sinners; and he, apparently, is not aware that he is a sinner. Whatever may be their individual differences, all the churches, with insignificant exceptions, assume that God is just, as well as merciful; that men are violators of His law and subject to its penalty; that they need a Savior who must help them to escape from sin and its consequences both in this life and the life to come; that certain demands are made as conditions precedent to any personal experience of the help offered by the Savior that is revealed. In a word, the churches are made, as Paul says the law was made, not for the righteous, but for sinners. The INDEPENDENT's correspondent, in his own estimation, is not a sinner. The holy God has no controversy with him. The two great commandments, and the assurance that those who keep them shall have eternal

life, satisfy all his religious needs. He does indeed feel "the force of the great ethical imperatives," "the pressure of humanity, its needs, its sorrows, its tragedies, its sins"; but he feels personally no pressure of guilt, no power of sin, no need of salvation. He is insured both for this life and the life to come. All he seeks is "sources of religious inspiration and opportunities for religious effort." He finds the churches grievously at fault; but he himself is blameless.

It ought to be frankly said that the churches of Jesus Christ are not for him nor for men of his ilk, save as they are commanded to seek by speaking the truth in love to convince them of personal sin and to show them their need of a Savior. There used to be a church in Kansas City, Mo., called "The Church of This World." It may be there now, tho I have a suspicion that it has past away, notwithstanding that it was supported by some of the wise and powerful of this world. If it still remains, our "seeker" may find it to his mind. If it no longer exists, he might revive it or found another. The tribe of the self righteous is numerous and ever with us.

REV. E. C. GORDON.
(Presbyterian.)

LEXINGTON, MO.

Your correspondent who writes on "The Church I Am Looking For" asks:

"How many churches in Christendom will admit me to membership on my acceptance as an ideal of life this declaration of Jesus Christ: 'Thou shalt love thy God with all thy mind, and with all thy soul, and with all thy strength, and thy neighbor as thyself. This do and thou shalt live'?"

If he is sincere in this search you may inform him that all the Unitarian Churches in Christendom will admit him to membership on this affirmation, and that he may belong to as many other different kinds of churches as he pleases at the same time.

If he will take a little pains to inform himself by writing to the Unitarian Headquarters in Boston he will be able to satisfy himself that the church he demands for himself has been in existence for many years and that it has tried to fulfill his ideal of the Human Catholic Church.

The casual reader is surprised that one who

shows so much intelligence otherwise should lack this knowledge.

FREDERICK M. BENNETT,
Minister of the Unitarian Church.

LAWRENCE, KAN.

Your contributor felt crowded out of the Baptist Church because his wife could not commune with him. He certainly did not make much of a canvass of Baptist churches, because I do not believe that there is one in fifty in the North where objection would be made. Some might not invite it, but I do not know of one, and my acquaintance with Baptist churches is large and intimate, that would attempt to prevent it.

The wives of some of the most prominent members of the church I attend are members of other denominations, still they regularly attend communion with their husbands and I have never heard a murmur of dissent from any one.

I am intimately acquainted with many active Christian workers in almost all religious denominations and I do not find any points of disagreement worth mentioning. We all feel that God is a gracious Father and that Christ is the expression of His love and good will to men. That we are to exemplify the Christ life in all its fullness and try to make the world better and happier day by day. What does it matter whether the birth of Jesus was natural or miraculous or why should any one waste his time or energies to prove the Bible verbally inspired, or to lose faith if it were not so? After all the controversy there is enough inspiration left to regenerate the world if it is only appropriated.

I have only commiseration and pity for the man that tries to build up a religious life on creeds. They are as unsatisfying and unsustaining as the husks would have been to the prodigal, and no matter how much Church dignitaries may try to sustain them the rank and file have quietly cast them aside as worn out clothes. The Church your man is looking for is an *ignis fatuus*. It does not exist and never will. If a man is in the Kingdom of God the name or creed of his Church is of minor consideration.

BAPTIST DEACON AND S. S. SUPERINTENDENT.

The Eternal Things

BY HARRY H. KEMP

A THOUSAND empires rise,
A thousand empires fall;
And still the eternal stars
Shine over all.

At last the shining stars
Into the night are thrust,
And suns and systems pale
Go down to dust.

But let the universe
Back into darkness roll—
Two lights death cannot dim,
God and the soul.

Game Bird Enemies

BY DWIGHT W. HUNTINGTON

AUTHOR OF "OUR FEATHERED GAME"

[The following is the second of a series of articles on this neglected subject.—EDITOR.]

DARWIN says there is no exception to the rule that every organic being naturally increases at so high a rate that if not destroyed the earth would soon be covered by the progeny of a single pair. In the first of this series of articles I stated that one pair of bob-whites and their progeny, if entirely unchecked, would produce over 6,000,000 bob-whites in eight years, provided the covies contained only twelve birds each. One hundred pair of these birds (which would not be a large number to turn down on a farm or game preserve) and their progeny would produce, of course, 600,000,000 bob-whites in the same time if unchecked; so that it is evident that the causes of destruction or the checks to increase must be very great.

At a recent banquet of the Rutland County Fish and Game League, Mr. H. G. Thomas, the Fish and Game Commissioner of Vermont, spoke on a timely subject, "The Scarcity of Game Birds." Quoting the statement of Dr. A. K. Fisher, of the United States Biological Survey, that more wild fowl are killed each year than are produced, and his warning that the destruction of game birds must be further limited, he said:

"It is my honest and candid opinion that man is the worst enemy of game birds."

There can be no doubt that man popularly is regarded as the worst enemy of game birds, and the market gunner is said to be the most destructive species of mankind; but, when shooting is prohibited for a period of years, as it is often in the United States, the birds do not increase with anything like the rapidity to which we have referred, and in populous regions they often do not increase at all. Some birds—the heath-hen, for example—have decreased during periods when there was absolutely no shooting; other birds—the wild turkey, for example—have become extinct in places where they were protected by law at all times, and I have even ob-

served a decrease of bob-whites on farms where there was no shooting or trapping. Over eighty bob-whites out of every hundred on protected grounds where there is no shooting must be destroyed in some way each year; otherwise the bob-whites would soon swarm in every field, since the ten pair remaining would produce 150 bob-whites, and probably more, in a season, and the ratio of increase is geometrical.

We must conclude, therefore, that the destruction by man is very small in comparison with the other causes of destruction. Man, in all probability, takes less than one-fifth of the birds destroyed, but the birds he takes unfortunately are those which nature would spare for restocking.

It is, of course, mere guesswork to say what proportion of our game birds is destroyed annually by foxes, hawks, owls, crows, minks, weasels, snakes and other natural enemies of game which are collectively termed vermin, but every one who carefully has studied the question will admit, I believe, that vermin takes far more than is taken by the guns. Some State game officers say that a single species of vermin takes more than the guns. My guess is that vermin, wild and tame, destroys every year from 60 to 80 per cent. of the game, and that in places where there is an overabundance of game enemies as compared with the game, that the birds may all be destroyed by vermin before the shooting begins.

I am aware that many naturalists believe that certain game enemies do not destroy many game birds during the year, but a great loss must be accounted for in some way, and I am inclined to charge it to vermin until it is otherwise explained. My opinion that the loss should be charged largely to vermin is supported by all gamekeepers and by the English sporting writers.

The opinions of the gamekeepers, whose lives are spent in the fields with their charges, the game birds, should be

entitled to much weight. These men say it is impossible to show an abundance of game when vermin is not controlled, and they show always a tremen-

found the game birds surprisingly abundant, altho the shooting was heavy.

It is unnecessary to know the exact proportion of the game which is de-

A CORNER IN A NEW ENGLAND GAME PRESERVE AS IT APPEARS IN WINTER.

dous head of game when vermin is controlled. I have visited a large number of preserves in America where gamekeepers are employed and vermin is controlled, and on every one of them I

stroyed by vermin; it is sufficient to know that the game can be increased tremendously when this check to increase is mitigated. In England and Scotland, where the shooting is excessive, vermin

is controlled and the grouse and partridges¹ are abundant. In the United States, where the shooting is limited, in all places where vermin is not controlled the grouse and partridges or "quails" are scarce and rapidly growing scarcer.

Bob-white is nearly extinct from New England to Ohio and steadily decreases everywhere excepting on preserves; the prairie-grouse have been exterminated in most places, even as far West as Utah, and will soon become extinct.

In England the sportsmen fully believe

books and magazines, from which the following quotations are taken:

"If a keeper is to be a success he must incessantly trap for vermin, redoubling his efforts in that direction during the early months of the year, and always being on the watch for the signs of the presence of vermin. Directly he sees such, traps must be got down. *If he traps perseveringly he will produce a decent head of game on the most barren shoot*, and if he does not there will be no sport for his employer."²

Moorman says:

"Wherever game is preserved vermin must be destroyed."

Dr. D'Arcy I. Hamilton says:

"To show a good head of game on any estate the place must be cleared of vermin and there is no time like the close time for this. The professional keeper knows this and knows how to accomplish it."

The statement "To destroy vermin is to preserve game" is well supported by scientific opinion. The mitigation of the natural checks to increase, Darwin says, is followed by a rapid increase in the numbers of any species, and the addition of any causes of destruction is, just as certainly, followed by a rapid decrease in the numbers of the species. Nature's balance easily is upset in either direction. Hence it appears that field sports must be discontinued in America, unless we change our methods of game handling, since the addition of even a slight cause of destruction (a limited amount of shooting, for example, such as we now enjoy) must produce a continued diminution of the game, which in time will result in extinction.

The conditions in the United States so clearly prove the above statement that it seems negligent for those who are much concerned about the game and who influence legislation not to put an end to field sports for all time to come by a single legal enactment. The necessity for placing the burden of caring for the game or the people and rewarding those who properly look after it, is apparent.

In "The Origin of Species," Darwin says:

"It is not the obtaining of food, but the serving as prey to other animals which determines the average numbers of a species. Thus there seems to be little doubt that the stock of partridges, grouse and hares in any large estate

KEEPER ON AN IOWA GAME PRESERVE.
On the lookout for "vermin."

in Idstone's statement, "To destroy vermin is to preserve game." In America the sportsmen (excepting a few who employ gamekeepers) seem never to have considered the natural enemies of game, and the term vermin is almost, if not entirely, unused in our sporting literature.

The importance of controlling vermin is continually referred to in English

¹I have selected these birds for my comparison since they are wild breeding birds similar to our prairie grouse and bob-white partridge, and are not increased by artificial means as the pheasants and wild fowl are often in England.

²*Shooting Times and British Sportsman.*

depends chiefly on the destruction of vermin. If not one head of game were shot during the next twenty years in England and at the same time no vermin were destroyed there would in all probability be less game than at present, altho hundreds of thousands of game animals are now annually shot."

Since no laws are ever enacted in England prohibiting shooting for a term of years, it has never been possible to prove the correctness of the above statement there; but such laws are often enacted in America and we have furnished an abundance of evidence proving the accuracy of Darwin's observation.

The list of game enemies is a long one and includes foxes, wolves, cougars, bobcats, minks, weasels, skunks, eagles, hawks, owls, crows, blue-jays, snakes, turtles, frogs, certain fish, moles, dogs, cats, rats and red squirrels, besides mice and some other animals which do more or less harm.

The fox is a well-known enemy both of game and poultry. He has often been observed hunting grouse and "quail," and there are many records of the feathers of these birds being found about the foxes' den. Dr. Judd, in a bulletin issued by the United States Department of Agriculture, says foxes were observed at midday, on a farm where he made his observations, hunting thru fields where there were broods of bob-whites, and he adds: "It must be easy for a fox to exterminate a whole brood of newly hatched bob-whites, and no difficult task to catch them when three-fourths grown." He mentions finding the feathers of the ruffed grouse about the foxes' den.

Brewster, *per contra*, writes me that, in his opinion, the fox takes comparatively few game birds, and says a ruffed grouse nested and reared a brood of young in a cover on his place, at Concord, Mass., where a pair of foxes had their "earth" within fifty yards of the nest.

There can be no doubt that both the ruffed grouse and the quail are especially protected by nature in some way at the nesting time. It is certain that vermin often does not notice them at this season. I have repeatedly visited a nesting "quail" in company with a keen-nosed pointer that under ordinary circumstances would have pointed stanchly

when twenty yards away, but when I moved the grass aside to view the nest the dog at my heel seemed unable to even see the bird, and gave no sign that he knew it was there. Had the same dog (his behavior in the field was by no means good) discovered the quail in tangled grass at another season, when the scent was strong, I have no doubt he would have seized it, if hunting alone, and possibly in the presence of his owner. Dogs have often seized birds after pointing them when their owners were close at hand.

It is difficult for either a dog or fox to take a bird excepting in tangled grass or on the snow; if it were not so the birds might be exterminated by foxes alone. It is well known that a parent bird will fight in defense of its young. I have seen my hens with young chickens put full grown setters to flight and even take a bone away from them. A hen grouse flies with great speed and can strike a harder blow than my barnyard fowls did when they caused the setters to go yelping away, and an enraged mother is fearless. Possibly the fox desires to avoid such encounters and prefers to take the grouse later; possibly he may decide to save a few birds near his earth in order that he may have winter food near at hand when traveling is difficult. Squirrels, we know, store food for the winter.

Mr. Fryer, an English authority on partridges, says: "Foxes will frequently leave a nest close to their earth, possibly with the idea of teaching their cubs later how to take it"; but Mr. Fryer regards the fox as a deadly enemy of partridges, as we shall observe, and says they often seize a sitting bird and "bang goes a covey of partridges."

Speculation as to why a fox sometimes overlooks a nesting bird is idle, of course, for who can say what a fox thinks? The gamekeepers say they can rear game birds successfully in places where the woods are small and foxes can be controlled easily, but they cannot rear the birds successfully near large covers, where foxes are not easily controlled.

I once visited a game preserve where there were thousands of pheasants about the keeper's house, but, he informed me, the foxes destroyed practically all of the

wild nesting birds and it was impossible to prevent their taking many pheasants near the house. I have shot a fox just as he was ready to pounce on a covey of bob-whites, and from a large amount of evidence which I have obtained from gamekeepers and sportsmen I have decided that sly Mr. Reynard takes more game birds than many naturalists believe he does and that he takes enough during the year to account for a good part of the destruction which must be accounted for. When losses occur at the nesting time the destruction is wholesale, since the loss of a parent means the loss of a covey, and there can be no doubt that the fox sometimes discovers and takes a nesting bird, and that the hawk, the crow and other enemies with sharp eyes often take nesting birds and also destroy their eggs.

In England the fox is regarded with much disfavor by the game preservers, who have had the best opportunities (for many years) of observing what he does. The game birds, too, know their enemies, and the consternation caused by the appearance of the fox proves what they think of him.³ If he is comparatively harmless, why is the consternation great?

Mr. Cornish, an English authority, says it is a mistake to make artificial nesting places on open downs. The birds do better if left to themselves. Foxes and poachers raid all such places and search them.

Mr. Fryer says:

"The fox is a deadly enemy to the partridge . . . and altho I am of the opinion that in the country, a few hints as to the best way to preserving on a large scale in a fox hunting country, just as I think it is a mistake to try to start a pack of hounds in a good partridge country a few hints as to the best way to protect the partridge may be of interest."

After describing various methods of protection Mr. Flyer tells of a fox taking a pheasant on its nest. The fox which was seen to approach the nest killed and buried the pheasant and "had no doubt gone off to kill something else," when a friend of Mr. Bryer and his keeper went to look at the nest; "and yet," he says, "people are to be found who say foxes are not wantonly destructive."

Some of the hawks do more damage

to game, undoubtedly, than others do. Dr. Fisher says the goshawk is called the partridge-hawk, because of the persistency with which he hunts the ruffed grouse. Dr. Judd says the cooper-hawk, goshawk and red-shouldered hawk are the worst enemies of the ruffed grouse. He cites Dr. Strode, who says that bob-white's worst enemy is the cooper-hawk, and adds: "This hawk so persecuted the quails where he made his investigations that they were seldom seen far from cover." I once shot a marsh-hawk which had a full-grown cock bob-white in its talons, and picked up both birds, and have no doubt that this hawk takes many game birds during the year in places where he can find them, altho he is regarded as a "beneficial" hawk by many naturalists, who say that he does not take much game. Their opinion in favor of this hawk and some other hawks and owls has been formed from the evidence obtained from the examination of the contents of the stomachs of certain specimens. Dr. Fisher, however, in his bulletin on the "Hawks and Owls," says that the game birds have been exterminated "by the ruthless hand of man." It does not, therefore, seem conclusive to say that the marsh-hawk will not take game because he did not take it where it had been exterminated. Men, in places where game has been exterminated, might be shown in the same way not to be grouse or "quail" eaters, but we know that grouse and "quail" are considered excellent food by mankind. I feel equally sure that the bob-white is palatable to marsh-hawks.

The evidence of the game birds is strongly against the hawks. They tell us plainly that hawks are dangerous enemies. Sportsmen know that it is difficult to flush a covey of birds when a hawk is seen sailing overhead or perched upon a tree. I have shot a hawk that was evidently looking for birds which I knew to be on the ground, altho I could not find them with the aid of good dogs; upon my return to the field, a short time after killing the hawk, my dogs soon found and pointed the birds. I was quite sure they were hiding in some cover because the hawk was in sight.

I once saw a hawk strike at a covey of "quails" which I flushed over a point;

³See account of a fox among the pheasants in Scarborough. Country Life, Lib. Sport. Vol. Shooting.

all the birds screamed with alarm—such a scream as I had never heard—and pitched to the ground, a short distance from the dog, as if they had all been shot. I was too astonished at the sight to shoot, and the hawk sailed away unharmed.

A hawk-shaped kite when flown over a snipe meadow will cause the wildest "jack-snipes" to lie well to the gun; a similar kite has been flown to move wild ducks along a stream; a market gunner has been seen to throw his hat in the air to make a flock of golden plover "bunch" before he fired. Why are the birds so terrified if the hawk is comparatively harmless?

All naturalists admit that the hawks do some damage to game and that some species of hawks do great damage to it; when there are both kinds of hawks on a farm they jointly must account for a good part of the great loss which surely takes place every year before the shooting begins. The hawks are all big eaters and are especially industrious at the nesting time, when they feed their young on game.

Minks and weasels not only kill a large number of game birds for food but wantonly destroy far more than they eat. A gamekeeper told me that a mink destroyed eight pheasants in one night and there is a recent record of a mink killing fifty hens and nine geese which belonged to a constable in Chippena County, Ia. The constable killed the mink and was sent to prison for shooting without a license. Here we have game law literally "with vengeance." How much better it would be if some one would look after the birds.

I have talked with many gamekeepers about the misdeeds of minks and weasels and they all say that both of these animals are not only very destructive but that they are hard to control.

Verner de Guise, writing about the pheasant, says:

"No efforts will be fully repaid, no success will be perfect, unless a determined and continued onslaught is made on their foes furred and feathered. The brook so necessary for their comfort is the lurking place of the mink."

Dr. Kalbfuss, secretary of the Pennsylvania Game Commissioners, writing about weasels, says:

"I am satisfied that each of these animals destroys more game and birds than any hunter,

legal or illegal, who ever trod the woods. . . . They appear to kill simply for the love of killing. One gentleman, who has made a study of the weasel, and has actually killed over 1,700, says that during his investigation he found that the animal from a food standpoint almost nightly exceeded his necessities."

Minks and weasels, undoubtedly, cause a good part of the loss which must be accounted for.

Dr. Kalbfuss is one of a very limited number of game officers who have considered the losses due to vermin. He is

COLORADO BARN OWL.
One of the game bird enemies.

entitled to much credit for inviting the sportsmen's attention to this all-important question. We are indebted to Dr. Kalbfuss also for an account of the poisoning of vermin by a game protection association under his direction which was followed by an immediate and large increase of ruffed grouse. There can be no doubt that the bob-white shooting on unprotected grounds in Pennsylvania would be much better than it is if there were a large number of bob-white preserves which sent thousands of bob-whites to

THIS GAMEKEEPER HAS SHOT SOME OF THE ENEMIES OF THE WILD GAME UNDER HIS CHARGE.

market, as they easily could if competent gamekeepers were employed. It is claimed by some game protectionists that to sell game from preserves would open the door for some illegal game from the open or neglected fields. But what of that as against the extinction of bob-white everywhere? Granting that some illegal game might be sold from unprotected fields, the loss would fall on those who do nothing, and the country is large enough for every one who wishes to have good shooting to do so at little or no cost provided he will employ a gamekeeper and may sell some of the over-abundant game to pay him. Under such conditions and under no others can the game be saved from extinction, since the State cannot sufficiently control wild and domestic vermin and illegal shooting to save the game as population increases,

without an army of gamekeepers (in addition to the game police) far too large to be considered practical.

Many naturalists say the owls do only a little harm to game and poultry.

John Burroughs, however, calls the owl the "bugaboo" of birds. Why do they so regard him? There are many species of owls; some should be and no doubt are regarded by the game birds as less alarming "bugaboos" than others. The great horned owl is admitted to be a very bad game destroyer even by his friends the naturalists; the other owls for the most part are regarded as "beneficial" owls. One of the chief arguments in favor of hawks and owls — *i. e.*, that they destroy grasshoppers — does not apply to the game preserve, since there cannot be too many grasshoppers when game birds are abundant. They are the best food for young game

birds, and in places where game has been made plentiful grasshoppers have been brought from a distance to feed them.

Snakes destroy many birds, even when they are in charge of gamekeepers who make continual warfare on such pests. The keeper at the Russapeague Club informed me that black-snakes devoured young pheasants as large as quail. Bendise mentions a rattlesnake which was killed after it had devoured five bobwhites,⁴ and there are many other records of snakes destroying both the birds and their eggs. I have seen them when thus engaged.

Mr. Sweeney, the Indiana Game Commissioner, says the crow is one of the worst enemies of the birds, and the gamekeepers entertain the same opinion of him. In a splendid grouse country I saw

⁴Life Hist. N. A. Birds.

hundreds of crows and many cats last autumn, but not one ruffed grouse. Dr. Kalbfuss writes me that the crow has appreciably hastened the extermination of the prairie grouse.

The crow destroys both the young birds and their eggs. Dr. Judd says he pillaged a nest of the ruffed grouse on the farm where he made his observations and daily took young chickens and eggs near the house. The effect of such daily performances on the nests of bob-whites may easily be imagined.

There is evidence that the skunk does some good, but he is an enemy both of poultry and game and should be controlled on the preserve.

Wolves, cougars, bob-cats and eagles are comparatively scarce in the Eastern States, and it is for this reason that the deer increase when shooting is prohibited. Deer are decreasing in the Western States in places where vermin shows an increase and where little or no shooting is permitted by law.

Mr. Thompson-Seton informs me that the turtles have sadly interfered with his rearing wild ducks. There are records of certain fish and frogs seizing young ducks, and the carp has destroyed much wild rice and other duck foods by "rooting" up the plants. I have often seen the duck-hawk hunting wild fowl.⁵ Blue-jays and red squirrels have been charged with destroying birds' eggs. Moles are said to destroy many nests by burrowing under them.

Granting that some of the game-bird enemies take only a few birds during the year it seems evident (where there are many species, as there are in most places, some of which are noted and persistent game destroyers) the total number eaten and destroyed must be large, quite large enough, in my opinion, to prevent the great increase of the game birds referred to at the beginning of this paper. When there are additional losses due to climate and a little shooting is permitted we must expect a steady decrease of game.

Nature's balance, which is preserved by natural game enemies and climate, surely must be badly upset by the addition of numerous house cats, dogs and rats. On

a farm in Pennsylvania where a number of bob-whites nested I observed that the cats were hunting the young birds and complained to their owner without good results. I remained on the farm until the opening day for the shooting when I ascertained that not a single "quail" was left. The ground was searched carefully and thoroly with the aid of excellent dogs, and not a bird was found in the neighborhood. There had been no shooting; food, water and grit and dusting places were plentiful, and in order to migrate from the region the birds must necessarily have traveled a long distance thru a pine forest, since the farm with a few others formed a large clearing; the place appeared to be one where the birds would naturally remain. Several pair of bob-whites nested on the farm; the cock birds whistled daily. The foxes took a few chickens during my visit, and there seems to be but little doubt that the cats assisted them and other vermin in exterminating the bob-whites.

There is a record of the destruction of every bird on an island by a single cat (introduced by a lighthouse keeper) and its progeny. Many species of birds were abundant prior to the advent of the cat. On another island some cats, which were introduced by sheepmen to exterminate the rabbits, destroyed every native bird and drove away thousands of sea birds which formerly nested there. Many species of native birds had been abundant, but not a bird remained.

Last autumn I saw many cats in a beautiful country for ruffed grouse, in Maine. Large numbers of cats were living in the fields and woods; some lived in an abandoned house. The ruffed grouse seemed to be almost extinct. Cats are said to be one of the principal causes for the disappearance of the heath-hen which undoubtedly is vanishing.

Dogs running at large, farm dogs which accompany farmers in the fields, and even shooting dogs out for a run with their owners, do much damage to game. The dogs do not catch many old birds, of course, but they chase them, and birds will not nest in a field where they are thus annoyed.

Captain Oates, the owner of a game preserve in England, found sixteen wild duck eggs in the hole of a rat which he

⁵An account of this hawk seizing a wooden decoy will be found in the subsequent paper, "How to Preserve Wild Ducks."

dug out and killed, and English game preservers say that rats must be exterminated.

It has been said that there must be some unknown cause, such as disease, for example, to account for the great loss which certainly occurs every year, even when shooting is prohibited. Wild animals, however, seem to be almost free from diseases when they are uncrowded in the woods and fields and food is abundant. The grouse on the moors, and the pheasants and wild fowl on preserves where they are overcrowded, have suffered from diseases, just as people in tenements often suffer from them; but the gamekeepers have instantly put an end to diseases by moving their birds to fresh ground, and on modern preserves where game is overabundant diseases are prevented by rearing on fresh ground every year or every other year. Where the birds can be closely observed, therefore, they do not seem to suffer from diseases excepting on contaminated ground. Granting there are some unknown causes of destruction, we insist that we must check those we know about. We may have good shooting if we do, and extinction if we do not do so.

I enjoy seeing the sly fox about and the falcon sailing overhead. It seems fortunate that a good lot of game can be reared in two or three years, even if some vermin is spared. It is, in fact, impossible, in most places, to destroy it all. A gamekeeper, however, can practically control all roving dogs and house cats and rats, and a good part of the snakes and other vermin on a few farms; if this be done the shooting should be as good or better than it ever was anywhere, and in order that men of small means may combine and thus preserve the game, they should be permitted to sell some of it to pay the cost of guarding it. The gamekeeper must be on the ground every day in the year. He will not remain without compensation. The State, as we have often insisted, cannot and does not control the game enemies, excepting sportsmen and hotel-keepers.

It should, therefore, lend every aid to those who will employ gamekeepers and thus provide shooting for themselves, shooting rent for the farmers, pay for the keepers, and cheap game for those who do not shoot. The shooting for the indolent, as I have said at other times, is usually better in the vicinity of game preserves than anywhere else in the State. Every one is therefore benefited, and best of all, the game will not become extinct, but, on the other hand, will soon become cheap in the markets.

It is important that something should be done at once. Many species of wild vermin have held their own or even increased in some localities while the game birds have decreased, and domestic vermin undoubtedly is increasing. The marvelous rate of increase of the game birds, when unchecked, indicates that "*a large stock of individuals of the same species, relatively to the number of its enemies, is absolutely necessary for its preservation.*" The small remnants of game which some think the laws can preserve are not sufficient. "Any one who has tried," says Darwin, "knows how troublesome it is to get seed from a few wheat or other such plants in a garden. I have in this case lost every single seed." The birds can take all of the seeds when there are only a few. The game enemies, in places where there are only a few game birds, have also been known to take them all. And the danger of their doing this increases, even where laws prohibiting shooting (the mainstay of protectionists) are enacted.

It is evident that if the States turn down an immense number of half-tame pheasants from "hatcheries," they will be more easily taken by natural game-enemies than the wild birds are, and that the sportsmen will only be taxed to feed vermin. On any farm where the game may show an increase the farmer will no doubt put up some signs and the licensed sportsman will be told to try some less favored ground. Such is field sports in America today.

YONKERS, N. Y.

Bluejackets at Rio de Janeiro

BY MYRON A. CLARK

GENERAL SECRETARY OF Y. M. C. A., RIO DE JANEIRO

THE passage of a big fleet in a foreign port is more than an affair of international interest; it also causes deep concern to the officers, and to the local authorities as well. Admiral Evans's fleet of thirty war-vessels brought to Rio de Janeiro a small army of 16,000 enlisted men, whose ten days of shore leave would have proven a severe tax on almost any maritime city. Considerable anxiety was felt by press and people as to how the men would comport themselves under the circumstances, but now that they are gone only words of regret are heard over the departure of the bright and well-behaved fellows, who captured every one's heart.

Doubtless one of the contributing factors to this satisfactory outcome was the special service for men of the navy, organized by a committee of American residents, under the auspices of the local Young Men's Christian Association. "Naval officers are more or less accustomed to being dined and wined," said one of the oldest officers of the fleet, "but this is the first time in my experience where any systematic arrangements have been made to give the enlisted men a good time." The bluejacket usually goes ashore on liberty for the day, and is compelled to shift for himself; with no knowledge of the place, the language, the people and their customs, money and values, he usually wastes his time, sees nothing of the beauties of the place, is fleeced on every side by unscrupulous dealers, and returns on board with a headache and an empty purse.

To avoid such results and contribute to the men's comfort and pleasure was the objective of the committee, organized under the chairmanship of Mr. J. J. Slechta, Acting Consul General. Early in the planning the Prefect of the city, General Souza Aguiar, who had been Commissioner of Brazil at the World's Fairs of Chicago and St. Louis, was sought out and interested. Thru his influence the president of the Cantareira Ferry Company, Viscount de Moraes, granted free use of a spacious waiting room,

recently constructed at the steamer landing, where headquarters were established under the name "Information Bureau for American Seamen." A large sign was stretched across the front of the building, so as to be readily seen by the men as they left the barges and stepped ashore. For this Bureau they made a bee-line by the hundreds every day. It became far more than its name implies; from the very first hour of the first day, when the barges disembarked their crews, the Bureau was crowded full of men, exchanging money, writing letters, buying curios, getting meal and excursion tickets. It was the rendezvous of all, officers and men; questions and problems of all kinds were there taken for solution; it was the last place the boys left at night as they went back on board.

The committee had prepared 200 large placards, outlining the facilities offered, illustrated with post-card views of the city; these were put up in conspicuous places in the men's quarters on each vessel an hour after the fleet had dropt anchor, on orders from Captain Ingersoll, Chief of Staff, to whom the committee addressed itself with a presentation from the Ambassador. An edition of 21,000 pocket-folders, with map of city, and useful information about value of money, how to see the sights of the city, postage rates, etc., was printed; these were handed out to every man on landing from the ships.

To exchange dollars for milreis was the first concern of every man as he reached *terra firma*, and the committee had provided in the Bureau a Money Changer, under a guarantee to give every man legal rates. In front of his cage the men lined up every morning by the scores, patiently waiting their turns, and yet anxious to get out and see the town. During the ten days this man exchanged \$80,000 into Brazilian money, and just before closing hours each night he would exchange back into American money at the same rate all that the boys had not spent, thus saving them considerable, about \$6,000 in all.

Long tables, on which were scattered paper and envelopes with Y. M. C. A. imprint, pens, ink and all accessories for letter writing, were furnished free; scores of men could be seen at all hours of the day sending back to loved ones at home the impressions of their first tour abroad. No estimate of the thousands of letters written can be made, but some idea of the manner in which this privilege was utilized can be had from the fact that 11,000 sheets of paper and 6,000 envelopes were used, and that a large mailbox, placed in the Bureau by the post-office authorities, was filled up and emptied usually once an hour.

Another feature of utility was the sale of meal tickets. Arrangements had been made with a dozen restaurants to serve the men meals at a fixed price, tickets to be sold at the Bureau and redeemed afterward, thus avoiding extortion and cheating in change. Over 1,300 of such tickets were sold.

But the crowning feature was the excursion business. Unlimited credit is due the Rio de Janeiro Tramway, Light and Power Company, a powerful American organization, for cordial co-operation. Under the personal supervision of their Assistant General Manager, Mr. E. D. Trowbridge, excursions were sent off at frequent intervals to various points of interest, always with English speaking guides and in special cars. No less than 5,000 men were handled on these excursions, and another 5,000 went off by themselves on private trips of sight-seeing, following the instructions given in the folder issued by the committee.

The most notable of these excursions was to Corcovado, a mountain peak rising within the city limits some 2,300 feet above sea level; the trip was made by electric tram, crossing an old aqueduct built in 1750 by the Jesuit fathers, then winding along thru the woods of Santa Thereza Hill to Sylvestre, occasional glimpses offering themselves thru the foliage of the city and bay below. An hour later a cog-wheel road is taken, climbing grades of 20 and 30 per cent., puffing away to the summit, where, amidst the clouds, one has a superb view out over old ocean and down on the bay, with the fleet nestled in its bosom, and the city, half a mile below. The exclama-

tions of the fellows on their return from these trips were always appreciative, if couched in pithy terms: "The finest ever," "Great thing that," "Sure worth the dough," etc.

These excursions were run at cost price, and every man got his money's worth. After a few days the committee lost its voice in barking the excursions, and men from the fleet volunteered for this service. One fellow, Jenkins, had a knack for it. Standing up on the counter, he would call out in a fog-horn voice: "Excursion to Corkyvady—big run for your money—come on—you're a lot o' mutts if you pass this up—you'll never have a mother look after you so well as these uns—only five more tickets left for this bunch—all aboard!" And so, all day long, amidst great merriment, chaffing and the best of order, the fellows were helped on their way in a strange city.

Men and officers were profuse in their expressions of appreciation and gratitude. Numberless such testimonies could be adduced. Admiral Evans sent the committee a letter of thanks, accompanying a similar letter from a committee of petty officers. One officer remarked that the amount of trouble from disorderly men after shore leave was almost nil; another said that the men were leaving Rio with some definite ideas of the place, and with pleasant memories, instead of no impressions at all, except of gin-shops and dives; still another told a member of the committee that the thousands of letters written from Rio telling of their good treatment by a citizens' committee would doubtless be of great aid at the recruiting stations.

Several officers gave expression to the wish that similar work be undertaken in other foreign ports as American fleets touched at them in their cruises. The difficult question of personnel at such foreign ports could be handled by the fleet itself, detailing men to run the Bureau, if only local Y. M. C. A.'s and Consulates would do the preliminary work of arranging for suitable provision of booths, etc., at the landing, studying up the matter of excursions, getting out printed matter, etc. Surely the welfare of the men, thus exemplified in Rio de Janeiro, justifies the taking up of this question by those qualified to do so.

Petróleum: A Great American Industry

BY JOHN D. ARCHBOLD

[Mr. Archbold is vice-president of the Standard Oil Company and president of the Board of Trustees of Syracuse University. He has all his life been connected with the oil business and in 1864 went to the oil regions and spent eleven years working in the petroleum industry. For the facts here given as to the operation of the industry, which has such an absorbing interest at this time, credit must be given to H. C. Folger, Jr., who is the head of the manufacturing department of the Standard Oil Company and has been connected with the company for thirty years and has written much on petroleum.—EDITOR.]

THE American petroleum industry has prospered marvelously. Fifty years ago it had not started. To-day it is bringing from foreign lands \$10,000 per hour, twenty-four hours to the day, 365 days to the year. Petroleum exports have added \$2,000,000,000 to America's wealth.

For many years Pennsylvania was considered the custodian of the nation's supply. The "oil region" comprised a few counties up a narrow valley. Now seven distinct fields, widely separated geographically, and markedly dissimilar in characteristics, are active in fifteen commonwealths, and petroleum production touches the four boundaries of our great land—the Atlantic, the Pacific, the Gulf and the Lakes. What was a State enterprise has become a National industry.

In 1859 the output of petroleum was

2,000 barrels. By 1906 it had become 123,000,000, and the intervening forty-seven years have produced the enormous total of 1,637,000,000 barrels. Were these barrels placed end to end they would cover 775,000 miles, would stretch to the moon and twice as far beyond, and would girdle the globe thirty times. History affords no parallel to such commercial growth.

The point of greatest weakness in all criticisms of the industry is a failure to acknowledge this magnificent expansion. On the contrary, it has been studiously ignored. As a rule, statistics of the United States governmental bureaus seem tedious reading. But the records about petroleum are alive with its growth and progress.

The Bureau of the Census gives the consumption of crude oil in refineries as follows:

CONSUMPTION OF CRUDE OIL BY THE REFINERIES REPORTING TO THE UNITED STATES CENSUS BUREAU.

The Geological Survey reports the production of crude oil:

England, Germany, China, Africa, India, Australia and Japan pay American sellers

PRODUCTION OF CRUDE PETROLEUM IN THE UNITED STATES 1870-1905.
DEPARTMENT OF THE INTERIOR—U. S. GEOLOGICAL SURVEY.

The consumption increased nearly fourfold, and production fivefold. What industry has a record to match it?

Petroleum exports command well-earned attention. They are \$100,000,000 per annum, and have brought back from abroad the astonishing total of 2,000 millions in less than fifty years. Yet these imposing figures tell only a part of the story. From the inception of the industry petroleum has been exported, the surplus output finding a foreign market. But of late a new impetus has been given by the introduction abroad of American methods of distribution. American methods no longer stop at the ship's side in a home port. They prevail until the oil reaches the consumer's lamp in every quarter of the globe. And the profits of transportation and marketing come back to America as a return on the American capital employed. Crude mined in Kansas is delivered by pipe to refineries at the Atlantic seaboard. Its products are carried in bulk to receiving stations in all parts of the world, whence it is distributed, still in bulk, by barge, car and wagon until the consumers in

for these most typical American goods. The ocean steamers, foreign barges, cars and wagons, with all the tankage and other accessories for many thousand stations represent great investments of American capital, and the profits coming back from every quarter are steadily adding to our nation's wealth. Altho the Government's figures show an average income from petroleum exports of \$10,000 per hour, they do not include these returns from abroad. Our petroleum business is no longer limited to America. American in spirit, and American in ownership, it is world-wide in extent, and its value to the United States deserves consideration before it is destroyed.

Again, the critics make a poor shift in their efforts to show excessive profits. That the American petroleum industry is profitable has never been denied. But profits in any industry should correspond with the risks, and the hazards of oil are even greater than those of other mining ventures. Luck alone locates many producing fields, and when found their life and quality cannot be anticipated. What seems a satisfactory territory today may

soon be valueless. Pithole, in 1865, was the third largest post office in Pennsylvania; but before its streets could be paved production had past, and the city's site is now a wilderness.

For example, because it has not increased its capital the critics would have us assume that the Standard Oil Company has not increased its assets, and to speak of large earnings without conceding a right to them because of large investments is quite in keeping with forever harking back to the venerable South Improvement bugaboo—that abortive infant corporation, still-born thirty-five years ago, its stock never issued nor even paid for.

A recent review from the desk of the United States Commissioner of Corporations shows that the investments by the Standard had increased from \$55,000,000 to \$121,000,000 between 1882 and 1892. His words are "more than doubled," his figures show 2 1-5 times. Assuming a corresponding growth for the succeeding fifteen years, the investment of 1907 becomes \$400,000,000. Those familiar with the expansion of the industry will not think the figures excessive. Existing pipe lines have been enlarged and new ones built to distant fields, enormous refineries erected at home and abroad, a hundred tank steamers and sailing ships provided to carry American products to many thousand distributing stations in every quarter of the globe, requiring tanks, barges, cars, wagons, not to mention the funds to maintain current stocks and distribute goods. In a second paper, Commissioner Smith publishes a table showing, among other features, the profits of the Standard. One column is headed "Percentage of net earnings based on net assets," and the earnings "average to 1896, 15.3 per cent." The column is not continued, but the basis makes its completion easy, and we find the total earnings on the net assets for 1905, 16½ per cent.; and for 1906, assuming as large returns as for 1905, 15.6 per cent., while from his earlier calculation the Commissioner would make the

figure for 1906 only 14¼ per cent. But what are the facts? Men, not yet old, recall a steady progress in illumination, from sputtering tallow dips and dangerous fluid lamps to the safe and satisfying glow of petroleum. Forty years ago the great majority in this and other lands were without artificial light. Petroleum has ameliorated American home life and is fast extending its civilizing influence thruout the world.

To distribute American petroleum is the mission of the Standard Oil Company, and the industry's matchless growth is its enviable reward. Pipe lines, tank cars, bulk ships and tank stations—all developed and nearly all originated by it—have combined to put a peculiarly hazardous industry upon a safer basis.

As its share in this gigantic commercial adventure, the Standard employs 8,000 miles of trunk pipe lines with 75,000 miles of feeders from wells; storage tanks for crude, holding 82,000,000 barrels; 10,000 tank cars in America and 2,000 abroad; sixty bulk steamers for ocean traffic and twelve for foreign coasting trade, with 150 steamers and barges at home; 3,000 tank stations in America and 5,000 elsewhere; representing an investment of over \$600,000,000 and giving employment to 65,000 men.

The Standard is a natural evolution to meet the demands of the petroleum industry because of its unstable foundation. Its genius has been an abiding faith in American oil. As an organization, its success is due to its solidarity; officers and men work together in mutual confidence for a common end, knowing that honest effort will have prompt recognition, and that when faithful service can no longer be rendered an annuity insures provision for declining years. As a business, its success is due to its commercial integrity. It has striven consistently to make its volume of trade large thru the merit and cheapness of its products. Millions of satisfied customers in every quarter of the globe will bear witness that it has kept its word.

NEW YORK CITY.

Haeckel and the Gospels

BY THE REV. JOHN M. THOMAS

[Haeckel's "Riddle of the Universe," which was sold by the tens of thousands in Great Britain in a sixpenny edition, and which has exerted tremendous influence among working-men of free thought tendencies, contains some startling statements in regard to the Gospels, which this article runs down to their source. So far as is known this has not hitherto been done. It is shown that the Gospels were selected much earlier than Haeckel affirms, and that the choice was not the work of Councils, but a popular movement. The character of the apocryphal Gospels, and their differences from those in the Bible, are explained, and the general trustworthiness of the canonical records is affirmed. Mr. Thomas has been elected President of Middlebury College, Vermont.—EDITOR.]

IN Professor Haeckel's "Riddle of the Universe" there is a statement concerning the separation of the apocryphal from the canonical Gospels which must be attributed to polemic zeal rather than to sincere love of truth and of fair play in argument. In order to get a full exhibition of its wealth of falsehood the passage must be quoted:

"As to the four canonical Gospels, we now know that they were selected from a host of contradictory and forged manuscripts of the first three centuries by the 318 bishops who assembled at the Council of Nicæa in 327. The entire list of Gospels numbered forty; the canonical list contains four. As the contending and mutually abusive bishops could not agree about the choice, they determined to leave the selection to a miracle. They put all the books (according to the Synodicon of Pappus) together underneath the altar, and prayed that the apocryphal books, of human origin, might remain there, and the genuine, inspired books might be miraculously placed on the table of the Lord. And that, says tradition, really occurred! The three synoptic Gospels (Matthew, Mark, Luke—all written *after* them, not *by* them, at the beginning of the second century) and the very different Fourth Gospel (ostensibly "*after*" John, written about the middle of the second century) leaped on the table, and were thenceforth recognized as the inspired (with their thousand mutual contradictions) foundations of Christian doctrine."

This paragraph is not history, not even of the most radical school. It is not based on critical examination of reliable sources, but on miserable medieval legends, deliberately chosen, when historical proof to the contrary was close at hand. Not the slightest honest endeavor to find out the facts concerning the selection of the Gospels could have preceded such wild assertions. The learned biologist took counsel of his hatred and descended to methods totally unworthy of a man of science.

What is the authority for the declara-

tion that the canonical Gospels were chosen by a miracle at the Council of Nicæa? According to McCabe's translation of Haeckel it is the Synodicon of Pappus. Name and title have an ancient sound, and are sufficiently unfamiliar to lead even one who has read somewhat in Church history to imagine that the appeal is made to some early Church father. The only Pappus one can discover in any ordinary book of reference is an Alexandrian mathematician, who compiled an important history of mathematics in the latter part of the fourth century. This mathematical Pappus makes no reference whatever to the origin of the Gospels. Haeckel's authority is Johannes Pappus, a Lutheran divine who died in 1610, nearly thirteen centuries after the Nicene Council! Johannes Pappus was a harmless sort of man, a preacher in the Minster in Strassburg and professor of theology in the University, an advocate of the strict Lutheran position as against those who wished to compromise with Calvinistic doctrine. Among the host of mediocre writings which he put forth was a Synodicon Vetus, which related in extreme brevity, possibly to aid students in memorizing, the acts and decrees of the ancient Councils, beginning with the Council at Jerusalem, described in Acts, xv. This Synodicon may be found in the "Bibliotheca Græca," of J. A. Fabricius (Hamburg: 1718), and there one may read (Vol. xi, p. 197f), in parallel columns of Greek and Latin, the ridiculous legend on which Haeckel bases his statement that "we now *know* that they (the four Gospels) were selected . . . at the Council of Nicæa."

However, Mr. McCabe, the translator of the "Welt-Räthsels," has been a little

kind to Haeckel, for the authority in the original German edition is not even so respectable and ancient as Johannes Pappus, of Strassburg. There is no mention in the German edition of the Lutheran theologian, but instead appeal is had to a certain "Saladin," the author of a learned and scientific treatise on the Bible, which Haeckel describes as "a critical investigation of the structure of the Jewish-Christian religion on the basis of the critical study of the Bible." "Saladin's" book is entitled "Jehovah's Gesammelte Werke," and was published at Leipzig in 1896. Who is this new German savant whose name carries sufficient weight with a great scientist to fix the date and manner of the selection of the Gospels? Investigation here is difficult, for "Saladin" is not a scholar whose works are reported in historical journals and bibliographies, nor are his books of sufficient decency to be admitted to public libraries and put on sale in respectable book stores. "Saladin" proves to be Mr. Stewart Ross, the editor of the *Secular Review*, and "Jehovah's Gesammelte Werke" is a translation of "God and His Book," a tract of an anti-religious agitator, to whom truth is no object, and who is eager to pick up any fable, no matter how sadly discredited nor how often disowned by historical science, provided only it can place some religious institution in a bad light. A sharp distinction must be made between radical historical critics, like Professor William B. Smith, of Tulane University, and Professor Daniel Völter, of Amsterdam, who launch with good intent ill-founded and impossible theories, and such men as "Saladin," who are not seeking to establish facts, but to overthrow an enemy, and acting on the maxim, "Everything is fair in war."

It is passing strange that Haeckel was induced to lean upon a staff which could only pierce his hand. One would have thought that the title would have betrayed the faker to him, for no scholar would entitle a treatise "Jehovah's Gesammelte Werke," or imagine that a work with such a title page could have the slightest scientific or historical value. The spectacle of men who are seeking to establish a new theory of the universe employing each in his own language an

authority whose name carries a suggestion of weight in that language, and each omitting reference to writings which would discredit their theories with their countrymen, is not pleasant contemplation for one who likes to believe in the honor and good faith of scientific investigators of all schools of thought.

It is a settled principle of historical investigation that the growth of fable about a fact does not disprove the fact itself. No one doubts that the city of Rome was at some time founded, tho he may gravely suspect that Romulus was neither sired by a god, nor suckled by a wolf, nor fed by a woodpecker. The current superstition that horse-hairs thrown into a river turn into water-snakes does not deny the existence of snakes which are at home in the water. If some pious romancer of the days when any miracle was credible thought to commend the Gospels by a tale of their marvelous origin, the trustworthiness of the Gospels themselves is not thereby in the least affected.

It is true that many more Gospels were written than the four we have in our Bible. But it is fact of just as sound and scientific history as that which one reads in Trevelyan about Lord Macaulay, or in Nicolay and Hay about Abraham Lincoln, that the four were not selected at the Council of Nicæa, nor chosen by any principle of preferment by any other ecclesiastical gathering. Reliable records of the Nicene Council are extant, composed by contemporaries, and there is not the slightest mention in them of any debate as to what was Scripture and what not. The question was not even up for discussion. Nearly seventy-five years later three Councils under St. Augustine put forth authoritative lists of New Testament books. But these Councils simply ratified, for the benefit of scattered and ill-informed Churches, what had come to be the recognized practice of the Church. There had been debate about the Apocalypse, II Peter and Jude, but no one had the slightest doubt that there were four Gospels, and only four, which could possibly have any claim to recognition as authoritative exponents of the life and teachings of Jesus.

For over two centuries prior to that time the Gospels accepted today had held an established position among Christians.

Irenæus, who wrote about the close of the second century, explains why there were just four Gospels. His reasons are trivial—because there are four principal winds, because the cherubim were four-faced—but the fact that he had to give a reason shows that four books were then prominent, and his references leave no room for doubt that they were the four now accepted. Origin of Alexandria, a little later than Irenæus, refers to the canonical Gospels as the four “which alone are uncontroverted in the Church of God spread under heaven.”

Justin the Martyr, about 150 A. D., refers to the “Memoirs of the Apostles,” which were read each Sunday “as long as time permits,” and his quotations are from the canonical four. The list of Christian writings known as the Muratorian Canon, which dates from about 175 A. D., includes no other Gospels. Tatian the Syrian, who about the same time produced a composite work of the accepted records concerning Jesus, called his book a *Diatessaron*, using the four Gospels familiar to us. That is certainly sufficient evidence to establish the fact that at least 200 years before the Council of Nicæa, the Gospels of Matthew, Mark, Luke and John had worked their way into general preference as the treatises superior to all others on the life and teachings of Jesus.

The selection of the Gospels was a vital movement. No Bishop or Pope gave Matthew and Mark their honor. No Synod or Assembly helped the Fourth Gospel to win its way. The four were selected by the insight and discernment of humble men and women who lived in the spirit of Jesus pure and honorable lives, and who found these books useful above others in declaring the image of Jesus to their heart. In the weekly reading of the “Memoirs of the Apostles,” as related by Justin, the books now in our New Testament came to be the most popular. The process was entirely similar to the selection of hymns for general Church use at the present day. Any disciple is free to write a new hymn; any Church is free to use it in worship. Here and there many new hymns are introduced, and in the process of years now and then one is selected for what may be

called the official hymnology of the Church. Thus Phillips Brooks’s carol, “O Little Town of Bethlehem,” was composed for his Sunday School in 1868, sold by a local book-seller, inserted in a School Hymnal six years later, but not until twenty-four years after its composition included in the Episcopal Hymnal. The affection of the people gave it its honor. Precisely so were the Gospels selected by Christian disciples, the early Christians of martyr stuff. It is a gross misrepresentation to imply that any Council, at a date early or late, did not know what records of the life of Christ to select, and by chance or miracle fixt upon four which would do as well as any others.

Among the Gospels classed as apocryphal there are a number which were serious endeavors to embody evangelical tradition, and which are sufficiently early to allow some reliance upon their statements. One of these is the Gospel of the Hebrews, which Jerome found in Palestine about the year 385, and translated into Latin. His translation is lost, but some twenty-four fragments are preserved in quotation. These fragments are very similar to verses from the canonical gospels, and taken together their addition to our knowledge of Jesus is very slight. The same may be said of the Gospel of Peter, a portion of which was found at Akhmim, Upper Egypt, in 1892. It was certainly not by Peter, tho it was a sincere attempt to represent the truth, but if one should use it as authoritative in narrating the deeds and teaching of Jesus, it would make no great difference. Other Gospels, such as that of the Ebionites, doubtless disappeared because they included heretical notions, but should they be rediscovered—as is not entirely impossible—they would be most unlikely to affect the opinions concerning Jesus, even of the historians most free from bias, in any appreciable degree.

There are other apocryphal Gospels of an entirely different class from these just mentioned. These are the religious romances, like the *Protevangelium* of James, the Gospel of Thomas, the Gospel of Nicodemus, which were written to satisfy curiosity on points on which the recognized Gospels are silent, *e. g.*, the history of Joseph the carpenter, the

life of Mary before her marriage and after the death of Jesus, the childhood and youth of Christ himself. Long ago these books were forbidden to be read in churches, and certain divines denounced them as misleading and injurious. There has been a glamour over them ever since, and the superstition is widely prevalent, especially among those influenced by "free thought," that if only these apocryphal Gospels could be known, a truer and more human understanding of Jesus would be the result. Anti-religious agitators have encouraged the belief that the apocryphal books are more worthy of confidence than the canonical authorities.

It would be highly useful if the New Testament Apocrypha could be scattered far and wide, that everybody might see just what they are. One can now secure a good translation at a low price in the Temple Bible, and there is not the slightest harm in reading them as long as one can keep awake. The books are filled with the incredible and the silly supernatural *ad nauseam*. Whatever basis of fact they contain is derived from the familiar Gospels; all else is the product of purest fancy.

The conclusion should not be drawn that these writings are of no value. They are important for the history of the time in which they were composed. Many an interesting side-light on Church history shines from them, and their quotations and appropriations from the canonical Gospels often increase our knowledge of the history of the text. Some of these books have been of almost incalculable influence. The Assumption of Mary, which dates from about the fifth century, and which recites the miraculous gathering of the twelve Apostles to witness the enthronement of the Virgin as the Queen of Heaven, in certain ages was more loved than the Gospel of John, and its stamp will abide on Christian art forever, and upon Cath-

olic piety for more generations than at present can be foreseen.

But as sources of information concerning Jesus these books are absolutely valueless. During the generations of their origin the Church set herself against them, not because they were non-miraculous, but because they contained incredible miracles. The Protestant fathers ratified the choice of the early Church of the soberest and sanest books on the life of Christ that had been produced, basing their judgment on what seemed most likely to be true and what most found their hearts as good men. It is more than a little unfair that their motives should now be called in question, and that the long vital process of the selection of reliable records of the Christian faith should be passed over with a sneer.

The Gospels of the New Testament are not above the scientific examination of historians for the determination of the truth. They are old-time witnesses to very remote and remarkable events, and any man who doubts has the right of cross-examination. Research may read on the Gospel page many things the multitude does not see there, and may understand certain pages differently than has been the pious custom. But the most relentless research to date agrees, in the case of the first three Gospels, that the witnesses were of the second generation of Christians, and that they told the facts as they sincerely believed them. The Gospel story took shape on the soil of Palestine, where Jesus lived, and during the lifetime of men who had heard Him talk. Divergencies in detail exist and are not unimportant, but the substance of the message, that Jesus of Nazareth lived a divine and blameless life, and that He taught truth which lifts men above the cares and hardships of this common world, is fixt and certain. The Nazarene put His impress on the heart of the world, and it is still legible.

EAST ORANGE, N. J.

The Shah's First Year

BY OUR PERSIAN CORRESPONDENT

ON the 10th of January Mohamet Ali Mirza completed his first year on the Persian throne as "King of Kings" and "Shadow of the Universe." Were time measured by change in Persia, the past twelve months would equal a hundred years, for Iran advanced less during the nineteenth century than it did in the year 1907. Lord Curzon's great work on Persia, written in the early nineties, was largely, with the addition of a few personal observations, a revision of much that had been written in the early years of the past century. It is probably the best book ever published on Persia, and yet time has proven that he knew practically nothing about the country's future. He saw everything thru English spectacles, shadowed by an Indian helmet. He did not believe that it was possible for the people to awaken without a helping hand, but as often happens, the unexpected has come to pass.

This awakening thruout the country has not been along material lines, for the people have become poorer; at least,

the rich have found it harder to meet their obligations, and the peasants in many localities, being strong enough to resist the tax gatherer, have quit their landlord's fields. The fact is that there has been a state of passive anarchy thruout the country during the whole of the year. The parliament blames the court for these chaotic conditions, while the court party calls the parliament a debating school. In the meantime Russia, whose legation is almost under the shadow of the parliament building, looks on with satisfaction, confident that the ripening fruit will drop into her apron, on the corner of which may be found the seal of the Anglo-Russian agreement of last summer.

While in material things the country has gone backward, there has been a great intellectual awakening among the common people. It seems strange to us to hear the merchant, artisan, and sometimes the laboring mechanic discussing politics, always with Japan as their ideal. Formerly the only part these people had in the government was to pay their taxes and turn their faces to

THE SHAH AS HE APPEARED AT THE PARLIAMENT.

the wall when the carriages of the harem were passing.

It is only natural that the priesthood should have a strong influence in these changes, for they are the leaders in intellectual as well as religious thought and progress, and without them it is hard to see how the reform movement could have succeeded. It is not unlikely that, as the liberal movement gains strength, the influence of the priests will decrease, for the movement has back of it strong and determined men. Whether they will succeed in establishing a liberal and fairly honest government is uncertain, but one thing is sure—Mohammedism in Persia can never be what it was a few years ago. With all this political agitation going on, Babism has had an opportunity which it has vigorously improved, and it is claimed that most of the clericals in the parliament are Babists. Indeed, one of the leading clericals told the writer that he proposed to open a Babeic house of worship. Until a year ago few Babists were bold enough to confess their faith in that strange mixture of truth and fabric. This means, too, a more tolerant spirit toward Christianity and better treatment for the Jews.

The young Shah had hardly got thru with his housewarming last January until he was bombarded with complaints against M. Naus, a Belgian who, as Minister of Customs and Posts, had gained a marvelous control over the whole country thru the paying of salaries and distribution of revenues. It was not denied that many of the complaints were well founded, and that M. Naus had let his ambitions lead him too far, but the young ruler always replied: "We must have money, and M. Naus is the best man we have to find it." When the time came that he could not meet the demands he was forced to resign. Later his carriage was attacked by a band of infuriated men in the street. He then left the country and the customs passed into the hands of Nasr-el-Molk, an able Persian, trained at Oxford.

Shortly after this a half brother of the Shah, whose mother was a Kurdish girl from one of the wild tribes, organized a strong armed force from among his mother's people in Kurdistan and threatened Hamadan. He proposed, after taking Hamadan, to proceed to Teheran

A KURDISH GIRL FROM THE HILLS.

The mother of Salar-e-Dovleh, leader of the Rebellion, was a Kurdish girl, taken to the Shah's harem when he was the crown prince and lived in Tabriz.

and contest his brother's right to the throne. He had been encouraged to believe that the parliament would support such a venture, but instead they stood loyally by the Shah, and the rebellion, after a month, failed completely. No adequate punishment was inflicted on the Prince.

The recall in May of Ali Askair from exile to become again prime minister, by the Shah, proved a great mistake. While he was a clever man, he did not realize the strength of the reform movement nor that the people held him responsible for their troubles. The people charged that, while he was prime minister under the late Shah, he had negotiated a needless loan of twenty millions of toman, which was afterward divided among the ministers at court. It is well known that the various ones about the court suddenly became enormously rich, but whether or not he was to blame for it all will never be known.

Upon his return to power he again took the title of Attabeg, the highest possible Persian honor. One evening in September, as he was leaving the parlia-

ment, he was fatally shot, the assassin at once committing suicide.

The joy of the people at this deed plainly showed their hatred for the man. The minister's body was quietly taken without special honors to Koom for burial, but not so with the poor wretch who was hired to commit the murder. His grave, near the city, at once became the place for pilgrimages. A special day was proclaimed for recognizing what was called a great service to the country, and parliament adjourned while 20,000 people went with flowers to do his memory honor. He was proclaimed a national hero and poets made him the subject of verse.

Other lives were attempted, among them the Alla Dogleh, the Governor of the city. Fear and dread filled the hearts of many of the leading citizens, and this feeling even extended to the Court, for in November the Shah himself proposed to make peace with the parliament, and as an evidence of good faith came in person to the assembly. But it was hardly a month before the same guns that announced the royal visit to the parliament

were again lined up in the public square to be used this time on the parliament building filled with armed men—the reception committee, if you please, of a month before! At the same time it seemed that a battle between the two forces was inevitable, but the year closed without serious riots, and we might add, without pay to many of those employed by the Government. The lack of money is the greatest difficulty in the way of the success of the liberal movement. To overcome this difficulty a national bank is being organized with a German in charge. Many favored an American Moses to lead them out of their financial wilderness, as aside from the missionaries America has few interests in Persia. But the German Legation took up the matter and sent to Berlin for some one.

The Anglo-Russian agreement concerning Persia has caused much feeling against both countries, especially in Teheran. The leaders in political affairs, regardless of party, say that a riot can be precipitated any day in Teheran that will endanger the lives of all foreigners, and in case of such an event, all Europe and

THE GRAVE OF THE ASSASSIN DECORATED WITH FLOWERS.

CROWDS GOING TO THE GRAVE OF THE ASSASSIN WHO KILLED THE PERSIAN PRIME MINISTER LAST SEPTEMBER.

In the tents tea and refreshments were served, the expense being borne by popular subscription. The day this picture was taken, Parliament had adjourned to do honor to his memory.

America would invite Russia to put troops in there to restore order, and when that is accomplished who can tell her to withdraw her Cossacks?

While all this is being feared Turkish troops have crossed the frontier and restored order about Urumia and Salmas with the result that the people, after years

of anarchy, are glad even to welcome the "unspeakable Turk."

Those, however, who know conditions in East Turkey, have little hope that the present security of life and property will continue, if the star and crescent are allowed to remain.

TEHERAN, PERSIA.

The Future of Racial Hatred

Y HON. YUKIO OZAKI

MAYOR OF TOKYO, JAPAN

[Hon. Yukio Ozaki is the present Mayor of the city of Tokyo, Japan, and has been the Minister of Education of the Japanese Government. He was an active leader in Count Okuma's political party. "The future of racial hatred" seems to represent an intelligent class of Japanese people, for this reason it may hold especial interest for the reading public of America.—EDITOR.]

RACE hatred is one of the great questions agitating the world today. But as communication between countries and peoples advances boundary lines will become less severe and even obliterated, with the result that racial antagonism will disappear. The manners and customs of the various peoples will become familiar to all, oftentimes they will be interchangeable, and this in itself will constitute a natural peace-maker between nations, quite without interference or the effort toward amalgamation by enthusiasts.

Yet there is a great obstacle which lies in the way, and delays this natural evolution toward unity. This obstacle is nothing more nor less than the appearance in all countries of pseudo great men, who play on the prejudices of the ignorant and weak, and turn these to their own account in political and other schemes. Bismarck was a man of that sort, fanning the flame of race prejudice as he did, and ever adding new fuel to it, for the furtherance of his personal ambitions. Continental Europe, before Bismarck's rise, was thoroly cosmopolitan. It was the

time when Free Trade, as set forth by Cobden and Bright, was popular in Europe, and the weight and currency system was about to be made reduced to an international basis. The open door policy prevailed thruout Western Europe. But with the rise of Bismarck this open door policy, and cosmopolitanism, received a set-back, and he built up a policy on national and racial lines. The Germans were on the point of abandoning their heavy and old-style lettering for the Roman alphabet; this Bismarck discouraged. He forced the use of the German letters, and constantly appealed to national sentiment, knowing that it would serve his own ends to do so, tho it set Germany back for generations to come.

True great men will not attempt to satisfy personal ambitions at the expense of world-progress. They will not rejoice in a temporary, personal success gained by such narrowness. Unfortunately, Bismarck lacked the noblest ideal of greatness, and sacrificed the progress of the entire people for his own ambition. Such men are contemptible even in their greatness. I say emphatically that Bismarck was a contemptible great man. What was the result of this great man's career? It is true that he helped Germany to rise among the nations; at the same time he undermined the progress of the nations as a whole. The tendency to universalizing the currency and weight systems, together with other matters of like general interest, he destroyed, and he was largely instrumental in arousing the sentiment of national and racial hatred, which exists today between Orientals and Occidentals, between whites, yellows and browns.

The struggle between the principle which helps to increase racial hatred and the principle which destroys it is the struggle between progress and defeat, between the right and wrong of the world.

We must keep our eyes open today for men like Bismarck. For the day may come when some such contemptible great man may arise and utilize the narrower prejudices of the unthinking to their own ends, thus placing the world in the throes of a great race war. It is the duty of the people to inform themselves that they may oppose the policy of men of this kind, for in the understanding of the people alone lies the world's possibility of peace and its future progress.

In regard to the anti-Japanese riots in California and Vancouver I am not inclined to look upon them as being serious from a general viewpoint. I am not prepared to state the cause of these riots from personal investigation, but judging from reports I conclude that they must be as follows:

First, the difference of traditions, customs and manners of living between the Japanese and Americans. Second, there is still a great gulf between the standard of living of these two peoples. Third, the number of Japanese immigrants have greatly increased in recent months. Fourth, these facts were used as fuel on the fire of the anti-Japanese movement by certain leaders of the American workingmen.

The first cause, the differences of customs and traditions, will in time disappear, since the Japanese are rapidly adopting Western manners and modes of thought. The second must likewise vanish, and that in the near future, since the standard of living in Japan is rising so rapidly as to soon equal that of America. The third cause, the recent rapid increase in the number of immigrants, will be cut short by the higher living in Japan, since this will render it impossible for coolies to live out their lives at home on wages earned during a short period of labor in the West, as they have done in the past. Only those of our people who desire to study abroad, and those other few who wish to live abroad permanently, will in the future leave Japan.

With the disappearance of the causes above stated, the anti-Japanese movement in America will die, so we may well look upon it as a temporary factor also. After all, it is absurd to make a gulf between the various nations, religions, thoughts and customs of the world's people. Open all the doors widely, and take what is best from all nations, all peoples, all countries. The thought that will divide the Orient and the Occident, the West and the East, is the real enemy of the world-civilization.

It would be infinitely better for the world if we had international weights, currency and language. Not good, but real harm, comes from the adoption of various languages and customs. Let us look forward to the universalization of the world.

Literature

The Spell of Italy

OF the making of many books about Italy there is no end; for every traveler goes there, and every other one among them, it seems, feels it incumbent upon him to write a book about that fascinating land. The spell of Italy is potent. Even the stay-at-home traveler knows it must be so. Yet few are they among the horde of scribblers who can translate into words anything of the charm of that sunny home of passion, power and beauty—receptive tho the reader be for the joyous thrill of poetic description or the uplift of honest edification.

Among the half-score of volumes dealing with Italian scenes and life which the season brings to our table Mr. Arthur Symons's collection of essays on the chief Italian cities¹ is unique in its power to convince the reader that the realities must, indeed, quite equal his dreams of the grandeur and the majesty of Rome, the sea-magic of Venice—that "piece of superb, barbaric patchwork in which the East and the West have an equal share"—the splendid craftsmanship of Florence, city of all the arts and corridor thru which the beauty and finery of the world have past, the charm of "lean and ascetic Ravenna," the enveloping subtlety of Pisa, pulsating with life in spite of its fragile aspect. If Mr. Symons does not always make his reader realize these qualities, he yet makes him aware that they must be there in that land of enchantment could only the reader go in search of them himself. Impressionistic essays are these, by one for whom cities "are like people, with souls and temperaments of their own." He has tried to persuade them to give up their own secrets. And while he does not always succeed in doing this—his hatred of Naples, which has become for him "but a witches' cauldron," is a blemish; we must believe that if he did not see anything there but "the ferment of uncivilization" it was because

he would not—the book, as are most of the writings of this English poet and critic, is decidedly worth reading.

Worth reading also, and, indeed, deserving of shelf room beside Mr. Symons, is Mr. Edward Hutton's account of sentimental journeyings and studies in Northern Tuscany,² with its pleasant style, its wealth of information, its snatches of clear and luminous interpretation of the spirits of those cities and of artistic treasures they contain, and its pretty pictures in color by William Parkinson.

Of less interest to American readers is Miss Lees's *Scenes and Shrines in Tuscany*,³ which contains some clever records of the experiences of an English girl alone in the Tuscan country and among Tuscan folk and some bits of pretty writing on such topics as St. Francis and "Old Madonnas." Much of it is imbued by a naïve grace, to be expected in the utterances of a youthful maiden enchanted in a delectable land, and it will be liked by those who like that sort of thing. Even the hardened reviewer welcomed it after the flood of gush and sentimentality precipitated upon him by Miss Lilian Whiting's book.⁴ A queer hodge-podge, this, of quotations from poets, romancers, painters, sculptors, preachers, professors, statesmen and others who have sojourned in Italy, all intermixed with acres of comment that is trivial or commonplace or inanely obvious, with the narration of well known or utterly unimportant things, and an inconsequential "record of various impressions that gleam and glow thru the days after several visits to the Magic Land."

And the bars should never be lowered to admit the perpetrators of such banalities in text and "illustration" as Mr. Dan Fellows Platt has assembled in *Through*

⁴CITIES OF ITALY. By Arthur Symons. New York: E. P. Dutton & Co. \$2.00 net.

*Italy with Car and Camera.*⁵ The narrative recounts the fast runs and the breakdowns of the writer's motor car, and what he ate as well as what he saw. The reproductions of "snapshots" show either that his camera was a poor one or that he did not know how to use it. In these days when photography is a common practice it is strange that a man who does not know how to use a swing-back or hold a camera level should publish an expensive volume of his views. There are, to be sure, many reproductions of the excellent Anderson and Alinari photographs of famous works of art—but anybody may procure those for himself.

Inability to remember the exact words uttered by poets concerning the scenes he visited in a tour of Italy induced Mr. Robert Haven Schauffler to compile his anthology⁶ of the "best poetry about Italy, from Virgil and Horace to Arthur Symons and William Vaughan Moody." Poems of places are seldom great poems, but many fine and memorable lines have been written about "the land of poetry," and many persons no doubt will welcome a collection of this kind. The book is somewhat bulky for what its editor calls a "pocket friend"; and, as the arrangement of its contents is purely arbitrary, its serviceableness would have been enhanced had the compiler utilized for a good index the few pages occupied by his own and other mediocre verses.

In *The Lakes of Northern Italy*⁷ Mr. Richard Bagot has not attempted to prepare a guide book, with detailed routes and directions for travelers, but rather to supply visitors to the Lombard lakes with some account of the chief characteristics of the beautiful places thru which they will travel. He has succeeded in compressing into a handy little volume (which is appropriately illustrated with beautiful photographs by Sig. Giovanni Negri, of Brescia) a great deal of information about the scenic and artistic interests of the region traversed and concerning its local traditions and history. And his pages are pleasantly written for the most part, tho sometimes

marred by expressions of the insular Britisher's insolent contempt for travelers from other lands—from Germany and America, especially.

Belonging in a different category from any of the foregoing, Mr. Thomas Okey's monumental work on *The Old Venetian Palaces and Old Venetian Folk*⁸ is at once the most important and the most valuable of all these new volumes on Italian themes. This is a scholarly and a thoroly workmanlike book, in which the chief existing examples of old palatial architecture are described, so far as possible, in the order of their erection, and grouped into the three main divisions—Byzantine, Gothic and Renaissance—of their style, and in which the author, presupposing his reader to have some acquaintance with the main facts of Venetian history, draws from the writings of the three great Venetian diarists a detailed and vivid picture of life in the lagoon city during the critical period of its history which elapsed between the closing decades of the fifteenth and the first half of the sixteenth centuries, when the more important and magnificent of the patrician mansions which still survive were building. The fifty illustrations in color by Mr. Trevor Haddon, R. B. A., which are skilfully reproduced, are altogether worthy of the text and help to make the work indispensable for the true lover of Venice.

The Rev. Stopford A. Brooke has loved Venice for many years, he tells us, and believing that "the record of any individual impressions received from her may have the interest which belongs to personal feeling," he has jotted down in his smooth, flowing style his impressions of "the charm and the life which are added to Venice by the presence of the sea," and of "the influence which the sea has had on her beauty, on the character of her art, and on the imagination of those who visit her," and has printed them in a neat little book of 113 pages which he calls *The Sea-Charms of Venice*.⁹

Scholarly in an old-fashioned way, and well written, too, is Mr. Edmund G.

Gardner's *Saint Catherine of Siena*,¹⁰ not the conventional biography of a canonized saint, but a "study in Italian history centered in the work and personality of one of the most wonderful women that have ever lived." Obviously the work of a devout Roman Catholic scholar, not a scientific investigator of history, it is inevitably colored by the habit of mind of the believer. Yet the book is rich in documentary value for the student of the times.

The popularity of Naples with American tourists is evidenced by the fact that all the vessels bound for that port this winter are so crowded that neither love nor money will procure an extra berth. The volume on *The Naples Riviera*¹¹ will be just what many of them will want to take along, for it describes all the favorite resorts, Vesuvius, Pompeii, Amalfi, Capri, Salerno and Sorrento, giving in a pleasant and unpedantic way the Greek, Roman and Italian history which gives these places their deepest interest. The colored illustrations by Maurice Greiffenhagen cannot be commended.

Children's Literature

THERE is no doubt that the editor of this collection of the world's best literature for children* has winnowed thoroughly the field of juvenile books, according to her own tastes; these ten volumes bear witness to the fact, and the introductions to each, however they may slightly tend to reach *down* to young readers in appeal, evince sympathetic insight into the interests of boys and girls; they also display some knowledge of the historical phase of the subject. This much should be said in justice to the spirit of *The Children's Hour*, and, furthermore, a word of warm praise should be given for the agreeable form in which the publishers have issued this series.

Such is the surface view, the first impression of the work. But there is yet a more vital estimate, one which ques-

tions its relative permanence, in the same manner that we would question the absolute value of any librarian's list of books, compiled for children between certain ages. At random, examine the tenth volume, devoted to "Modern Stories." Here are to be found whole pieces of seasoned excellence, "The King of the Golden River," "Jackanapes," "A Dog of Flanders," and a few others. But we do not wish a slice of "Alice in Wonderland," or a section of "Little Women," or a chapter from "Tom Brown at Rugby"; it is unwise to endow young readers with the fragmentary habit.

In the first volume, a varied array of "Folk Stories and Fables" is gathered. Historically we resent the creditable name of Charles Perrault being replaced by the phrase "adapted by Horace Elisha Scudder," especially when Æsop, the Grimms, and Andersen figure so prominently.

Regarding the second volume, the selections are fairly representative of five countries, and it is very noticeable that they are taken from a limited number of books issued by the publishers of *The Children's Hour*. These "Myths from Many Lands" and also "Stories from the Classics" have much of interest in them, tho there is likely to be a difference of opinion as to appropriateness of versions. In one way, we should have been pleased to see something taken from Lamb's "Ulysses," even tho it is, nowadays, not so commonly read as the surprisingly fruitful A. J. Church's adaptations. The other volumes of prose selections are subject to the same criticism.

The sixth volume, entitled "Stories and Poems," is composed of samples from the old writers of the Edgeworth type. Considering that these authors are antiquated in their style, despite their redeeming traits of sentiment, they are still interesting in small portions, and in view of their historical meaning the selections here made indicate some thought. The pages devoted to poems of the Watt-Taylor-O'Keefe period, cover, in part, what E. V. Lucas covered in his "Another Book of Verses for Children."

Finally, the "Poems and Rhymes" are indicative of a definite *genre* of book in the child realm—a conglomerate mass of

verse, good, bad, and indifferent, artificially arranged and totally devoid of the sympathetic handling of a true anthologist. In this extensive collection of reading matter for young people, the librarian will doubtless find much which she already has upon the shelves. Unfortunately she is debarred from purchasing the volumes separately. But for the village library and for the home there is offered a rich choice and variety for "the children's hour."

Ceramics

Books designed to instruct and guide collectors have multiplied of late until there is hardly a branch, bough or twig of industrial art that has not been thoroly written up. But the title of Mr. Wilde's volume, *How to Collect Continental China*,¹ is misleading. The book is really a collection of short histories of the old Continental porcelain factories. With each history the leading characteristics of the factory's output are given, the color of its paste, its style of form and decoration, and its marks. About seventy different old Continental factories are discussed, nearly half of which are or were French, some few of which, like the Sevres factory, being still in existence. The illustrations include specimens from more than two-thirds of the factories under consideration, and they represent the various wares admirably. Not how to collect, but what to collect, and how to recognize the productions of different porcelain factories is the lesson of the book.

Somewhere between the ponderous folios of the catalog of General di Cesnola's collection of Cypriote antiquities and the series of cheap little handbooks issued by the Metropolitan Museum is this *Catalogue of the Morgan Collection*,² a wonderful collection of Chinese porcelain, the most complete and characteristic in the world, which occupies a large room to itself that is to many intelligent visitors the most beautiful and attractive in the whole museum. First printed pri-

vately four years ago this *Catalogue* prepared by Dr. Stephen W. Bushell and Mr. William M. Laffan is now enlarged by a new historical introduction and issued by the Metropolitan Museum. Mr. Laffan is an experienced connoisseur as well as journalist, and Dr. Bushell is the best English authority on Chinese porcelain. The introduction gives the history of the art and is followed by a study of the marks, and a description of 1,115 objects, illustrated with seventy-seven unusually fine halftone plates. It is in every way a choice volume, and we commend it as a hand-book of value by itself, but indispensable to any one who can study these exquisite objects in the presence of the collection itself.

Dr. Barber's neatly bound, well-printed book³ of barely fifty pages is one of the art primers issued by the Pennsylvania Museum and School of Industrial Art. These little volumes are designed as condensed authoritative up-to-date reference books, giving information, in the words of the author, "based upon the latest discoveries relating to the various industrial arts." "Artificial Soft-Paste Porcelain" and "Salt-Glazed Stoneware" have also appeared in this series. Of the fifty-six examples of tin enameled pottery represented in the illustrations all but seven are to be found in the museum of which Dr. Barber is the curator. After introductory paragraphs on the characteristics and origin of this pottery, the author treats of his subject under three heads: Majolica of Italy, Spain and Mexico, its processes, forms and styles of decoration; Delft of Holland and England; and Stanniferous Faience of other European countries with their styles of decoration. Half a dozen pages of makers' or decorators' marks and a two-page chart in which the principal features of tin enameled pottery are recapitulated bring the book to a close. Except for a reference to Babylonian and Assyrian bricks, and to the enamels used by the Arabs, the author says nothing of Oriental stanniferous enamels. The volume will be specially useful to collectors, students and artisans in tin enameled pottery,

which ware, the author tells us, "has never been made in the United States except in an experimental way."

The Gentlest Art. By E. V. Lucas. New York: The Macmillan Co. \$1.25.

As Mr. Lucas strayed with his reader thru London showing his favorite haunts and thereby awakening his companion's desire for much more than was shown, so now this graceful cicerone invites us on charming little excursions here and there in the realm of biography. A collection of letters must be the pleasantest thing in the world to make as it is one

the fine gravity, to Americans so unreasonably diverting. Sir Thomas More's lady writes homely little notes about her grandson that makes the tragedy of that exquisite household a matter but of yesterday. Miss Austin talks to her friend on paper precisely as she talks to her public, and convinces you beyond a doubt of the photographic truth of her stories. Nelson and Macaulay appear where we do not expect them, and Jeremy Taylor comes forth from his seclusion, to show himself a kindly and wise as well as whimsical spirit. It is one of the books where something new

THE COLLAPSE OF A SIBERIAN BRIDGE.
From Barzini's "Pekin to Paris."

of the pleasantest to pick up for an idle half hour. It has the inconsequent quality complained of by the old lady who read the dictionary in course, but on the other hand it has the delicious variety of a handful of treasures brought from an afternoon walk. Lamb and Jeanie Welsh Carlyle, Marjorie Fleming and Thackeray are here, not because a collection of letters would not be complete without them, since no such gleaning of letters ever could be complete; but because no collector could ever leave them out. There are others, however, less known, who are, in these chosen specimens, as delightful. Cicero and Pliny and Seneca show a human quality wholly foreign to the Latin grammar of which they are frequently reminiscent. A little group of letters come from sportsmen, treating their interest with

is always to be found, where, if there be nothing profound, there is also nothing dull.

Pekin to Paris. An Account of Prince Borghese's Journey Across Two Continents in a Motor Car. By Luigi Barzini. Translated by L. P. De Castelvechio. New York: Mitchell Kennerley. \$5.00.

Now, when the automobiles of four nations are racing across this continent on their way from New York to Paris, this book telling of the greatest land journey yet made by any vehicle is of especial interest. It required the true spirit of adventure and sportsmanship of the highest kind to run an automobile thru the Great Wall, over the Khingan Mountains, across the Gobi Desert and Northern Mongolia, around Lake Baikal, and along the Trans-Siberian Railroad

GENERAL WASHINGTON.

Painted by Charles Wilson Peale. Original owner, Joseph Wilson, of Philadelphia and Dublin. Present owner, Charles A. Munn.

until the well-traveled roads of Europe were reached. Leaving Pekin June 10th, 1907, Paris was reached August 10th without serious accident, a triumph of modern invention and Italian enterprise. And the narrative, written by the practiced hand of a journalist, reads with the rush and excitement of the motor ride. It is no wonder that the book this winter was classed as one of the three best sellers in England.

Three Types of Washington Portraits. By Charles Allen Munn. New York: Privately Printed.

As this monograph devoted to the Trumbull, Peale and Stuart portraits of Washington will be seen by few of our readers we reproduce two of its most in-

teresting illustrations, reproductions of paintings in the collection of Mr. Munn and never before published. The portrait by John Trumbull has been known thru numerous early engravings made from it, but the original was not supposed to be in existence, for it had been unheard of for over a hundred years, until it was brought over from London. The Peale portrait became known in 1905, when it was placed on sale in Dublin by James Harrington Wilson of Clifden, County of Galway, who had inherited it from his great grandfather, Joseph Wilson, a merchant of Philadelphia. It is a large picture, measuring 5 feet 2 inches by 7 feet, and seems to be older than the Peale portrait of Washington at the battle of Princeton owned by the University, for it gives the American flag with the thirteen stars in a circle. At his feet are the British standards, and red-coat prisoners are being marched away past the Princeton campus.

The Japanese Nation in Evolution. By William Elliot Griffis, D. D., L. H. D., New York: Thomas Y. Crowell & Co. \$1.25.

Will Orient or Occident eventually win in the world struggle? There is no meaning in such a question, says Dr. Griffis. His chief argument seems to be the admixture of Aryan blood in the Japanese thru intermarriage with the white Ainu who had settled the islands before the coming of the later race, probably from Malaysia. But if the Ainu were really Aryan the extent of amalgamation with the later Malay stock is uncertain. This contention, we feel, amounts to little.

The claim which he so justly makes for respect, sympathy and justice rests on stronger grounds than that of an infusion of so-called Aryan blood. But if racial prejudices still blind many, the white Ainu blood in Japan may prove a sight-restoring salve. The Ainu served best in forcing the conquerors to combine against the common enemy. Here began the evolution of the Empire. Dr. Griffis makes a valuable contribution when he shows how similar to those of the West have been the stages in Japan's development. Unorganized hordes became a kingdom which thru seven centuries of feudalism developed into a centralized empire. Isolation, protecting from the Mongol invasions that swept India and China, fostered that national self-consciousness that ensures the place of Nippon today. Equally vital is the fact that

the present civilization of Japan is one for which she was in large part ready by the force of her own evolution. Already having struggled far toward it, thus alone was she able to assimilate so successfully the new forms. Japan of today is inherently powerful because she is far more an evolution than a revolution. Dr. Griffis discounts so-called differences between East and West. Japan is distinctly non-Mongolian in her greatest achievement—the Samurai, soldier and gentleman in one, in whom culture, art and the noblest ideals of life unite with the fire and progressive spirit of a man of action. Constitutional privileges, public schools and the enlistment of all classes into the honorable ranks of the

PORTRAIT OF GENERAL WASHINGTON.

Painted by John Trumbull, 1780. Original owner, M. De Neufville, of Amsterdam. Present owner, Charles A. Munn.

army have rendered these ideals truly national. And yet it would be too much to assert that similar traits are not to be found among the Chinese. A great deal of ambiguity might have been spared us by more careful writing and a more logical arrangement, but if this book begets a broader view of our neighbors and a fuller sympathy it will be profoundly useful. In the end, the differences between East and West are infinitely less than the similarities. The personal element, Dr. Griffis's own observation on the state of society under the old régime, is the most valuable feature of the work and distinguishes it from the numerous second hand and superficial books on Japan now in the market.

From Sail to Steam. By Capt. A. T. Mahan. New York: Harper & Bros. \$2.25.

It is safe to say that a search thru the active and retired on the navy lists of all the maritime nations would discover no man who, by right of sea experience and proved authorship, should be better able to pen a requiem for sail and a pean for steam than the distinguished author of "The Influence of Sea Power Upon History." But Captain Mahan has rather "missed stays" in the effort. Not that this book is commonplace. It is truly far from that, and if issued under its subtitle of "Recollections of a Naval Life," it is just the kind of episodic, anecdotal, reminiscent biographical sketch that would bring joy to the lovers of naval lore on three continents. But the main title of this book calls for a different treatment than Captain Mahan has vouchsafed. *From Sail to Steam* is not a local subject. The change from sail to steam marks an epoch in world history, and a new order wherever the free winds of heaven blow over blue water, and the flag of a maritime nation flaunts the breeze. The author is himself a sailor of the old "knot and splice" days, and a competent seaman under the machine-shop regime of the new. His foot has trod with authority the fighting deck of the United States frigate which crowned in culminate epitome the long line of water-borne, wind-driven, man-commanded sea fighters, whose beginning predates the gray dawn of authentic history, and whose passing and effacement he is, by title, called upon to fittingly chronicle. As a modern seaman his purview commands all the causes. As an author his skill to deal with them undoubted. And as one of the last of old school sailors he is a direct heir to the spirit and the sea-lore which echoes down the long fighting line from Norse Viking, to Nelson's "Victory"; from British "Henri Grace de Dieu" to "Congress" of the United States of America. Probably the reminiscences have been in course of compilation during many years, and probably they were originally arranged under, what is now the sub-title, "Recollections of a Naval Life." Then comes recasting and revision, and the stirring memories glow thru the ashes of the years. They begin with sail, and end

with steam, and the title is begotten. The gustatory pleasure in the phrase obscures the issue that the readers who only know Captain Mahan as the author of "Sea Power" and "The Life of Nelson," might expect from such a title, when used by such an author, a succinct review of sail history and the tragedy of its merging, instead of an extended and whilom diary of the author's life progress. But the history of every life is interesting, and that of Captain Mahan brims with interest. The son of a brilliant and distinguished father, he starts in life rather shadowed and overborne by the parental personality. He is reticent, introspective and somewhat self-conscious; slow to make friends, thoughtful and reserved. It is to this mental independence and absence of gregarious tendency that we owe the close reasoning and exactitude which mark the great work he has done for the library and his profession.

Leaves from the Notebooks of Lady Dorothy Nevill. Edited by Ralph Nevill. Pp. xi, 359. New York: Macmillan Co. \$3.75.

Lady Dorothy Nevill is of the Walpole family—a family that, as she concedes, has now for many generations scarcely attempted to emerge from the humdrum backwaters of private life; for the founder of its fortunes, Sir Robert Walpole, remains the first and last great politician which the family has produced. But Lady Dorothy Nevill has long had an easily assured place in English society; and these leaves from her notebooks form the second volume of reminiscences which she has published. They differ in several essentials from the ordinary run of English autobiographies; and these differences are such as cannot fail to add to the constituency of readers that awaits a pleasantly written volume of reminiscences. There is in them very little about politics—no side-lights and no revelations. But what there is can be read with interest by people who have not the least acquaintance with English political history in the nineteenth century. There is much about London west of Temple Bar; and much about society in London, when society's bounds were far less extended than they are at the present time, when it is difficult to tell just what people mean when they write or speak of

London society. Lady Dorothy Nevill writes exceedingly well. She has the faculty of making even trivial incidents and experiences of interest; and, above all, she has been a keen observer all thru her long and busy social life, and has taken infinite pains in setting down her observations and getting them into good perspective. When an old custom has disappeared she has been careful to note just when and where it was last observed. Lady Dorothy Nevill has always been an assiduous and systematic collector; and from an artistic point of view perhaps the most interesting of her pages are those in which she describes her experiences in acquiring old English furniture.

The Welding. By Lafayette McLaws. Boston: Little, Brown & Co. \$1.50.

Lafayette McLaws commands a literary style in keeping with the martial ring of her name. The reader of her last story is apt to feel that she might have been christened William the Conqueror McLaws with equal appropriateness. It deals with events and conditions that culminated in the Civil War. And the title implies the author's belief that belligerent States were welded together into a united nation in the red-hot furnace of war. She has the national rather than the sectional consciousness and hates slavery both from the humanitarian and patriotic standpoint. She offers really valuable information concerning social conditions in the South prior to the war, strange contradictions between the will of the people and their more virtuous and delicate sensibility, such as was expressed in the contempt of all classes for overseers and the social ostracism visited upon any man who abused his slaves. The curious half feudal; half democratic state of society is also exemplified by the relations that existed between the lords of the soil and their retainers. The scope of the book, however, is too great. First, one is confused by the mob of characters. Then these are swallowed up in the tremendous vortex of war. The historic rather than the dramatic sense presides over the scenes portrayed. And the fortunes of individuals are subordinated to vast historic movements, so that many famous men figure merely as shadows as

if all the history of that period had been condensed into a hurried moving picture show. This fault, if it can be called a fault, is not so evident in her presentation of mind characters. These are presented with sufficient clearness for the reader to form the illusion of actual personalities, and we are charmed with the hero, who happens to be a Georgia cracker and a *protégé* of Alexander Hamilton Stephens. The love interest is also happily sustained, but the crowning features of the book are the chapters dealing with the Battle of Bull Run.

The Continent of Opportunity. By Francis E. Clark. New York: Fleming H. Revel Co. \$1.50.

The South Americans. By Albert Hale. Indianapolis: The Bobbs-Merrill Co \$1.50

Dr. Francis E. Clark calls South America *The Continent of Opportunity*, altho his presentation of the subject hardly does justice to such a title. Dr. Clark visited eight of the eleven republics of South America, under the auspices of the Christian Endeavor movement, and the opportunity he was seeking was not exactly that which the average man would have in mind, for he writes not for travelers, scientists or business men, but for Protestant missionaries. Dr. Clark's descriptions are never dull and are often relieved in the most pleasant way by a touch of humor; only as the author had no time, in the course of his trip, to wander away from the beaten tracks and to get a glimpse of the byways, those descriptions seldom reveal any new aspects of life or of nature. The same thing could be said of the illustrations which accompany the text. Quite different is Albert Hale's work, both in its scope and in its treatment, tho it is hardly truer to its title than Dr. Clark's book was, for the author's observations only bear upon four South American countries, and we do not find the compendium of South American information which the cover might lead one to expect. For several reasons, however, this book deserves careful reading. It is something more than one man's opinion of South American scenery and morals. Not only does an extended residence in the countries which form the subject matter of the

book impart to the author a certain authority, but, besides, Mr. Hale produces an imposing array of facts and figures to substantiate his statements. In order not to overburden the text, all figures, statistics and maps are presented in the form of a synopsis preceding each division of the volume. In the closing chapter, devoted to a discussion of the Monroe doctrine, there is a laudable attempt at treating with impartial fairness all South American questions, and at determining to what possible extent geographical and climatic conditions account for the existing differences between the Anglo-Saxon and the Latin-American point of view in religion and ethics. To quote the author:

"The book has been written with a North American pen, but I have looked thru South American eyes while writing it . . . and if I can arouse sympathy for our neighbors and appreciation for . . . the idealism which is as much alive in them as it is in us, I shall be content. . . ."

The book is too obviously made up of miscellaneous magazine articles written at various periods and loosely connected with each other. Still it makes easy and interesting reading and the illustrations are generally original and well selected.

Leading American Soldiers. By R. M. Johnston. New York: Henry Holt & Co. \$1.75.

This is a collection of biographical sketches of Washington, Greene, Andrew Jackson, Taylor, Scott, Grant, Sherman, Sheridan, McClellan, Meade, Lee, Johnston and "Stonewall" Jackson. The sketches are admirably written, for they are concise in statement, they are generally careful as to fact, and, on the whole, are judicial in tone. In the treatment of Lee and "Stonewall" Jackson the strain becomes somewhat rhetorical at times, but it quiets down with its other subjects and is, perhaps, best in reciting the merits and demerits of Grant. Naturally in a book so crowded with judgments, there are many to which exception will be taken by the readers here and there. The contrasting of the "good judgment of men" possessed by President Davis with the "poor judgment" frequently shown by Lincoln will, no doubt, be taken humorously; but there are other

judgments more likely to awaken serious criticism. The attempt to say all that can be said for McClellan leads the author frequently into direct or implied censures upon Lincoln. There is an unwarranted depreciation of Meade's generalship at Gettysburg; the author may find a better estimate in Gen. E. P. Alexander's "Memoirs." It will be safer, too, to take Higginson's computation of 88,000 and 75,000 as the respective strength of the Union and Confederate armies at Gettysburg than the figures given here. The figures of the Chattanooga battles are still wider of the mark. Despite the generally painstaking carefulness of statement, there are a number of details of this sort that are faulty. Yet for a clear and vivid presentation of the personalities and achievements of some of America's leading soldiers it is a book to be highly commended. The volume is the first of a series containing brief biographies of Americans distinguished for their achievements in science, literature, politics, etc. They are written in a popular style and especially suited to public libraries and schools.

The Elimination of the Tramp. By Edmond Kelly. New York: G. P. Putnam's Sons. \$1.00.

Few books now appearing, even of this "Questions of the Day" series, have the timeliness of this. The number of unemployed men in New York City at the present time is probably about 150,000, and some other localities have an even larger proportion. Part of these are of the chronic vagrant class who should be made to work for their own support; others would be glad of a place where they could go and work for their keep until times improve. Mr. Kelly finds a solution of the problem in labor colonies which would provide work and subsistence for both classes in separate divisions. He has personally studied the Dutch, Belgian and Swiss colonies and developed from them what seems to be a very practicable plan adapted to American conditions. He would have them established on waste land in the neighborhood of large cities and make them as far as possible self-supporting thru agriculture and the manufacture of articles needed by State institutions.

Literary Notes

....The Cole Lectures for 1903 on *The Religion of the Incarnation*, delivered at Vanderbilt University by Bishop Hendrix, of the Methodist Episcopal Church, South, are now published by the Fleming H. Revell Co. (\$1.00 net).

....It is announced that Frank A. Munsey has acquired control of the *Baltimore News*. In twenty-five years Mr. Munsey has built up a publishing business which now includes *Munsey's Magazine*, *The Argosy*, *The All Story Magazine*, *The Scrap Book*, *The Railroad Man's Magazine* and *The Live Wire*. Mr. Munsey also owns the *Boston Journal* and the *Washington Times*.

....The combined issue of *Putnam's* and *The Reader* for March has just appeared. It contains 126 pages of reading matter and 96 pages of advertising, together with an index, which is a substantial increase over the usual size. The presswork by The Knickerbocker Press is excellent. With this additional circulation *Putnam's* will now rank among the foremost American magazines.

....Justin McCarthy, as a former editor of *THE INDEPENDENT* and still one of its regular contributors, has many friends among our readers who will be glad to know that a new edition has appeared of his *Short History of Our Own Times*, covering the entire reign of Queen Victoria. This is a condensation of his five volume "History of Our Own Times" and is the best single volume history of modern England to be had.

....Dr. Hilling, of Bonn, has written a useful handbook on Canon Law, entitled *Procedure in the Roman Curia* [Joseph Wagner, publisher, New York], on the various Roman congregations and on the forms of procedure observed in them. The volume gives specific directions as to the manner in which to bring business before these tribunals and the rules according to which their decisions are to be interpreted. Naturally the general reader will care but little for this sort of thing; still it gives one a new insight into the practical workings of that world-wide system of ecclesiastical legislation which centers about the Roman See. Some of the "faculties" to be obtained at Rome hardly advance the prestige of Catholicism, for example, the privilege of blessing girdles in honor of St. Philomena, for St. Philomena never existed.

....*Discoveries in Hebrew, Gaelic, Gothic, Anglo-Saxon, Latin Basque, and other Caucasian Languages*, showing fundamental kinship of the Aryan tongues and of Basque with the Semitic tongues. By Allison Emery Drake. 8vo. Pp. vi-402. Denver, Col.: The Herrick Book and Stationery Co. \$6.00 net. The title is startling and indicates the purpose of the book, which is a revolt from the scientific principles of comparative philology and a return to the easy scheme of a hundred years ago which compared Hebrew roots with any Greek or Latin or English word that had a similar sound, as when Gesenius compared

the Hebrew *kaphar* with the English *cover* (from Latin *cooperire*). This volume is a long list of Hebrew and other words compared with Gaelic, Gothic, Latin, Greek, Sanskrit and even Basque, in which last language he takes special pleasure. Thus he finds Hebr. '*echad*, one, related to Gr. *hekaton*, a hundred; Hebr. '*anosh*, man, to *hench-man*; Hebr. *zar*, stranger, to Latin *extra*; Hebr. *lun*, to sojourn, to *London*; Hebr. *cheiq*, bosom, to English *hug*; and *tamar*, a palm-tree, to English *timber* and Latin *domus*. With such limber license of comparison and all the dictionaries to resort to, any conclusion desired can be reached, and would justify the definition of comparative philology as that science in which the vowels count for nothing and the consonants for very little.

Pebbles

THE other day as Farmer Corntassel's brindle cow was walking into the barn, she slipped and strained her milk.

"LADIES and Gentlemen," is the phrase
In years of three hundred and sixty-five days,
But Nineteen Hundred and Eight is when
The Ladies are after the Gentlemen.

—*Harvard Lampoon*.

THE TEDDY-DIDS.

Who broke the Knickerbocker Trust
And robbed us of our hard-earned dust?
Teddy-did! Teddy-didn't!

Who smashed the market all to bits
And put the railroads on the fritz?
Teddy-did! Teddy-didn't!

Who squeezed the water out of stocks
And put us in an awful box?
Teddy-did! Teddy-didn't!

Who spoiled the railroad looter's plan
And tied a can to Harriman?
Teddy-did! Teddy-didn't!

Who led the government attacks
That gave old Confidence the ax?
Teddy-did! Teddy-didn't!

Who wrote a riot act and read it?
Who knocked the stuffing out of Credit?
Teddy-did! Teddy-didn't!

Who said a thousand things he shouldn't?
A thousand things that others wouldn't?
Teddy-did! Teddy-didn't!

Who said, in accents low and firm,
He wouldn't take another term?

GRAND CHORUS.

Teddy-did! Teddy-didn't!
He-did! He-didn't!
He-did! He-did! He-did!
He-didn't! He-didn't! He-didn't!
He-did! He-didn't! He-did! He-didn't!
He-didn't!
He-did!

—*Puck*.

AUGUSTUS SAINT GAUDENS.

A Deserved Tribute to a Great Artist

THE leading artists, sculptors and art lovers, including members of the National Arts Club, the National Academy of Design, the Fine Arts Federation, the National Sculpture Society, the Municipal Art Society and the American Water Color Society, gathered at Mendelssohn

Hall last Saturday afternoon to do honor to the late Augustus Saint Gaudens. The memorial meeting was under the auspices of the National Arts Club, and Spencer Trask, its president, presided. Mr. Trask referred to the exhibition of the works of Saint Gaudens at the Metropolitan Museum of Art, which opened to the public on Monday, as "the largest and most complete exhibition of the works of

one man ever shown in America." High tributes were paid to the creator of some of the greatest monuments ever moulded by one man, notably the Peter Cooper and Sherman statues in this city, the Shaw memorial in Boston, the Puritan in Springfield, the Logan and the Lincoln in Chicago and the Shaw memorial in Washington. The Sherman statue, unveiled on May 30th, 1903, and here reproduced, ranks, according to Kenyon Cox, as third in rank of the great equestrian statues of the world. His nude "Diana," a detail of the tower of the Madison Square Garden, is a beautiful piece of work and well adapted to the purpose it so well serves.

Perched on its dizzy hight, this "Diana" with its well conceived and happily executed drapery, is well known to every one who has ever been in New York City. His designs on the new United States gold coins, introducing the so called "trouserred" eagle, but which follows the classic models of the ancient Roman coinage, have not yet become as familiar to the masses as they might be. Saint Gaudens had a summer home at Windsor, Vt. His fame as a sculptor is secure.

A masterly oration on Saint Gaudens was delivered by Mayor McClellan. An original poem was also read by Richard Watson Gilder.

THE SHERMAN STATUE AT THE CORNER OF CENTRAL PARK.
By Augustus Saint Gaudens.

The Independent

Entered at New York Post Office as Second Class Matter.

Publisher, Clarence W. Bowen.

Owner, The Estate of Henry C. Bowen,
130 Fulton Street, New York.

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Mr. Carnegie's Freight Rates

MR. ANDREW CARNEGIE contributes to the *Century Magazine* an interesting account of his experience, as a manufacturer, in dealing with railroads and concerning rebates. It begins with his work, in 1856, as the secretary of Thomas A. Scott, then superintendent of the Pittsburgh division of the Pennsylvania road, and the record is brought down to include Mr. Carnegie's agreement for the extension of the Gould lines to Pittsburgh, which immediately preceded his retirement from business. While the entire article deserves to be read carefully by all who would trace the development of railway rate methods, we desire now to speak only of what Mr. Carnegie has written about the rebates said to have been given to his steel company.

In May, 1906, there was published in one of the magazines an article by James Creelman, containing a report of an interview with the late President Cassatt, of the Pennsylvania road. Following this interview, the author set out to relate Mr. Cassatt's experience concerning rebates, ascribing to him the assertion that when he assumed control of the road, in

1899, he found that the greatest of rebaters, so far as his company was concerned, was Mr. Carnegie, and that the latter, when these rebates were discontinued, became angry and threatened to injure the road by constructing competing lines. When this was brought to the attention of Mr. Carnegie, who was then on the ocean, he replied by wireless telegraph as follows:

"Strange that I, who fought the Pennsylvania road most of my career, should have been favored. Was with Vanderbilt building South Pennsylvania to Pittsburgh, with Gould, getting Wabash into Pittsburgh; built, myself, the Bessemer road to Pittsburgh from Conneaut—all to compel the Pennsylvania Railroad monopoly to give us rates equal to those obtained by competitors outside its grasp. Never asked for anything better. Cassatt is entitled to credit, doing more than any other railroad official to establish equal rates for all by reducing extortionate rates of his predecessors and inducing other railroad systems to advance theirs."

In support of Mr. Creelman's assertion, First Vice-President Green, of the Pennsylvania road, said, two days later:

"Our records show that the steel companies governed by Mr. Carnegie received more rebates, during the time when rebates were given by our road, than any other shipper in any line of business."

Mr. Carnegie now does not refer to these assertions or reports, but his account of what took place explains the whole matter. It appears that Pittsburgh manufacturers were at a disadvantage because their rates were higher than those given to competitors elsewhere for a much longer haul. For this reason a Chicago competitor was able to underbid him for material to be delivered at Newport News. When the Pennsylvania road ignored his protests, he began to build a line to Lake Erie. This induced the Pennsylvania to ask for a conference, at which Mr. Carnegie produced proof of "the secret rebate rates prevailing elsewhere" and on other roads. The result was an agreement with President Roberts that Mr. Carnegie should have "at all times rates as low as those which competitors on other lines were paying on the same articles for similar distances."

This agreement, which required Mr. Carnegie to refrain from building competing lines (the road to the Lake ex-

cepted) was in force until Mr. Cassatt "returned to power." Mr. Carnegie shows, as follows, how the adjustment of rates in accordance with the agreement involved deductions which may have appeared to be rebates:

"I was in Europe when he [Mr. Cassatt] changed the coke and other rates, not knowing the details of our agreement with his predecessors. All that we asked and obtained, as I have explained, was the same rates given by other lines to our competitors, and nothing lower than those. It was impossible, I am told, for the railroad company to do anything, however, but charge the regular rates on some of our shipments as made, and at the end of each month to compare these rates with any they had given to others, or which we could show their competitors had given to others, for similar traffic.

"Therefore, the necessary deductions, if any, that had to be made to us might be considered in one sense technically 'rebates' upon the higher rates charged, altho not such in any true sense; for the net result to us was that, according to the agreement, we got just the rates that the Pennsylvania Railroad officials were satisfied our competitors were paying in other districts over other lines. Thus we were given, as it were, the 'most favored nation' clause, nothing more."

This is a chapter in the business career of one who was for a long time one of our greatest shippers of manufactures, and to whose differences with one of our greatest railroad companies some are accustomed to trace the creation of the greatest of the world's industrial corporations. Mr. Carnegie, who was at variance with President Cassatt in transportation questions after the termination of the rate agreement, warmly commends him for his labors in the promotion of railway reform. It is noticeable also that Mr. Carnegie's experience leads him to support Mr. Roosevelt's railway policy and to predict with confidence that not only freight rates, but the issue of stocks and bonds, will be subject to the approval of a national tribunal "which is to be our Industrial Supreme Court."

The Unemployed

THE brevity of this editorial is inversely proportioned to the magnitude of the subject, and directly proportioned to what we and the rest of the world know about it.

All kinds of wild statements and a limited assortment of wise ones are finding

their way into print about the number of the unemployed in American cities, and especially in New York at the present time. From the estimate in *Charities*, placing the unemployed in New York at 35,000, to that of Mr. Bruere, general agent of the Association for Improving the Condition of the Poor, that there are at least 90,000 unemployed union men, and as many more unorganized laborers in this city, the margin of error is wide. It is sufficient to say, however, that the *Charities* estimate, unless it is meant to apply to vagrants only, is worthless. All other estimates, including that officially issued by the Department of Labor at Albany, agree closely with Mr. Bruere's figures. The trade unions themselves reported for the month of December that 34 per cent. of their men were idle. Inasmuch as the unions do not class a member as unemployed if he has as much as two days of work a week, and do not aid him if he has one day a week, these figures show a serious state of affairs.

From organizations engaged in relieving destitution, the appeals to the public for aid are more urgent than we remember them to have been for a generation. Individuals who know the situation well privately remark that there has been no such distress in New York City for at least thirty-five years.

In view of these facts attempts to minimize their significance, and the careful avoidance by the daily press of all serious discussion of them are childish and mischievous. Not in the least mischievous, because nobody with brains in his skull is deceived, but excessively silly and tiresome, is the reiteration of the charge that the attempt of the national and State Governments to make corporations obey the law of the land have brought upon us all this misery. The simpletons who believe such stuff should provide themselves with a few recent issues of European newspapers and magazines. They will find that the American situation is paralleled in London, in Berlin, and in Milan.

The one fact that cannot be blinked or dodged is that an increasingly large percentage of mankind is outside the margin of economic safety. When times are booming, it finds employment at living wages, which, however, do not pro-

vide for contingencies. As often as the lean years come, this ragged edge of the wage labor class is unhesitatingly dropt from the rolls and thrown upon the tender mercies of the charitable.

What are we going to do about it?

Anarchists Again

WE have not believed, and do not believe, in punishing and exporting anarchists whose anarchism is of that purely theoretical, that mild and harmless variety which Tolstoy preaches; that which declares that there ought to be no law, no prisons, no forcible repression of crime, but that everybody ought to be good without law. But we do support the law which punishes or deports criminal anarchists; men who not simply disbelieve in law, but oppose law by violence, who use bombs and pistols and dirks, and create mobs, and who stir up the unregulated people to acts of disorder and murder. They are madmen, not safe to leave at large, whether public speakers like Emma Goldman, or conspirators and assassins like the Italian who shot the priest at the altar the other day.

Whether or not that assassin was one of a band of assassins may not be fully settled, but it looks probable, and the police must investigate that matter to the bottom. The fact that he had been driven out from one country after another looks that way. There are these assassins, bred in the Latin countries, who hate the Catholic Church, and believe the priests to be the enemies of the people. This priest is not the only one threatened with death in this country.

The circumstances of that murder were most significant. He was killed at the altar, while the assassin was taking the wafer from his hand. The priest died in the prosecution of his most sacred priestly duties, and it is not strange that he is proclaimed a martyr. And Father Heinrich was just as truly a martyr to the faith as was any one of those who were slain in the Decian persecutions, for he was slain for being a Christian priest, and for nothing else. There was no personal animosity toward him; the anarchist Giusippi did not know

him even, only knew that he was a priest, and so he slew him. It is just as right that Father Heinrich should be canonized as a martyr saint as that the honor should be accorded to any one of those of old who, thru the baptism of blood, gained the red crown of glory and the name of saint.

The American people believe in free speech, but they do not believe in that sort of free speech which incites to murder. Public meetings called to honor assassins who have died at the hand of the law, or to denounce the conditions of legal society, and declare that officers of law, or certain classes of citizens, ought to be killed, or that in any other way the regular operation of law should be violently resisted, are not peaceable meetings and should be interdicted, even as the law provides. Law must protect itself, for law is the will of the people, and the will of the people must stand. So foreign anarchists should be deported, and native anarchists forbidden to preach a gospel of murder, and their meetings should be suppressed, but with discrimination and intelligence. In a land of freedom, where the people rule, there is no excuse for anarchism.

The Unification of Humanity

IN a late able paper the distinguished scholar, Alfred R. Wallace, to whom is yielded rank with Darwin as the earliest promoter of the doctrine of evolution, argues that we have no evidence that the most advanced human races are, in essential mental structure, superior to those of the earliest primitive barbarism. He tells us that it is only conditions that make them seem so superior; that we stand on a higher hill, but are no taller; and that the pre-eminent discoverer of those prehistoric days accomplished as great a task when he invented a fishhook or a needle as does the Franklin or Morse of today. Further, he tells us that of the present races of man we can bring no evidence to prove that any one is essentially inferior to another in mental endowment; that all have the same intellectual structure, and that, under favorable circumstances, any one may rise to the level of the highest, and from any one may originate any highest genius,

This is no more than the Christian religion has long ago taught us, that we are all of one blood. But the Christian religion has added to it the prime duty to achieve the proof of this unity of humanity by attempting the task of the unification of humanity. There are ethnologists who would regret the accomplishment of this task. They desire to see tribes left in savagery, so that they may study survivals of lower conditions; but Christianity declares that the best of knowledge and development is for all men, that the gospel of growth is to be preached to every creature until all shall know God and all shall have the blessings of Christian civilization.

All the movements of art and science and commerce are aiding Christianity in this purpose. Commerce is blindly following religion. The trade and the missionary go, not hand in hand, but in the same direction. The world is smaller than it was, and men and nations are closer together. The steamship, the railway, the telegraph, the telephone are tying people together, and each wire and rail and screw is preaching the doctrine of the unity of humanity and helping its unification. Christianity went fifty years ago to Japan and proclaimed the truth that we are all brothers. Then trade came and learned that it could do nothing by the doctrine of superior arrogance and contempt, but must buy and sell on terms of equality. The two together taught the world that the Nipponese were only hidden away and belated, simply sleeping, and that awakened, brought into the stream of progress, they are equal to the best of the human family. What we have learned of Japan we are beginning to find proof is true of China; and we shall find it true, for we are making it true, of not only the Philippines, but of every race, yellow, red and black.

But what we call the Christian nations are very slow to accept in its full measure this mighty truth of science, of commerce and of religion. Those on the top of the hill look down on those below and from the distance imagine that they are pigmies. So they despise them, call them barbarians, inferior races, and would make them slaves. So in Mississippi and in Cape Colony they make laws to hold men down, "in their place," who are in

all native ability equal to themselves; and when, for it must be so, these races feel the power of civilization, education, and religion, and try to rise, the stronger puts a special weight upon them to hold them down, tells them that their inferiority forbids that they shall ever have the equal rights of the superior race, but must remain ever the bottom sill of society.

But this will not long be so. The tremendous forces of science, commerce and religion are all drawing in tandem, religion the leader, to advance the most belated and undeveloped of peoples, and to accomplish the unification of humanity, despite both the ethnologists who delight in picturesque nakedness and savagery, and the barbarians of civilization, who would shut all but themselves from the higher rights of man. The triple team pulls steadily forward, and equality of privilege is sure to prove the unity of man.

Insurance Superintendent Kelsey

WE believe that Otto Kelsey is unfit to be Superintendent of Insurance for the State of New York, and we regret that a majority in the Senate at Albany, exhibiting an almost contemptuous disregard for the recommendations of Governor Hughes, have voted to keep him in office. There is no evidence that the man is corrupt, but his incompetence has been established beyond room for doubt.

The best man that can be found for the place is needed at all times in a State whose insurance interests are so great as to be of national and even international importance. Especially have the services of such a man in the Superintendent's office been required since the Armstrong committee's memorable investigation and the enactment of laws designed to prevent the abuses which that investigation brought to light.

This has been clearly seen, of course, by a Governor of the highest character, who conducted that investigation and therefore is exceptionally well informed as to what the conditions demand. But his good purpose has been thwarted this year, as it was in 1907, by a combination of political legislators. It seems to us that the great insurance companies might

well have assisted him. It is for their interest that the office shall be held by a Superintendent whose competence and honesty will inspire public confidence.

After Governor Hughes's first failure to procure the removal of Kelsey, the people came to his support and compelled the adoption of other measures, then pending, in his program of reform. They should exert their influence again now. Unfortunately for the Republican party, however, their disapproval of the Senate's course will probably be shown this year not by protests addressed to their representatives in the Senate, but by their votes at the polls. The fifteen Republican Senators who joined hands with McCarren and Grady and the followers of these two men to defeat the Governor have done what they could to imperil the success of their party at the coming election.

An Atrocious Charge

DR. ALLAN McLANE HAMILTON, of this city, who has reputation as an alienist, and is one of the profession frequently called on to give satisfactory testimony in legal cases in which sanity or insanity is averred, has been quoted for a considerable time in clubs and in certain political and financial circles hereabouts as expressing the opinion that President Roosevelt's strenuous activity in urging the necessity of correcting various abuses is evidence of incipient paranoia. This has been a very acceptable delusion on Dr. Hamilton's part, and quite comforting to the conscience of men who do not like to be held up as undesirable citizens. But altho certain journals have publicly taken Dr. Hamilton's cue so far as to talk of the President's conduct as "madness" and "insanity," it was hardly to be expected that Dr. Hamilton would put the charge in print. He has not done it directly and by name, but by purposed implication, so that no reader of his article in *The North American Review* could fail to understand what was his meaning. Under the title "Psychopathic Rulers," in an article not fit to be printed, he gathers those characteristics of President Roosevelt which his newspaper critics find in him—his tireless energy, his self-confidence,

his denunciatory language, and the frequency of his coming before the public in messages on various subjects—and declares that these are the signs of psychopathic tendencies. Seeing that he includes in the list of such men "the Peter the Hermits, the Luthers, the Savonarolas," among those who have fascinated others "after having been themselves first of all fascinated by a creed," he leaves his unnamed target in no bad company; but we can imagine scarce anything more illegitimate and discreditable than to put before the country such insinuations with the purpose to injure the President of the United States.

Particularly discreditable is it when it is known that Dr. Hamilton may have personal reasons for his antipathy. On September 8th, 1903, the *New York Herald* reported that Dr. Hamilton's son had been tried by court-martial in the Philippines and sentenced to dishonorable dismissal from the service of the United States. The same paper also reported that Lieutenant Hamilton's father was trying to persuade the President to cancel the sentence and restore his son to the service. This the President did not do; but, probably because the young man's military record had been creditable, he so far listened to Dr. Hamilton's earnest appeals as to allow the son to resign instead of being dishonorably dismissed, and the resignation was accepted. The press and the public put this and that together. They may say that one who has long brooded over imagined personal injury may himself have got his brain turned, have lost his mental sobriety, and become morbidly suspicious. Under such a condition we might explain this article, but we do not in fact refer to mental irresponsibility such an article as this, and in it such intended applications to the President—it is impossible not to see the intention—as are found in the following extracts. Speaking of a psychopath he says:

"His ideals may be high enough, and he may strive to cultivate a personal altruistic life, yet his studied desire to help and reform others often ends in mischievous disregard of those who do not need development or protection or correction, and he may even be looked upon as a 'mischievous meddler.' Should he be invested with power, he may imperil the peace and safety of those over

whom he rules. . . . An erroneous fixt idea, no matter how lofty, if irrational and obstinately entertained, may be highly dangerous in its consequences, as all psychiatrists know."

"When their psychosis has developed sufficiently, it may be expressed by expansion, and false and exaggerated ideas of personal power; by . . . a futile attempt to correct the abuses supposed to exist by the person of diseased intellect. . . . Psychiatrists are familiar with such defects, for there is a well-known disorder called *paranoia reformatoria*, which is expressed in erratic attempts at social betterment when none are needed."

"They are obsessed by the *cacoethes* both of *loquendi* and *scribendi*, and the literature of the insane furnishes us with striking examples of verbosity. . . . Specimens of the writings of the expansive insane are not only redundant in exalted phrase and florid rhetoric, but in energetic invective as well!"

Having thus described the paranoiac with the reformatory craze, he applies it to "psychopathic rulers" in a republic:

"There is a great danger attached to all republican forms of government, no matter in what part of the world, where new presidents are chosen every few years, about whose antecedents and mental health little is known.

. . . An entire country may be exposed to the gravest consequences thru the unrestrained influence of an irresponsible demagog, who may even impress others by his apparently lofty, but really visionary, ideas."

The danger, Dr. Hamilton tells us, is enhanced by the undisciplined, restless, mob-like character of so many of our people:

"No longer does reasonable contentment prevail. The strenuous and extreme life of excitement and unrest is expressed in general discontent and the alleged interference with the rights of the unreasonable workingmen, who in turn find warm sympathizers in high places. What is really wanted is an example of unquestioned dignity, and the logical and unvarying administration of justice which requires absolute mental lucidity and poise. The power vested in a President of the United States is so great that if there be not sanity, self-control and self-respect, and a regard for the rights of every one, its immoderate and irrational use may be readily directed in a way which may be compared with the tyranny of any of the worst monarchs of other ages. . . . The investiture, therefore, of power in an unstable person is likely to lead to an abuse of privilege and a quasi-delusional assumption of the right to regulate in an arbitrary way the affairs of a great nation with a total disregard of individual rights."

If Dr. Hamilton imagines that he could conceal his purpose in these general statements about Presidents he exhibits an unbalanced mentality. There is no occasion for such an article unless it

is aimed where every reader of intelligence will understand it to have been aimed. Our Presidents have been sane men, from Washington to Lincoln, and from Lincoln to McKinley. President Roosevelt has earned the hatred of a class of unprincipled rich men, and of aristocrats who despise the "unreasonable workingmen," and it is not strange that so earnest and effective a denouncer of corruption and unfair privilege should be called insane, but it is a sad exhibition of personal spleen and class arrogance which seems to be displayed in such an atrocious charge by a member of a self-respecting profession.

The Journalistic Style

THE chief characteristic of modern literature is the development and dominance of the journalistic style. Newspapers form such an overwhelming preponderance of the printed matter produced and read that the form of language used in them has gradually affected all branches of literature. Both writers and readers are trained in this style. A large proportion of our authors in all lines have served an apprenticeship in newspaper work of some sort, and almost all of us read so much journalistic writing in periodicals and books that we become somewhat impatient of a style requiring a more sustained attention. We have to shift our thought gear in changing from the prevalent sentence form to the older classical standard, and this requires a certain effort.

The journalistic style aims at the triple economy of time, space and attention. The object of the old style was to hold the reader's attention until he had received all the information the author desired to impart to him. The object of the journalist is to convey as much information as possible without holding the reader's attention. In the first case, therefore, all the qualifying clauses and phrases are worked in as the sentence goes along, so that by the time the reader has reached the end he has the complete thought in mind in its proper proportions and relations. The sentence has to be swallowed whole; you cannot bite off a piece of it to suit yourself. The common example of the rhetorics is the "Satan-

exalted-sat" sentence of Milton. We inherited it from both sides of the house, the classical and the Germanic languages. But only an inflected language is suitable to such sentence construction in its extreme form, and as we dropped the inflections we necessarily simplified the structure. Even in Germany, without change in the language, there is a marked tendency recently in the same direction.

The journalist reverses the Miltonic form, putting Satan first. Instead of withholding his clue as long as possible, he puts it at the head of the column. He tells his secret in the first breath. He develops his "story" like a Wagnerian score, first giving the leading motive in brief and simple phrase, then repeating it again and again with variations and increasing complexity. Those who are unfamiliar with the technique of newspaper writing would find it interesting to analyze the structure of some important article in a well edited daily. They will find that the gist of it is repeated four or five times in a continually expanding form; first in the headline of four to ten words, second in the subhead of ten to twenty words, third in the first paragraph of one to two hundred words, and fourth in the main article of a thousand to ten thousand words. The sonnet has not so rigid a form; it is more like constructing a word-square puzzle, for even the number of letters used in the headings are fixed within narrow limits by the typographical rules of the paper, and it requires marvelous ingenuity and versatility of vocabulary to avoid verbal repetition in telling the same story over so many times. The ordinary office rule that every headline must contain a verb in some form proceeds from the desire to make it tell the whole story, not merely what the story is about.

The journalistic sentence is constructed on the same principle as the journalistic article, that of gratifying the reader's curiosity at once, not keeping him in suspense. The question of the relative merits of the two types of sentence is essentially the same as that which has been interminably debated, of whether the adjective should precede the noun, as in English, or follow it, as in French. Is it more convenient and logical to say "a

black horse" or "a horse black"? In favor of the latter it is argued that the reader should know first what the writer is talking about, a horse, then he is ready to be told what color it is. On the other side Spencer holds that if one puts the horse first the reader conjures up a vision of a horse which is necessarily of some color, and if it happens to be white he has to go to the trouble of changing it. The classical sentence-form is based upon the English principle of getting the qualifications first; the journalistic follows the French method.

The reason why so many people find Henry James difficult to read is because they are used to the journalistic style and he carries its opposite to the extreme. Take, for example, this sentence from his last story in the *March Harper's*:

"With his thick, loose black hair, in any case, untouched by a thread of gray, and his kept gift of a certain big boyish awkwardness—that of his taking their encounter, for instance, so amusedly, so crudely, tho, as she was not unaware, so eagerly too—he could by no means have been so little his wife's junior as it had been that lady's habit, after the divorce, to represent him."

There is not the slightest ambiguity about this sentence. If it is not clear at first reading it is because it is necessary to get the whole sentence in mind in order to grasp its meaning. To contrast with this we take the first sentences in today's *New York Times*:

"The Italian Zusta and French De Dion cars arrived in Chicago in the New York to Paris race at 6:32 and 6:33 last evening. The Zusta left Michigan City, Ind., at 8 o'clock Tuesday night, and the De Dion an hour earlier. An escort of 100 automobiles, accompanied by a brass band, went out from Chicago to meet the two cars."

This is a fair sample of the ordinary journalistic style, conveying a large amount of detailed information with the least possible strain of attention. If the reader thinks it is easy to write that way let him see if he can put the same facts into less space without making the sentences more complex in structure and therefore harder to read.

The modern tendency to do away with punctuation marks is due to the prevalence of the journalistic style. Colons and semicolons are replaced by periods. Parentheses and dashes eliminated, and

even commas are not often necessary. Sometimes we see half a column with no punctuation except periods. The subjunctive mood is disappearing, altho much of the matter in the newspapers could be more properly put in it as being hypothetical, conditional, future or contrary to fact.

On account of these limitations and simplifications the journalistic style is apt to be dry, monotonous and mechanical. It looks like a brick wall. To read it aloud is like riding over corduroy. But it has the merit of the straight street. It takes the shortest distance between two points. It is one of our modern labor-saving devices. And on account of its convenience it has increased in popularity until fiction, history, biography, science, essays and even poetry have been influenced by it. Compare Johnson's "Rasselas" with Kipling's "Light That Failed" or Gibbon's "Decline and Fall" with Herbert Paul's "History of Modern England." But economy is not the only object of life, and it would be deplorable if the journalistic style should get a monopoly of the language.

Take Care of Your Own Town

A PEOPLE whose political interests cover a continent are likely to overlook the importance of local affairs. The ambition of a good citizen should be to create a completely furnished town. In this way the civic and political unit is kept sound. Worcester, Mass., boasts an art school so superbly endowed that the directors do not know how to use the money at their command. With one hundred and twenty thousand population, this art school has an endowment of four millions of dollars, besides a large tract of land. This instance should not stand so completely exceptional as it does. In fact every town in the United States should be made not only beautiful by its citizens, but wealthy as a political organism. If wealth is scattered, or donated to an institution at a distance, the donor cannot associate his benevolence with the home sentiment. The town is the home, and should be as sacredly considered as the smaller homestead.

What can one do for his own town?

He can certainly do something far better than fighting evil; he can build the useful and the beautiful. Among the farmers' best proverbs is "Hoe the corn, and the weeds will take care of themselves." Prohibition has no value beside permission and encouragement. A good ball-ground donated by a kindly spirit, and looked over by the donor, can be made the very expression of manly sentiment among the boys of the town. We know one man who is called the town father, altho he is not yet in middle life. He gets his title from his determined effort to give the young people what their youthful spirits call for, while by his kindly zeal he is able to suppress the evil associations commonly associated with gaming fields. That man's spirit quietly governs and educates all the young people of the town. He is a force by himself—a sort of superintendent of education—without being a nominal teacher.

A town school, gathering to itself all the forces that have heretofore been scattered among a dozen district schools, has fortunately become the rule all along the pioneering path of the Puritans westward. Such a building, if placed in the center of several acres of ground, where the garden school idea can be developed, does for the town what the old school system was incapable of accomplishing. It not only develops a new sort of spirit in the young people, making them workers as well as thinkers, but the commodious building becomes a center of town thought and effort. Those who create town libraries should invariably associate them with the school. It is unwise to duplicate expenses, but it is still worse to fail in creating a town center. The school building should be the very heart of public effort and thought.

A town tree-planting association is needed everywhere. The first organization of this kind on record, was in Clinton, Conn.; and this was followed by a second in Clinton, N. Y. These organizations have been in existence for nearly fifty years, and they have done a vast deal in the way of making their towns centers of refinement. They are constituted of the more enterprising and cultured people, who meet once a month, rotating in succession to their several homes. After luncheon upon such fruits

and vegetable products as the season affords, and after discussing these, the afternoon or evening is occupied in consideration of town improvement. Both of these towns have become notable, not only for their admirable avenues but for their well-planted homesteads. The best methods of culture, and the introduction of rare trees and shrubs, are always prominent topics. An association of this sort, if composed of men only, should be supplemented by a co-operative association of women for household improvement. The annual fee should be small, but it should be sufficient to make possible the testing of the value of new plants and trees. The town should turn over the care of street trees entirely to such a trained band of citizens or more properly to that one who is selected by them as best qualified. Town authorities are rarely qualified for judicious work of this sort.

The creation of a town park, involving the evolution of a love for nature, can be greatly advanced by individual effort. Seize on every waste public spot for the creation of the beautiful. Individual members of the Clinton Rural Art Association were stimulated to promote the planting of the village green, and later a smaller park for the display of flowers and shrubs. The association itself planted, around the railroad depot, a welcome to strangers; and an unsightly canal bank now appears as a magnificent wall of Norway spruces.

By all means our towns, whether young or old, should recognize their own history as a chapter of interest to the future. Old home week has not only demonstrated how widely we have become scattered, but how tender remain the associations of pioneers with their old New England homesteads. The first celebration of this sort, outside of New England, was in Oneida County, N. Y. Each town worked as a unit, and some of them gathered back to the old brooks and glens three or four hundred guests, gathered from all over the Western States—once more to hear each other's voices and clasp hands. Sufficient historic material was collected to construct a valuable town museum. It was curious to discover, away up on the hillside, and under barns, three or four of the old-time wooden

plows, and many other primitive implements, used by our fathers and mothers one hundred years ago. Such a museum should, however, be forward looking as well as backward looking; scientific as well as historic. Every town has its own botany, entomology and geology, as well as frequently its own ornithology. An old building or an old homestead, marking a past order of events, and an architecture characterizing an earlier period, should not be lightly allowed to be destroyed. Last year the first academy built by New Englanders on their way westward was torn down to build the bricks into the basement of a college restaurant. The first mill is still in existence, and the very first library, that is, the books, are still collected, but lie in a heap in an attic.

The appeal is not so much to the millionaire as to those who can only give to the people a modest share in the remembrance of prosperity. There should be a combination of effort; so that while one man gives the school park, another constructs the building, and a third contributes the garden and orchard. We know a village brought to the front rank as a residence home by a man who transformed a wild glen into a thing of beauty and a joy forever. The idea caught and all about him, the farmer folk, began to cultivate the beautiful. That town today is known thruout the land for its loveliness. In a quiet way ill-taste is suppressed, and bad habits go with it. The population becomes refined without schools of art, because each one is studying art in his daily work.

At all events cultivate the town spirit. It is our social home. It was the Anglo-Saxon unit; and it cannot be left out of a democratic government. State authorities should be compelled to keep their hands off local rights. Every sign of town weakness indicates a growth of national autocracy. Keep up the town spirit. Let town traditions be recorded for the children; memorable trees be guarded; beautiful glens or groves, with springs of sweet water, be adopted by the public. A village park gets a fountain, and the fountain is easily supplemented by a clean trough for horses and dogs. Then comes the day for a free bath house, and for a public gymnasium. The

end is not simply a dominance of the beautiful, but a sense of fellowship among the townspeople; what the Anglo-Saxons charmingly called *wholth*.

Defying Satolli

It is a serious responsibility that the Bishop of Pittsburg has taken in an order that wherever there is a Catholic school within two miles "parents and children are forbidden, under pain of mortal sin, to send their children to any non-Catholic school, and confessors are forbidden to absolve those who do not obey." That involves exclusion from the sacraments.

It is well known that the Catholic Church in our land wishes her children to be taught in Catholic schools, and in the Third Plenary Council of Baltimore has gone so far as to forbid them under the severest penalties to send their children to other schools. However, there is no rule without exceptions. Hence the American prelates provided in the aforesaid Council that Catholic parents, with the approval by their bishop of the reasons for so doing, are not to be interfered with if they send their children to public schools. Many bishops paid no heed to this cautious exception; some made it a reserved case; again, children attending public schools were made to sit apart. Matters were going from bad to worse, when Mgr. Satolli came here in 1892. At once after his arrival he laid down to the meeting of the archbishops, which was in session at Archbishop Corrigan's house, fourteen propositions, which once and for all restored to Catholic parents their rights over their children. Thereafter Catholics might send their children to non-Catholic schools, provided always that the faith of the little ones were safeguarded.

When just before receiving the Red Hat, Cardinal Satolli published his speeches and addresses under the title "Loyalty to Church and State," the fourteen propositions held the place of honor. They were imparted to the archbishops as positive commands of Leo XIII, and no choice was left to them. They had all the force of canon law; quite unlike the decrees of the Plenary Councils of Baltimore, which bind, no more and no less,

than the same subject matter does in canon law. Those decrees furnish a norm of procedure to the hierarchy. But after the fourteen propositions were promulgated, the points touched upon in them are law and no bishop can change them. If he does, he goes beyond his authority. It was then a great surprise to learn that the Bishop of Pittsburg has renewed the old anathemas against parents and guardians who send their children to non-Catholic schools. The overseer of the Smoky City needs a course of study in canon law. Things are not bad enough with free investigation, but a bishop goes out of his way to declare the enmity of the Church to the country's pet institution—the school.

The controversy that has been going on for twenty years over the poisonous properties of the loco weed seems likely to be settled by the recent investigations of the Department of Agriculture at Washington. The question has been discussed with such heat as to cause a considerable degree of coldness between stockmen and scientists. On the one side the stockmen insisted that certain leguminous plants on the range caused their cattle to go crazy and die. The chemists analyzed the plants and could find no poison in them. The stockmen called attention to the fact that in the State of Colorado alone the loco caused a loss of a million dollars per annum. The experiment station fed a test lot of stalled cattle on the loco weed and they turned out fairer and fatter than the rest of the herd. A professor in a Western State university prepared a fluid extract of loco and took a tablespoonful three times a day before meals without any noticeable injury to his mentality. Chemists all over the country raced for the discovery of the suppositious alkaloid, but altho "locaine" was reported several times to have been isolated it always proved harmless. In order to eradicate the pest a bounty of a cent or more a pound was offered for it in Colorado, and until the law was repealed it proved a profitable crop to grow. To make the matter more perplexing the name "loco" was given to many different weeds, and what the stockmen in one locality con-

sidered poisonous those of another called harmless. The Washington investigators now report that the obnoxious weeds are *Aragallus lamberti* and *Astragalus mollissimus* and that the poisonous ingredient is barium. This is one of the rare mineral elements of the calcium group. The so-called rare elements are really rather widely diffused thru the rocks and soil, altho being present in exceedingly minute quantities and ordinarily regarded as of no practical importance, they are not usually looked for by analysts. In this case it appears the barium salt is not to be found in the alcoholic or water solution, but is extracted from the plant by the digestive ferments. Being a cumulative poison like lead the animal can neither eliminate it nor become immune to it. The loco weeds from certain soils do not contain barium and in that case are not poisonous, which probably accounts for some conflicting evidence. There are still many perplexing points, such as how soluble barium salts can exist in soils where sodium sulfate is abundant as it is thruout the arid region, and the publication of the experimental data will be awaited with eagerness. The weed has given a new verb to our popular language, or rather, transplanted it from the Spanish. It is common in the West to hear it said that a man is "locoed" when he shows a tendency toward "crankiness." Curiously enough, a synonym of this, "rattled," has a similar derivation. The loco is known in some parts of the West as the "rattle weed" from its dry pods, and the animals affected by it are called "rattled," whence the application to human beings of erratic actions.

Temperance in England

In England the Church and the brewery are often said to be hand in hand, partners together, and both to be supporters of the Conservative party. But within the past few years there has been a notable growth of the temperance sentiment, and an actual diminution of the per capita consumption of malt and distilled liquors. It was one of the promises at the last general election made by the Liberal leaders that they would reduce the enormous number of public houses, what we call saloons, of which there is one to every 370 inhab-

itants. The great difficulty in suppressing such public houses consists in the general acceptance of the fact of property in the good will, or franchise, of such establishments, and that if any are closed the nation must pay for the injury done to the owner. We have no such notion of a vested right to run a saloon, and it never occurs to us that if a State or county or town votes prohibition it must pay the saloon-keepers for the loss of business they have sustained. So the bill brought in by the Government, in accordance with its promise, is denounced as robbery, even altho it provides a system of compensation for the thirty thousand saloons that will be closed, but in a way assessed on those that remain, for only about one-third will be closed. The bill also includes a local option provision, and also declares that after fourteen years no further right of franchise will be allowed. England is a beer-drinking country, and the bill stirs up a loud outcry, and will be bitterly opposed, but the temperance sentiment is growing among Churchmen as well as Dissenters, and also among laboring men. In this matter, as well as in union of Church and state, England is far behind the United States, but she balances it, in a measure, by her great advance over us in the public ownership of public utilities and in postal facilities.

Religious Teaching in Italy

The Piedmont law of 1859 made obligatory the teaching of the catechism in State schools. This was the outcome of the first article of its constitution: "The Catholic religion is the religion of the State"; and Italy united accepted and was bound by this Constitution. So teachers taught catechism in the schools, not, indeed, to all pupils, for that the authorities did not demand, but to those whose parents demanded it. Italians remained passive. They bothered their heads little about it, for, indeed, Italy has continued Pagan. Its Christianity is only a veneer, hardly affecting its *morale* or its genius. With the coming of Pius X a change has come over the peninsular. He allowed Catholics to ignore the *Non Expedit* of Pius IX and Leo XIII, forbidding Catholics to vote, with the result that now there is a Clerical party and an Anti-

Clerical. The latter has attacked the catechism classes. It won a slight victory, in so far that the regular teachers are exempt from that duty. The schools, however, may be used for catechizing by persons selected by the parents and duly accredited by the local authorities. The Anti-Clericals, dissatisfied with this, now agitate to abolish the catechism from the national schools altogether. Probably Giolitti is too veteran a parliamentarian to lose now and too adroit not to forestall their attempts for the present. Pius X seems somehow destined with the best intentions to disturb and muddle things everywhere.

The Northern States, as well as the Southern, are coming to the system of nominating candidates for State offices by direct vote. In Oregon and Illinois this applies to all offices and does away with all conventions. In Pennsylvania the convention is retained for Governor and all offices for which the entire State must vote, but the delegates to the State convention are chosen by direct vote. We see but one advantage for making this exception, namely, that it gives an opportunity to adopt a platform for a party. This has some importance in the North, altho less important in the States in which practically only one party exists.

There is good authority for the statement that mistakes will occur in the best regulated families, and we are only grieved, not wholly surprised, to find an awkward mistake in *THE INDEPENDENT*. Elizabeth Worthington Fiske, of Washington, D. C., writes to complain with reason that her poem, "Ode to Love," in our issue of February 13th, was credited to Elizabeth Worthington *Smith*. We are very sorry, and well know that nothing can compensate an author for loss of identity to the public.

It is conjectured that the alarming increase of crimes of violence in Washington is due to the influx of criminals from States that are closing up the saloons. It is not desirable to make Washington a harbor of refuge for that sort of riff-raff, white and black, that is attracted by Washington's eight hundred saloons. It would be well to shut them up, and

there is a satisfactory bill before Congress to that effect.

It is a very curious statement made by Professor Vamberg that Russia is preparing for war with Great Britain as a way of solving her internal difficulties. How could she reach England to fight her? Not by water, for she has no fleet. Not by land, for she nowhere touches British territory. The only way would be thru Persia or Afganistan, and the late treaty forbids that, altho war would annul treaties. The idea seems preposterous.

It was no fair response which the Columbia students made to Cornell when they objected to the Cornellians because the latter had chosen a woman to take part in the debate between the two universities; but it was perfectly fair and admirable for them to reply by choosing a Chinese student to be one of their champions. And both the woman and the Chinese did admirably, but the latter's team won the prize.

Every step toward the public ownership of public utilities is to be welcomed, and so we hope that this city will purchase the Belmont tunnel under the East River. The opening the past week of the tunnel under the Hudson River is a great boon to the traveling public and opens the way to a radical change in communication. In this way New York ceases to be an island, and suburbanites no longer have to leave the city by boat.

The Brewers' Association has agreed to raise a million dollars, if necessary, to fight prohibition in Alabama, Georgia and Mississippi. It is perfectly legitimate for them to fight it, as they propose, by shutting up the dives and refusing to sell to any but legally conducted saloons. But that million dollars is not likely to be as legitimately expended, we fear.

At last Kentucky not only has a Republican Governor, but sends a Republican to the United States Senate. That is what comes from factions in the Democratic party; and the Republican party in New York is endangered by just such faction.

A New Bank Building

THE new banking house recently erected by the New York County National Bank, at the corner of Eighth avenue and Fourteenth street, is a beautiful building. The interior is just as attractive as the exterior. This bank was organized fifty-three years ago. Its history has been honorable and its management has always been conservative. It is now one of the strongest of the uptown banks. Its capital, surplus and profits are \$1,579,837. The deposits are \$7,939,003, and its total resources are more than \$10,200,000. Beginning with 4 per cent. in the first year of its existence, the bank has declared steadily increasing divi-

dends, going as high as 100 per cent. in one year. It has never passed a dividend. Francis L. Leland has been president of the bank for twenty-three years, or since 1885, when he succeeded his father, Francis Leland, who was president for twenty-nine years. Father and son have, therefore, been presidents of the bank for fifty-two years, only one other man serving as president, namely, Charles A. Macy, and he only for ten months—May, 1855, to March, 1856. Christian F. Tietjen, the president of the West Side Bank, is the vice-president of the New York County National Bank, and James C. Brower is cashier. The directors are William Carpender, Pedro R. de Florez, Christian F. Tietjen, T. M. Cheesman and Francis L. Leland.

A Great Bank's Annex

INTERESTING and important action is about to be taken by the stockholders and officers of the First National Bank, of this city, who will organize a new corporation, to be called The First Security Company, with a capital of \$10,000,000, which is to be paid by a special dividend of 100 per cent. on the bank's stock. While the bank's stockholders will share in the company's dividends or profits, the company's stock will be issued to and voted upon by six trustees (the president, vice-presidents and cashier of the bank), who will be bound to elect the same directors for both institutions. President Baker says, in his letter to the stockholders:

"It is deemed to be for the interest of the stockholders of this bank that a security company should be organized for the purpose of transacting for its patrons certain lines of profitable business which, tho often transacted by bankers, are not expressly included within the corporate powers of National banks. Among these are the acquiring and holding of real estate, securities, stocks and other property."

The First National holds \$55,221,000 in stocks, bonds and mortgages, or more than one-third of the entire quantity of such securities held by all the national banks of New York. It is assumed that part of these securities will be the assets of the new company. J. Pierpont Morgan is largely interested in the bank, which is a powerful and highly profitable institution. It has been associated in the public mind with many important financial undertakings. While the province of the new company has not been exactly defined, an impression prevails that it will include the promotion and financing of large projects and other similar business not strictly within the bank's legal powers. Reports that some other banks will follow the First National's example have not been confirmed.

....Last week, for the first time, the gold coin and bullion in the United States Treasury reached and past the sum of \$1,000,000,000, the amount being \$1,000,-473,031.

....The port of New York's share of our foreign trade in 1907 was 58 per

cent. of the imports and 35½ per cent. of the exports. Exports from all the Atlantic ports fell from 70 per cent. of the total in 1897 to 60 per cent. in 1907.

....The New York and New Jersey Telephone Company has elected Ford Huntington treasurer in place of Henry Sanger Snow. U. N. Bethell was re-elected president of the company and Theodore N. Vail chairman of the board of directors.

....The number of the shareholders of the Pennsylvania Railroad Company on January 1st was 57,226, the increase during the preceding year having been 16,370, while the average holding decreased from 150 to 110 shares. For subsidiary companies about 20,000 may be added, making the total number a little more than 77,000.

....A committee, composed of Elbert H. Gary, Edward Shearson and others, gives notice to the stockholders of the American Steel Foundries that those who desire to assent to the proposed plan for retiring the preferred and common stock and for making a new issue of one kind of stock in place of both, should deposit their stock with the Guaranty Trust Company, 30 Nassau street, before noon on March 14th, the date of the adjourned meeting of stockholders. A large majority have already so deposited their stock.

....Seth M. Milliken, of Deering, Milliken & Co., who was elected president of the Mercantile National Bank on October 20th last, has resigned, as he only took the position temporarily until the right sort of a man could be found as a permanent president. Mr. Milliken has served as director thru three administrations of the Mercantile Bank—the presidencies of George W. Perkins, William P. St. John and Frederick B. Schenck—and has always taken a personal pride in the bank. As Mr. Milliken had the full confidence of the Clearing House Committee and of leading financial and mercantile interests, he carried the Mercantile Bank thru the panic most creditably. He is heartily to be congratulated on the result of his work. The Mercantile was obliged to borrow during the panic \$4,000,000, every dollar of which has been repaid.

Uniform Couplings in Maine and Elsewhere

A STEP in the right direction has been taken by the Board of Trade at Portland, Me., as one result of the very disastrous conflagration at Old Orchard Beach last summer and other large fires that have taken place in the State of Maine during the past few years. The Portland Board of Trade has adopted resolutions advocating uniformity of thread in hydrant and hose couplings, and in this regard has set an example that might well be followed by other similar organizations all over the country. The resolutions in question, which were unanimously adopted by the Portland Board, are as follows:

Whereas, it is a long, well-known yet regrettable fact that there is not in the cities of Maine uniformity of hydrants, of hose-couplings, and of threads in the hose, so that in case of a conflagration raging, either in our own city, or in one of the other cities of our State, mutual and reciprocal aid can be rendered at such times and due to the fact that this unfortunate and unbusiness-like matter of non-uniformity of hydrants, and hose-couplings has brought about the result that when our Portland fire department's engines were called to some other city or town in this state, it was then found that the said engines could not connect with the hydrants, and that the same disastrous result is apt to come to us here at Portland,

And, whereas, if our cities and towns did have uniformity of hydrants, and of hose-couplings, and threads of the hose in the couplings, and the pitch to the threads in the said couplings, then when a conflagration was sweeping through one of our cities or towns, and help was needed from other nearby cities, the same could be rendered, with the result that a vast saving of property would be brought about,

Now, therefore, be it resolved that it is the sentiment of the Maine State Board of Trade that we recommend that this very important matter for the saving of property be brought to the attention of the several municipalities of this State, and that they give this subject their early attention, and that we suggest to the incoming Legislature of Maine, that it shall, promptly on convening, take up this important subject for discussion, and we recommend the early enactment of a law in this State whereby

it shall be compulsory for the several cities or towns of Maine to have uniformity of hydrants, of hose-couplings, threads to the hose and pitch to the said threads in the said hose-couplings.

Insurance on the Nobility

SOME of the European monarchs are believers in the principles and practice of insurance even if they are popularly supposed to be wards of the state. According to late dispatches from London the King of England carries life insurance aggregating \$3,750,000. The Emperor of Germany is insured for \$5,000,000. If the Czar of all the Russians dies he stands to win \$4,000,000 in the way of insurance money for his heirs and dependents. The Czar's youthful son's life is protected by a policy for \$1,250,000. The Czar's daughter, the Grand Duchess Olga, carries \$2,500,000 on her life. The King of Italy is insured for \$3,500,000 while Lady Curzon has life insurance aggregating \$500,000. Lord Rothschild pays an annual premium of \$40,000 for life premiums on an insurance of \$1,250,000, while Lord Dudley has an estate based on his life insurance of \$750,000.

The Economic Department of the Ohio State University, at Columbus, Ohio, has established a course in insurance, which is open to students who have had at least one year's work in economics. The course includes a study of the economic and social aspects of insurance, and is designed not to make insurance agents but insurance missionaries. It embraces a study of various kinds of companies, different classes of policies, policy contracts, settlements and other related matters, which are necessary to an intelligent appreciation of life and property insurance. Such courses ought to do much in replacing some of the prevailing sentiment in insurance with sense and at the same time creating more intelligent sentiment.

VOL. LXIV NEW YORK, THURSDAY, MARCH 12, 1908

No. 3093

Survey of the World

Ohio Republican Convention

In the Ohio Republican convention, last week, there was not the slightest sign of opposition to the nomination of Secretary Taft. Before the delegates assembled, the district meetings were held, and no member of the State committee who had supported Senator Foraker was re-elected. Seven members were thus displaced, and the entire committee is now for Mr. Taft. Neither Senator Foraker nor Senator Dick attended the convention. James R. Garfield, Secretary of the Interior, was the temporary chairman. In his address he defended the policies of the present national Administration. Congressman Longworth nominated the four delegates at large. They are Charles P. Taft (the Secretary's brother), ex-Governor Myron T. Herrick, A. I. Vorys and Governor Andrew L. Harris. Presidential electors at large were nominated by a negro delegate. The platform was reported by Congressman Theodore E. Burton (chairman of the resolutions committee), who is a prominent candidate for the Senate, to succeed Mr. Foraker. It begins as follows:

"In the nation we stand for those ideals of government which mean justice, equality, and fair dealing among men: A brave and impartial enforcement of the law; commercial and industrial liberty; individualism as against socialism; competition as against monopoly; government regulation as against government ownership; the promotion of the best interests of labor and capital, and the unflinching protection of both; compensation for injured employees of the government; the re-enactment in Constitutional form of the employers' liability act; a limitation in the exercise of the power of injunction in order to prevent its abuse; a greater merchant marine and an adequate navy; generous provision for the old soldier, the vanishing forces of the republic; liberal appropriations for the improvement of waterways and harbors; including the Ohio River and the Great Lakes, in accordance with

a general plan which shall be comprehensive and just to all portions of the country; the organization of all existing national public health agencies into a single national health department; a revision of the tariff by a special session of the next Congress, insuring the maintenance of the true principle of protection by imposing such customs duties as will equal the difference between the cost of production at home and abroad, together with a reasonable profit, to the end that, without excessive duties, American manufacturers, farmers, producers, and wage earners may have adequate protection."

There are brief references to the Panama Canal, the currency and the development of popular government in the Philippines. The party stands for the following, the platform says, with respect to the negroes:

"The civil and political rights of the American negro in every State, believing as we do that his marvelous progress in intelligence, industry, and good citizenship has earned the respect and encouragement of the nation, and that those legislative enactments that have for their real aim his disfranchisement for reasons of color alone are unfair, un-American, and repugnant to the supreme law of the land; we favor the reduction of representation in Congress and the electoral college in all States of this nation where white and colored citizens are disfranchised, to the end that the Fourteenth Amendment to the Constitution of the United States may be enforced according to its letter and spirit."

Endorsing "the splendid Administration of Theodore Roosevelt," the platform specifically approves "the enactment of the Railroad Rate law, the strengthening of the supervisory powers of the Interstate Commerce Commission, and the prosecution of illegal interests and monopolies, and of evil doers, both in the public service and in the commercial world." Mr. Taft's candidacy is supported in the following words:

"In this convention, chosen upon a call for a primary election providing for a specific choice for President of the United States, we send greetings to Republicans everywhere, and an-

nounce with pride and devotion that every delegate here assembled is instructed for William H. Taft. He is the man equipped for the day and its duties. His conspicuous part in the achievements of a greater America, his broad knowledge and experience in law and government, his genius for world peace and advancement, his rare tact and sturdy courage, and, more than all else, his steadfast devotion to the enduring policies of Republicanism, make Ohio's candidate the ideal leader for 1908. We pledge him our earnest and loyal support, and instruct our delegates to the national convention this day chosen to vote for William H. Taft until he is nominated."

At the Taft headquarters in Columbus, on the 7th, a statement was published saying that of the 148 national delegates already selected, 116 had been instructed to vote for Mr. Taft, and that only sixteen of these were from the South. Prediction was made that both Nebraska and Iowa, in conventions soon to be held, would select Taft delegates. Thus far, it was asserted, there were no indications that there would be more than the usual number of contests from the Southern States.

Mr. Bryan's Nebraska Platform While the platform made in Ohio is regarded as that of Mr. Taft, the leading Republican candidate, that which was adopted by the Democrats of Nebraska on the following day represents the views of Mr. Bryan, thus far clearly the leading Democratic candidate for the Presidential nomination. Mr. Bryan was present and the convention was harmonious in his interest. All the national delegates selected were instructed to vote for him. The platform is a very long one. At the beginning it says that the conscience of the nation has been aroused by investigations which have traced graft and political corruption to the representatives of predatory wealth, and, if honestly appealed to, will free the Government from the grip of those who have made it a business asset of the favor-seeking corporations. It opposes "the centralization implied in the suggestions, now frequently made, that the powers of the general Government should be extended by judicial construction," and insists "that Federal remedies shall be added to, and not substituted for, State remedies." There should be new laws to "compel foreign corporations to

submit their legal disputes to the courts of the States in which they do business":

"A private monopoly is indefensible and intolerable. We therefore favor the vigorous enforcement of the criminal law against Trusts and Trust magnates, and demand the enactment of such additional legislation as may be necessary to make it impossible for a private monopoly to exist in the United States."

Additional remedies specified are a law preventing the duplication of directors among competing corporations; a license system requiring a manufacturing or trading corporation to take out a Federal license before it shall be permitted to control as much as 25 per cent. of the product in which it deals, the license to prevent watering of stock and to prohibit the control by such corporation of more than 50 per cent of the total amount of any product consumed in the United States; and a law compelling such licensed corporations to sell in all parts of the country on the same terms, due allowance for cost of transportation having been made. Revision of the tariff cannot safely be intrusted to the Republican party:

"We favor an immediate revision of the tariff by the reduction of import duties. Articles entering into competition with articles controlled by Trusts should be placed upon the free list, material reductions should be made in the tariff upon necessities of life, and such reductions should be made in other schedules as may be necessary to restore the tariff to a revenue basis."

There should be an income tax, and the submission of a constitutional amendment authorizing one is urged. The platform also calls for a national inheritance tax, "to reach 'swollen fortunes,'" but the accumulation of such fortunes should be "permanently prevented by abolishing the privileges and favoritism upon which they are based." Concerning railroads it is said that both the nation and the States should ascertain the present physical value of them, should forbid them to engage in any business bringing them into competition with their shippers, forbid the issue of watered stock, and reduce transportation rates until they yield only a reasonable return on the present value of the railroad property. "Shrinkage in the market value of watered stock has precipitated a widespread panic," and the panic has "emphasized the necessity for legislation protecting the wealth pro-

ducers from spoliation at the hands of the stock gamblers and the gamblers in farm products."

"We condemn the experiments in imperialism as an inexcusable blunder which has involved us in an enormous expense, brought us weakness instead of strength and laid our nation open to the charge of abandoning the fundamental doctrine of self-government. We favor an immediate declaration of the nation's purpose to recognize the independence of the Philippine Islands as soon as a stable government can be established—such independence to be guarded by us as we guard the independence of Cuba, until the neutralization of the islands can be secured by treaty with other powers. In recognizing the independence of the Philippines our Government should retain such land as may be necessary for coaling stations and naval bases."

Our nation should announce its determination not to use its navy for the collection of private debts, and its willingness to enter into agreements with other nations providing for the investigation by an impartial tribunal, before any declaration of war or commencement of hostilities, of every dispute which defies diplomatic settlement. Opposing the Aldrich and Fowler bills, the platform calls for emergency currency issued by the Government, for a guarantee of national bank deposits, for interest on Treasury deposits in the banks, and for postal savings banks. It favors the eight-hour day and an employers' liability law. Concerning labor injunctions, it calls for notice and a hearing before issue, a trial before a judge other than the one who grants the injunction, and trial by jury when the alleged contempt is committed "outside the presence of the court." It would protect all foreigners residing here under treaty:

"But we are opposed to the admission of Asiatic immigrants who cannot be amalgamated with our population, or whose presence among us would raise a race issue and involve us in diplomatic controversies with Oriental powers, and we demand a stricter enforcement of the immigration laws against any immigrants who advocate assassination as a means of reforming our government."

The platform favors the election of Senators by direct popular vote, the reclamation of arid and swamp lands, liberal appropriations for inland waterways, and a generous pension policy. As it is said to have been written by Mr. Bryan, the absence of any recommendation for Government ownership of railroads or for

the initiative and referendum is noticed by critics. A resolution favoring an issue of \$500,000,000 in Government bonds for public improvements to provide work for the unemployed was adopted by the convention. On the same day the Nebraska Populist convention instructed its delegates to vote for Mr. Bryan.—On the 6th, the Minnesota Democratic Committee passed resolutions in favor of the nomination of Governor Johnson, owing, the chairman says, to attacks upon the Governor by supporters of Mr. Bryan. This action was opposed by a Bryan minority in the committee.—Mr. Hearst's paper in New York says that the Independence League party will not support Mr. Bryan, Mr. Roosevelt or Governor Johnson.

Railroad Questions

At the close of the recent hearings, all petitions for delaying the enforcement of the new law which limits working hours of railway telegraph operators were denied by the Interstate Commerce Commission, and the companies took measures for complying with the statute, which went into effect on the 4th inst. It is estimated that about 5,000 additional operators will be employed; the Pennsylvania road alone needs 700. A large number of small stations, it is said, will be closed. The Denver & Rio Grande Company has reduced its telegraphers' wages.—The St. Louis & San Francisco Railroad Company and the Chapman & Dewey Lumber Company, of Kansas City, were indicted last week, one for granting rebates and the other for accepting them, in 1905.—A demurrer having been overruled (at Salt Lake City) the Union Pacific Coal Company, which is controlled by the Union Pacific Railroad Company, will be tried for violating the Sherman act, the charge being that the coal company, the railroad company and certain individuals combined to oppress and injure a coal merchant named Sharp because he did not obey their orders as to the prices for which he sold coal.—Thus far, only four railroad companies (all in the Southeast) have undertaken to make a general reduction of wages, and it is expected that they will resort to the provisions of the Erdmann act relating to mediation and conciliation.

Chancellor Day Accused

Charges against the Rev. Dr. James R. Day, Chancellor of Syracuse University, have been made by the Rev. George A. Cooke, pastor of a Methodist church in Brandon, Vt., and they are in the hands of the Rev. Dr. P. M. Watters, presiding elder of the New York Conference of the Methodist Episcopal Church, as Chancellor Day is under the jurisdiction of that Conference. Mr. Cooke asserts that Dr. Day, in his published defense of the Standard Oil Company and Beef Trust, and the accompanying criticism of President Roosevelt, has violated that rule of the Church which requires avoidance of "uncharitable or unprofitable conversation, particularly speaking evil of magistrates." He says that he supports his charges by several passages in the book recently published by Dr. Day and by the following words in an interview, the authenticity of which Dr. Day has acknowledged:

"Anarchy of the sort practised by President Roosevelt is the most dangerous kind of anarchy. Anarchism in the White House is the most perilous anarchism that has ever threatened our country."

He remarks that "altho Syracuse University is under obligations to the Standard Oil Company by reason of large money gifts, Chancellor Day was not justified as a minister of the Methodist Church in assailing President Roosevelt." It is said that the charges will come up for a hearing in April. Mr. Cooke has heretofore brought charges against Prof. Borden P. Bowne, the Rev. Dr. Buckley and others. Chancellor Day says that he is "regarded as something of a joke and seems to have a mania for making charges." He adds that he has violated no rule and is "utterly indifferent as to Mr. Cooke's charges or procedure."

The Anarchists

Because of the assassination of Father Leo Heinrichs, in Denver, on the 23d ult., by an Italian anarchist named Giuseppe Alio, and the attempt, on the 2d inst., to assassinate George M. Shippy, Chicago's Chief of Police, efforts have been made by the police in our large cities to hunt out and restrain anarchists, and the Federal Government is seeking evidence to warrant the deportation of some of them. On the 3d, Secretary Straus issued a cir-

cular letter of instruction to all commissioners of immigration and immigration inspectors, directing them to confer with the police in their respective jurisdictions, with a view to securing their co-operation "in an effort to rid the country of alien anarchists and criminals falling within the law relating to deportation." The letter says:

"You should call to the attention of the chief of police or chief of the Secret Service the definition of 'anarchist' contained in sections 2 and 38 of the act of February 20, 1907, and the provisions of section 2, placing within the excluded classes 'persons who have been convicted of or admit having committed a felony or other crime or misdemeanor involving moral turpitude,' pointing out that if any such person is found within the United States within three years after landing or entry therein he is amenable to deportation under the provisions of section 21 of said act. The co-operation of said officials should be requested, making it clear that in order that any particular anarchist or criminal may be deported evidence must be furnished showing—first, that the person in question is an alien subject to the immigration acts; second, that he is an anarchist or criminal as defined in the statute; third, the date of his arrival in the United States, which must be within three years of the date of his arrest; fourth, the name of the vessel or of the transportation line by which he came, if possible; and fifth, the name of the country whence he came—the details with respect to the last three items being kept at the various ports of entry in such a manner as to be available if information is furnished with respect to the anarchist's name, the date of his arrival and the port of entry."

Agents of the Department of Commerce and Labor are making inquiries in the prisons, reformatories and asylums, to ascertain the number of aliens in them and the criminal record of each one. It is thought that this investigation will show that a considerable number in these institutions should have been excluded from the country or deported after their admission.—It appears that Giuseppe Alio (or Guarnaccio), who shot Father Heinrichs at the altar while receiving the sacrament from him, has been an anarchist for twenty years, and was one of a group of forty expelled from Italy two years ago. He came to this country from Buenos Ayres. After the assassination of Father Heinrichs it was ascertained that plans had been made for the assassination of certain priests in Chicago and elsewhere. One of the men who had been in danger was Father Pasquale Renzullo, in Chicago. Owing to discoveries as to the murderous plots, Chief

Shippy provided guards for several of the threatened clergymen, and caused his men to make raids in the resorts of anarchists. On this account he excited their hostility, but the man who attacked him in his house and whom he shot to death was not an anarchist of the Italian school, nor does it appear that he had accomplices or confederates. He was Lazarus Averbuch, a Russian Jew, twenty years old, who had been in this country only four months. He came from Kishineff, where, in the memorable massacre, his father and one of his sisters were killed. After his arrival in Chicago he brooded over the misfortunes of his family and became an easy prey of anarchist agitators. Many pamphlets and letters received from them were found in his room. Averbuch, after gaining admission to the Chief's house, directed the latter's attention to what appeared to be a sealed letter. The envelope was afterward found to contain a blank sheet of paper. He did not succeed in inflicting serious injury upon the Chief, but before he was killed he shot the Chief's son thru the lungs, and James Foley, the Chief's coachman, in the arm.

The Kaiser and the British Navy

The *London Times* created a sensation by publishing the statement that the Emperor of Germany was endeavoring to influence the British naval program by corresponding with Lord Tweedmouth, First Lord of the Admiralty, which it claimed was an insult to the nation. It appears that the Cabinet was not aware of the correspondence until it was reported by the *Times*. Mr. Asquith explained to the House of Commons that the letter which Lord Tweedmouth had received from the German Emperor on February 18th was a purely personal and private communication conceived in an entirely friendly spirit, and that his answer had been equally private and informal. The letter, he said, had not influenced the Cabinet in regard to the naval estimates for the year, because these had been decided upon before its receipt. Public opinion almost universally condemns Lord Tweedmouth for corresponding on such a subject with a rival naval Power, and for his indiscretion in telling some of his intimate friends of the Kaiser's letter. He will be called

upon to give a full explanation in the House of Lords, and there every effort will be made to force him to make public the correspondence. In the meantime the newspapers are filled with conjectures as to the contents of the letters. It is said by those who assume to know that the Emperor's communication was a hasty and informal note written to refute the passage in a letter of Lord Esher to the Maritime League in which he said: "There is no man in Germany, from the Emperor downward, who would not welcome the fall of Sir John Fisher." Sir John Fisher is Senior Naval Lord of the Admiralty and one of the foremost advocates of a more formidable navy. The reason why the Kaiser's note is withheld from the public is said to be the vigorous and unconventional language in which his opinion is expressed. He is believed to have pointed out that the British fleet is now five times as strong as the German, and there is, therefore, no need to increase it thru fear of Germany.—Sir Henry Campbell-Bannerman's retirement as Premier is recognized as inevitable. Probably next month Mr. Asquith will succeed to his place, and the Cabinet will be practically reorganized.—The House of Lords is endeavoring to meet the criticism of their inactivity and obstruction by passing a Scottish Land Bill of their own, in opposition to that originated in the House of Commons. This bill applies to Scotland the terms of the English Small Holdings Bill.

The Polish Land Bill

Prince Bülow, after a hard fight, has succeeded in getting his bill for the expropriation of Polish lands past by the Prussian Parliament. In the Lower House its scope was narrowed by cutting down the sum to be advocated to land purchases to \$68,750,000 and the area to be acquired to 173,000 acres. When it reached the Herrenhaus the committee to which it was referred recommended amendments which threatened to still further weaken the bill. The opposition to the Government was not altogether from humanitarian motives but largely due to the fear of the land owners and ecclesiastics of the Upper Chamber that the admission of the principle of expropriation by the Government of landed estates would establish a precedent which

might in the future be directed against them, particularly in case the Socialists should come into power. They desired to exempt from the expropriation clauses all church lands, entailed estates, and all lands which have been the property of the owner for ten years or more. In the debate in the Herrenhaus Prince Radziwill, the Polish leader, protested against this violation of the Prussian Constitution by the legislation directed against a particular race. The Poles had been loyal to the Government, altho their rights had been infringed and the pledges made by the King of Prussia, in 1815, had not been fulfilled. It appeared to him that the Prussian Government had determined upon the extinction of its Polish subjects, and was endeavoring to evict them from its land. A great deal of attention was being given to the treatment of the natives in African colonies, and he asked why the peaceful rural population in the Polish Provinces were treated harshly with impunity. The Prussian Minister of Agriculture, Count Arnim, said the present Government was strong enough to deal with the Polish peril, but in view of the fact that the Poles increased more rapidly than the Germans, prudence demanded that provision should be made for the future. Cardinal Kopp, Archbishop of Breslau, protested that there had to be a real necessity before interference with life and property could really become warranted. It was not justifiable to attack unarmed men simply because they might, on some future occasion, take up arms. In closing the debate Prince Bülow, Prussian Minister-President, said that the German people had always been distinguished by a singularly pronounced sense of law and justice, but that sometimes they were inclined to lose themselves in abstract formulas and regard great political questions from the point of view of private law. In political questions which involved the existence of the country, the first duty of a State was self-preservation. He quoted from a speech of Bismarck at the time of the adoption of the Polish Settlements Policy, in 1886, to the effect that neither in peace nor in war could a nation which is fighting for its existence follow ordinary rules of conduct. A situation might arise which legally would kill justice. Prince Bülow held that a

consistent policy was far less cruel than half-measures or vacillation. There was no thought of exterminating the Poles; it was the Germans who were on the defensive in the Eastern Marches. The Government only desired to prevent them from being ground down and driven away by the Poles. The amendments recommended by the committee were rejected by a vote of 143 to 111.

The Kongo Treaty

The announcement made by the British Government last week that England was dissatisfied with the delay in transferring the Kongo Free State from King Leopold to Belgium, and that the reports of cruel and oppressive treatment of the natives had been confirmed by the United States Consul has had the effect of bringing the King to terms. The text of the Annexation Treaty as submitted to Parliament on March 5th concedes the principal points in dispute. The Crown Domain and the Crown Foundation, which King Leopold has maintained was private property, is transferred to Belgium, and the Government is given full control over the finances of Kongo but must carry out the obligations of the Free State amounting to \$21,000,000, and must restrict the concessions of the two American companies in which Thomas F. Ryan is prominent. The King will retain during his lifetime the use of the Kongo revenues. Certain obligations of King Leopold are to be taken over by the Belgian Government: \$24,000 to Prince Albert, son of the Count of Flanders, brother of King Leopold to be available after his accession to the throne, and \$15,000 a year to Princess Clementine, the King's third daughter after she marries. The sum of \$600,000 is to be provided annually for fifteen years for hospitals, schools and scientific research in Africa, and the museums, schools and public works planned by the King in Belgium are to be carried out. The King surrenders to Belgium on his death, his estate at Cape Ferrat, in the south of France, which was purchased from Belgium revenues. The King retains the ownership of forty hectares at Majumbo, where he has experiments in growing coffee and cacao. It is possible that the Treaty may pass the Belgian Parliament in substantially its present form, altho

there will be opposition against certain features, particularly the concessions of forest and mineral rights to the American companies, and the heavy charges on the Belgian Budget. Some amendments may be agreed upon in the Chamber, particularly the establishment of a currency system for the Kongo, which may relieve the natives of the burden of forced labor. Baron Deschamps, Minister of State, speaks as follows in regard to the magnanimity of the King's gift to the nation:

"The King presents to the nation as a gift a colony twenty-three times as big as Belgium, which he created and organized. Of the crown domain, which is larger than France and of extraordinary richness, he retains nothing. Besides, he gives to the nation beautiful properties in the south of France which he purchased with the revenues from the crown domain, only holding for himself the usufruct during his lifetime. More important still, he grants to the Belgian Parliament both the administrative and budgetary control of the colony, which should satisfy the foreign critics. In return, he simply exacts an obligation that Belgium complete the works undertaken by him in this country and a sum of money necessary to carry out his philanthropic and scientific projects in the Kongo Independent State."

The French in Morocco

The French Government has evidently decided that half measures will not serve in Morocco, and the futile skirmishing in the vicinity of Casablanca, which has been going on continually for so many months, will be superseded by more vigorous and determined action. The power of Mulai Hafid continues to grow, and the French may ultimately find it necessary to occupy both capitals, Fez and Marakesh. Reinforcements amounting to about 13,000 men will be sent to Casablanca, most of them taken from the garrisons of Algeria and Tunis. General Lyautey, who has command of all the Algerian troops, will go with M. Regnault, the French Minister at Tangier, to the coast towns to study the situation, and he may be placed in charge of the French army, since General d'Amade, who has been conducting the operations at Casablanca, has only the rank of a brigadier-general. General d'Amade has been vigorously attacking the Madakra tribesmen, meeting them in three engagements and driving them from their territory. The Moors of the western frontier in Algeria have become affected by the spirit of unrest in Mo-

rocco, and there is danger of an extensive revolt against the French domination. A large number of armed Moors are collected opposite Ain-Sefra.

The Seizure of the "Tatsu" Japan is taking a firm stand in regard to the steamer "Tatsu," loaded with small arms and ammunition, which was seized at Macao on February 7th by Chinese customs officials. It is held by Japan that the vessel's papers were in legal form, consigning the arms and ammunition to a firm in Macao, and therefore not being a case of smuggling. A representative of the firm had boarded the vessel with the Portuguese authorities before her seizure by the Chinese vessels, and the "Tatsu" was in Portuguese waters, being anchored awaiting the tide off Macao, when the four Chinese gunboats approached her. She was boarded by armed men, the Japanese flag hauled down and the vessel taken to Canton, where she now remains. Therefore, Japan demands the immediate release of the vessel and her cargo, an apology for the insult to the flag, the punishment of the officials who are responsible, and a full indemnity to the shippers for their loss. In case of delay or failure in meeting these terms, Japan announces her intention of "taking immediate action." The Chinese Government holds, on the other hand, that the seizure was legitimate, as it was not in Portuguese waters, and it is undeniable that the arms were intended for the rebels who are endeavoring to overthrow the reigning dynasty. China offers an apology for the incident and agrees to release the vessel, but proposes that the disposition of the rifles and ammunition confiscated should be left to a mixed court of Japanese and Chinese, or to the British admirals in Chinese waters. The Japanese Government has refused to submit any part of the case to arbitration, contending that the facts are clear and not contestable.—A refusal of the Japanese Government to permit the construction of the railroad from Hsinmintun to Fakumen on the grounds that it would injure the trade of her Southern Manchurian Railway, is regarded by the Chinese as contrary to the Treaty of Portsmouth. A banking system has been established in China by an imperial edict,

The Candidate of Indiana for the Presidency

BY JOHN W. FOSTER, LL.D.

[The following article by the Ex-Secretary of State on Vice-President Fairbanks is the second article in our series of Presidential Candidates. Mr. Foster is himself an Indianan, and Vice-President Fairbanks is his old friend and neighbor. We have already printed President Schurman's estimate of Governor Hughes, and this article will be followed shortly by others.—EDITOR.]

THE Republicans of Indiana propose to present to the National Convention at Chicago the name of Charles W. Fairbanks for nomination as the candidate of the party for the Presidency. In doing so they feel assured that they are supported by well-founded reasons. They also feel that they have some acquaintance with the qualities necessary to the make-up of a statesman. Without going beyond the memory of the present generation, they may cite, for instance, citizens whom the people of Indiana have sent to Washington to represent them in the Senate. In one of the parties appear the names of Hendricks, Voorhees, McDonald; in the other Morton, Harrison, Fairbanks.

Passing over the eminent qualities of the Democratic Senators, it may be justly claimed that Oliver P. Morton stands next to Abraham Lincoln in character and services during the great crisis of the Civil War. Such is the estimate of him by Senator Hoar in his "Reminiscences"; and no less a historical authority than President Roosevelt has assigned him the same place in the roll of fame. Benjamin Harrison, soldier, lawyer and statesman, in the estimation of many public men, ranks next to Lincoln in intellectual power and grasp of affairs among the Presidents of the last half century. The names of these two Senators were presented to Republican conventions for nomination as President. With no less unanimity and enthusiasm will the Republicans of Indiana carry the name of Vice-President Fairbanks to Chicago in June. As stated by Senator Beveridge, in his recent manly speech at Wabash, they are going to the convention with one united and earnest voice to

vote for his nomination and for none other so long as his name is before that body.

Let us examine some of the reasons why it is asked that the people of the United States should be afforded an opportunity to raise to the highest post within their gift this favorite son of Indiana.

We present his name because, first, he is a worthy representative of the best type of American citizenship. Heredity is not to be despised even in a democratic republic. The ancestors of Charles W. Fairbanks fought with Cromwell at Naseby and Marston Moor. They were among the early Puritan settlers in Massachusetts. They participated in the great work of laying the foundations in New England of the free institutions upon which our Government was built and in gaining our independence. When the West was still in its pioneer days the father of the Vice-President emigrated from Massachusetts to Ohio, and there he was born in the lowly estate of a log house on a farm. His boyhood and early youth were spent in the hard toil of farm life of the period.

But he aspired to higher things and a broader life. His father was able to give him only the education of the district school, and by his own unaided efforts he fitted himself for college. Having learned the rudiments of the carpenter's trade, he made the furniture of his room, cooked his own food, and supplemented his expenses thru college by what he earned by manual labor. He chose the law for his profession, and to enable him to pursue his preparatory studies he followed the avocation of a news reporter,

When he was admitted to the bar, he went with his young wife, the friend of his college days, to the growing city of Indianapolis to make it his future home. With the courage and persistency of purpose which ever marked his after life he began his professional career in poverty, and without experience. After a few years of waiting and hardships, success began to reward hard study and devotion to his clients. Thenceforward he made rapid strides in his profession. Within fifteen years he stood in the front rank at the bar, which embraced among its members some of the first lawyers of the nation.

Altho from his college days he had taken an interest in politics, and while in the practice of the law had rendered his party such service as he could, he had resolved to devote to his profession his best energies and time until he had acquired a competency that would enable him to give his children an education and to live in comfort. Hence for more than twenty years he sought no office, but labored assiduously in his practice, which extended thru the three rich States of Indiana, Ohio, Illinois, and even more distant States, and proved lucrative beyond his hopes. So that when he was called to the Senate in 1897 he was able to take leave of his profession and give his undivided time and attention to the duties of that great office. From that date he never accepted a retainer. It would be better for the country and for their reputation if other government officials would follow his example.

From 1888 forward Mr. Fairbanks became active in politics, and with the election of General Harrison to the Presidency and his retirement from direct participation in politics, the former has been regarded and accepted as the leader of the Republican party in Indiana. For twenty consecutive years he has marshaled its forces and gained for it greater victories in the State than any of his distinguished predecessors. When the State convention was held or the campaign was to be opened he was looked to as the person to sound the "key-note," and his speeches on these occasions were made use of by the campaign orators as a storehouse from which to

draw facts and arguments for the people.

These "key-notes" bore no uncertain sound. In all his political life he has been frank and outspoken. Independence has always marked his utterances. His attitude on the money question was a marked indication of his character in this respect. In 1892, four years before the Republican party declared in favor of the gold standard, in his speeches he took strong ground against a debased coinage. In 1896, when it was a serious question for a while as to the position the party would take, no man was more influential in bringing it up to the high standard it assumed than Mr. Fairbanks. The Ohio State convention had led off with an indefinite resolution on the subject. The convention in Indiana was soon to follow. He felt that it was a critical time, and that unless our State could be brought to an unequivocal declaration in favor of the gold standard, the silver craze then sweeping over the country might divide, if not overwhelm, the National Convention. A meeting of the leading men of the State was called in conference. I remember well the anxiety we felt at the meeting. Mr. Fairbanks was able to secure their approval of his view, and a resolution which he framed was agreed upon, which was in due time adopted by the State convention. With that declaration the attitude of the National Convention was no longer doubtful.

As he had been the leader of the party in the State, so also has he been its most active and indefatigable worker. In the two Harrison campaigns of 1888 and 1892 he spoke in every county of the State, as well as in the intermediate Congressional campaigns. In the first McKinley campaign of 1896 he had attained a national reputation as a speaker, and while he still made a thoro canvass of the State, his services were requisitioned for many other States. In 1900 still greater outside demands were made upon him for campaign services, and he spoke to large audiences in many States, giving his entire time to the canvass. In 1904, when he was placed upon the ticket with Mr. Roosevelt as the candidate for Vice-President, the burden of

the campaign fell upon him, as Mr. Roosevelt, with great propriety, made no canvass. In that campaign Mr. Fairbanks traveled twenty-five thousand miles and made speeches in thirty-three States—a record without parallel in political history.

No other man in the Republican party in recent years has spoken so often and over so wide an area in political contests, and none more acceptably to the masses of the people. No one has more willingly contributed his services in closely contested States, even in those where the fight seemed almost hopeless, as in Kentucky and Missouri.

Since he has been Vice-President his services have been greatly sought after as a platform orator on all kinds of civic occasions. His addresses always indicate thought and usually show careful preparation. There are no studied attempts at oratory, seldom stories are told or poetry quoted, and no resort is had to adventitious decoration or the arts of the demagog. They are always upon a high moral plane, and while they are listened to with interest and instruction by the educated, they are never above the comprehension of the masses of his hearers.

A characteristic of Mr. Fairbanks's speeches is that they contain no vituperation, irony or sarcasm. He never indulges in abuse of his political opponents. His view of political differences and his relation to them was announced in his address on the death of one of his political opponents, Mr. Holman:

"Political parties are undivided as to purpose—the highest and best welfare of the country; their differences arise as to the best method of obtaining the end."

He came to the Senate of the United States at the same time that Mr. McKinley was inaugurated as President. They had long been friends, and the President had a high estimate of the Senator's ability and political sagacity. So much was this the case that it came to be understood that the Senator's acts and speeches were an exposition of the views or wishes of the President. He was the faithful supporter of the latter's policies and measures. This was notably the case in respect to the Spanish War. He stood by the President in his strenuous

efforts to find a peaceful settlement, when Congress and the country were clamoring for war. But when the issue was made up and war came, the Senator promptly tendered his services to the Governor of Indiana for military duty, which very properly were not accepted, as in no other place could he be so useful to the country as in the Senate.

His attitude in respect to that war was further shown by his interest in securing commissions for colored officers. Their appointment was strongly opposed in the War Department, and not until Senator Fairbanks went directly to President McKinley were the commissions issued. He believed that the man who was worthy to be a citizen of this great country should have the honor of holding its commission and fighting its battles.

His record in the Senate is so fresh in the public mind that it need hardly be recapitulated. Almost immediately after he entered that body he was recognized as one of its most useful and influential members. He debated many of its most important measures, and his views and position were known on all of them. In one respect his experience in that body has fitted him for the duties of an important branch of the public service—our foreign relations—as candidates for the Presidency are rarely equipped.

He served in the Committees on Foreign Relations and on Immigration, and thus had to deal with some of the most interesting and perplexing questions in our relations with foreign governments. I have already alluded to his attention to the complications with Spain, in which he assumed so honorable a stand. He had to do with the international questions growing out of the construction of the Panama Canal. I quote one of his declarations:

"It pays nations, as well as individuals, to adhere to the inflexible principles of fair dealing. No doubt the United States could have ignored the Clayton-Bulwer treaty and proceeded with the construction of the canal, but it preferred, as it always prefers, the frank and honorable way."

He declared himself in the Senate in favor of settling international disputes by arbitration, as far as possible, when diplomacy failed. He used this language: "Sir, I hold to the opinion that all war is barbarous. . . . It will be in-

deed a fatal hour for the Republic when the President of the United States loves peace less than war." It was a distinguished honor that was conferred upon him while in the Senate when he was appointed to the American chairmanship of the Anglo-American Joint High Commission, which had to do with a great variety of questions with Canada. In this capacity he gained a wide view of foreign and continental matters.

There is no man in public life, certainly no one who is mentioned for the Presidency, whose views are so well defined or so well known as Vice-President Fairbanks's. During his service in the Senate he has both by his votes and speeches declared his position on every question of importance now pending or which has been considered in the past ten years. And these declarations have been supplemented by his many published speeches before the people.

He has very distinctly and repeatedly made known his views on the subject of labor and capital; on combinations or trusts; on the ownership and regulation of railroads; on the functions of and the respect due to the courts; on the strict and impartial enforcement of the laws; on immigration and its regulation; on the tariff; the improvement of our rivers and waterways; on socialism and kindred subjects. It is not possible within the circumscribed range of a magazine article to quote his utterances on these questions, but they have been published broadcast to the country, and they are readily accessible. While in full sympathy with the demands of the sober masses of the people, they will be found to be characterized by that conservative spirit which makes the prudent statesman. His friends confidently challenge a full and careful examination of this record to determine whether he is fitted for the high office for which they present his name.

It is likewise gratifying to his friends to note the cordial relations which exist between him and the President. The occupant of the Vice-Presidency has not always maintained with the Chief Executive the most friendly intercourse, owing in part to the illy defined line of demarcation and to the indiscretion of the subordinate official. Mr. Fairbanks has

never erred in this respect; and on all proper occasions he has not failed to commend the President in his arduous labors. For instance, at Chicago in 1906, at the laying of the cornerstone of the Cook County building, he said:

"We gladly acknowledge the inflexible purpose of President Roosevelt to enforce the nation's laws according to their written intentment. He has set a high example which those of lesser responsibility may well emulate in municipal and State administrations."

And at Lincoln only a few months ago:

"We most heartily commend President Roosevelt for what he has so splendidly done towards aiding in the solution of the questions which so widely concern our trade and commerce. It has been in the line of securing fair treatment and fair play."

I have thus far dwelt upon the political career of my friend and neighbor. I regret that I have not space to speak at some length upon his domestic life. It is in all respects blameless and respected. Most highly of all he is appreciated by his nearest neighbors, who know him as a warm hearted and genial man, affable and hearty without any of the tricks of the demagog, generous and true in his friendship. He is abstemious in his habits, never using either spirits, wine or tobacco. Blest with a vigorous constitution, he has never felt the need of stimulants. From his youth he has been an active member of the Methodist Church. To him may be applied the words uttered by himself upon the death of President McKinley: "He was a sincere believer in religion, a devout Christian, and a doer of Christian deeds."

A word is due in this connection to the faithful partner of his life, to whom he owes a great share of his success—Mrs. Fairbanks. A woman of education and refinement, she is well fitted to adorn the highest circles of society. To her has been applied the remark made by Lafayette on his return to France of Martha Washington: "She is the best woman in the world and beloved by all who know her."

The foregoing sketch furnishes some of the reasons why the Republicans of Indiana have decided to present the name of Charles W. Fairbanks to the National Convention at Chicago. I may advance one other. Indiana has usually been regarded in the history of the Republican

party a strategic battleground—a doubtful State, necessary to the election of its candidate for the Presidency. With the nomination of Mr. Fairbanks it will be doubtful no longer.

Of late years the Vice-President has not been chosen as the successor of his chief, but it was not so in the early history of the country, when the statesmen who framed this marvelous machinery of our Government were still administering affairs. They thought it was most appropriate that the official who had for years stood next to the President and had intimate knowledge of the legislation and administration of government should be called to take his place. There

never was a better opportunity to return to the wise practice of the fathers of the Republic.

When Mr. Fairbanks was chosen unanimously to go upon the ticket as Vice-President, the distinguished Republican who placed him in nomination used language which may well be repeated at Chicago in June next for the Presidency:

"We want to place on the ticket a man who represents in his personality, in his belief, in his public service, in his high character, all the splendid record the Republican party has made; all the great declarations of the former platforms, and a man who will typify the highest ambition and the noblest purposes of the Republican party of the United States."

WASHINGTON, D. C.

Migratory Farming

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," ETC.

MIGRATORY farming is still a new idea to most of our Northern agriculturists; but it is a rapidly growing idea, and in the practice of it is one of the best thoughts of the age. It means that a man may cultivate his crops for seven months in New England and five months in Florida, without either one conflicting with the other, and in both cases doing what the genuine farmer believes in—making money. It means, at least, that a man who is wearing out under the stress of severe winters can escape the cold weather without becoming a mere tourist and spending all of his savings. If you will go to Florida today you will find a host of Northern farmers, either truck growing in the coast counties or melon and potato growing in the central or dry counties. They undertake to wind up their Northern work about the first of November, and this can generally be done, with energy and good calculation. Corn can be husked and every other preparation made, certainly by the middle of that month. What is there to hinder flitting to Florida soon after the birds, and here engaging in winter gardening

or fruit growing? Oranges begin to ripen just about that time, and they can be marketed, with the exception of only one or two sorts (which need not be grown), by the first of April. My neighbor, Mr. Hawkins, who is a builder in the North, has an orchard of three hundred trees, from which he sells one thousand dollars worth of oranges between November and May. If the preference is for truck growing, you sow your lettuce seed early in November, or your celery, and market the first crop in January. A second sowing is immediately made and sent North in April. The owner may immediately start for his Northern farm. The apiarist can follow a very similar course. Another neighbor, Mr. McColly, after taking up two thousand pounds of honey in Ohio, comes to Florida and during the winter takes up two thousand more. Chicken and egg raising is another line of business equally to the point. The hen is happier in her ranging during January and February than she is during July and August, while her eggs are most abundant at the season when prices are highest.

Winter gardening is certainly a novel-

ty to one who has been accustomed to ground frozen two or three feet deep at Christmas. It takes some little time to get adjusted to the fact that you can have your green peas in December, and your carrots and new potatoes in January. But if you are growing for market, you have still to learn just about when to plant your seed in order to get perfected products at the right time. The Floridian knows that he can command the Northern market, in spite of everybody. He aims to get there just a little ahead of Georgia and Louisiana. For this reason he plants his potatoes about the first of January, and his melons a little later. The migratory farmer must crowd his plantings on a little earlier, and so get ready to migrate in time for his Northern work. To say that it is delightful to pull one's cabbages on New Year's day is but half the story; the other half of the story is that these cabbages can be immediately shipped to New York and Philadelphia and bring in a whacking price. There are men growing rich very rapidly on lettuce alone. In Sanford they have Celery Avenue, and for four miles you will see hardly anything in the fields, as far as your eye can range except celery, and the negroes that are cultivating it. In some of these fields lettuce is used as a filler between the rows. Land stands at a fabulous price, and as a rule the crops are caught up on a quick market. All thru this part of Florida, and up and down the St. Johns River, the land lies very flat, and it can be irrigated by flowing wells. These wells can be seen everywhere, and are obtainable by boring only twelve or fifteen feet into the soil. The water is carried by a system of tiles, adjusted to the most complete control.

In Central Florida the lay of the country is wholly unlike that along the coast, and it so closely approximates the hills of New York and New England that the lover of landscape beauty finds enough to satisfy him. Geology has tipped the underlying rock not only upward, but downward; and all the hollows are filled with lakes. Some of these are exquisitely beautiful, and just large enough for a man to take into his farm. The banks of Lake Lucy, most of which I own, are in some cases so steep that it is real climbing to reach the top. The sunsets

are gorgeous, and the morning sun rising over the pines, with a soft breeze blowing from either Ocean or Gulf, makes midwinter indescribably delightful. I think I never saw the moonlight quite so homeful as here, repeating itself in the lake. In this more rolling land we do not undertake truck gardening to any extent. All the higher land is devoted to melons, and these are shipped by carloads that often weigh over forty pounds to the melon. I do not see that the migratory farmer can quite become a melon grower, for the time of ripening is a little too late, and will find him at work in his Northern grounds. However, I am experimenting, to see what chances there are for a melon garden planted in December. You know that there are just enough touches of frost in Florida to make vine-growing in midwinter a problem. Irish potatoes may be planted at any time, and will grow along side the sweet potatoes, becoming a splendid crop for the Northern market. As a rule they are planted here in January. Sweet potatoes are selling at one dollar a bushel, and Irish potatoes are considerably higher.

Naturally any one coming here from the North turns to citrus fruits. The orange is a bewitching affair, not only for the profits, but for the novelty and the beauty. All the early comers, at once, cleared openings in the forest, and filled them with orange groves, adding grape fruit to some extent. They also made a trial of pineapples, loquats and other semitropicals. Most of these people were merchants, clerks, schoolma'ams, and professional people—possessed of very little capital of their own, and bringing what they did have burdened with twelve to twenty per cent. interest. The freeze of 1895 found these people thick as flies in the woods, and just about as homeless. Their houses were mostly shacks, and their intentions were evidently to exploit the State for money, and quit. There was among them very little knowledge of agriculture or horticulture, and little home-making instinct. The freeze found them at a terrible disadvantage, utterly swept away their dreams of wealth, and whipped them out of the State. Not ten per cent. remained. Property went down almost to nothing. If they had been

real home-makers and skilled farmers they could have met the frost, and all other natural disturbances, and come out ahead. During the last fifteen years an entirely new class of immigrants has been coming in—people of moderate means as a rule, and quite capable of taking care of themselves. A few of the older residents, who possessed some knowledge of the building arts, stayed over, for the most part in the towns. These have gradually worked back onto the groves or gardens, and are doing admirably well. The deserted farms and orange groves have been bought up at low prices, handled scientifically, and are paying a round figure. Grape fruit is just now more profitable than oranges, and more groves of this sort are planted. The price of oranges this year is one dollar and a quarter by the wholesale, and in the orchard, or two dollars to two and a half in the market. Grape fruit is much higher. New varieties are constantly being started, and the improvement does not by any means end with the Washington Navel. A good orange orchard is likely to contain twenty prime sorts. Ruby is one of the very finest, and Golden Nugget Navel promises some progress. But any farmer is likely to start something still better; and this is owing to the fact that seeds are thrown everywhere, spring up easily in the sandy soil, and very often come to fruitage in the edge of the pine woods.

The land is easily worked, for it is almost universally sandy, and in very few places does the underlying clay come to the surface. You can plant ten trees, and do it well, while you would plant but two in the North. Altho sandy, the soil is very far from being poor. It would be astoundingly rich if the State were not burned over every year, to accommodate the cattle that are allowed free range. Just now the lakes are low, showing a magnificent deposit of vegetable matter, in some cases two or three feet deep, all of which would have been spread over the whole State, had it not been burned. Fortunately, the lakes could not be burned over, and whoever owns one owns a mint. Nor have I ever seen anywhere else such a provision of Nature to enrich the soil. Legumes are not limited, as they are in the North, to

clovers, but they exist in every conceivable form—every one of them gathering nitrogen from the air, and ready to contribute it to the soil, if plowed under. This fool business of burning Nature's contribution to our wealth, is a sample of the waste that goes on in the North as well as the South. Several millions of dollars go up in smoke from burning autumn leaves. In other words, a man who will use his wits here, fence in his land, stable his horses and cows, save his manures, plow under his annual crop of legumes, need never spend a dime on commercial fertilizers.

The migratory farmer will find that the general principles of farming are about the same at both ends of his homestead. He certainly will find a lot of traditions and notions very popular here, but based on superficial investigation; and he will find a lot of that same material at the North. But at bottom farming is a single science, everywhere. For instance, at the North we have recently heard a good deal about "cover crops," and we know very well that fruit growing cannot be successfully carried on without some sort of legume to cover the ground during the winter, and to fatten it by being plowed under in the spring. In Florida we have simply to shift the key; that is sow a cover crop to shield the ground from the sun in the summer, and plow it under in the fall. Of course, there are local problems that must be studied out, and the man who succeeds will be the one who studies most independently and thoroly. He will listen to all sorts of advice, but he will exercise his own judgment. I have been repeatedly told that apple trees cannot be grown here, and as for plums the trees will grow, "but no fruit can be obtained." My informants simply do not know how to fight the plum curculio, and so they lose all their fruit. As for the apple, the soil heats down so deeply of a hot day (for sand is very conductive of heat), that the delicate roots are scorched. A thoro mulching of coarse material, partly covered with sand, will keep the underlying soil thoroly cool; and a wrap of coarse paper around the trees while young, will protect the bark. My apple trees made growth of two to three feet in the limb, during the hot

droughty summer of 1907. The Northerner who comes here need not confine himself to growing semi-tropical fruits.

Land can be obtained for from \$10 to \$25 an acre; and orange groves, in bearing, are worth a good deal more. There are still some deserted homesteads for sale very cheap, and a few of the old settlers are selling out at low rates, because they are very old and worn out with the hard conditions after the freeze. It is far better to buy, and have a home to drop into, and a certainty of sufficient earnings from a garden, to pay your passage back and forth. Any one with rational tact and common sense, and a modicum of health can live through the winters here, laying up rather than spending. There is considerable demand for skilled labor, and there is a measure of call for farm work. The negro is an element to be counted upon, but he does not entirely shut out white labor. Everybody works, and the old slavery traditions are about worn out. In your garden you can raise nearly all that you wish to eat, while your hens are laying your eggs—themselves furnishing food just before you leave for the North. A cow can be kept in pasturage all winter, if you feed her cassava from your garden. This root is as easily grown as turnips, and can remain in the ground for two or three years. It grows from two to four feet long, and one acre would be enough for a whole dairy. Horses like the cassava, as well as cows, and chickens eat it ravenously when chopped fine. Beggar weed is a wonderful grass that comes up late in the season, as sweet as a sugar beet to chew, and liked especially by horses. The cow peas thrive admirably for cover crops, and after being mowed once or twice, can be plowed under for the nitrogen. The velvet bean is Florida's private property; brought in here from India as an ornamental vine, it has turned out to be the greatest hay and forage plant in the world. It grows over fifty feet in a season on barren soil; and after mowing two or three times can be plowed under—giving an enormous amount of nitrogen to the land. Peaches are a natural crop here, and there is more money in them than in oranges—only that the tree is not long lived. I find that quinces thrive exceedingly well, and

of course we can grow a large number of the very best grapes. Sweetwater and Black Hamburg, which you have to house at the North, stand the climate as well as the Scuppernong. I am planting an orchard of figs.

In other words there is a whole lot of romance and luxury here, for any one who cares to enjoy outdoor life. We have our cool spells, but the thermometer rarely goes below thirty, as in summer it rarely goes above eighty-five. Nearly all winter it ranges between fifty-five and seventy-five—occasionally rising to eighty-five. We have fire-places, if we are sensible, and kindle a few cones or knots evenings and mornings. Possibly there will be ten days during the winter when you will keep the fire throughout the day. An overcoat will last you forty years, and most of the time you will sit with your coat off, on your broad verandas, to watch the moonlight on your lake, or the blue herons at midday. New England is in some ways repeated in these primitive lands. We lead a simple life. We raise nearly all that we eat or wear, and we swap eggs at the store for sugar. The conditions are such that Southern agriculture will lead the world by 1925. The negroes take to agriculture, and the Crackers are, many of them, becoming decidedly enterprising. Imitativeness has been confined a good deal more to the whites than to the blacks. The climate is, absolutely, as near perfect as climate can be, preventing the possibility of such diseases as grippe and catarrh. A young friend of mine who had been tortured from childhood with rheumatism, is spending her winter in sight of my home—the first joyous winter of her life.

My object in writing is to show Northern farmers that many of them can escape the rigor of winter, and not have it cost them all they can accumulate in summer. It is true that there are resorts in Florida where it takes a small fortune to exist for a few weeks. The common tourist knows nothing of this land excepting what he sees at such places. He makes a flourish, as well as he can, for a short time, and then retreats. The very wealthy, perhaps, can do nothing better than spend their money in such a manner. Palm Beach is well worth see-

ing, but see it as fast as you can, or go home to a poorhouse. Central Florida is not "tourist infested," as John Burroughs expresses it, and its hotels charge seldom to exceed eight dollars per week; many of them not more than five. Life is idyllic, because it is almost wholly spent out of doors. Possibly two or three days in a month may be chilly. I have spent four winters in Florida, and many of my friends are beginning to spend their summers here also. The heat is not felt as severely as in New York City. A breeze is always playing over the land, from either the Gulf or the Ocean. Shade is abundant, and in midsummer showers are nearly every day. However, of these months I have no personal experience, and do not care to write.

I do not mean to draw the picture too strong, only to show that, with a very moderate capital to start on, and decision of character, this migratory problem can be solved. We go by the Clyde line, on round-trip tickets to Jacksonville from New York, and return, for about forty dollars. This covers all your expenses between those two points. From Jacksonville we go down the St. Johns River,

one of the most delightful excursions in Florida, landing at Sanford, and are not far from our destination. The trip by ocean is safe, and but rarely stormy. A house of eight rooms can be built for less than eight hundred dollars—of the choicest pine, and with big fireplaces. Once located you must show your grit. There are difficulties to be overcome, and it would be a worthless land that did not furnish them; for with all the crops there is to be grown, not one is better than a crop of pluck and character. There are hawks to catch your chickens, and even the mockingbirds draw their salaries. I have seen snakes, but no more than in the Adirondacks. There are mosquitos in the coast counties, but in the interior only enough to know that the pest has not been exterminated. The turpentine tapper has ruined a vast area of noble pine, and the razorback has some legal rights. In other words, you will find your winter life just about as prickling and stimulating as your summer life, in the way of hindrances and annoyances. Migratory farming belongs to men, and not to human derelicts.

SORRENTO, FLA.

The Hague Conference From a Woman's Point of View

BY SUSANNE WILCOX

IT was my fortune to spend a good portion of the summer at The Hague in companionship with one who was professionally interested in the work of the Conference. Consequently, I met a number of the official and non-official delegates, press representatives, peace advocates, and others directly or indirectly connected with it; read the journal in which its transactions were published, and inevitably became interested in some of the most important questions under discussion.

But it soon became evident to me that only specialists could hope to unravel the tangle of its proceedings, and, having no

rôle to play or being under no obligations to persuade myself that things were not what they seemed, I took great pleasure in interpreting all that came and went within my circumference merely thru the medium of a woman's unreasoning intuitions. So from time to time I listened to the guarded but suggestive prophecies of some of the official delegates; to the exchange of small gossip or personalities and social affairs; to the gleanings for the press by some of its ablest representatives, and occasionally, when time hung heavily, I betook myself to the beautiful, tree-arched *Princessegracht*, No. 6 A, where *Le Cercle Internationale* (the un-

official Hague Conference), headed by Mr. William T. Stead, the Baroness von Suttner and others, held its meetings. There I drank a cup of tea and listened to the various discourses, radical or conservative, rational or irrational, sensible or nonsensical, as they chanced to be.

At these meetings peace was discussed from every point of view. There the various delegates and deputations from the colleges, churches, peace organizations, women's clubs, etc., were hospitably welcomed and given assistance in getting their petitions before the President of the official Conference.

The great body of these pacifists were made up of earnest enthusiasts whose attitude toward the powers and evils that be is fairly patient and rational; but, like all radical movements, the ranks of its advocates contain some extremists and bizarre personalities. So it was not surprising that after the regular programs, when the audience was invited to join in the general discussions, one heard some very extraordinary and diverting discourses. For example, upon one occasion a woman representing several organizations in the United States took up almost a whole afternoon reading her own original but not irresistible poems on peace. Another American woman who came armed with credentials from at least six high-sounding societies delivered a long dissertation on "Peace from the Point of View of the Higher Thought," and ended with a savage attack upon President Roosevelt. Fortunately, either the Baroness von Suttner or Mr. William T. Stead, editor-in-chief of the *Courier* (a journal which published the proceedings both of the official and unofficial Conferences), presided at these meetings, and they rarely failed to qualify over-rabid statements. Mr. Stead was a sort of ringmaster to the *Cercle Internationale*. He himself enjoys a hot discussion and is fearless in expressing his own opinions or in combating those of others. He has, however, a comprehensive knowledge of international affairs, and to him no small credit is possibly due for correcting many of the misinformed peace advocates, as also for castigating some of the lukewarm, evading official delegates.

Perhaps the most interesting woman who figured at The Hague was the Baroness von Suttner—a rare personality with unquestionable tact and ability. This enthusiastic leader in the peace movement seems gifted with subtle feminine instincts combined with a broad masculine understanding of affairs and infinite patience to labor and to wait. It was interesting to see her rise in the midst of a heated discussion and with a few potent, convincing remarks calm the troubled waters.

The official Hague Conference or Parliament of Man was heralded as one of the greatest bodies of statesmen ever assembled. From the outset, however, the ways and methods of this august body impressed me as not wholly unlike the ways and methods typical of our American women's clubs, which never cease to furnish a butt for satire and witticism. Subtle jealousies, petty ambitions and bickerings began early to develop, and the gratification of their smaller vanities seemed of greater importance to some of the delegates than the crucial issues under consideration.

At the beginning, for example, there was animus because the Russians had appropriated some of the choicest honors and the leadership of the Conference, when, by virtue of her recent international delinquencies during the Russo-Japanese War, many thought her least entitled to be at the head of the world's peace and arbitration movement.

Irritation was also manifested because the representatives from the United States (*Etats Unis*) were seated under the letter A (*Amerique*), altho they signed all documents under E. This was because of a precedent established at the Conference of 1899, when it was thought that the delegates from Spain (*Espagne*) and the United States (*Etats Unis*) might prefer to sit apart, inasmuch as the countries in question had just been at war with each other. But this mode of seating seemed to stir up considerable dissatisfaction at the recent Conference; so much so that, at an initial meeting of one of the large committees, the delegates of the United States found their places appropriated by the Italians, to whom in any case the places could not have belonged. After considerable

mutual belligerent pantomime, the Italians were informed by the delegates from the United States that the seats in question had been assigned to them and in the future would be occupied by them.

Another amusing incident was the sharp personal difference between Professor de Martens, President of the Fourth Commission, and Señor Barbosa, of Brazil. The latter, when called to order for reflecting upon the conduct of Russia in her recent war with Japan, sharply retorted that, inasmuch as he had been President of the National Assembly of Brazil for some years, he probably knew parliamentary law as well as did Professor de Martens.

These are only a few of the many episodes which did much to enliven the proceedings of the Conference, and which tend to show that the peculiarities of great statesmen are quite as diverting as those of American club-women.

The initial work of the Conference was, however, begun with much zest and good-will. The attitude of Germany, it was said, was infinitely more liberal than it had been at the previous Conference.

England came early to the front with her astounding proposal for the abolition of the capture of contraband, which for a few days set the whole Conference agog. But almost immediately she submitted a second proposal for the capture of neutral merchantmen in the guise of auxiliary vessels, thereby taking back with the one hand what she had given with the other, and it was once more declared: "Albion is to be feared even while bearing gifts."

Japan, it was rumored, was quietly but significantly watching the game, and in the end would not be found wanting in efforts to promote peace, but she remained ultra-conservative to the end.

The delegates from the United States were reticent, but sanguine. It was said they had definite instructions from their Government, and at the psychological moment would come forward with convincing projects, which would revolutionize international relations.

For a time there was great activity in formulating proposals and propositions which soon began to pour into the various committees: the British and German projects for an International Prize

Court, proposals regarding the rights and duties of neutrals, the immunity of private property at sea, the bombardment of undefended and unfortified towns, floating mines, declarations of war prior to hostilities, treatment of prisoners, submarine cables, wireless telegraphy, and so on *ad infinitum*. In the wake of this flood of proposals, amendments or counter-proposals were submitted, intended mainly to discredit or shelve the original ones, all in such chaotic profusion and disorder as to threaten to choke the proceedings of the Conference.

And now the real temper and eminently human qualities of the delegates began to reveal themselves. The subjects submitted covered almost the whole field of international law, and to decide upon these questions required an intimate knowledge of that subject. But most of the nations had sent diplomats rather than jurists to represent them, and few had been given definite instruction. Moreover, it soon became obvious that the delegates from many of the smaller states were not deeply concerned with the crucial issues of the Conference, and that even some from the larger ones were open to conviction in whatever appertained to their own interests, and were not averse to wire-pulling and log-rolling. As an able press representative put it: "The small states are afraid of the great ones and the great states of one another." Indeed, it was agreed that Señor Triana of Colombia, in his retort to Mr. Choate's speech, echoed the real spirit of almost every delegation: "As representatives of a nation it is our duty to defend the interests of that nation, and we are here assembled for purposes of international policy and not for purposes of philanthropy"; or, in other words, the work of promoting peace is a secondary matter. In fact, nearly all the propositions thus far submitted bore upon the regulation and amelioration of warfare and little had been directly suggested in the interest of peace.

The pacifists, who were eagerly watching the proceedings, now became unsparing in their criticism and named the Conference a "War Conference," and one of the committees which appeared unable to agree upon any important mat-

ter, the "Zero Commission." At this juncture, when the whole Conference seemed to have become impregnated with hopelessness and dissatisfaction, the Americans (who had already to their credit the very important Porter resolution relating to contract debts) came to the front with two eminently practical and well conceived projects: the one a scheme for establishing a Permanent Court of Arbitration, and the other providing for obligatory arbitration in certain cases. These proposals were supported by England, France and Russia, but it was feared that they would be crushed to pieces on the rocks of German opposition.

When, therefore, Marschall von Bieberstein, the head of the German delegation, announced in July that the German delegates were willing to collaborate in the task of creating a permanent Hague tribunal, and that the German Government, as a result of its study of the question, "is today in favor of obligatory arbitration in principle," the joy of the Americans and the peace advocates knew no bounds. They loudly proclaimed that a great victory for peace and arbitration was about to be won. And as an ardent pacifist declared: "Every one concludes that so much cackling after a long period of incubation must indicate that the Conference is about to hatch at least one big egg." But, alas, again there came an ominous lull! And great was the disappointment when it finally dawned upon the world that, owing to the opposition of the smaller states, headed by Dr. Barbosa, of Brazil, a permanent court so constituted as to be acceptable to some of the Great Powers (more particularly Germany) could not be obtained, and that Germany's affection for the principle of compulsory arbitration was purely platonic. For while she favored it in the abstract, she resisted every attempt at its practical application. The result was that the Conference, after much quibbling and dallying, was forced to adopt Germany's attitude, and declared in favor of obligatory arbitration *in principle*, but made no attempt to apply it except to recommend its use in the interpretation of treaties. As to the Permanent Court, the Conference, as Mr. Stead expressed it, created one in the spiritual

world, *i. e.*, it adopted the American project without providing for its constitution or organization. Or, in other words, it created a soul without a body.

Meanwhile, the social wheel was kept revolving. The delegates and various attachés of the Conference were brought constantly together at the many small dinners, banquets, pleasure trips and balls given by the Queen, the Dutch Government, and by the various delegations. Indeed, it might be said that these brilliant social functions contributed much to the promotion of mutual acquaintance and good will among this conglomerate assemblage of delegates, many of whose hopes, opinions and aspirations were directly antagonistic. A variety of types and races and a babel of tongues made these gatherings of exceptional interest to the onlooker. The hues of the Orient, varying from olive to dusky brown; the unmistakable sprightly Latin types of Southern Europe and Latin America; the larger, more phlegmatic Saxon, Teuton and Slav; officers of the armies and navies in faultless uniforms, and dignitaries wearing gorgeous decorations of honor, invariably made up these motley companies. It behooved one also to look seriously upon the marks of distinction, altho the decorations of some of the dignitaries were so similar to that of the gorgeous flunkies that one was often tempted to jest about them. Once I casually overheard a woman remark that the large brass buttons attached to the bottom of the coat skirts of one of the guests were like those of the flunkies in waiting, whereupon she was sardonically informed that the guest's buttons signified that he was in direct waiting upon the Czar.

No Oriental women graced these functions, but all Occidental types were represented; and it is needless to add that they contributed greatly to their brilliancy and spectacular aspects. A not unnoteworthy feature was the seeming ambition of some to display their personal charms to a point of generosity unequaled upon the stage, and in the presence of no small number of Orientals, whose traditions teach them that it is immodest for women to appear in public even with their faces unveiled. Indeed, I think many quite agreed with the dele-

gate who facetiously suggested that here was another matter which needed international regulation.

In time, however, many became fatigued with the unending round of formal social affairs and the paucity of political results, and did not hesitate to speak of the Conference as the World's Political Fair and the World's Vanity Fair. But, as our able minister, Dr. Hill, remarked to a press representative who had expressed his impatience with the proceedings: "If the world at large only knew the difficulty of managing and persuading a body of more than two hundred men, composed of different races, many naturally jealous and suspicious of one another, and of diametrically opposite opinions, and each fettered by positive instructions from his Government, it would marvel that anything had been accomplished."

So, while it is indisputable that this august body of statesmen did not succeed in reconstructing the whole realm of international law—a task which ex-

perts claim could not have been accomplished by international jurists, invested with unlimited powers to act from their respective Governments—and while there are critics who claim that little has been accomplished, others who have decried every effort made; and while it is known that a comparatively small number of the delegates had any vital interest or influence; that others strove mainly for personal favor and aggrandizement, it is nevertheless true that much was achieved toward the settlement of details regarding the laws of warfare. An important move toward compulsory arbitration was also made in the adoption of the Porter resolution. And, altho no Court of Arbitration composed of permanent judges was actually created, the general ideas underlying the American project were approved and the calling of periodical Conferences in the future is practically assured. These are doubtless important initial steps on the long and tortuous road to the universal reign of law and peace.

Machines in Fur and Feathers

BY JOHN BURROUGHS

THE longer I observe and consider the lower animals the more I am persuaded that the old Cartesian view of them as mere automata is nearer the truth than the recent more popular view of them as possessed of a fair measure of human reason. Mr. William T. Hornaday, who has recently been writing upon animal psychology in one of the popular magazines, often sees in his caged and yarded wild beasts deliberate criminals and murderers capable of planning and carrying out a scheme of revenge upon one of their fellows after the manner of men. He believes the wild creatures think and reason every hour of their lives. And Mr. E. P. Powell, who recently wrote upon animal intelligence in *THE INDEPENDENT*, takes a similar view and taxes one's patience even more than Mr. Hornaday does. He does not merely anthropomorphize the animals as does the

latter; he sentimentalizes them and they come from his hand sicklied over with his own nerveless humanism. If I held the views of animal intelligence that either of these worthy men does, I should turn over a new leaf in one respect at least, I should banish meat from my table upon principle and join the ranks of the vegetarians. I could not be a party, directly or indirectly, to the murder of beings between whom and myself there existed the relationship implied by the gift of the faculty of reason. The unthinking vegetables and cereals should supply my wants. If I had a hen that when she weaned her chickens would come out of her way to tell me, in language that was unmistakable, what she had done, as Mr. Powell, in a serious discussion of Evolution, says his hen did, I could never bring that hen's head to the block, nor allow any one else to do so. Rather would I

send her to Dr. Long's school of the woods and see to it that her education was properly finished.

There is much in animal behavior that confirms the Cartesian view, and very rarely anything that supports the view that the lower animals possess the faculty of reason, even in its most rudimentary form.

Take the case of the raccoon, for instance.

During some long-gone time in the history of the raccoon it seems to have been needful for it to wash its food. Maybe the habit was acquired when it lived more exclusively than it does now upon fresh water mussels which it dug out of the mud along inland streams and lakes. At any rate, the coon now always washes its food, whether it needs washing or not, and in muddy water as promptly as in clear, so that the Germans call the coon the *Waschbär*. Ernest Harold Baynes tells me that he has taken young coons before their eyes were open, and brought them up on milk, and that the first time he gave them solid food, one of them took it and ran to a pail of water which it had never before seen, thrust the food into it, washed it, and then ate it. When no water was within reach, he has seen the coon rub the food a moment in its paws and then drop it. Dallas Lore Sharp says that his tame coon would go thru the motions of washing its food on the upturned bottom of its empty tub, and that it would try to wash its oysters in the straw on the floor of its cage. This habit, I say, doubtless had its origin in some past need or condition of the life of the race of coons, and it persists after that need is gone.

The story that is told of the brakeman upon a train of cars in Russia, who, at each stop of the train, went from wheel to wheel, as was once the custom in all countries, and hit it a sharp blow with a hammer, saying on being asked why he did it, "I do not know, sir, it is my orders," illustrates very well the unreasoning character of animal instinct. The animal has its orders, but it does not think or ask why.

The lower animals, as I view them, act very much as we do when we know not what we do, when we act entirely from impulse and not from thought. Surely the coon did not know what it was do-

ing. And surely the phoebe bird does not know what she is doing when she covers her nest under the porch with the same green moss that she covers it with on the ledge of rocks or under the bank, because in the one place the moss betrays what it conceals in the other. Surely the same bird does not know what she is doing when she begins and partly constructs three or four nests under a porch on as many sites precisely alike, and is not set right till I intervene and block all the nests but one.

Surely the song-bird that has a serious defect in its organ (in one case that I knew—a bobolink—rendering it almost inarticulate), and that yet sings with the apparent joy and abandon of the perfect songster, does not know what it is doing. It is the song impulse that rules and not any purpose of the singer.

The same blind automatonism may be seen in the insect world. For instance, the trap-door spiders in California make their nests in moss-covered ground and cover the lids of the doors with green growing moss. An English naturalist, as reported by Jordan and Kellogg in their "Animal Life," removed the moss and the other assimilative material from the door and found that the spider always replaced it. Then he removed it again and with it the moss and debris from the ground in a large circle about the nest. This, of course, left the door as well concealed as before, because it made it one with its surroundings. Did the spider leave it so? Not a bit of it. She fetched more moss and bits of bark and sticks and covered it as before, which gave away her secret completely. If she had done otherwise, or had covered her door with soil so as to make it one with its environment, we should have had to credit her with a faculty higher than instinct.

While speaking of insects in connection with this subject of the automatic character of animal intelligence, I am reminded of the habit of one of the solitary wasps as described by Fabre. When the wasp brings an insect to its hole, it lays it down at the entrance and backs down into the hole, apparently to make some examination, then comes out and drags in its prey. Fabre watched his opportunity, and, when the wasp had

disappeared in her den, removed her game a few inches away. The wasp came out, hunted for her bug, found it and drew it back to its former position, then dropped it and retreated into her den as before. Fabre again drew the insect away, and again the wasp came out and repeated her former behavior. Time after time this little scene was enacted; the wasp *must* go into her den and make her preliminary survey before dragging in her prey. That habit had become fixt and there could be no deviation from it, and yet the wasps in many ways seem so surprisingly intelligent!

Another bee upon which Fabre experimented builds a cell of masonry, fills it with honey, lays its egg in it, and then seals it up. When the bee was away Fabre punctured the half-filled cell and let the honey flow out. When the bee returned it appeared to be disturbed to find its honey gone; it examined the hole thru which it had escaped curiously but made no attempt to repair it, and continued to pour in the honey the same as before. After it had brought the usual quantity—the quantity her forbears had always brought—she laid her egg into the empty cell and sealed it up. The machine had done its work, and it could do nothing not down in the ancestral specifications.

Dan Beard, in his delightful "Animal Book," tells of an ichneumon-fly that tried all one day to thrust its ovipositor into a nail-head in a board in his cabin, mistaking the dark spot which the nail-head made for a hole that led to the burrow of a certain wood-borer which is the host of the ichneumon. Beard thinks the fly desisted only when it had seriously dulled the point of its instrument. I am reminded of one of our well-known wild flowers, the erythronium or fawn lily, that will persist in a certain habit, no matter how many times defeated. This plant forms a new bulb each spring by sending out a big tap-root that bores down into the ground and plants the new bulb deeper and deeper each season till the required depth of six or eight inches is reached. When the ground is so hard that the pioneer root cannot penetrate it, it wanders in loops over the surface and forms the new bulb no deep-

er than the old one was, and keeps this habit up spring after spring, groping its way blindly about over the hard surface.

The strongest instinct in the carnivora is the killing instinct, and when this instinct is fully aroused does the animal know what it is doing? When a weasel or a wildcat gets into your hen-roost it rarely stops till every chicken is killed, tho it may not devour one of them. We say it kills and kills to satisfy its lust for blood, as the inebriate drinks and drinks to satisfy his abnormal appetite for alcohol. But it is not like that. The weasel or mink kills all within its reach in obedience to its normal killing instinct. It has no choice in the matter. Appetite starts the machine and then it keeps on and on like a fire. Last winter a wildcat starved to mere skin and bones was found at midday in the henhouse of one of my neighbors. It had killed over thirty hens and kept on with the slaughter while the man ran to the house for his gun. The strange part of the incident is that it had not eaten one of the fowls or any part of one that it had killed. The explanation doubtless is that its killing instinct was so overstimulated by its great hunger that the cat could do nothing but kill as long as there was a live fowl left. There was no such word as enough in its vocabulary. It had no perception of the relation between its appetite and any given quantity. It must kill and kill and kill again. After it had cleared the roost, if left alone, it would doubtless have fallen to and gorged itself. Wolves act in a similar way with a flock of sheep, killing vastly more than they can eat. I do not look upon this excess as the result of the wild spirit of debauch, in the human sense, but as the result of blind instinct acting automatically. The rodents that hoard nuts illustrate the same tendency. A tame chipmunk, fed to repletion, will hoard all the nuts you are a mind to give him, and go thru the pantomime of covering them up on the bare floor of an empty room. Dallas Lore Sharp says a red squirrel will hoard nuts in its own cage from the stores you give it, and that if a white-footed mouse were confined in a room with a peck of hickory nuts, it would make little piles of the nuts about the room. It must hoard

when stimulated by the opportunity to hoard. Is not this true of the honey-bee? The amount of honey she will store has little relation to her actual wants. She will store honey as long as there is any to store, often to her own detriment, as in her greed, as we miscall it, she will fill up the empty brood comb, if strongly tempted. The presence of honey sets her machinery going and she must carry it home.

When the orioles begin to stab our grapes in August they appear to be seized with the same spirit of excess. A few drops of the juice must satisfy their thirst, if that is what they are after, but once started they go on and on, the appearance of fresh clusters of grapes stimulating them to greater efforts of destruction, till a few birds will in a short time render unmarketable tons of grapes. We may call it an exhibition of the spirit of wanton destruction, but the bird is so well equipped for the work with that stiletto-like bill of his that the stabbing of the grapes doubtless satisfies some inborn instinct. The animals can have no purpose to do this or that; they act without purpose; they know not what they do nor why they do it, and the riot and excess of which they are so often guilty only illustrates how nature loads her dice to make sure she wins in the game she is playing thru these humble creatures. Spread a table of corn and nuts for the birds in winter, and if the jays find it they will carry off corn and nuts all day and hide them in holes in trees or in old birds' nests or worms' nests, where they will probably never see them again, because their propensity is to steal and secrete, and the opportunity to do so seldom fails to set their machinery going. How this instinct of the crow tribe came about is a problem. How does nature find her account in it? How do the crows profit by it? At times in the fall the jays may be seen carrying acorns and chestnuts from the woods and hiding them here and there on the ground or amid the leaves, one in a place, apparently without any reference to their future need of them as food. Where, then, is the gain to the jay? So far as I can see, only in the fact that they are unwittingly planting oaks and chestnuts, which may yield

them food at a later day. If this is the true explanation it shows what a round-about and indirect course nature sometimes pursues. One season a New England woman sent me a bird's nest with a hole nearly thru the bottom the shape of an egg, and wanted to know what the hole meant. It was evident that it was caused by a premature egg. While the bird was building the nest an egg had ripened and had to be laid, then the automatic creature had gone on and built the bottom of the nest up around it, just as a growing tree will envelop or embrace a piece of metal. A bird's nest is always more like a growth than a mechanical structure; how it fits to the branch, or to the rock, or to the ground, almost becoming a part of it. The bird molds it to her own breast, and it seems almost as vital as if it were a secretion or excretion, like the shell of the snail or the case of the chrysalis.

As we go down in the scale of animal life it seems as if the brain functions, as seen in the higher forms, were performed more and more by the spinal cord. Thus certain reptiles will get along for a short time without their brains. Dan Beard tells of a headless rattlesnake that coiled and struck him with its bloody stump when he touched it as promptly as before it had lost its head, and Huxley found that a frog with most of its brain removed could keep the center of gravity on the top of his hand when he turned it over and could swim when thrown into the water, the same as when its brain was intact. Hence when Dallas Lore Sharp tells his almost incredible story of the little snake that had just swallowed a toad and thereupon, in trying to escape thru a small hole, had stuck fast, and after apparently reflecting a moment upon his predicament, had drawn back and vomited up the toad, and then quickly made his exit, one must look to the reaction of its spinal cord for the explanation. One cannot conceive of the snake as thinking to itself: "It is that lump in my body caused by the toad that keeps me a prisoner; I will cast it out." Only reason takes in cause and effect in that way. No, the vomiting was as inevitable as any other vomiting, and was brought about by a disturbed nervous system, which was again brought about

by the thwarted effort to escape. This nerve intelligence is nerve irritability, which sets the muscular machinery going without cerebral prompting.

Up to a certain point, or under certain conditions, man is an automaton also. He is a bundle of instincts and of inherited traits, supplemented by self-knowledge and the gift of reason. His instincts leave him where they find him; he is what he is by virtue of these higher gifts. Every creature but man knows its own craft without having to learn it. Man must learn his and invent new ones.

and rise thru overcoming the obstacles that oppose him.

It is as if Nature had said to him: "Here is unerring instinct and here is erring reason; which will you choose? With instinct goes the gift of prompt and sure action, freedom from thought and from the failures of misdirected energies; with reason goes knowledge and progress, and mastery over nature, but pain and struggle and failure and the burden of free choice." Man chose the latter and the prize of the universe is his.

WEST PARK, N. Y.

Machine, Violet and Star

BY JACOB BACKES

A RIM, a hub, an axle; spokes flashflung,
Then revolutions slower by degrees. . . .
Scarce motion now. . . . Full stop. . . .
The whirr has ceased;
And thus the Wheel:

"Neighbors and friendly my auxiliaries—
(Cam, wedge, and lever, pendule, screw, and
rod,
Pulley, and tackle, clutch, and spring, and scale,
Chain, barring lock, and anvil, pinion, drill)—
Should we from mankind's service be exiled
Empierced would Progress be, as with a sword,
And its development derailment find.
Who use us, conquer; and who conquer, use.
To limit us is to unlimit Waste;
In us the knout and rack their ending see;
With like goodwill we serve Technique and
Art,
And crown the efforts of the delving mind;
In poets' verse a welcome never find.

"To us pertains
To lengthen still the stretch from brute to
man,
The cleft to close from Self to Seraphim.
Not distant we, when wakes the dozing Force
For ages numbed in forests carbonized,
When miracles are forged from molecules;
Nor when titanic powers are released
Foreprisoned in matter aered, or vapored flow.
The chronicles of goddess, ghou, or nymph
Of fabled Greece, of Ind, or Araby,
Are Fancy's rill: a sea of Fact are we.

"Yes, this we'll dream
(Cam, wedge, and lever, pendule, screw, and rod,
Pulley, and tackle, clutch, and spring, and scale,
Chain, barring lock, and anvil, pinion, drill,
All you that span, propel, illumine, or lift,
Weld, clip, or core, swift-powered to perform—
Where love and lilt, where lark-souled minstrels are
For aye to dwell in that beguiling realm
Tri-caroled with the Violet and Star.

NEW YORK CITY.

"And our domain:

Where honeyed strains Italia's roses lull—
To deeper clang dome-cleaving Alps beyond—
To Ocean's Gem, won from Atlantic's West—
To tropic strands by strength or cunning wrest
For Freedom's fold from weak hidalgo-hand—
From bound to bound, our trace in every land.

"To this the rimers are yet disinclined:
Tho Pittsburg grows, than old Venezia more,
The star and rose are sung, and not are we;
But penlight still remains when high the theme,
And now I dream:

"We'll yet be added to the poemed praise—
Of polar pine, deep-dreaming of the palm;
Of shattered vase; late summer's lonely rose;
Spear-gathering breast for Liberty that died;
And crimson balm, drawn from Immanuel's
side;—

"Of matron's smile, on duteous daughter
beamed;
Of Truth, fair-framed in Avon's ardent lines
Which stir to steel, or melt as to a maid;
Of pansied gardens, dawning under dew;
Of glimmering landscape, fading from the
view;—

"Of tiny warbler's heaven-uptrilled lay
Greeting the millioned majesty of Day;
Of Verna's lure, afraught with fragrance sweet,
With growth and grace, with curve and color
blest,
On field and flood conspiring sweet Unrest.

Needed: Home Settlements for Young Americans

BY AN EX-MEMBER OF SOME OF THEM

NOT long ago I met a fine young American fellow of about twenty-one years of age, a graduate of a college, who had just come to New York. I asked him casually what he expected to do that evening.

"Guess I'll go bumming on Broadway again," was his reply.

"Do you find it amusing?" I asked.

"Not especially. I've gotten tired of it; had too much of it. But there isn't anything else to do."

"Why, I thought you knew some nice girls in town. Why don't you look them up?"

"I did. But what's the use? They haven't any time for me. You see, I'm just a plain American of good stock. The girls are all so busy 'saving' little, half-baked immigrants over on the East Side in some club or settlement that they haven't any time to give to me. They seem to think it is better to teach those fellows to eat with a fork than it is to keep American chaps like me from getting lessons in other things from undesirable teachers. Those that aren't in the settlements are so religious that they close their homes on Sundays, I suppose so that they won't compete with the saloons for my trade. If it isn't that, when a fellow goes to their places they act as if it were such hard work to talk to him and such an awful responsibility to ask him to an informal meal that I prefer to buy my welcome elsewhere and pay for my food. I haven't yet succeeded in buying real hospitality, but I guess that is for sale somewhere. But I can buy fellowship and amusement."

It so happened that I knew something about some of the families of which he complained. I, too, had been there, as a welcome guest of the father one very bad Sunday afternoon. The father had come in to talk to me and had said, "You'll surely stay to tea with us?" I was about to accept gladly when one of the girls spoke up with some annoyance. "No,

don't ask him to stay tonight; ask him to come next Sunday. We have only a plain tea tonight." I politely refused her kind invitation on the ground that another engagement interfered with my acceptance a week later, and went around the corner and got my supper in a café. From that day, altho I had known those people for years, and continued to call there at intervals, I never accepted an invitation to dine with them. For I knew that they were asking me to "feed," under the impression that I expected principally "food" when I dined out. I could buy "food," but I could not buy hospitality and admission to a family evening meal. I would not have cared if they had had merely bread and butter and tea; I should have enjoyed and appreciated, far more than they knew, a welcome which did not have to be engraved on a card. Men do not look on the flap of an invitation to see what engraver has done the printing.

These people were religious, did good works, and yet were willing to let me roam around Sunday night alone, to escape as best I could the places which somehow never seem to be unprepared to give even a stranger a glorious welcome—for revenue only. I know of few stronger social contrasts than the dark parlors one sees in city American homes and the blaze of light from every saloon and every burlesque theater. For Americans, somehow, in the great cities, are getting into the habit of thinking that the only fun in life after dark is to dine at hotels and spend the evenings at the theaters. Young men who call on young women soon find that the girls are not pleased to use their homes very much, but expect to be taken elsewhere for their enjoyment. The talk is mainly about plays seen and places and entertainments visited; there is little said about home affairs, which are left largely to servants. The young American man, therefore, is too quickly educated to look also for his

fun away from the evening lamp. A family evening, with father telling his old stories and mother beaming on the young fellows and living over again her young life, is rapidly growing to be considered a bore, not merely by the man visitor, but by daughter, whose one idea in life seems to be to get away from parental supervision. And daughter not infrequently marries with the one idea of becoming her own mistress, and too often treats her husband no better than she treats her mother.

In contrast with these homes where the people are too busy or too selfish to preserve our American male stock from contaminating influence, the writer has in mind three homes which are, or were, truly Social Settlements for Young Americans. To these homes no one who was unworthy of full confidence was admitted, but once he was admitted he had no cause to say that the lights of the saloon blaze brighter than the American hearth, or that doubtful women were more attractive than those who are pure and good.

One of these homes was unusually religious—not even a Sunday paper was permitted, and the maid was not allowed to do more than was actually essential on the Sabbath. Sunday afternoons, however, young men were welcome for a family gathering. If they called and one of the daughters was at Sunday School or at a mission, they were asked to go after her. And few of these callers found themselves able to refuse the sort of invitation for tea which was extended.

In another home, on Sunday afternoons, there were always a simple cup of afternoon tea and some wafers, over which the mother of the girls presided. Here, too, was a welcome at tea or dinner; here, also, was music, or some innocent game or some sort of gayety whenever the girls were home. And if the girls were out, the mother received their callers tactfully, and as a general rule the young fellow had as good a time talking to mother as any one else. "Looks like a man trap," I think I hear many people say. "We wouldn't think of palpably rushing men in such a fashion." This family didn't think of any such thing, and altho I knew well many men who like to go there, I never found

one who even said: "They know their business." In fact, both girls married men they met elsewhere, and not a few of the young fellows still call on mother.

Moreover, these families did not even appreciate that they were doing social betterment work. The old folks simply liked to have young people around, and said that they thought if a little attention were given to the matter, home could be made the most delightful place of all for everybody. The girls were perfectly contented to spend most of their time at home, tho they liked to go out occasionally. But before they would accept an invitation they somehow got a line on the young man's resources, and no young chap who was not making a high salary was ever permitted to do anything elaborate. If it was a dance, the girls would insist on going in the cars; if it was a theater party, there was a little supper at home which would be more fun than the restaurant. They seemed to have more fun in the cheap seats at a place with some chaps who couldn't afford anything better than their friends who sat in a box and wore flowers which cost their escort three days' salary. Somehow these girls, who had everything they wanted, escaped the idea that the amount of pleasure one gets out of a thing is proportionate to the sum of money it costs.

These several families are as much opposed to the vice traffic probably as any in New York. I have never heard, however, of the mothers speaking at women's clubs on the subject, or the fathers delivering speeches in public on the topic. They are too busy running an opposition shop to the lights of those who conduct the man hunt. And as nearly as I am able to judge, they have chosen a method far more effective than any amount of oratory. They are following the substitution theory of social betterment in its application to young Americans. In the settlements on the East Side the workers seem to believe that if you can give the foreigner a taste of cleanliness, orderly domestic conditions and æsthetic surroundings he will develop an appetite for better things and will strive to attain them thru his own efforts. If there is anything in virtue, anything in true American standards, it should be

possible to make them more attractive than their antitheses. The young man in the great city who gets no opportunity to test the charm of home conditions cannot be expected to know the difference in flavor between real living and a burlesque existence, between drinking tea out of a cup and wine out of a slipper. Unfortunately, the people who use slippers for a "social glass" are always "on the job" and ready to serve their beverages. The cup of tea, brewed with true hospitality, is far harder to find. About the nearest one can come to it is a sermon or lecture on its relative excel-

lence, and, altho these sermons have been delivered for years, they do not seem to have broken very many social glasses. The reason for this probably is largely that American homes do not take the trouble to supply samples of virtue's wares. In other words, it is my belief that the most effective opponent of the "social glass" is the social lamp chimney kept lighted in the parlor and sedulously kept burning by home-keepers to mark a channel past the cruel rocks of society, on which the wreckers keep such tremendous false beacons.

NEW YORK CITY.

The Rules of the House of Representatives

BY JOHN DALZELL

MEMBER OF CONGRESS FROM PENNSYLVANIA

THERE are few subjects of public discussion about which there is more unjust criticism—I might, without exaggeration, say, unjust abuse—than the rules of the National House of Representatives. The criticism and abuse come largely from members of the House when in the minority, and from newspaper and magazine writers, of whom, without unfairness, it may be said that they have very little knowledge or intelligent conception of what they are writing about. Indeed I think it may be truly said that there are comparatively few members of the House itself, much less outsiders, who have any real knowledge of the rules. The rules are simple enough and entirely logical, but to the majority of members of the House who have no special ambition to familiarize themselves with them they seem complicated.

There is nothing new in this protest against the rules. It is human nature to be uneasy under restraint, and in all Congresses, even among the first, when the membership was small and the rules were simple, complaint was heard as now from those who could not have their own way.

The rules of the National House of Representatives are not the conception of any one man or set of men; they are not the product of any one Congress or of any combination of Congresses; they are an evolution, the outgrowth of the parliamentary experience, necessities and exigencies of all the hundred years and more of our Congressional life. The book of rules contains no rule that had not a reasonable necessity for its adoption in the first instance and has not a like necessity for its continuance now. As a whole the rules are so made as to render possible the most expeditious accomplishment in the wisest way of the legislative business of our ninety millions of American people. There have been two revisions of the rules within the last thirty years.

In the Forty-sixth Congress (1880) the rules were revised under the direction of the Committee on Rules, consisting of Speaker Randall and Messrs. Stephens, Blackburn, Garfield and Frye. The changes then made consisted mainly in dropping a number of rules that by reason of changed conditions had become obsolete, in consolidating a number of

others and changing their arrangement, and in the introduction of a very few new rules. The Committee in its report, which was unanimous, said:

"The objective point with the committee was to secure accuracy in business; economy of time, order, uniformity, and impartiality, and to prepare, if possible, a simple, concise and non-partisan code of rules, which would neither surrender the right of a majority to control and dispose of the business for which it is held responsible, or, on the other hand, invade and restrict the powers of a minority to check temporarily, if not permanently, the action of a majority believed to be improper or unconstitutional, and to attain, if possible, the great underlying principle of all the rules and forms by which the business of a legislative assembly is governed, whether constitutional, legal, or parliamentary in their origin, viz., 'to subserve the will of the assembly rather than to restrain it, to facilitate and not to obstruct the expression of its deliberate sense.'"

The rules then adopted remained in force until the Fifty-first Congress (1890), when they were revised by the Committee on Rules, consisting of Speaker Thomas B. Reed, Messrs. McKinley, Cannon, Carlisle and Randall. By this revision, out of the total number of forty-seven rules, twenty-nine were allowed to remain unchanged, and in the remaining eighteen such changes as were made were only formal, except in four fundamental particulars. These related to (1) dilatory motions, (2) the counting of a quorum, (3) the number which should constitute a quorum in Committee of the Whole, and (4) the order of business. This last revision was found necessary in order to carry out the announced objects sought to be attained by the revision of 1880, viz.: *"economy of time, order and the right of a majority to control and dispose of the business for which it is held responsible."*

Prior to this last revision, under then existing rules, the practice known as filibustering had grown to such an extent as to waste much valuable time and to threaten the power of the majority to deal with the business of the country. By the use of the privileged motions "to adjourn to a day certain," and "to take a recess," and the practice on the part of members of remaining silent and refusing to vote, thus breaking a quorum, it was in the power of the minority at any time effectually to obstruct the passage of any legislation. A motion to adjourn to

a day certain was subject to two amendments, on each of which as well as on the original motion the yeas and nays could be ordered. The same was true as to the motion to take a recess; these motions could be repeated without limit and thus days could be consumed in useless calls of the roll. In point of fact, in the Fiftieth Congress on one occasion the House remained in continuous session eight days and nights, during which time there were over one hundred roll calls on the iterated and reiterated motions to adjourn and to take a recess and their amendments. On this occasion the reading clerks became so exhausted that they could no longer act, and certain members possessed of large voices and strenuous lungs took their places. If this was not child's play it would be difficult to define it. Then again, when a measure to which the minority objected was likely to pass, the yeas and nays would be ordered. The objecting minority members, sitting in their seats, would fail to respond when their names were called, and when the count was made it would appear that there was no quorum present to do business and thus the measure would fail. It seems now strange to realize that many eminent men acting as Speakers of the House maintained that for this manifest evil no remedy existed. It remained for the Speaker of the Fifty-first Congress, Thomas B. Reed, the greatest parliamentary leader in the history of English speaking people, to make an end of this manifest absurdity. He declared that physical presence and constructive absence was impossible; that the quorum called for by the Constitution was a present and not a voting quorum; and so, on a certain historic occasion, he added to the names of those voting the names of those present and not voting and announced the result accordingly. He has no greater glory than that the principle he announced and put into practice has not only been endorsed by the Supreme Court of the United States, but also by his partisan foes when they came into power in the House, and by the practical results which recent years of wise legislation unobstructed by foolish tactics have put on the statute book. Under present rules the motion to adjourn to a day certain and the motion to take a re-

cess are not privileged, and furthermore the Speaker is not allowed to entertain any dilatory motion. If a quorum has been ascertained by actual count to be present, a measure voted on passes or fails in accordance with the recorded vote, whether all members have voted or not.

In the Committee of the Whole 100 now constitutes a quorum instead of a majority of the whole House. This is in the interest of the expedition of business.

Bills are now introduced by filing and not by presentation in the open House, and thus much time is saved. Business once entered upon is continued until concluded instead of as under prior rules being limited to a certain time for its consideration and then not having been concluded being sent to the graveyard of the calendar of unfinished business.

In the last Congress (59th) there were 386 members (in this Congress there are 391), and there were introduced a total of bills and resolutions numbering 27,114. It goes without saying that not all of these bills could be considered nor could all of these members have a hearing. Theoretically every member of the House is the equal of every other member; every constituency is entitled to equal recognition with every other constituency, but practically there cannot be 391 Speakers; there cannot be 391 chairmen of committees, nor equal recognition for debate given to 391 members. The real purpose, then, to be accomplished by the rules is the selection from the mass of bills introduced those proper to be considered. There is no limitation on the right of a member to introduce bills; as many as he likes and of whatever character he pleases. Every bill introduced goes to an appropriate committee for consideration, and whether or not it gets upon a House calendar for action depends upon its being reported by the committee. It may never be reported, and, of course, if not reported can never be considered in the House. In the last Congress, of the 27,114 bills and resolutions introduced there were 7,839 reported; the others remained in the pigeon-holes of the various committees. Of the bills reported, 7,423 were considered and passed. Bills when reported go upon certain calendars of the House, according to the character of the bills.

1. Revenue and appropriation bills. These are few in number, not to exceed perhaps twenty. They come from the Committee on Ways and Means, whose office it is to provide revenue for the Government, and from the Committee on Appropriations, and from the several committees having to do with the maintenance of the Government in its various arms, such as the Naval Committee, the Military Committee and others. These bills when reported go to a calendar known as the Union Calendar, but they are highly privileged, as they ought to be, for without their passage the Government wheels would stop. They can be called for consideration at any time. They take precedence of all other bills, and the Speaker has no alternative but to recognize the member calling them up. These bills are considered, not in the House, but in Committee of the Whole; the Speaker leaves the chair and another member takes his place.

2. Another class of bills are such as relate to some public purpose, but carry no appropriation, such, for instance, as bridge bills and the like. To a large extent bills from the important committees on the Judiciary and on Interstate and Foreign Commerce are of this class. These bills go on the House calendar and are entitled to consideration in the morning hour. There being no privileged bills for consideration, the morning hour is the regular order. The Speaker must call the committees in their alphabetical order, and then the chairman of the committee which has the call is entitled to recognition by the Speaker as of right. The House then proceeds to the consideration of such bill reported by the committee in question and then on the House calendar as the chairman calls up, and continues its consideration until a vote is had, subject only to a possible interruption at the end of sixty minutes, to which I will refer hereafter. But even if interrupted its consideration is continued thereafter, when business of that character is in order, until it is finally disposed of.

3. In addition to public bills such as I have enumerated, some carrying an appropriation and others not, there is another class of bills, the most numerous of all—private bills providing for the relief of private individuals or corporations.

These have a calendar of their own called the private calendar, and are in order on every Friday of each week. They are, generally speaking, bills from the Committee on Claims, from the Committee on War Claims and from the Committee on Pensions. As to these bills the Speaker has no independent right of recognition. When addressed by the chairman of the appropriate committee on a Friday he must recognize him, and unless the House declines to consider these bills the Speaker must leave the chair and nominate a member to preside in his place. In the last Congress there were reported 6,834 private bills; 6,624 were passed, leaving 210 undisposed of.

There is another class of bills that, like private bills, have a day of their own under the rules, viz., District of Columbia bills. As is well known, there is no right of suffrage in the District of Columbia, and the Senate and House act as its Select and Common Councils. District of Columbia bills are in order on two Mondays of every month. As to these bills, again the Speaker has no alternative but to recognize the Chairman of the District Committee when, on his allotted day, he calls up his business.

4. A fourth class of bills provide for various matters of public concern and are such as involve a charge upon the Treasury. These go to the Union Calendar, and when considered must be considered in Committee of the Whole. At the end of the morning hour (sixty minutes) a motion may be made to go into Committee of the Whole for the consideration of bills on the Union Calendar or for the consideration of some particular bill thereon. This motion the Speaker is bound to entertain.

Then a large part of the business of the House is done wholly outside of the rules, by unanimous consent. Some gentleman, for instance, arises in the House and, being recognized by the Speaker, asks "unanimous consent for the present consideration of the following bill." Unless objection is made the bill is considered and voted on. It is in connection with this practice and because of it that autocratic power is without any reason ascribed to the Speaker. But the rules have nothing at all to do with this. The applicant for recognition asks that all

rules be set aside. To this any member of the House may object. Why should complaint be made if the Speaker exercises his right of objection by refusing to recognize an applicant for recognition in any particular case? Because he is Speaker he is no less a member of the House; no less a Representative of his Congressional District. If he were on the floor he could interpose an objection to any request for unanimous consent. Should he be less able to interpose that objection because he is in the chair? Certainly not. That the Speaker's power in this regard is only, in the last analysis, that of a member may easily be illustrated. During the latter part of the Fifty-fourth Congress, when Mr. Reed was Speaker, there was a member from Nebraska named Kem who announced that he would object to any consideration of bills by unanimous consent. After the announcement, on the first day, the Speaker's room was crowded, as usual, with applicants for recognition. Mr. Reed promised to do the best he could, but recalled to his applicants Kem's threat to object. Still members persisted, one of them was recognized, and Kem objected. The next day the throng at the Speaker's room was not so great, but still of large proportions. Members had faith that Kem would not persist. Again Mr. Reed promised to do his best; again a recognition was had and again Kem objected. On the third day the Speaker's room was deserted, while an anxious throng surrounded the desk of Mr. Kem, and from that time on, Kem being persistent, the Speaker had peace; Mr. Kem was the autocrat, and the business of the House proceeded under the regular order.

There is no doubt that a great many measures of questionable character are passed by unanimous consent. Members cannot keep the run of all bills reported and are loth to object, both because ignorant of the merits of the particular measure proposed and because they may have measures of their own to be considered and they fear a reciprocity of objection. In a majority of cases the only real intelligent objection made to measures proposed for unanimous consent is that made by the Speaker, who has had opportunity to examine, as was his duty, the bill. On two Mondays in every

month and during the last six days of a session a motion is in order to suspend the rules and pass bills, which requires for its adoption a two-thirds vote of a quorum. The object of this rule, of course, is to expedite business by getting rid of bills to which two-thirds of the House are agreed. But the demands for recognition to move to suspend the rules are so far in excess of any possible power of grant upon the Speaker's part that he is confronted by the embarrassing necessity of making a choice. There is no doubt that he performs his unpleasant duty with due regard to his obligation to the public service.

It is manifest that even under the methods provided by the rules for the consideration of all classes of business there must necessarily be measures of great public importance that, for one reason or another, cannot be reached in the regular order of business. These are provided for by special orders reported by the Committee on Rules, which consists of the Speaker, two members from the majority and two from the minority. Like the rules themselves, the Committee on Rules is made the subject of much unjust criticism. Autocratic power is ascribed to it. But it must be recognized first that the existence of such a body is a necessity, and second that the only power it exercises is the power of the House. The Committee on Rules does not dictate, it simply suggests. Its report is of no consequence until it has been adopted by a majority. The fact that the committee's reports are uniformly adopted, so far from being any evidence of undue authority or power on the part of the committee, is evidence of the discretion of the committee in recognizing and making possible what the House wants to do. The real temper of the House upon any question at any given time, it may be assumed, is better known by the Committee on Rules than by any one else. The committee, so far from being the master, is the servant of the House. Of the 7,423 bills considered last year, only 24 were brought forward by the Committee on Rules.

While it is true that the authority of the Speaker as to recognition is very much limited, it would be useless to deny that he exercises a great power upon the business of the House. But this is not

due to the rules in the first instance, but to the personality of the Speaker himself. Much of his power lies back of his office. It is because of his character, his experience, his service, his position as a party leader that he is Speaker. He comes to his high office because he is *primus inter pares*. A leader on the floor, he does not cease to be a leader when he becomes Speaker. One who was himself a distinguished Speaker of the House of Representatives, James G. Blaine, in that most eloquent eulogy pronounced upon his Chief, President Garfield, said:

"There is no test of a man's ability in any department of public life more severe than service in the House of Representatives; there is no place where so little deference is paid to reputation previously acquired or to eminence won outside; no place where so little consideration is shown for the feelings or failures of beginners. What a man gains in the House he gains by sheer force of his own character, and, if he loses and falls back, he must expect no mercy, and will receive no sympathy. It is a field in which the survival of the strongest is the recognized rule, and where no pretense can survive, and no glamour can mislead. The real man is discovered, his worth is impartially weighed, his rank is irrevocably decided."

Undoubtedly the rules contribute to the Speaker's power in so far as they place in his hands the appointment of committees. He can, by a judicious selection of committee membership, shape legislation in advance to accord with his views. But, after all, his power in this respect is limited by a number of considerations. In the appointments to committees he must recognize the claims of localities, the qualifications and length of service of his appointees and various other things. Above all things he is interested in the success of his administration, in the standing of his party, and in his own reputation for fairness. What he does he does in the open, where all men can see. And, besides, how else could committees be selected in a House of so large a membership as the present House of Representatives? Caucus selection would mean selection by combinations representing localities or special interests. Caucus selection has been tried in the past, and abandoned as impracticable. Committees can best be selected by an authority that can with certainty be located and made to bear the burden of responsibility.

I know of nothing more interesting in

the history of Congress than those passages which relate to the expedients to which the majority has been compelled to resort to obtain control as against obstructive tactics upon the part of the minority.

Early in our history unlimited debate was resorted to to prevent legislative action, and the result was the adoption of the previous question in the House. According to Mr. Calhoun, it was adopted "in consequence of the abuse of the right of debate by Mr. Gardenier, of New York, remarkable for his capacity for making long speeches. He could keep the floor for days." But Mr. Gardenier was only a type, and the adoption of the previous question marks the first step in our Congressional history taken by the majority toward securing its right to

rule. The next step was the adoption of the hour rule, pursuant to which a member of the House is confined to the use of one hour in debate.

With each decennial apportionment the House of Representatives increases in numbers. As the numbers increase the importance of the individual member decreases and the influence of a few increases. What the remedy for this growing evil is I do not undertake to predict, or what new or modified rules may become necessary. But under present conditions the rules of the House of Representatives are as efficient as present wisdom and past experience have been able to devise, "to subserve the will of the Assembly rather than to restrain it, to facilitate and not to obstruct the expression of its deliberate sense."

WASHINGTON, D. C.

Hindering the Children

BY MRS. L. H. HARRIS

DO we educate or merely train our children? A monkey may be trained into a chimpanzee clown that knows how to take off its hat and beg, but is that educating the monkey? And we all know what pitiful wonders of the mind the obedient public school child is made to perform. That person is considered the best teacher who can make one of them learn how much four times nine is whether he can learn it or not, just as he is considered a good animal trainer who can make beasts do the things that are not natural for them to do, like jumping thru hoops of fire. And it is only a question of time when the public school child will be so highly trained mentally that he will be capable of inventing a flying machine or an aerial map of the universe. But is this education, or only the mechanical and simpler part of education? There is much knowledge that it is best not to know, in spite of those insolent ignoramuses of their own human nature who think they can afford to know everything. We talk grandly of making the world better, but we talk too late, after we have betrayed all its crimes and weaknesses to the children who shall come after us. Educa-

tion is not the knowing of things, but it is the fine moral selection of knowing the *right* things, particularly whatsoever things are of good report. If the grown people of this generation would form a trust not to betray so many of their own faults or the faults of the past to their children, either at home, or at school, or upon the stage, or even from the pulpit, until they are old enough and mature enough to endure the moral embarrassment of such revelations, we should begin to see more clearly what real education is. A child can be taught the dangers of alcoholism without having his father dramatize drunkenness. And it is positively malicious for his teachers to destroy at this early time his ideal of the father of his country by telling him that Washington was a land-grabber, given to profanity, and that Alexander Hamilton wrote his farewell speech for him. Children require heroes and convictions about guardian angels in order to develop the proper qualities of spirit and character. And the mind should not be trained at the expense of either. Also, young people are much more apt to remain pure, to marry, and to remain married who do not see the vulgarizing of

sex and the degradation of love upon the modern stage, and who do not read about it in the best examples of modern fiction.

As a matter of fact, we outrage the divinity of childhood by destroying its illusions. The writer knows of poor little intellectual waifs who are not even permitted to believe in the patron saint of all childhood, Santa Claus. Neither one of them ever plays, because the boy cannot ever imagine he is a Jack the Giant Killer, and the little girl knows she is not and never can be the mother of her doll. We are conscientious about taking away their own peculiar happiness by teaching them what *we* know to the contrary, as if half of what we know is not a misfortune, and the other half merely colorless and scientific. It is what we do not know and what children believe which makes them such as are of the Kingdom of Heaven.

Now all this is what we call "training the child"; so it is, but it is not the proper way to educate one. It is the kindergarten method of rearing him for this world, and for this world as if it were a dollar-marked dirt ball, instead of one of Heaven's stars. And this is a convenient method if the child is merely a kind of human insect that matures, breeds and dies. But he is not.

By this protest it is not the writer's purpose to inveigh against the teaching of scientific truth to children in so far as they are able to comprehend it. The very great hope of the future is in the awful, invincible spirit of veracity in true science. But it is the *way* things are taught that matters; the partial, unbelieving, skeptical manner, whereas we know that great scientists are the greatest of all believers. They have imaginations that take in the coal mines on the planet Mars, and they are not averse to immortality. Probably no other class of men stand with fewer deceits of traditions and creeds between them and God. But the average child, youth, college man, university graduate, is taught science in such a way as to make him a materialist rather than to imbue him with an indefatigable hope for the ultimate, divine solution of things.

This is further illustrated by the kind of literature prepared for them to read. Passing over the fact that most of them

have been made so alarmingly precocious mentally and physically by our "training" system that they read with unnatural interest and worst examples of neurotic and erotic fiction, the books actually prepared for them are not often prepared in the right spirit. To be sure some really excellent books for children appear every year, but the point is *every* book designed for them should be of the same unquestionable quality, and the great majority of them are not. Nearly as much trash is put forth for children every year as is published for the rest of us.

And here again we find the effort of the age to reduce children to our realities by refusing to cultivate the wings of their spirits with fanciful literature. In spite of a few artificial fairy tales on the market, we have erred meanly against them on the other extreme. We deceive them grossly now, not fancifully. Only a very few authors write for children with the right power of illusion. Of these Joel Chandler Harris probably comes nearest their home country of dove-wisdom, wonder and delight. This is why his stories pass from land to land and from tongue to tongue like dear enchantments. They are the scriptures of fancy told in tender parables, and next of kin to those elder scriptures of the soul. But does any one recall a single instance where Br'er Rabbit pauses to inculcate a lesson in patriotism? Those who have seen Maude Adams in "Peter Pan" know that he is the memorial of all the innocence, faith and fancy of childhood, but does Peter Pan even call a single virtue by its dull, hard name?

The one important fact which neither teachers or writers take into consideration is that children have delicate sensibilities mixed up with their truly barbaric faculties. In their best moods they are shy of the obvious, because they do not yet belong to our world of dull realities. And they are attracted by the incredible and illusive for the same reason. A training, whether of books or text books, which destroys this eternal quality of childhood without replacing it with a high poetic ideality is not suitable to the exquisite nature of these little Heaven-strangers.

NASHVILLE, TENN.

Literature

The Province of Burma

APPOINTED Colonial Commissioner by the University of Chicago, to report on the various systems of government in those parts of Southeastern Asia under one of the great Western powers, Mr. Ireland presents in these two volumes* the fruit of five years' work. Preparing carefully for his task, alike intelligent and faithful in his investigation, he studies and classifies under thirteen particulars and eighteen subjects all the matters involved, so that now fair comparisons can be made with all other governments. His scheme covers the French, Dutch, American and English systems, in nine dependencies, and will require twelve volumes—ten for the direct exhibit and two for criticism and analysis of methods and results. His aim is "not to make his report attractive to the general reader or to make an appearance of originality," but rather, by a statement of "administrative activity, formal, precise and detailed," to furnish the basis for just comparisons of all such activity, as well as of its cost and efficiency.

England, compensated in part for her loss of the American colonies by the vast realm opened in Asia, and especially in India and Burma, is easily first in colonial administration. She has five systems, known as the Crown, the Residential, the Chartered Company, the Autocratic and the India Provincial, used in Burma; hence the general features of administration are alike in India and Burma. Three brief chapters on the land and the people, then follow nineteen on civil service, education, judicial, police, prison, financial, revenue, forestry, public works, municipal, village, harbor, medical and sanitary, trade and shipping matters, including also the Shan States and the Chin Hills. Each chapter has an appendix, and some are of great value, as one gives the full report of the com-

mission led by Macaulay, in 1854—a most important document on colonial civil service, as its general principles are yet the foundation of the system for recruiting the Indian officials. Land revenue receives the largest attention, then police and prisons, public instruction, civil service, trade and shipping, and finances; to these topics almost as much space is given as to all other matters treated. Land allotments are transient or permanent, and the Government makes loans to encourage settlers, aiming however, to train them to help themselves, so that the support may be eventually withdrawn.

Much advance is shown in education in the last ten years, especially in secondary, industrial and technical schools, and acknowledgment is made of the "great assistance rendered to the cause of female education generally by missionary effort." Medical and sanitary work has nearly doubled in both expense and worth in five years, and prisons yield large revenue; all prisoners must labor nine hours a day, and this is so systematized that they earned and paid about half of all the jail department expenditures for 1904. The opium traffic is dealt with frankly. Out of a total excise revenue of seven and a quarter million rupees, opium paid four and a third millions, and yet the Government makes every effort to restrict the product and to punish the chief users; the number convicted and punished in 1904-05 almost equaled the whole number arrested the previous year. Roads, bridges, railways and large steamers came with the English, as well as many Western ideas, and yet the trade and shipping show some surprising figures, for China and Japan exceed the Western nations in both imports and exports. Imports from China grew 126 per cent., and from Japan 299 per cent. in ten years, while exports to Japan, in 1905, are thirty-six and three-quarter millions, exceeding even the United Kingdom, tho the Russian war and the export of rice increased the fig-

*COLONIAL ADMINISTRATION IN THE FAR EAST. The Province of Burma, a Report Prepared on Behalf of the University of Chicago. By Alleyne Ireland, F. R. G. S. Two Volumes, 1024 pages, with maps. Boston: Houghton, Mifflin & Co. \$12.50 net.

ures of this year. Appendix "T," modestly put as "a contribution toward a bibliography," is most valuable. Some important works published here we miss, and no mention is made of Judson's Bible or dictionaries, in use yet today, and some books dealing with the Karens, Kachins and Shans are not named. It is a most comprehensive and invaluable compendium of colonial administration, based upon the latest government documents, which statesmen of every country may profitably study, and yet the reader may well wonder at the projected output of twelve volumes when these two contain 1,024 pages.

An Artist's Reminiscences

MR. WALTER CRANE remembers many interesting things. His book* contains some good anecdotes of celebrated people he has known, and he tells them pleasantly. Here is one, in his own words, about Lord Tennyson, whom he met at dinner at the home of the Rev. Stopford Brooke:

The poet himself was brusque and almost rough in his manner, and had a strong burr in his speech, and spoke in a deep voice, which occasionally became rather like a growl, especially when he objected to some dish that was served at the dinner. He was rather taciturn at first, but melted by degrees, and even told stories (after the ladies had retired); and after dinner in the drawing room we had the unusual pleasure of hearing him read a poem of his own. This was the "Ballad of the Fleet." The poet read in his deep, impressive voice in a way which reminded one of his own description in the "Morte d'Arthur" of how the poet Everard Hall (which may have been himself) "Read, mouthing out his hollow o's and a's, Deep-chested music——"

Before he began he solemnly enjoined the whole company—almost swearing everyone—to the strictest secrecy as to the poem, or his having read it; and when the reading was finished, and when the applause and gratitude of the small audience (which consisted of Mr. Stopford Brooke, his sister, and his daughters, my wife and self, and Mr. Frederick Wedmore) had subsided, the Laureate growled out, "Yes, and to think that those wretched fellows of the *Nineteenth Century* only gave me three hundred pounds for it!"

Mr. Crane, who was born in Liverpool in 1845, has occupied an important place among the English artists of his time; has painted some notable pictures; has

been one of the foremost of book illustrators; has taken a large part in the movement to awaken public interest in the decorative arts—sharing in the arts and handicrafts propaganda, started by William Morris, by lectures and writings as well as by contributing in large numbers his own designs; and has published a volume of poems. As a result of all these activities, and the possession of a likeable personality—a capacity for friendship—he has enjoyed the friendship of an exceptionally large and interesting circle. At one time and another he came into contact with almost every distinguished English painter of the last generation and with some Continental artists, and he met and knew intimately many important figures in the literary world. Among his friends he counted William Morris, Lord Leighton, Hubert Herkomer, George Frederick Watts, Sir Edward Burne-Jones, Sir Edward J. Poynter, Holman Hunt, William M. Rossetti, A. C. Swinburne, Frederick Harrison, Sir Richard Burton, John Morley, John Burns, William De Morgan, Charles G. Leland, Lord Rosebery and others, letters from many of whom adorn his pages.

About 1886 Mr. Crane was converted to Socialism by William Morris. He thus tells how:

A little pamphlet, entitled *Art and Socialism*—a reprint of one of Morris's addresses—had a great effect upon my mind, and led me into a correspondence with Morris on the subject, in which I stated all the objections or difficulties which occurred to me against Socialism, as I then understood it, and he very kindly wrote fully in reply. The result was that the difficulties disappeared, and from the verge of pessimism as regards human progress, I accepted the Socialist position, which became a universal solvent in my mind. It was the question which swallowed all other questions—"Like Aaron's rod," as Morris said at the time.

The new convert became active in the Social Democratic Federation, its offshoot, the Socialist League, and Mr. George Bernard Shaw's Fabian Society. In a chapter on "Art and Socialism" he gives some account of those organizations and of the events of "Bloody Sunday" in London (November 13, 1887), when, according to his version, the police were guilty of the only rioting that occurred. The book is well made and con-

*AN ARTIST'S REMINISCENCES. By Walter Crane. New York: The Macmillan Company. \$5.00 net.

tains reproductions of 123 drawings, paintings, studies and designs by the author and other illustrations.

The Loves of Pelleas and Etarre. By Zona Gale. New York: The Macmillan Company. \$1.50.

There are old people, of seventy and beyond, who cherish a fancy that life has made them overwise. Their dolls have all been dissected, their rainbows in the sky have been resolved into cold, white light; their thrushes have turned out to be sparrows; their bravest efforts and their most magnificent attempts have been proven fruitless in result, or failures in accomplishment. But here comes the author of these sketches who knows better. With the keen vision of youth she has discovered that the conventional attitude of the septuagenarian mind is but a pose, that they really, tho unconfessing, still hug their dear, delusive dolls; chase the vanishing rainbow, albeit with halting feet; listen to the thrush's song, and, now and again, catch the flash of a bird of paradise's wing among the homely vines in their own kitchen garden. The distinctive charm of the book is its truth. It reveals one of the open secrets of nature. Not the bud, fresh plucked and fragrant, but the hardy, wrinkled kernel of winter preserves the arcana of eternal youth, and holds the positive promise of recurring spring.

The American Revolution. By Sir George Otto Trevelyan. Part III. New York: Longmans, Green & Co.

Sir George Otto Trevelyan has continued the study of the American revolution, thru which he is adding another to an already long list of readable and reliable accounts of the struggle for American independence. The work has been slow in appearing. Ever since its first volume saw the light the historical public has recognized the point of view and the brilliancy of this account, and has esteemed highly the survey of English politics upon which it is based. It ranks equally high as history and literature. No other writer on the revolution, if we except the late John Fiske, has possessed the charm of style which distinguishes this work of the nephew of Lord

Macaulay. It is quite possible to narrate history without offending the canons of criticism or the literary taste of the reader. Most writers, content with calm and accurate presentation, pay little attention to rhetorical aids; but Sir George has worked out his story with careful attention to details of form and style. The book is full of quotable passages, vivid in their critical insight, masterly in their power of condensation and summary, yet phrased with the grace and balance of the master tongue. This third part deals with the affairs of 1777 and 1778. The author believes, with the best of modern opinion, that an essential part of the revolution took place in the long decade before Bunker Hill and the Tea Party. His space is so distributed that two parts of the book are done with most of the war still unfought. This third covers in a single volume Saratoga and the Brandywine, Valley Forge and the French alliance. We are not disposed to quarrel with a scheme of arrangement which subordinates the military side of the struggle, for we believe that a war is chiefly significant in the causes which antedate it, and in the forces which conclude it. Its military details are picturesque and interesting, but, on the whole, without instructive value. We believe, ourselves, that the French alliance was as important as Sir George says it was, and, indeed, that the space which he has given to it is unduly small for a topic of its controlling significance. No single phase of Revolutionary policy illuminates the incompetence of the Government under Congress as does the story of its diplomacy. Congress was erratic and careless as well as uninformed. Its wild idea of soliciting alliances by wholesale was well suited to alienate those European Powers which were not already quite willing to neglect the insignificant American States. Any body which should flood Europe with a wave of Lees and Izards and Deanes would be entitled to destruction, and this body would most likely have reaped its reward had it not fared beyond its deserts in its principal commissioner. "He was a great Ambassador, of a type which the world had never seen and will never see again until it contains another Benjamin Franklin." We should be ready to ap-

prove a survey of the Revolution which should place the services of this one man ahead of all the rest. It hardly needs remark that in some matters of detail Sir George reveals the fact that his work has been done in England. He is without knowledge of certain bodies of source material which are easily accessible in America.

Christianity and the Social Order. By Rev. R. J. Campbell. New York: The Macmillan Co. \$1.50.

When Dr. Joseph Parker's death left the cathedral pulpit of Congregationalism in England empty, a young man was called to that high place whose spiritual refinement and intellectual strength had captivated the fastidious editor, Dr. Robertson Nicol. Immediately this young man exercised as much power over the multitude as he had over the scholar, and his fame went abroad. Last autumn in a sermon he announced himself a Socialist and a storm broke over his head. Had he been an Episcopalian the announcement would have been less startling, for Kingsley, Maurice and one or two bishops have shown a profession of Socialism to be compatible with the holding of seats of honor in the Anglican Church. But nonconformity in England and the corresponding bodies in America are less sympathetic with fundamental social change than the Episcopalian Church. In this significant volume Mr. Campbell justifies himself. It is an able work, free from the blemishes of style and sentiment which make volumes of sermons the least popular of all forms of literature.

"It is herein maintained that the practical end, which alone could justify the existence of churches, is the realization of the Kingdom of God, which only means the reconstruction of society on a basis of mutual helpfulness instead of strife and competition."

So much many clergymen would announce. But Mr. Campbell argues that such a reconstruction of society demands the "root remedy, the communal appropriation and administration of the means of production." Without reserve, because he says his Christian professions necessitate that alignment, he places himself with the large band of educated men and women who in England, in greater numbers than in America, advo-

cate a Socialist renaissance which, ignoring the class hatred that some bitter souls take as their prime motive, would fain build society anew on a foundation of social justice.

Poèmes et Poésies. By Francis Vielé-Griffin. Paris: Société du Mercure de France.

Among the French poets of today none are more interesting than the little group of expatriates of American birth that have made France their home and the French language their medium of poetic expression. Taking their cue from Walt Whitman, they have freed French verse from its rigorous formalism and stood at the head of the *vers-libristes*. But not only in form, in essence, too, have Stuart Merrill and Francis Vielé-Griffin been among the first to sound a new note, when the wave of symbolism swept over the world of song about fifteen years ago. The volume of collected verse by Francis Vielé-Griffin suggests neither the "Leaves of Grass" nor the "Fleurs du Mal." The author may have been influenced by the great forces of his time, but he does not imitate them. With a few exceptions he has also succeeded in avoiding those echoes of classicism which strike the modern reader as anachronisms in the poetry of any nation, but seem to have a permanent abode in French verse. That the poetic individuality of the author has matured in the atmosphere of an old-world culture and among a people with an exquisite sense of form, is evident from that fluidity of expression which hightens the most serious sentiment and adds a touch of fresh grace in the grandeur and the solemnity of the most ponderous productions. It is distinctly a French quality, and this impress of France is on every page of the book. Yet it has not a few traits which are more American than French. His love poems are dramatic rather than naïve; his nature poetry records experiences rather than reflections. The admirable *duo* beginning with *Vous si claire* and the second poem in *Les Cygnes* are fair examples. There is a refreshing sincerity and healthful optimism in the book, which closes with these lines of a brief *Envoi*:

J'écoute les sonnaillles dans le soir
Et pense que la vie est belle de bel espoir.

Literary Notes

....Four timely bibliographies have been issued by the Library of Congress giving the titles of the best books and magazine articles on Postal Savings Banks, Federal Control of Commerce and Corporations, The Eight-Hour Working Day and Political Parties in the United States.

....The American Sunday-School Union, 1816 Chestnut street, Philadelphia, offers a prize of \$1,000 for the best book on "Christian Principles in Our Rural Districts: How to Make Them a Controlling Influence," and \$600 and \$400 for the best and next best book on "The Bible: An Attractive Book." April 1st, 1909, is the time limit.

....Beginning with the April number *The Home Magazine* will be issued by the Publishers' Auxiliary of New York, of which Mr. Arthur S. Ford is manager. We have already announced the acquisition by G. P. Putnam's Sons of Bobbs-Merrill's other publication, *The Reader*. The March *Putnams* will continue the serial now running in *The Reader*, but the Bryan-Beveridge debate will be laid on the table.

....*The Heart of the Gospel*, by Rev. James M. Campbell, D.D., is a popular exposition of the doctrine of the Atonement. (Fleming H. Revell Co. \$1.25.) The author has studied recent literature on his subject, but his point of view is hardly modern. Measured by the treatises which used to appear years ago, the book occupies an advanced position, and there is a religious public in America among whom it could circulate to advantage.

....There are a good many things to admire in the sermons of the Rev. Henry Sloane Coffin in the volume *The Creed of Jesus* (Charles Scribner's Sons. \$1.00 net). The preacher is evidently a thoroly modern man, whose advanced theology does not prevent spiritual earnestness, and whose *Aufklärung* does not stick out in every paragraph. One is struck with the wealth and appropriateness of literary and biographical allusion. Persons who fear that progressive theologians have no gospel worth preaching should secure this volume.

....*Internal Taxation in the Philippines*, by John S. Hord (Johns Hopkins University Studies in Historical and Political Science, Series XXV, No. 1), comes from an authoritative source, for the author is collector of internal revenue in the Philippines, and drafted the internal revenue act adopted in 1904. This pamphlet is, however, less a careful review of the new Philippine revenue system, in both theory and practice, than it is an exposition of its content and of the reasons for its adoption with a view to arguing for the removal of tariff barriers between the United States and the Philippines. And the introductory section, summarizing the Spanish methods of internal taxation in the Philippines, is not an accurate bit of economic history.

....The endeavor of Dr. W. H. Bennett, Professor in Hackney College and New Col-

lege, London, to narrate *The Life of Christ According to St. Mark* (New York: A. C. Armstrong & Son) is commendable. It is doubtless true, as the author suggests, that there are "very many for whom Mark is hardly allowed to tell its own story, but rather serves to recall a general knowledge of the Four Gospels." Dr. Bennett has "tried to construct for himself the impression which the Second Gospel would make on a reader who had no other sources of information as to Christianity." Unfortunately the reader is left with questions on every page, and the problems and difficulties presented by Mark's Gospel are not squarely faced.

....The Rev. Charles Stelzle, who has attracted attention as an advocate of the alliance of the churches with the labor unions, and more recently by his project for the education of ministers in social service by correspondence instruction, is the author of a study of the modern city, entitled *Christianity's Storm Center*. (Fleming H. Revell Co. \$1.00.) Mr. Stelzle contends that workingmen are naturally religious and that American workingmen honor Jesus Christ, and that the churches have a great opportunity if they will consider their needs and patiently study their problems. Whatever one may think of the propriety of the Church effecting an alliance with organized labor, there can be no question but that Mr. Stelzle presents facts which demand consideration.

Pebbles

THE rat is a small quadruped having four legs and furnished with fur on the outside. It is a species of rodent and is thus related to the squirrel, the only difference being that one is a squirrel and the other is a rat. Its habitat is generally wherever it can get to quickest, but it is also to be found in barns, cellars, pantries and ladies' hair (see L. Shaw: *Rats I Have Made*. Vol. XXIII). It is much given to ratiocination and ingratitude, but its habits are very erratic and irrational. Its favorite articles of food are hairdye and cheese, the stronger the better. If a trap is baited with limburger the rat makes a B-line (such as good little boys get on their exam. books) for it and is caught. Thus we are rid of both the cheese and the rat; therefore, let us rise up and bless rat-traps.

When the rats live in cellars they are generally obliged to subsist on coal. Indeed, it is a coal day when a rat has not bin in the cellar. Tho the rat can gnaw anything from a lamp-post to one of Hudnut's sundæes it will totally ignaw Commons sandwiches, which is extremely gnawty of it.

Rats are much beloved as meat in China and even in America we often hear of a meeting being ratified. Other species of rat are the rattle, the baccarat, the b-rat, the f-rat. There is also a species of O-rats, which, however, must not be confused with orators. White rats are often kept as pets, but are not very desirable because of their impetuous nature and their fondness for carpets.—*Columbia Jester*,

The Independent

Entered at New York Post Office as Second Class Matter.

Publisher, Clarence W. Bowen.

Owner, The Estate of Henry C. Bowen,
130 Fulton Street, New York.

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Undiscovered America

LAST year we tried the experiment of a co-operative Vacation Number, and it proved such a popular and interesting feature that we are going to try it again. This is a case where many heads are better than one, for the tastes of the readers of THE INDEPENDENT are various in the matter of vacations, and editorial initiative is incompetent to provide for all of them. But he would be hard to suit who did not find something among the twenty-eight articles and forty-two photographs contributed by our readers to the issue of June 6th, 1907, which would give him a suggestion as to the profitable employment of his leisure days or weeks. He could learn from them how to build a house or a motor boat; how to get enjoyment from a broken leg or a hive of bees; how to "do Europe" on \$200 or to explore the wilds of our own country; how to extract happiness out of a hammock, a picture, a sunbonnet, a book, a bicycle, a roof, a snake, or a dream; how to spend the strenuous vacation and the vacant vacation.

This year we want quite as great a variety in vacation experiences, but wish them conveyed upon a common aim—that

of pointing out the unknown or unappreciated beauties and delights of our own country. We have nothing against Europe, Asia and Africa. The articles that appear every fall in the papers showing how many millions of dollars have been spent in Paris and Switzerland which should have gone to the support of home industries and scenery do not arouse in us any desire for the imposition of an export duty on tourists, because we know so many other ways in which money is spent less profitably than in foreign travel. But the "See-America-First" movement is likely to do much good in developing the tourist possibilities of our country and proving that many of those who go further fare worse. Cannot you help it along by telling of some new place to go to or of some new thing to do on vacation? Are all the beautiful spots in America pictured and described in the folders of the railroads and hotels? Did you ever experience for yourself the joy of the discoverer of a new land? Do you know how Columbus felt when he saw San Salvador, or Balboa when, with eager eyes, he stared at the Pacific, silent on a peak in Darien? If so tell us about it. Write it down while the impulse is fresh and, when written, mail it at once; do not leave it around waiting for time to put on the finishing touches.

We appreciate, of course, your reluctance to expose to vulgar gaze the secret of your swan's nest in the woods. You do not want to have your chosen solitude broken in upon by noisy tourists who will trample down the grass, pick the flowers and scatter peanut shells around. But there may be some resort that you are not going to use any more, and this you may be willing to share with others.

We do not want mere descriptions of scenery. Good landscape artists are rare among authors. Some of our best novelists do very botchy painting on their back drop-scene. Better take a photograph of mountains or the woods and devote your space to telling how to get there, what it costs to stay and where the fun of it comes in. Make it personal and specific and unconventional. We have plenty of encyclopedias and geographies in our office. Between 300 and 500 words is the proper length. For every such article of

American vacation experiences that we print we will give two annual subscriptions to *THE INDEPENDENT*. If you are not a subscriber this will give you a chance of taking it for yourself and somebody else at a cost of 2 cents instead of \$4. If you are already on our list you can have your time extended a year and send *THE INDEPENDENT* to a friend, perhaps one of your vacation companions, beginning with the number in which you describe your experiences.

If you have some photographs pertaining to the subject send them, too. But we want in addition a great many photographs, not necessarily connected with these vacation stories, but suitable for publication in the same number. Pictures of sports and games, of camping expedients and adventures, of birds and beasts, of insects and flowers, of the life of land and water, mountain and plains, city and country. Send as many prints as you please of any size, style or subject. If you have our last Vacation Number, June 6th, at hand you will find it worth while to look over the pictures we printed then and the editorial discussing them. For the best photograph sent us we will pay \$10, and for the next best \$5. For all the rest used we will give one year's subscription to *THE INDEPENDENT*, sent to your own address or any other. Put your name and address and a descriptive title on each print and enclose postage for its return if not used. Pictures and articles must be sent in before May 1st, 1908.

We would not put too narrow a limit on the word America in this case. It may include any accessible region of our continent. We want to hear not only about remote and unfrequented spots, but also about the attractive features and capabilities of places that we have overlooked because of their very nearness and convenience of access; places where may be found the health, picturesqueness, scenery, climate, architecture and society which are sought in foreign lands. Even ruins are not wanting in America. We can make pilgrimages to sites of historic, religious, literary and sentimental interest without going outside our national boundaries, visiting places not without honor save in their own country. A vacation is, after all, not so much dependent on locality and money as on the vacation

spirit, the spring in the unleashed bow. What we really want is such a collection of pictures and stories that we can stamp on the cover, "A Guide to a Good Time." We shall, therefore, be most indebted to those of our readers who show the way to delectable lands, not perhaps on the map of this or the other hemisphere, but still not far from every one's doorstep.

"We're made so that we love
First when we see them painted, things we have
past

Perhaps a hundred times nor cared to see;
And so they are better, painted—better to us,
Which is the same thing. Art was given for
that;

God uses us to help each other so,
Lending our minds out."

Two Platforms

DURING the past week two very important State conventions have been held, and two platforms adopted, which were doubtless approved or dictated by the leading Democratic and the leading Republican candidate for the Presidency. The Democratic convention of Nebraska unanimously endorses its fellow citizen, Mr. Bryan; and the Republican convention of Ohio unanimously endorses its fellow citizen Mr. Taft. It is in order to compare the two platforms.

The two platforms in large part are practically the same, because they cover moral issues of justice and equality. They differ here in that the Republican claims the credit for what the party has done, while the other asserts that whatever is good has been the reluctant borrowing of Democratic principles.

The two agree on the following points: Both equally demand the enforcement of criminal law against corporations and individuals guilty of crimes against the public; both ask for the revision of the tariff; both for limitation of the right of injunctions; both would have an employers' liability law; both favor the speediest completion of the Panama Canal; both favor liberal appropriations for internal waterways and pensions for old soldiers.

On some points the Republican platform is general in its terms, where the Democratic accepts Mr. Bryan's definite recommendations. Thus the Ohio platform asks for "such modifications of the

currency laws" as will give security and elasticity; while the Nebraska platform condemns the Aldrich and Fowler bills, and asks for simple emergency currency issued by the Government.

On but a single point do the two platforms actually collide, that as to the Philippines. The Republican approves "the development, step by step, of popular government in the Philippines," while the Democratic condemns "imperialism as shown in our policy toward the Philippines."

Other matters are mentioned in one platform but purposely or accidentally omitted in the other. In the Democratic the first place is given to the prohibition of contributions to campaign funds by corporations, and the publication of all large subscriptions. It also asks a direct vote for the election of Senators, favors postal savings banks; the protection of bank deposits; that surplus revenues should be deposited in banks at competitive rates; an eight hour law; the admission of Arizona and New Mexico as States, and an income and inheritance tax.

On the other hand the Ohio platform includes some things not mentioned in that of Nebraska. One of the most emphatic is that which declares for individualism as against Socialism, competition as against monopoly, and Government regulation as against Government ownership of railroads, etc. It calls for a development of the merchant marine—but does not say how—and "an adequate navy." It would have a single central national health department. It also specifically approves the enactment of the railroad rate law and the strengthening of the Interstate Commerce Commission.

But a special plank inserted in the Ohio platform and quite ignored in the Democratic deserves attention owing to the history of the party and the attacks on Secretary Taft for his relation to the Brownsville affair. It demands:

"The civil and political rights of the American negro in every State, believing as we do that his marvelous progress in intelligence, industry and good citizenship has earned the respect and encouragement of the nation and that those legislative enactments that have for their real aim his disfranchisement for reasons of color alone are unfair, un-American and repugnant to the supreme law of the land; we favor the reduction of representations in

Congress and the Electoral College in all the States of this Union where white and colored citizens are disfranchised, to the end that the Fourteenth Amendment to the Constitution of the United States may be enforced according to its letter and spirit."

There is not a word on this subject in the Nebraska platform, but another racial question is there introduced as follows:

"We are opposed to the admission of Asiatic immigrants who cannot be amalgamated with our population, and whose presence among us would raise a race issue and involve us in diplomatic controversies with Oriental Powers."

Which of these declarations is the most American and democratic in spirit we leave to the conscience of our readers. Certainly the exclusion of Asiatics is much more likely than their free admission to involve us in international difficulties. But we do not approve the Ohio proposition to reduce representation in the Electoral College of those States which limit negro suffrage. It cannot be done, and if it could it would be condoning and perpetuating the crime against those citizens whose civil rights are affected. Better the continuing protest of equal justice against a palpable wrong.

The Conversion of Princess Patricia

THE Princess Patricia of Connaught is to marry the Count of Turin, cousin of King Victor Emmanuel of Italy. By a British law the royal family must be Protestant, but the Italian royal family is Catholic; and it would be impossible to have a fine royal wedding with all the brilliant appurtenances in a grand cathedral unless the Princess Patricia would consent to become a Catholic and have her children brought up in the Catholic faith. Therefore, as the marriage is more important than the religion, Patricia consents—unwillingly consents—to change her religion. There is no pretense that she is convinced, but simply policy requires it, and she changes her religion just as she might exchange a more becoming for a less becoming gown.

Religion is a pretty serious thing. Many a serious man or woman has died rather than change the religion. There have been Protestant martyrs under Queen Mary, and Catholic martyrs under Queen Elizabeth.

It looks bad, but let us say the best we can for the poor, unhappy girl who has never been taught to have a mind and will of her own, but has always known that it was her fate to be married off as it might please the family council of her elders and the command of King Edward. Let us excuse her as far as we can.

When we think of religion we think of two things, life and belief. The one is spiritual and the other intellectual. Let us consider the latter first.

The Catholic beliefs and the Anglican Protestant beliefs differ considerably. Yet both believe in God, and in God as a Trinity of Father, Son and Holy Ghost. Both accept Jesus Christ as Savior. Both confess the Apostles' Creed. But they differ in that one holds that the Pope is the head of the Church, and the other that the Archbishop of Canterbury is head of the Church. One believes in Purgatory as an intermediate state between Heaven and Hell, while the other does not. One believes that confession to a priest is requisite, while the other does not. One holds that the intercession of saints with God is of advantage, while the other does not. There are other points of difference of belief, but these are among the chief.

Now on these points the Princess Patricia probably has no intelligent opinion. She has not studied them; she has been busy learning French and German and Italian and how to dance. She has no intelligent opinion whether it is Sarto or Dr. Davidson who ought to rule the Church, and she does not care. She has been a docile child and has taken her faith as she has taken medicine, gulped and swallowed it, and when a new pill is given her she swallows again. It is not her business to think; that is done for her. To be sure, one who thinks and reaches a result from his own reason could not do what she does, for such a conclusion is not subject to one's will, but depends on evidence presented. The Abbe Loisy, when bidden to confess that he is wrong in his conclusions, simply replies to the Pope that he simply can't do it, because he can't. That is the end of it. But Patricia of Connaught can, because these distinctive religious beliefs to her have no rational basis, and she can

honestly accept one formal statement in place of another.

But religion is also a matter of life, and on that side we may assume her to be a religious girl. That is, she prays to God and tries to do her duty. She wants to love God and to love and serve her fellow beings. Now that is somewhat in common to the life and teaching of both Protestant and Catholic religion. There is no difference between them. Millions of people have equally been religious in both communions. This is the really essential part of religion, and all that such an ignorant girl may be supposed to concern herself with; and it is the most important thing for any of us to be concerned with. We have past the day when we hold that except one believes this or that distinctive article in the Athanasian or any other creed, without doubt he will perish everlastingly. So we will excuse Patricia and hope she will find her religious life nourished in her married communion.

The Governor's Crusade

IN the days when Phillips Brooks was preaching in Boston it used to be said, and perhaps it is still said, that the local Unitarians found no difficulty in transferring their ecclesiastical allegiance to Trinity Church, where they had to repeat the Apostles' Creed every Sunday and join vocally in worship of the Father, the Son, and the Holy Ghost. One thinks of this easy alliance when one reads how Bishop Potter and Dr. Slicer united their influence in the chorus which, before the Albany Legislature, defended the present permissive gambling law of this State.

It was plainly against them and their allies of the Jockey Club that Governor Hughes directed his telling speech the other evening in this city. His argument was sharp and decisive. The State Constitution says:

"Nor shall any lottery, or the sale of lottery tickets, poolselling, bookmaking, or any other kind of gambling hereafter be authorized or allowed within the State, and the Legislature shall pass appropriate laws to prevent offenses against any of the provisions of this section."

That covers gambling at the races, as well as in hidden poolrooms. But the present law allows and, with a license

fee, protects the former while forbidding and punishing the latter. Its purpose seems to be to bring the gamblers all to the races, that all the gamblers' profits may be gathered there. Of course the racing associations wish to shut up the poolrooms that they may hold the whole wicked monopoly.

Members of the Legislature have sworn that they will obey the Constitution. Governor Hughes holds them up to their oath. To fail is perjury. There is no escape, for in this matter there is no higher law. Gambling is by common consent immoral, vicious and mischievous. There is no proper excuse for breaking their oath and annulling the Constitution.

Governor Hughes risked the opposition of the bishop and the clergyman to his candidacy for the Presidential chair when he said:

"Our clergy pray in their churches that law and order may be upheld, and that among our people there may be genuine devotion to our institutions and sincere desire for the maintenance of just authority. Would any churchman, breathing that prayer, dare to give his counsel and support to open defiance of the Constitution of the State, a defiance, which in its cynical disregard of the expressed will of the people, breeds contempt for our laws?"

But the clergy and the churchmen of the State are almost a unit with the Governor in this matter, and we believe that so are the farmers. We observe that while those that run the agricultural fairs, which are subventioned by the races, as education is in some States, are quoted as favoring the present system, the granges, which really represent the farmers, are thruout with the Governor.

We are especially pleased with the lively way in which Governor Hughes hits back at ex-Governor Black, who had presented an argument for the racing associations to the effect that men will gamble, and they might as well be allowed to do so under due limits—that is, at the grand stand, but not in poolrooms. For, said he, women will wager gloves, and men will bet a cigar, and boys will play for marbles, and it can't be helped. What the Governor says is so fine, so strong, that we must quote it at length:

"But it is said that the Constitution prohibits all kinds of gambling, and that it is a humbug to deal with racetrack gambling and not to deal with betting of boxes of candy and the petty wagers of common experience.

"Is this sensible? Is any thoughtful man really impressed by such an argument? Suppose it be impossible to deal with petty private wagers, is that any reason why the constitutional provision should not be enforced where it can be enforced? If you cannot reach every bet of a cigar or every chance or grab-bag, is that a reason why we should repeal the law relating to lotteries and revert to the scandals of earlier days? Because every bet of a box of gloves cannot be reached would you repeal the laws as to gambling dens and poolrooms? But why should we make a favored class of pool sellers and bookmakers at racetracks? Shall we erect a Monte Carlo and legalize gilded gambling saloons where the inherent failings of human nature may have free exhibition and not indulge in the humbug of attempting to prohibit them, because, forsooth, we cannot reach the wager of a box of candy? Talk about humbug? There is humbug for you, of the finest, rarest quality; but fortunately it deceives no one."

That is what it is, humbug, nothing less. But it is more than that; it is lawlessness, nullification. And it is even more than that; it is greed, and Governor Hughes says so:

"It happens because money wants the privilege. It is simply, so far, the victory of unscrupulous money power over the people of the State."

Let Governor Hughes, who dares thus to fight one of the strongest financial combinations of villany in the land, have the hearty support of all decent people; and let all decent people unite to overwhelm the indecent rich corruption of public morals. Then let the crusade move on to Kentucky, where an act has just been past allowing gambling at races, but remembering the admirable example of Governor Folk and the Missouri Legislature.

Railroads' Coal Property

THIS important provision of the Hepburn Railroad Rate Law will become effective on May 1st:

"It shall be unlawful after May 1st, 1908, for any railroad company to transport from any State, Territory, or the District of Columbia to any other State, Territory or the District of Columbia, or to any foreign country, any article or commodity (other than timber and the manufactured products thereof), manufactured, mined or produced by it or under its authority, or which it may own in whole or in part, or in which it may have any interest direct or indirect, except such articles or commodities as may be necessary and intended for its use in the conduct of its business as a common carrier."

It was designed to compel railroad

companies to withdraw from the business of mining and selling coal, and the adoption of it, as an amendment to the pending bill, was due mainly to the official investigations of the time, which proved that great railroad companies, owning coal mines on their lines, had discriminated against and oppressed other mine-owners, who must rely upon them for transportation. The remarkable disclosures concerning favoritism, and the payment of shares and money to subordinate officers on the Pennsylvania road, will be recalled. Investigations in the West had led to indictments, as to one of which, against the Union Pacific Coal Company, the court at Salt Lake City decided last week that the trial must soon take place.

Twenty months have elapsed since the law was approved, but it does not appear that the railroad companies affected by this commodity clause, as it is called, have prepared to meet the requirements of it, altho railroad property and securities worth not less than a billion of dollars are involved. In many instances the companies' coal properties are a part of the security upon which their mortgage bonds rest. Again, there are several powerful companies whose profits from their coal holdings and business are a large and important part of their annual receipts.

Strict obedience to the law requires coal railroad companies to divest themselves of their coal mines and coal lands. This would apparently necessitate large sales of property and a readjustment of a great mass of securities. The Louisville & Nashville Company has transferred, or is about to transfer, its coal property to a new company composed of its stockholders, who are to receive shares of the new corporation in proportion to their holdings of the railway shares. Careful reading of the law shows, we think, that this is not obedience to its requirements.

It must be admitted that the problem is a difficult one for those railroads whose coal interests are large. The Western Maryland Company sought, last week, a solution of it by going into the hands of a receiver. That is to say, it has virtually asked a Federal court to decide what course it shall take. This is

the company whose road the Gould interests acquired in 1902, in order that their lines might be prolonged to the Atlantic Coast. Its chief business is the mining and carrying of coal. It has failed to procure an extension of a loan of about \$4,000,000, for which its own bonds are security, because the market value of the bonds has fallen, owing, it is alleged, to apprehension as to the effect of the commodity clause which we have cited. The loan was obtained in order that additional coal property might be bought. This company's mortgage bonds, like those of several greater roads, are based in part upon its coal property. While additional reasons were given for seeking a receivership, they were all related to this coal question, which was the moving cause.

As the president was promptly appointed receiver, the management remains unchanged, except that he is under the direction of the court. But the court must say what course he shall take to comply with the commodity clause of the Hepburn Act. All the coal railroad officers await with much interest that court's instructions to Receiver Bush.

Railroad companies and officers who violate the law are subject to penalties that may amount to large sums. A fine "not to exceed \$5,000 for each offense" may be imposed for each interstate shipment, perhaps for each carload, of a company's coal. It was reported some time ago that the Attorney-General had agreed to refrain from enforcing the law until a final decision as to its validity should have been reached, if the roads would co-operate with him in expediting a test case. But we are not aware that an authoritative statement as to such an agreement has been made.

It should be ascertained with the least possible delay whether the law is constitutional or not. We assume that prominent companies, those in the anthracite coal trade, for example, will not dispose of their coal properties or cease to carry their coal across State lines. At least, there is at present no indication of an approaching change in their methods. If they intend to make no change, and are confident that the commodity clause will be annulled by the Supreme Court, they should, immediately after May 1st,

co-operate with the Department of Justice in sending a case to that court at the earliest possible date.

In the public interest railroad companies should have been prevented from owning and monopolizing coal property. They should have been confined to the carrying trade. If the commodity clause be in harmony with the Constitution, there is still a question, however, whether the public interest can best be served now by compelling an absolute separation of the companies from their coal properties or by preventing in some other way the evils that have accompanied the alliance of carrying and production. This question is inevitably suggested to those who realize how large the railroads' coal interests now are, how difficult it would be to dispose of them by actual sale to really independent buyers, how closely related these coal properties are to an enormous mass of bonds and other securities, and how those bonds and securities (with industrial and other interests) would be affected by forced segregation and sale. We are not prepared to say that considerations of this character are sufficient to prove the inexpediency of that absolute separation which the new law requires. But they should not be ignored, and they suggest an inquiry as to the efficacy of strict official regulation, inspection of accounts and intimate official supervision, as an alternative, for the prevention of the injustice and wrong that have excited popular indignation. It may be that what is desired could not be accomplished by supervision and that absolute separation should be preferred.

The Direct Legislation Movement

IN twenty American States the movement to establish real popular government is making rapid progress. In Oregon, since 1902, the initiative and referendum have been in practical operation, with noteworthy results. We plan soon to publish an article on Oregon's experience. Of the actual working of these democratic methods in South Dakota, ex-Governor Charles N. Herreid says that recourse to the power of the people to act directly has never been necessary since this reform was achieved, because no attempt at questionable legislation has

since that date been hazarded. Nevada also has the initiative and referendum, and Utah supposed that she had them, but the law proved to be defective and inoperative. Oklahoma has come into the union with the initiative and referendum guaranteed in her constitution. Ohio, Maine and Montana are about to submit to the people for ratification legislative resolutions authorizing popular legislative action. Massachusetts, Illinois and Texas, not going quite so far, have past laws providing for a direct expression at the polls of public opinion on specific measures. Iowa has authorized her cities to institute the commission system of government by initiative and referendum. In New Jersey a bill was past by the Legislature enabling the people of any city to demand a referendum vote on local affairs, but it was vetoed by the Governor. In the cities of Omaha, Lincoln, Wilmington, Houston, Alameda, Santa Cruz, Berkeley and Grand Rapids, the people enjoy the right to participate directly in the conduct of their local affairs, and they have done so vigorously, especially to prevent franchise grants, and other measures contrary to the public interest.

New York, if not in the van of this movement, is not disposed to bring up the rear. A concurrent resolution prepared by the New York State Initiative and Referendum League will be introduced in the State Senate by Senator Saxe, and in the Assembly by Mr. Toombs. It provides that the people reserve to themselves power to propose laws and amendments to the constitution, and, independently of the Legislature, to enact or reject them at the polls; also to approve or to reject at the polls any act, bill or resolution past by the Legislature. It is not probable that this resolution will be past at this session, and it may be some time before the people will have the opportunity to vote upon the necessary constitutional amendment. But there is no reason to doubt that opposition will presently break down, and that New York will take her place among the commonwealths in which government for and by the people is a reality. Much educational work to this end is being vigorously carried on by means of lectures, printed matter and correspondence. It will all tell in time.

Theoretically, representative govern-

ment should be popular government; but practically it creates a career for the professional politician; and the professional politician, however, upright his intentions, is driven by the exigencies of his life to build and maintain the political machine which is moved by bribery and graft. The professional politician must get elected. To that end he must have votes. To that end he must have money. To that end he must do something for men who are willing to pay money for services rendered or goods delivered. Direct legislation by the initiative and referendum cuts thru this vicious circle. Its immediate effect, therefore, is to clean up political business.

It has another effect, however, which is quite as important. It educates and disciplines the people in political competency. The world has enormously overestimated the educational value of that popular participation in political affairs which consists only in voting for candidates for office. Popular government to this extent merely centers attention upon personal qualities. It makes the voter a blind hero worshipper or the pliant tool of a boss. It provides no incentive to study questions, to understand measures. All that is left to the legislator. Under the initiative and the referendum the voter turns his attention from men to measures and becomes an informed citizen. Altho years and generations may pass before more than a small minority of the people will thus become thoroly informed and interested, yet every year the number of such increases where direct participation in legislation is the rule, while under the merely representative system voters become more indifferent, more neglectful and more stupid.

Direct legislation is the most important "next step" to be taken in American political evolution.

A Complete Waterway System

WE are glad to note that the suggestion of a completed waterway system, advanced not long since by THE INDEPENDENT, has been endorsed so generally by the press, by conventions, granges and farmers' clubs. It is still more gratifying to have the subject brought by the President to the attention of Congress,

and, so far as it concerns New York State, embodied in the recent Report of the State Superintendent of Public Works, Frederick C. Stevens. He tells us that the Barge Canal should be completed from Lake Ontario to the Hudson River at once, and that it be as a ship canal, 21 feet deep, and capable of allowing the passage of vessels of 8,000 tons, instead of craft of 1,000 tons. In this project the Government is supposed to take the leading part, and we have a restoration of the original idea of a national waterway. New York's share of the expense would be considerably less than the one hundred and one millions voted for the Barge Canal.

This, in our judgment, is the only way to avoid positive disaster for New York City, Boston and other Eastern shipping ports. On the line of present work, or plans, rather, the Barge Canal cannot be completed this side of 1915—and as Mr. Stevens suggests, at a cost very far exceeding the estimate voted upon. When completed it would be wholly outgrown and useless for commerce. The Ohio Canal and the Illinois-Mississippi Canal, altho just completed after fifteen years of labor and expense, with 35 foot locks, are already obsolete—an experience that Canada also had to go thru with. Without waiting, Canada has already changed her tactics, and is well on the way with the Ottawa-Georgian Bay route connecting the Lakes with St. Lawrence River. This canal will take all the ordinary vessels of the Lakes, without breaking bulk, into and thru the St. Lawrence, and to the sea. Here will go much the larger proportion of the grain, lumber and ore of the whole Northwest, including that which at present, by a longer route thru Lake Erie, finds its outlet in New York City. In this race for commerce Canada must be dealt with as a formidable rival. She has long been determined to control the Northwestern trade, and from the present outlook she will succeed. The condition of affairs demands a policy of waterways that will, by the shortest possible route, connect New York City and Lake Ontario. This the Federal Government understood long ago, and in 1900 it surveyed for a deep canal across New York State. The estimated cost for this canal was \$198,000,000, and for the

line connecting Lake Ontario with the Hudson River, it was \$155,000,000. This line was to follow the Oswego and Mohawk Rivers. It was a far-sighted and complete grasp of the situation, and it should have been followed out to the end. It is this plan which Superintendent Stevens practically proposes to revive. The survey is already made, and the Government is committed to its adoption. We should then have a natural link in the improved waterways system connecting the Lakes southward. The proposition seems to have been met with almost unanimous approval, not only from the people of New York State but of the Western, the Northwestern, and the New England States. It does not affect in any way the completion of the Barge Canal thru the western counties. It simply shows that we have a larger necessity on our hands, and that we have outgrown the 1,000-ton project before the contracts could be let.

Meanwhile trade has another demand upon us. Our coast commerce is not only vast, but is rapidly increasing. Migratory farming has linked the North and South into a closer unity. Shipments of fruit and vegetables by ocean vessels must be facilitated to the utmost. The railroads can move more rapidly, but they are overtaxed, and most overtaxed during the more important seasons of melon, peach and orange shipments. The connection between the Florida and Georgia orchards with New York, Philadelphia and Boston is neither sufficiently speedy nor safe. We have now the project, not only of a canal system from the Gulf to the North, and from Duluth and Chicago to New York, but a canal system that shall connect Jacksonville and Fernandina, Savannah and Charleston with New York and Boston. This canal, as it is projected, is to follow down the coast, taking advantage of all the inlets and natural waterways, from Cape Cod to Jacksonville. Florida has, in fact, already let the contract for a canal that shall reach Key West, a distance of 500 miles from Jacksonville. The Cape Cod end of the canal is also under way. Between New York and Boston the route will be shortened 74 miles, so that the canal will not only be safer from storm and from dangerous shoals, but will give a much abbreviated passage between the

towns along the coast. It will carry the coasting vessels that are now engaged in the open ocean in safety, while making the coast trade touch hundreds of points that are now past by steamers. Of course such a canal would be large enough to admit the lake vessels that would emerge on the Atlantic Coast; so that these could be profitably employed in coast trade, at that season of the year when shipments of Western grain, Eastward, would be lightest. It happens that this trade is heaviest at the time when coast trade is least important, and vice versa.

We have next only to provide for the Gulf commerce an outlet more speedy and more safe than around the Florida Keys. A canal across Florida, and you will have the internal waterways system completed. One half the United States, at least, will be surrounded by canals, serving the vast grain and corn fields, the mines of the Northwest, the cotton fields of the South and the immense fruit gardens and orchards all over the country. This system will connect the Great Lakes with the Gulf, pass thru the peninsula to the ocean, and thence, by comparatively short and safe lines, make the circuit of trade from New York and Boston complete. It is a scheme thoroly national in spirit, and forbidding any jealousy that might arise concerning national aid for a purely local measure. The East is as deeply interested as the West in bringing Chicago and Duluth into commercial fellowship with St. Louis and New Orleans, while the Gulf and the Northwest are alike advantaged by a ship canal across New York.

Here is a proposition worthy of the children of the men who, one hundred years ago, dug the Erie Canal, thus making the great Northwest habitable; of those who, fifty years ago, connected the Atlantic and Pacific with steel rails, and about the same time laid a cable under the Atlantic. Nothing can be more short-sighted than commercial jealousy between the different sections of the country, or even between the United States and Canada. It is commerce that makes of us one people, with a common purse and a common purpose, from Baffins Bay to Pensacola, and from Portland to Portland across the continent. We go forward and upward to-

gether, and we also suffer together. The proposition we advocate is pre-eminently national, and it is also international. We do not care to rival Canada, but we surely should not, by supineness, let our natural share of trade drift or be diverted to our ruin. We have come to a time when an international waterway system has become vital to sustain our present prosperity and command future progress. It is vital that the whole scheme of internal waterway improvement should fit together and be co-operative. There should be a complete plan at the outset also, avoiding the necessity of readjustment. The system should then stand on its own bottom, and should be compensative, not only to the trade of the people and general commerce, but to the nation as a nation—bringing into our revenues an adequate return for the outlays necessary in its construction.

The War Cloud

It is incredible that Japan and China will go to war over the seizure by the Chinese of a Japanese vessel charged with the attempt to introduce into the Dutch port of Macao a lot of arms intended to be used in a rebellion against the Chinese Government. It is for the interest of some people to represent Japan as a swashbuckling country that is eager to get into a war, ready for any pretext. If Japan is so quick to pick a quarrel with China, why, then—such is the argument—we must be on our guard against her and build four or eight battleships of the largest class. So we are told blood-curdling stories of the unreasonable attitude of Japan; that she will not wait for ordinary diplomatic correspondence, but will demand immediate apology and redress or will recover by force the seized vessel. Now, neither Japan nor China wants war, and each is ready enough, we believe, to do the right thing. Already China apologizes for the hauling down of the Japanese flag, and will investigate as to the facts. It would seem that Japan ought to be willing to take pains that arms be not exported for hostile purposes, and China had no right to seize the vessel if, as claimed, it was in Dutch waters. If there were any serious question between the two Powers there is the Hague Court, and Great Britain and the

United States would be quick to urge reference to it. The alarmist stories need not alarm us; they have a purpose.

An Inclusive Betterment League

Prof. Charles Sprague Smith has a passion and a gift for devising and conducting organizations for the betterment intellectually, socially and ethically of the people; and we are not surprised that he has called into being the "Ethico-Social" League in this city, which brings together Jew and Gentile, Socialist and individualist, labor leader and capitalist, all religions and all theorists, if only they are united in purpose to secure the betterment of humanity. There are no better men of all sorts in this neighborhood than are in this League; and they propose to meet in great public meetings to discuss social and moral problems and thus educate the community, and to provide speakers for meetings wherever called. Such a plan is adapted to break down intolerance, to help each man to see the view of his neighbor man, so that each may recognize the sincerity of the other, and, perhaps, agree on measures of reform which can then be accomplished without loss of friction. This is the day of unions, a multitude of them, but a more inclusive and yet practical union than this it would not be easy to devise.

The Slaughter of Children

The slaughter of one hundred and eighty little children by a school fire near Cleveland, Ohio, has sent a thrill of horror over the country. Such a holocaust of death is so untimely, such a destruction of all the fair promises of life, the unripened fruit killed in the bud, that it seems more terrible than even the death in battle of strong men. In this case the fire-drill seems to have been tried, but not effectively, and the doors of exit were not properly opened. The children were too closely jammed to escape. Cleveland is closing its schools to correct blunders in construction of the buildings, and the lesson is being made of value all over the country in carefully examining the means of escape in case of fire, and in perfecting the fire-drill. In a multitude of cases it proves a means of safety, for we frequently hear of fires in school houses when the children, without

fear, form in line and pass out rapidly. The fire-drill should be practiced every week, and at unexpected moments, in the midst of recitations, till the scholars are familiar with it. But even now the school boards must see to it that means of exit are free.

The Secret of Japan

Why India cannot follow the example of Japan and become self-confident and strong is explained by Count Okuma in a way that is attracting some attention in India. He says:

"About fifty years ago we came in contact with the influence of the West and when once we became aware of our own inferior points and errors, we promptly appropriated the excellences of others and assimilated them. Up to forty years ago, our country, like India, had a caste system of its own; but scarcely had its weak points been discovered, when it was dismissed, and all the people came to be equalized in rank and right. This was a cause of our rising up. I question whether the Hindus will muster up courage enough to do the same. Upon this hinges the future destiny of India." But in India they do not see the weakening effect of the caste system. Lately some members of sub-castes of a single caste proposed to eat together, and it was stoutly resented. Count Okuma's explanation will bear application elsewhere.

Why the Bishops Met

There have been many stories in the irresponsible press about the reason why the colored bishops met in Washington the other day, and it has been represented that their meeting had a political object, particularly in opposition to President Roosevelt and Secretary Taft. There is no truth in it. The real purpose is thus to be explained. Before the Civil War the African M. E. Church and the African M. E. Zion Church were organized and were sharp rivals of each other, and efforts made from 1864 to 1868 to unite them were failures. After the war a new body, the Colored M. E. Church, was started, all three having bishops. An attempt in 1904 to unite this latter with the Zion Church was a failure. But the desire for union of the three bodies grew, and last year their senior bishops met and arranged a meeting in Washington on Lincoln's Birthday of this year of all the bishops. Of the twenty-five bishops twenty-three met, the two others being ill. The utmost harmony prevailed.—

The Joint Board of Bishops constituted themselves into a Federation, and planned for a second meeting two years hence; they also recommended a federation of the churches to the extent of forming ministerial unions in all cities where possible. They further agreed not to receive suspended or expelled ministers from the included Churches, except upon terms mutually satisfactory; they recommended a common hymnal, common catechism, common liturgy and a common fast day. These three Churches represent over 1,700,000 members and about 12,000 traveling preachers, three publishing houses and twenty-five institutions of learning, with about \$15,000,000 worth of church property all told. Neither in the joint sessions nor in the sessions of the separate boards was any expression made as to political parties or candidates, and all statements given out by the press intimating that politics crept into the meeting are false. Individual members may have expressed opinions, as is their privilege, but the meetings made no pronouncement, and the published "interviews" may be credited largely to newspaper enterprise.

A Questionable Correction We said in THE INDEPENDENT that in 1854 "of his own authority, without Council, Pius IX declared the immaculate conception of Mary a revealed doctrine." Our friend of *The Catholic Standard and Times* would correct us:

"It does not accord with the reputation for erudition that the INDEPENDENT possesses that such a statement should be put forward without qualification. The venerated Pope did not act 'on his own authority' or 'without council' in this high matter. Four hundred years previously the doctrine was defined at the Council of Basle, but as that Council was not of general or numerical rank, the decision was not promulgated."

Certainly it was not a Council of accepted authority. To say that even that Council, which deposed Pope Eugenius IV after he had excommunicated its members and which elected an Anti-Pope, "defined" the doctrine, is bad history and worse theology. It was after deposing Eugenius that the Council of Basle declared that the Immaculate Conception was "a pious doctrine and in harmony with ecclesiastical worship, with

the Catholic faith, right reason and sacred Scripture." The Council further exhorted that the doctrine should be universally accepted and its feast observed. Now the above is not a definition. Moreover neither Creighton, the Anglican, nor Pastor, the Catholic, in his sketch of the Council of Basle, makes any reference to this episode, which happened in the period between the deposition of Eugenius IV and the election of Felix V, the last Anti-Pope. Neither would pass over so important a doctrinal definition. Finally the Jesuit, Schrader, who drafted the schema of the Vatican Council, declared that the fact of Pius IX in defining the doctrine of the Immaculate Conception was:

"A deed, entirely peculiar to the Pontificate of Pius IX, such as no other Pontificate could show a parallel to, for the Pope had defined this doctrine in his independence and in virtue of the fulness of his own proper power without the co-operation of a council."

We may be pardoned for accepting his authority.

Methodists have much to say in criticism of the attacks made by Chancellor Day, of Syracuse University, on President Roosevelt; but that does not mean that they have any sympathy with the action of the Rev. George A. Cooke, of Brandon, Vt., in bringing charges against the Chancellor therefor. If a Methodist minister thinks the President is a blunderer and a dangerous man, they do not see why he should not be allowed to say so. To be sure, Mr. Cooke is an inveterate heresy-hunter and trouble-hunter. It is he that has brought charges against Prof. Borden P. Bowne and Dr. James M. Buckley and other Methodist lights, but with no distinguished success. Such men make bother—and laughter.

Miss Clare M. Howard, professor of rhetoric and composition in Wellesley College, proves that she knows how to handle the English vocabulary, as we learn from her scoring of certain girls in the college who waste half their time in a vacuous sort of amusement which might be spent in a more vigorous and profitable way. She says:

"When one thinks of an undergraduate's ignorance of the world how sad it is to contemplate our foolish virgins playing bridge.

"Even the emptiest mind must chew on some-

thing, and bridge provides a sort of mental chewing gum.

"To wear the colors of a college woman and to spend half one's time in emulating the accomplishments of addlepaters is to be a trailer in the camp.

"There are accomplishments of society women which college girls might cultivate—a beautiful voice, beautiful movements and every sort of care for the body—but not the trick of playing bridge, that last infirmity of empty minds."

Of course, the chance to get at the Carnegie foundation for retired professors is not the main reason why Brown University alumni are moving to change the Baptist charter, but it is the reason why the subject is being prest just now. A letter was sent out to representative graduates asking their opinion, and six men opposed the change and thirty-three favored it. The present charter requires the control to be by Baptists. Yet Brown is the one college in Rhode Island and ought to be non-denominational. Of the students, 188 count as Baptists, 104 as Congregationalists, 95 Episcopal, 80 Roman Catholic; 45 Methodist, 24 Presbyterian, 23 Unitarian and 19 Hebrews.

Over forty of the most distinguished physicians of New York have signed a letter to the press calling attention to the fact that an existing State law punishes cruelty to animals, and allows vivisection only for scientific investigation "under the authority of the faculty of some regularly incorporated medical college or university of the State." That ought to be enough. We must trust somebody, and the abuse is already forbidden. Among the signers are such famous men as Drs. Abbe, Blake, Bull, Jacobi, Jane-way, Lusk, McBurney, Stimson and Thomson. There are no better men.

What Bishop Hendricks, Bishop of Cebu, says of American government in the Philippines, is what all say that see things at first hand. He is thus reported on a visit to this country:

"The Filipinos are a loving and confiding people and they are learning that the American clergy are among them, not for their own, but the people's good. He deprecates the agitation for Filipino independence in this country, and declares that the worst enemy of the Filipinos could wish them no greater calamity than political autonomy. The Filipinos themselves do not want it—at least not just now."

Insurance

The Fidelity Mutual Life Insurance Company of Philadelphia, Pa.

THE twenty-ninth annual report of the Fidelity Mutual Life Insurance Company of Philadelphia is a comprehensive and luminous document. In it there is an intelligent survey of the life insurance field. That the past year has been a trying one for life insurance companies is freely admitted in the report. Primarily because of the New York insurance investigation, as the report sets forth, an era of reform has swept over the country, and during the past year and a half we have had almost revolutionary reconstruction methods in life insurance. Laws have been enacted regulating the expenditures of the companies writing life insurance, some of which are prejudicial to the welfare of the insurance business. The disclosures of extravagances that came about through the Armstrong investigation have likewise been responsible for the organization of hundreds of life insurance companies on the stock plan, and by means of holding out the prospect of large profits many persons have been induced to take out policies in these newer life insurance organizations. There is, however, small hope that all of these newly organized companies can survive in competition with the long established companies, and there is in consequence every prospect of loss and bitter disappointment in many cases where policies have thus been written. It must also tend toward the injury of the business of insurance in general, particularly on the part of those who cannot discriminate between the good and the bad. Laws enacted by the State of Texas have been so hostile to the welfare of insurance companies that twenty-one of them have withdrawn as to new business from that State. Wisconsin has enacted a law on different lines, but almost, if not quite, as objectionable, which has resulted in the withdrawal of most of the companies from that State. There is every prospect

of conflict between that State and the several companies before a final settlement of the controversy is reached.

The report under consideration is quite in line with the views of John M. Taylor, president of the Connecticut Mutual Life Insurance Company of Hartford, Conn., to which reference was made in THE INDEPENDENT of February 13th, and also with the remarks made by Darwin G. Kingsley, president of the New York Life Insurance Company, before the Trans-mississippi Commercial Congress at Muskogee, Okla., to which we referred in our issue of December 5th, 1907. In each of these cases there is both a recognition and a deploring of the growing tendency to increase the burdens of insurance companies in the form of taxation, license fees, etc. This method of taxation seems, however, to be growing in popularity among legislative bodies, and has now reached a point where it is becoming an actual menace to the business. According to the "Insurance Year Book," the policy-holders of legal reserve companies alone were taxed in 1906 over eight and one-half millions of dollars, which was equal to more than 20 per cent. of the dividends paid by the interested companies. In other words, if a policyholder under existing conditions received a dividend of \$10, if relieved from the burdensome tax he would have been entitled to \$12. These are all significant figures and may well have the attention of all those who are insured or who ought to be insured.

In his lecture on "Legislation in Life Insurance," delivered in the Yale University Insurance Course, John M. Holcombe, president of the Phoenix Mutual Life Insurance Company of Hartford, Conn., has exhaustively stated many of the difficulties with which an insurance executive is confronted because of recent legislation in life insurance. A significant fact brought out by Mr. Holcombe is that in insurance no values are created; they are only distributed, and whatever a company distributes must be collected.

The Knickerbocker to Resume

IN the early days of last year's panic there was no more sensational event than the suspension in New York, on October 22d, of the Knickerbocker Trust Company, followed, as it was three weeks later, by the suicide of the company's deposed president, Mr. Barney. Probably there would have been no suspension if the company could have realized quickly upon its investments, but payments of nearly \$8,000,000 in half of one day exhausted its ready cash, and it became necessary to close the doors. Four and one-half months have passed, and now the Knickerbocker is about to resume business. The temporary receivers will retire on the 26th inst., when the doors will be opened. Superintendent Williams's report shows that the company's assets now exceed by nearly \$2,000,000 its liabilities (which include gross deposits of \$46,370,000), and that a part of these assets is \$11,765,000 of cash on hand. About \$1,500,000 is soon to be collected, and this, with \$2,400,000 contributed by the stockholders, will make a total of \$15,665,000, which will exceed by at least \$1,500,000 the cash required for resumption. A very large majority of the depositors have assented to the resumption plan of the Parsons-Satterlee depositors' committee, which provides that for 30 per cent. of their claims the depositors shall receive interest-bearing certificates, to be redeemed out of earnings, and that the remainder shall be paid in instalments during a period of twenty-nine months, the first one, of 10 per cent., being due on the day of resumption. The company will be placed in the hands of Henry C. Frick, Lewis Cass Ledyard and Myron T. Herrick (formerly Governor of Ohio), who, as voting trustees, will choose a new board of directors. Control will not revert to the stockholders until all the depositors have been paid in full.

Much hard work has been done by many persons to bring about this resumption. Among these are Clark Williams, Superintendent of Banks (whose course is highly commended by Supreme Court Justice Clark), and Mr. Satterlee, the indefatigable counsel for the depos-

itors' committee. Julien T. Davies, counsel for the directors, remarks that the whole atmosphere of the case has been one of good will and co-operation. Justice Clark, upon whose order the company will resume, has shown a deep and sympathetic interest in the movement, and Mr. Satterlee acknowledges the "constant helpfulness" of Attorney-General Jackson. The result is much to the credit of all who have labored for it, and the influence of it upon banking interests is distinctly favorable.

....The American Car and Foundry Company's net earnings for the quarter ending with January were \$1,772,200. Quarterly dividends of $1\frac{3}{4}$ per cent. on the preferred stock and 1 per cent. on the common have been declared.

....The directors of the Columbia Trust Company have elected as president Willard V. King, vice-president of the New York Trust Company. Mr. King is resigning his present position and will assume his new duties on March 23d. He was connected with the old Continental Trust Company from the beginning and rose to the position of vice-president. When it merged with the New York Security and Trust Company he became vice-president of the combined companies, Otto T. Bannard being the president. The Columbia Trust Company was organized about two years ago, and altho it has not yet acquired a large line of deposits it is regarded as one of the most conservative institutions in this city. It has a clean record and was among the nine companies in Greater New York to show an increase in the undivided profits account during 1907. It has a capital of \$1,000,000, a surplus of \$1,000,000, undivided profits amounting to \$130,000, and \$5,000,000 of deposits. Clark Williams was largely instrumental in organizing the company, and was vice-president up to the time when he became Superintendent of Banks. The other officers beside Mr. King are A. B. Hepburn, W. H. Nichols and Howard Bayne, vice-presidents; L. W. Wiggin, secretary; E. B. Potts, assistant secretary; Park Terrell, manager of bond department; D. S. Mills, trust officer.

VOL. LXIV NEW YORK, THURSDAY, MARCH 19, 1908

No. 3094

Survey of the World

The Battleship Fleet

President Roosevelt decided on the 13th that the battleship fleet should visit Australia, Hawaii, Samoa and the Philippines, and return by way of the Suez Canal, arriving at Hampton Roads about one year from the date of its departure, which was December 16th, 1907. The invitation from Australia has been supplemented by one from the British Government in a letter addressed by Ambassador Bryce to Secretary Root. Mr. Bryce wrote that he had been directed by the British Government to bring to the attention of our Government the hope expressed by the Commonwealth of Australia that the fleet would be instructed to visit the principal Australian ports, and also to say that Australia's invitation was most cordially indorsed by the Government at London, which would be glad to have it accepted. The fleet arrived at Magdalena Bay on the 11th, two days ahead of the schedule, in excellent condition and "ready for any service." It remains there for target practice, and will arrive on May 5th at San Francisco, where there will be a grand review on the 8th. After a visit to Puget Sound (and possibly to Vancouver) it will leave San Francisco on July 6th for Honolulu. Then it will go to Samoa, to the Australian cities of Melbourne and Sydney, and to Manila. After target practice in Philippine waters it will start for home. No provision has been made for a visit to Japan, altho the Japanese Government desires that the fleet shall come to a Japanese port. The Foreign Office at Tokio says the decision to send the fleet homeward by way of Suez "should silence all war talk" and is "a guarantee of the peace of the world." The very successful voyage of 13,000 miles to Magdalena Bay is the subject of much

favorable comment in the European press and foreign offices. It is generally regarded abroad as striking proof of the efficiency of our navy and as an instructive measure of American naval power. The entire voyage, as now planned, will be about 37,000 miles, and it is expected that at San Francisco the two new battleships, "Nebraska" and "Wisconsin," will be added to the fleet. Thoro search was made on one of the islands of the Galapagos group by the officers and men of the "Yankton" for Frederick Jeffs, an American sailor unintentionally marooned there in May last, but they could not find him.

Railroad Questions

The Department of Justice asks Congress for authority to sue the Oregon & California Railroad Company (which is controlled by Mr. Harriman) to recover 2,000,000 acres of granted land, asserting that the terms of the granting act have been flagrantly violated. In the Senate the necessary resolution has been past. Mr. Harriman is president of the company. In a formal statement to the Senate committee, Attorney General Bonaparte says that the granting act required the company to sell the land to actual settlers only, in tracts of not more than 160 acres to each purchaser, and at a price not exceeding \$2.50 per acre; that the company, disobeying the law, sold 800,000 acres, mainly to speculators, in the largest possible quantities and at the highest possible prices; and that in 1902 it violated the agreement in another way by withdrawing from market the unsold remainder of 2,000,000 acres, of which the assessed valuation is \$18,000,000. The company's purpose, he alleges, is to prevent such development of the region as would invite the construction of rail-

roads in competition with the existing transportation monopoly. The company is said to have realized \$4,500,000 from sales made prior to 1902.—Counsel for several Union Pacific stockholders have served upon the company's directors a demand that they shall sue E. H. Harriman, H. H. Rogers and James Stillman to recover for the company all profits realized by the sale of railroad stocks to the company by these three directors. This action is preliminary to a suit against the latter by the complainants, whose estimate of the profits in question is \$26,000,000.—It is now admitted that the Georgia Central Railroad was bought in June last for E. H. Harriman by Oakleigh Thorne and Marsden J. Perry. It was Mr. Harriman's purpose to transfer this property to the Illinois Central, and thus to complete a line from the Atlantic to the Pacific under the control of himself and his associates. The Georgia Central touches the Illinois Central at Birmingham, and extends to Savannah. Knowledge of Mr. Harriman's ownership was withheld from the public until last week, while his control of the Illinois Central was in litigation.—Having pleaded guilty to the rebate indictments recently found, the St. Louis & San Francisco road has been fined \$13,000.—In an address at St. Louis, last week, Paul Morton, president of the Equitable Life Assurance Society and formerly Secretary of the Navy, earnestly advocated Federal control of all railway business, intrastate as well as interstate, in order that the disturbing effect of State legislation upon interstate rates and traffic might be avoided. He was in favor of such Federal supervision, he said, because he was opposed to Government ownership, "which would be the very worst thing that could happen to the country."—In Washington, last week, representatives of railway labor unions argued against pending propositions for reduction of passenger rates and other restrictions, on the ground that they would cause reductions of wages.

Washington Topics

Several conferences relating to legislation proposed for enactment at the present session of Congress have recently been held at the White House. It is understood that the President regrets the

failure of Congress to take action with respect to the recommendations of his December message. At some of these conferences representatives of railway interests and of organized labor have been present. The President, it is understood, desires that the Sherman Anti-Trust law shall be amended to permit railroads to make traffic agreements, subject to approval by the Commission; that labor unions shall be exempted from classification as combinations in restraint of trade, and that a constitutional employers' liability bill shall be passed. He would also like to see the question of licensing interstate corporations by Federal authority taken up. The representative of organized labor in the conferences has been Mr. Gompers.—It was reported at the beginning of last week that the President had directed Commissioner Herbert Knox Smith to investigate the methods of trading and speculation on the New York Stock Exchange and other exchanges, with the purpose of suggesting legislation against trading in futures and upon margins. On the 13th, however, Secretary Straus, to correct any misapprehension, published the following explanation:

"Secretary Straus states, in regard to the matter of bucket shops, that the President has simply referred the subject to this department, with the request to have Mr. Herbert Knox Smith, Commissioner of Corporations, examine certain bills aimed at bucket shops and to report his views on the general subject. The President has not ordered any general investigation of Stock Exchanges, and Mr. Smith has been instructed to use his own judgment in reporting upon the subject and getting the facts that the President desires."

—Six of the treaties adopted at the Hague Peace Conference were ratified, without opposition, in the Senate last week. They are the agreements relating to the opening of hostilities, the laws and customs of war on land, the rights and duties of neutral powers and persons in case of war on land, the laying of automatic submarine contact mines, bombardment by naval forces, and the adaptation of the principles of the Geneva Convention to naval warfare. In a letter to the President forwarding the treaties for transmittal to the Senate, Secretary Root said:

"Let me go beyond the limits of the customary formal letter of transmittal and say that I think the work of the Second Hague Confer-

ence, which is mainly embodied in these conventions, presents the greatest advance ever made at any single time toward the reasonable and peaceful regulation of international conduct, unless it be the advance made at the Hague Conference of 1899. The most valuable result of the conference of 1899 was that it made the work of the conference of 1907 possible. The achievements of the two conferences justify the belief that the world has entered upon an orderly process thru which, step by step, in successive conferences, each taking the work of its predecessor as its point of departure, there may be continual progress toward making the practice of civilized nations conform to their peaceful professions."

Irish patriotic organizations have sent to the State Department emphatic protests against a new treaty of arbitration with Great Britain, said to have been negotiated by Secretary Root and Ambassador Bryce. Resolutions of the same tenor have been forwarded to the Senate.

Harrisburg Capitol Conspirators Convicted

Four of the men indicted for defrauding the State of Pennsylvania in supplying furniture for the new Capitol at Harrisburg were convicted, on the 13th, at the close of a trial which had consumed seven weeks. They are ex-Auditor-General William P. Snyder, ex-Treasurer William L. Mathues, James M. Shumaker, formerly Superintendent of Public Buildings and Grounds, and John H. Sanderson, the leading contractor. The jury was out for nearly ten hours, but only two ballots were taken, the first standing 11 to 1 for conviction. It was alleged that the defendants conspired to rob the State, the contractor presenting fraudulent bills, which were fraudulently certified by Architect Joseph M. Huston and fraudulently audited and paid by the accused officers. This case involved a fraudulent payment of \$19,000 in a bill for \$50,000. Representatives of the State allege that the entire sum wrongfully taken by the conspirators was nearly \$5,000,000. The maximum penalty provided by law is two years in the penitentiary and a fine of \$1,000. Ten other men have been indicted and in all there are thirty-eight cases. At the next trial the defendants will be Architect Joseph M. Huston, Congressman H. Burd Cassel, Assistant Auditor Frank Irvine and three (Snyder, Mathues and

Shumaker) who have already been convicted. The discovery of the frauds followed the election of William H. Berry, a Democrat, to the office of State Treasurer, and the indictments were the result of an investigation made by a commission of the Legislature. It had been commonly thought that the cost of the new capital was \$4,000,000, but it soon appeared that \$4,000,000 had been expended in erecting the building, and that \$9,000,000 more had been paid for furniture, painting, etc. Contractors had received sums greatly in excess of the market value of the articles supplied, their profits rising in some instances to 1,000 and even 2,000 per cent. Governor Pennypacker's responsibility for the fraudulent payments has been the subject of much discussion. During the recent trial the prosecutors—Attorney-General Todd and James Scarlet—spoke of him as an "honest but deluded old man."

The Discharged Negro Soldiers

Reports concerning the discharged negro soldiers were presented last week by the Senate Committee on Military Affairs. Their character was foreshadowed by the committee's resolutions, to which we referred on the 5th inst. Four Republicans (Messrs. Lodge, Warren, Warner and Du Pont) and all of the five Democrats signed the majority report, which says that the Brownsville shooting was done by "some of the" discharged soldiers, altho those who did it were not identified by the testimony. In a supplemental report, the four Republicans recommend legislation permitting the re-enlistment of those who can prove their innocence. The minority report, signed by Senators Scott, Hemenway, Foraker and Bulkeley (all Republicans), asserts that the guilt of no one of the discharged men has been proved and recommends that they be restored to the service. Another report, signed by Senators Foraker and Bulkeley, sets forth Mr. Foraker's views at great length. At the same time there was laid before the Senate a message from the President on this subject. At the beginning he says that on December 12th, 1906, the Secretary of War, "at my direction," issued an order providing that applications of the

discharged men for re-enlistment might be made, accompanied by written evidence designed to show their innocence. Proceedings under this order were interrupted by the Senate investigation. The committee now finds (the President continues) that "the facts upon which my order of discharge was based are substantiated by the evidence." The testimony secured by the committee being now available, he desires to revive the order of December 12th, 1906, and to have it carried out. But the time limit during which reinstatement was possible has expired:

"I therefore recommend the passage of a law extending this time limit, so far as the soldiers concerned are affected, until a year after the passage of the law, and permitting the reinstatement by direction of the President of any man who in his judgment shall appear not to be within the class whose discharge was deemed necessary in order to maintain the discipline and morale of the army."

The San Francisco Frauds

Some weeks ago the California District Court of Appeals reversed the judgment of the trial court in the case of ex-Mayor Eugene E. Schmitz (convicted of extortion and sentenced to be imprisoned for five years) and ordered that Schmitz be released. By unanimous vote the Supreme Court of the State has now confirmed this decision. As Schmitz was held under more than 100 additional indictments, however, he could gain freedom only by furnishing \$335,000 in bail. This was promptly supplied by Thomas H. Williams, president of the California Jockey Club, and William J. Dingee, an Oakland capitalist. Schmitz and Ruef had been at variance, but after Schmitz's release the two became intimate friends again. In the case in question it was admitted that the proprietors of several restaurants had been required to pay large sums to Ruef and Schmitz, in order that they might continue to do business, and Ruef (indicted with Schmitz) pleaded guilty. Recent events indicate much confidence on the part of Schmitz, Ruef and other indicted men that they will be able to defeat the prosecutors. Ruef has asked that he be allowed to withdraw his plea of guilty. In support of this application he submits a remarkable affidavit, asserting that he made the plea under duress. He had a formal contract of immunity, which has been published. The

prosecutors say it was broken by him because he refused to testify as he had promised to do. Ruef now says to the court that it was abrogated by the prosecutors because he declined to perjure himself for them. They urged him, he asserts, to swear falsely against Patrick Calhoun, president of the street railroad company, and other indicted men, and to give false testimony which might lead to the indictment of Governor Gillett and E. H. Harriman. He would have Prosecutors Langdon and Heney tried for subornation of perjury. He has even brought suit against these prosecutors, Judge Dunne, Rudolph Spreckels and Detective Burns, to recover \$4,659 which he says they compelled him to pay for the expenses of his confinement in a private prison. Some say that at first Ruef, to save himself, undertook to assist the prosecutors, and that he was induced afterward to serve the interests of prominent indicted men who believed that without his aid the prosecutors would be unable to convict them. Ruef has had the sum required for his bail bonds reduced to \$550,000, which, it is said, he hopes to obtain from some source. *The Bulletin*, a San Francisco paper which has vigorously supported the prosecution, has been sued for criminal libel by William S. Tevis, on account of its assertions concerning negotiations with the old Board of Supervisors relating to the Bay Cities water supply system. At the trial two of the former Supervisors have testified that Ruef urged them to vote for the purchase of this water supply system at a price alleged to have been ten times its actual value, saying to them that their personal profits would be very large. This project was not included in the original charges of corruption. Judge Dunne, on the 14th, in dismissing the Ruef indictments covered by the Supreme Court's decision, said that he regarded Ruef as the greatest criminal that had ever appeared in his court to escape just punishment.

The Tweedmouth Letter

Lord Tweedmouth, First Lord of the Admiralty, has positively refused to make public the letter of the Emperor of Germany to him in regard to the British navy, and in this position is supported by the Government. The

House of Lords and the gallery were packed to hear his statement in regard to the matter, which was as follows:

"I understand that some members are inclined to ask questions about an extraordinary outburst in the press during the last few days. I should like to anticipate any questions. It is a fact that on Tuesday, February 18, I received a letter from his Imperial Majesty the German Emperor. The letter came by ordinary post and was private and personal. It was very friendly in tone and quite informal. When I received the letter I showed it to Sir Edward Grey, and he agreed with me that it should be treated as a private letter and not as official. Accordingly on Thursday, the 20th, I replied to him in the same sense as that in which his letter had been directed to me—that is, in a friendly, informal manner. All I shall say further is this: That I beg to assure your Lordships I firmly believe the course I have adopted is a good one and calculated to do what we all so much desire, which is to do all we may to foster the good understanding between the German Emperor and ourselves."

Lord Rosebery denounced the London *Times* for calling attention to the existence of the correspondence in the following language:

"We have witnessed the whole world drawing the absolutely insane inference that the German Emperor was attempting to influence Lord Tweedmouth with the view of cutting down the naval estimates and checking the increase of British armaments. This country has been placed in a ridiculous position, and I am quite sure the idea mentioned never entered Emperor William's head or the head of any educated person entitled to remain outside of a lunatic asylum. There is a section of the press which seems anxious to create friction between these two countries. There is an impression abroad that because Great Britain has arrived at a friendly feeling for France she should be hostile to Germany. This section of the press took up this trivial incident to excite morbid suspicions between the two countries, suspicions which, in my opinion, gradually are developing into danger for the peace of Europe."

The London *Times* in a later editorial calls attention to the fact that neither Lord Tweedmouth or Mr. Asquith denied any of its statements and says:

"The Emperor's letter no doubt contained what may be called banter, but it was in substance a long and elaborate argument intended to persuade Lord Tweedmouth that the German naval preparations contain no menace at the present time or in the future to Great Britain, and therefore he ought not to induce Great Britain to augment her fleet."

"There has been a great deal too much of this kind of diplomacy practised by Germany in other countries, as well as in Great Britain, and it can only be hoped that this exposure of the latest example will do something to discourage the system."

In Berlin copies of the Emperor's letter and of Lord Tweedmouth's reply have been circulated, and it is said that it contains nothing which could be construed in any way to be an interference with the British navy program. A Berlin paper also objects to the letter being characterized as an impulsive note, saying it was really a long and exhaustive discussion of the subject.

The Unemployed Bill in England

The bill for the relief of the unemployed presented by Philip H. Wilson, assistant editor of *The Daily News* and Liberal member for St. Pancras, forced upon the Government the necessity of deciding whether it would take further steps in a socialistic direction or break with its radical labor supporters. Opposition was chiefly directed against the third clause of the bill, which provided that the state must supply employment at standard wages to all persons out of work, or, in case work cannot be provided for them, they and their families must be supported. This was regarded as a direct acceptance of the fundamental principle of socialism, and was objected to on that ground, and also as involving an enormous financial burden. James R. Macdonald, member for Leicester and secretary of the Labor Party, declared that the cost of it would not be more than the expense of building one "Dreadnought" annually, and it would be infinitely more useful to the nation. Frederick Maddison, Liberal member for Brunley, opposed the bill on the ground that it would waste the resources of the nation, throw out of work more persons than it would assist, and destroy the power of organized labor. He proposed as a substitute a resolution expressing a hope that the Government would consider immediately the recommendations in the forthcoming report of the Poor Law Commission so far as this dwelt with the problem of the unemployed. This amendment was accepted by the Government. Mr. Asquith, Chancellor of the Exchequer and acting leader of the Cabinet, stated that the bill involved the ultimate state control of the whole machinery of production, and would vastly aggravate the problem of the unemployed. John Burns, former leader of the Labor

Party and now a member of the Government, also opposed the bill on the ground that it would destroy the great fabric which unionism and the friendly societies had built up. The Government was doing all that it could reasonably be expected to do to mitigate the sufferings of the unemployed, and there was no country in the world in which so much money is diverted to the relief of the poor, aged and infirm. He declared that it was a great mistake to attempt to exalt fustian and corduroy above frockcoat and top hat government. Maddison's amendment was voted as a substitute for the bill by 265 to 118. There were 288 absentees, many of whom were unwilling to commit themselves on this crucial question. Lord Rosebery, in a speech before the Liberal League, denounced socialism as even worse than a protective tariff, and attacked the Government for weakening the House of Lords in the present crisis.

"We might be driven, tho I trust God we never shall be, to the formidable option between protection and socialism. If it comes to a choice then I would have no hesitation, disagreeable tho the course would be, in preferring protection. Protection is a great evil, a great tyranny, a great source of corruption; but socialism is the end of all empire, religious faith, freedom and property. If socialism were to dominate the community the Liberal party would inevitably disappear.

"I honestly say, considering the menace of socialism which has reared its head in this country during the last year, and which is prepared to rear itself on every occasion again, that it strikes me as amazing that the Government at the present time should embark on the policy of abolishing the only barrier remaining between it and the people."

—The House of Lords refused, by a vote of 153 to 33, to consider the Scotch Small Holdings Bill, which was again past by the House of Commons at the present session.

King Alfonso in Barcelona

The fact that King Alfonso paid a two days' visit to Barcelona and returned in safety to Madrid is regarded in Spain as a great triumph of law and order, for Barcelona is the center of the anarchistic discontent and anti-dynastic animosity. There were no active manifestations of hostility on the part of the populace, and the stringent precautions taken by the police prevented any violence, if such were intended. A small bomb was exploded in a water pipe in

the quay where the King was expected to land, and after his departure the explosion of a bomb in the marketplace injured four women. Other unexploded bombs were found in various parts of the city. Seven thousand extra guards had been sent to Barcelona, and the houses along the streets thru which the King past were all searched, closed and guarded. The King visited the Austrian squadron in the harbor, attended a gala performance at the Liceo Theater, where twenty persons were killed in 1893 by a bomb, and inaugurated an extensive system of public works for the improvements of the city and the harbor. The mayor of Barcelona announced in advance that the Republican members, who formed half of the Municipal Council, were to welcome the King, not as Republicans, but as Catalans and Spaniards.

The German Colonies

In the sessions of the Appropriation Committee of the Reichstag the subject of the conditions and future prospects of the German colonies has been under consideration for the past three weeks, and Herr Dernburg, the Colonial Secretary, has given the results of the personal investigation that he has made since his appointment to office. The condition of Togoland he described as very satisfactory, since it required no subsidy from the Empire. The railway from Lome to Palime is running and pays well. The surplus will be devoted to its extension. In Kamerun trade had increased 40 per cent. in the past year and now amounts to \$8,500,000. The demand for rubber had caused an exploitation of the country which would seriously injure its own development and inflict great hardship upon the natives unless stopped by the Government. The rubber forests were being destroyed without planting new trees. The natives were entirely occupied in hunting for rubber to the neglect of agriculture, and thru the destruction of their villages and lack of food they might be driven to insurrection. In many districts the Government had stopped the expeditions thru the country in search of rubber. He denied that the slave trade was practiced openly, but may exist in remote regions. German East Africa is in an unsatisfactory condition.

There were too many officials on the coast, and too few in the interior. Some attention should be devoted to the study of the needs and capabilities of the natives, and the judicial system improved in their interest. During the German campaign in East Africa it had been found necessary to seize all supplies, and as a result 75,000 natives died from starvation in addition to those who perished from disease and in fighting.—The Federal Council has decided to authorize the construction of 900 miles of new railroads in Kamerun and German Southwest Africa.

The "Tatsu" Case

China has practically acceded to all the demands of Japan in regard to the steamer "Tatsu," which was caught at Macao smuggling arms to the Chinese insurgents. The official statement of the Chinese Foreign Office holds that the vessel was seized in Chinese territorial waters while in the act of discharging her cargo of arms and ammunition, but acknowledges that the act of the Canton officials in hauling down the Japanese flag was an unintentional wrong, for which accordingly an apology is tendered. The Japanese flag will be again hoisted over the "Tatsu" and saluted by a Chinese warship when the steamer is released. China also agrees to purchase the munitions of war captured on the steamer, paying for them \$10,500. The Japanese Government—influenced, it is said, by the British Ambassador, Sir Claude Macdonald—has agreed to exercise stricter control over the exportation of arms to the Chinese revolutionists. The Viceroy of Canton has declared that he would rather resign than release the "Tatsu" in accordance with an order of the Peking Government. An indignation meeting held at Canton has declared in favor of a boycott.—The first Japanese naval squadron has sailed from Formosa under sealed orders. The financial stringency in Japan shows no signs of relief, and the Government will have great difficulty in raising money for the increased appropriations for the army and navy, and at the same time for the purchasing of railroads from private companies and extending them. In spite of her losses during the war the Japan navy is much

stronger than it was before, possessing twice as many battleships and one-third more cruisers. Besides the ships that have been built, twenty-one vessels captured from the Russians have been fitted for service. Among these are five battleships, representing 62,524 tons, *i. e.*, the "Orel" (now named the "Iwami"), the "Peresviet" ("Sagami"), "Poltava" ("Tango"), "Retvizan" ("Hizen") and "Pobieda" ("Sue").

Turkey, Persia and Morocco

Both Russia and Italy have circulated diplomatic notes to the effect that they see nothing dangerous or objectionable in the proposal of Austria to run a railroad line thru the province of Novibazar. Sir Edward Grey, British Secretary of Foreign Affairs, states that Great Britain's attitude to all such projects is one of benevolent neutrality, but that no active British support can be given to any of them until the Porte has agreed upon an effective scheme of Macedonian reform. He proposed the appointment of a governor of Macedonia, with the approval of the Powers, the introduction of a reformed judiciary and an efficient police service. This radical project will be opposed by many of the Powers as well as by Turkey. The Sultan has announced that he will agree to extend the present system of an international police force for seven more years, in the hope that the Powers will be able to carry out the reforms for which it was devised.—The Turkish troops have not yet withdrawn from Persian territory, and Fazyl Pasha still holds the town of Suj Bulak, in spite of the official denials. He refuses to obey the orders of the Sultan to retire, as it would leave the country in confusion. Russian Cossacks are on Persian territory, with field batteries, to defend the capital against Sheik Mahomud, who is reported to be marching on Teheran with 30,000 followers.—Mulai Hafid, Sultan of the South, has applied to General d'Amade, commander of the French army in Morocco, for a truce for the purpose of making arrangements for permanent peace. The recent victories of the French troops in the vicinity of Settat have apparently destroyed his power and prestige.

The Power Behind the Czar

BY WILLIAM ENGLISH WALLING

[Our readers will remember that Mr. Walling and his wife and sister-in-law were arrested in St. Petersburg recently and were only released from prison after considerable pressure from this country was put upon our embassy and the Russian Government, for he had gained the enmity of the Russian Government by the articles published in *THE INDEPENDENT* like the following. Mr. Walling is now in Paris, and it has been intimated to him that he had better not try to return to Russia.—EDITOR.]

NEITHER reform by violence nor the State Socialism (or capitalism) puts any check on the campaign of the reactionary classes against progress. The present tendency of the Russian Government is the resultant of these three forces—the strengthening and better organization of the brute power of the state, its absorption of private industry, and measures against liberty of the individual in every sphere of private and public life—the “coming slavery” that haunted Herbert Spencer.

This tendency will be maintained until the Czar has been forced to acknowledge not that he has voluntarily granted some reform while his power remains intact, but that the people have compelled him to abdicate or to share his power.

The coming Government, like the present one, will be rich and strong. It will not need to bother about the details of the persecution of the individual. But it will still need the support against the ever-rising tide of revolutionary feeling of certain classes that receive their income from privilege rather than directly from the coffers of the state. It will have to seek the aid of these thru lending them the arbitrary power of the state to crush their rivals or, as we shall now see, to crush their employees. It will be done not in disorder as now, but by law as the moderate reactionaries suggest.

Western Europeans and Americans do not have the habit of mind of thinking of social evolution as sometimes going backward. There has been too much prosperity in the past century for America, Great Britain or France to have a very defined idea of the reverse of progress. Nevertheless we all know that this thing can happen, and we must realize that it is on the whole reaction that a large part,

if not the majority, of Russia's ruling classes desire—not because they hate progress in the abstract, but because they hate it in Russia, where it endangers their incomes, their privileges and their domination.

The changes will begin at the bottom; they will be tried first in the schools. There must be no more trouble from the unruly children of the rich and privileged, who now absorb ideals of progress and liberty and upset the universities. They will be trained to worship the Emperor, to spend their youth in dissipation, to ignore every serious interest and study except that of their future official career, and to hate foreigners, peasants and working people, as do the youths of the Prussian universities at the present time.

The Monarchists' Congress in Moscow (July, 1907) demands a “sound Russian national school.” A model specimen has indeed just been opened in St. Petersburg. We can picture how it may carry the Prussian school idea beyond anything ever approached on its native soil. In connection with the same propaganda for the enforcement of sound national ideas it insists on the “effective” punishment of agitation in the press, as if the censorship had not already gone beyond anything known in modern times.

The reactionaries are clamoring for the same program they were in the past, based, first of all, on opposition to all traces of democracy in the Government, and next on the “priority of the Russian race in Russia,” with all the persecution this implies. They are still insisting on the continuance of the principles of Alexander III, followed by the present Czar without exception for the first ten years of his reign, and restored to the full in the creation of the new landlords' Duma.

For whether it is that the reaction has restored the landlords to power or that the landlords have brought about the reaction will never be decided. No Russian could ever imagine either a landlord power or reaction apart from its inevitable accompaniment.

At the Monarchist Congress preceding the one we have just mentioned, the president, the nobleman and landlord, Scherebatov, had declared that during the Revolution the nobility had either kept silent or in the persons of its lead-

have a great significance. They indicate clearly the position of Russia's ruling class, since both the League and the landlords are represented there. And they certainly supply a lively interest. The president's speech in 1906 was a beacon in the often incomprehensible obscurity of reaction. If the Duma should be abolished altogether, says this courtier and landlord, let us hope it will be replaced by an assembly of the old Russian character, composed exclusively of "the population that composes Russia's roots."

A TYPICAL LANDLORD GROUP OF THE REACTIONARY FACTION FROM CENTRAL RUSSIA.

To the right the important leader, Count V. W. A. Bohinsky.

ers joined the enemy. Now the landlord class has awakened, expelled from its assemblies most of these traitorous leaders, and together with the League of Russian Men its congresses have directed the policies of the Government. It was the landlords' organization and the League that demanded the dissolution of the first Duma and the *coup d'état* that dissolved the second and put the people's representatives in an insignificant minority by an election law against the Czar's so called fundamental laws.

These Monarchists' congresses, then,

The Czar did not follow this advice to the end; he preserved the name of Duma and left a few representatives to the Caucasians and Poles; but he certainly went more than half way toward the goal. One more short step and it will be reached.

"The principle of the sovereign prerogatives of the Russian nation must be expressed in several ways," said Sherebatov. First, all the responsible official positions are to be filled with scions of pure Russian stock, and even at least half the clerks must be of the dominant race.

The Congress of this year went farther and extended its protection not only to Russian clerks, but even to Russian servants. It decided its members were to use every means to get positions for such of these as were employed by Jews among Christian families. It is indeed wise for the League to promise something to the servants, for it is among the most ignorant of these that it obtains in the larger cities most of its members.

The difficulty of the League and other organizations supported by the landlords is not to influence the Government, but to get members. There are only about a hundred thousand noble landlords. The Government officials, house servants and small shopkeepers do not form a tithe of the population. The peasantry, conceded Sherebatov, was in commotion and, "without noticing it," he claims, "followed the Revolutionists." It is hoped to win these back through the priesthood. The resolution passed by this year's Congress about the punishing of any priests who make themselves offensive by their liberality in the Duma or in any way opposing the League's principles is being carried into effect. Every day priests who have assumed any kind of popular leadership are immured in the monasteries; those who spoke for the people in the Duma have been unfrocked, and two-thirds of the present delegation is composed of reactionaries of the most violent character.

This extraordinary movement that professes to be so loyal to the Czar is strangely opposed to the Government. It savagely attacks the officialdom for losing the war and wants an account of the nation's expenditures. It is opposed to the arbitrariness and corruption in the bureaucracy to the point that it would destroy its power. But not by making Ministers and officials responsible to the Duma. Oh, no; this would be democratic. They are to be made more responsible to—the Czar! To the Czar's thousand bureaus and councils is to be added another, a Supreme Court, above all the others, and directly answerable to the "Most High." To this court each of Russia's sixty million adult citizens is to have access, and all will be well. Such is the political science of the reactionary mind.

The political economy of our Czarists may be summed up in a word. The state is all. The professional reactionist does not stop half way; he always goes farther than the Government. The state that is all surely need not burden itself with the necessity of keeping hoarded up a supply of gold as the basis for money. Paper money is not only a natural demand in a desperately impoverished and indebted country; it is the inevitable logical outcome of all the thinking and all the principles, such as they are, that underlie the Czarism.

The Czars have never ruled alone. They have always had the indispensable support of a powerful ruling caste. The autocracy has merely been the device by which this oligarchy has governed. While subjecting themselves absolutely to the autocrat, the landlords have relied on the fact that it is from their ranks that are naturally chosen courtiers, ministers, generals and administrators. The landlords are the chief source of the Czar's information, teach him in childhood, advise him when he governs, execute his orders and organize the demonstrations of loyalty that give some appearance of popularity to the system. In return the landlords have offered the Czar a loyal and zealous support. Whatever causes they may have had for complaint, no considerable part of them have for centuries been so foolish as to attempt to overthrow a system that has worked so admirably in their interests. When the Czars have been wise they have done everything in their power for the landlord class. When they have been weak, innumerable wealthy or ambitious landlords have crowded to the court to become the true governors of the land. But only rarely have they tried to moderate and never have they tried to abolish the autocratic system.

So for a thousand years the people of Russia have been living under a double slavery—abject economic subjection to the landlords and abject political subjection to the State. But always while the people owed a double servitude the masters were really one. The Czar himself is the greatest landholder and the natural head of the class. The landlords owe their property, their privileges and their power to their influence over

the Czar. There were never those very serious conflicts among the members of nobility and between the nobility and the chief ruler that gave the people a chance to obtain a share of the power as in other European States. There were no artificial boundaries to give rise to independent robber barons; the constant threat of Tartar and Turkish invasion strengthened the military power and maintained the absolute dominion of the Czar. There were no great seaports or trading-centers to build up independent towns, no industries to create a buffer middle-class. When occasionally the Czar's generals and governors were chosen from among the people they at once became landlords, since the land constituted the sole great treasure of the State from which to draw their rewards. For centuries the peasants have borne this double servitude under changing forms. During these centuries serfdom was instituted and again abolished and finally a "constitution" has been granted and elections held. But the Czar still remains "autocrat" with absolute and unlimited powers; he still governs in the interest of the landlord caste, draws most of the Ministers and nearly all the governors and generals from the landlords and relies almost entirely for his power on their enthusiastic and eager support. In the new Duma it is in the main the landlords, elected under the unequal election law, not by the people, but by themselves, that vote for the measures of the Czar. As for centuries, the Czarism and the landlord caste stand united to maintain their rules.

In the present revolutionary crisis the landlords are no longer entirely united, but none favors the peasants' program. Practically all are loyal to the monarchy, and the overwhelming majority are zealously fighting to preserve the autocratic state. They are divided with few and insignificant exceptions into three parties: the Reactionaries, the Conservatives and the Moderate Liberals. Perhaps the most influential are still the Reactionaries, who demand a return to the old order—the peasants held on the level of serfs, the towns and industries in the hands of an irresponsible bureaucracy limited only by the influence of the Court party, which is and must remain the only

possible source of control over the governmental machine. For in a country as enormous and complex as modern Russia, government by an absolute monarch means government by the Court party. No ruler ever lived that could impress his single will on such a state.

The Reactionaries have a program that may be summed up in the single word—repression. Let Russia be bathed in blood if necessary until the last spark of self-assertion among the people be destroyed. Then let the Czar abolish the Duma forever, revive the Orthodox Church and renew the persecutions against Russian dissenters, Polish Catholics and Jews. Finally let a general economic reform be introduced of such a character that none but those sentimental landlords who happen to have some sentimental attachment to their estates could cavil at its terms, a reform that in turning over all the land to the peasants would leave the landlords better off than before, and let the nation pay the bill. Let the government subsidize the so-called "Peasants' " Bank, and let that bank gradually buy up all the estates. In this way, former Minister of Agriculture Kutler himself pointed out, the prices of estates stimulated by government bidding would constantly rise and the landlords would secure even more than the present inflated prices for their lands. Kutler was so outraged at this proposition made by Count Witte two years ago that he resigned from the Ministry and has become the financial expert and leader of the moderate opposition party as well as the chairman of the second Duma's commission on the land question that had so much the economic destiny of Russia in its hands.

This "reform," from the landlords' point of view, would cost Russia three or four billion rubles—about as much as the Japanese War. I was actually approached by one of the most notorious leaders of the Court party last fall, Count X., with an inquiry as to my opinion about the possibility of his interesting American financiers in such a loan. The Count had heard that America was overflowing with money, to be had by foreign governments on good security at 3 and 4 per cent. Might not America lend Russia a billion dollars or two on

the security of her land? It was the same group of reactionaries which proposed to mortgage the Russian railways to some Morgan syndicate, and which actually succeeded in putting a large part of the securities of the "Peasants'" Bank in English hands, with hopes of continuing the process.

Until his "execution" by terrorists, the notorious Jew-baiter, Count Ignatief, was the leader of this party in the court. Pobiedonostzev, head of the Church; Trepov, military dictator of St. Petersburg, and the other chief advisers of the Czar, with few exceptions, belonged to

without the check even of military law where that is effective, and wherever it is not, the arming of the dregs of the population against all the better classes. It is this class that has hired large bands of so-called Cossacks, often really new recruits raked even from the refuse of prisons, to guard their estates. One noble landlord told me that as soon as any peasant touched any of his property, he had instructed his ruffians to burn the whole thatch-roofed village down. This was, in fact, the official decision taken at the landlords' congress as to the action to be taken in case of any peasant attack.

TYPICAL PEASANT DEPUTIES OF THE SECOND DUMA.

Extreme revolutionists from the heart of Russia.

it and were its principal support. Some of the largest landlords in the country, such as Prince Sheremetieff, also a power in the court, have spoken openly on all occasions since the October Manifesto in favor of a return to pure orthodoxy, autocracy and nationalist persecution.

This party, which might be called the "old" landlords' party, is "legal"—that is, allowed to hold public meetings and demonstrations, while all the large parties of the Duma, even the moderate Constitutional Democrats, are still "illegal." Yet the basis of its program is violence, illegal governmental violence,

But why does this landlord party give itself up to counter-revolutionary violence rather than to its more profitable economic reform—the purchase of its lands by the Government at a figure beyond all criticism? The cause is this. The revolutionary propaganda among the peasants has given them the hope and the courage to demand for nothing the land that they have already repeatedly purchased with their sweat and blood. The peasants refuse to buy. In the meanwhile the revolutionary movement forces some of the landlords to flee and sell their estates. At the same time the national credit goes down and the

Government could scarcely get the money to make the purchase. After all, the landlords, even the most violent, are business men. If by fair or unfair means they can crush the revolution, the field of exploitation will again be theirs. They do not have at their disposal any huge corruption funds, like our corporation magnates. With all their millions of acres they are "land poor." But they are almost in complete control of this great engine of violence, the Russian Government, and by that means a large part among them still hopes to achieve its ends.

But there is a new landlord party in the court which would rather follow the well-tried methods of the Prussian, Polish, Austrian and Hungarian landlords. They do not hope to bring about a return to old conditions. They want not to abolish the Duma, but to dissolve it and change the election law back to the Prussian model, as was recently done in Saxony. They know the Duma was created not by the Czar or the revolution, but by the foreign financiers, and that therefore it cannot be entirely done away with. They wish not more violence, but the continued application of the present measures of repression which have imprisoned and exiled two hundred thousand or three hundred thousand people during the year. They rely on the "constitution" which allows the Czar's "council" to counteract the Duma, and in such a case permits the Czar to enact the laws alone.

With the enactment of an election law that left three-fourths of the Provinces entirely in the landlords' hands and gave them nearly all the rest in common with an electoral body composed exclusively of the wealthy and privileged classes of the towns, the proprietors were inspired with a new life. In the third Duma the majority of the extreme reactionary group of more than 100 members and of the moderate reactionary group of 150 members that holds the balance of power are landlords, while a third group that takes a position between the two, the so called simple Rights, is composed almost exclusively of landowners. Of these three groups the moderates hold the balance of power, but only when the democratic and popular

parties, who are often so disgusted with the Duma that they refuse to participate, happen to decide to vote with their moderate against their extreme enemies. Otherwise not the moderate, but the center reactionaries, control. This also often happens when the less moderate landlord members of the moderate group vote with their more violently reactionary friends. In either case the almost exclusively landlord party controls entirely the so called National Assembly. And in any case, even when the landlords don't control, they entirely dominate the Duma.

The leader of this party is the wealthy Count Bobrinsky, and it has already become the most official party of the landlords' congress. More, perhaps, even than the still more extreme reactionaries, it has now the sympathy of the Ministry and the Czar, and it is in close alliance with the Octobrists, who actually propose certain moderate reforms. Both parties, however, are agreed that the landlords are to suffer no loss in whatever transformation is to come.

The least influential and numerous party among the landlords has been touched with the liberal ideas of the middle classes of the towns, and feels that Russia can neither go back nor stop at the present point of her political evolution. They have joined in the movement of the Constitutional Democrats, the Progressists or the "Peaceful Regenerators," in the belief that the victory of this party and the gradual evolution of a moderately democratic state may stop the revolution and save them from threatened financial ruin. Some have formed the so-called "right wing" of the party, others have formed the still more conservative and independent group of "peaceful regeneration." Such are the Princes Dolgorukov, Trubetzkoi and Loov, Count Heyden, and former Minister Kutler. Their policy seems the wisest for the landlords and promises to become the most successful. Their influence on the Constitutional Democrats has so far moderated the latter's position of revolutionary opposition to the Government that this party has lost what little popularity it formerly enjoyed among the people. The party owes its power in the second Duma almost entire-

ly to a few hundred thousand city electors, who, under the extraordinary election law, control almost as many members as the twenty million peasant voters. But the Constitutional Democrats have increased their influence over the Czar, the Ministers and the foreign financiers as fast as they have lost it with the people. The party that in an early Congress recognized the democratic republic as the goal toward which Russia must evolve is now defending the monarch in the Duma against all disloyal remarks. Its leader, Hessen, has just declared that his party is ready to compromise both on the great political issue, on equal suffrage and on the great economic issue, the handing over of the land to the people.

Before the meeting of the first Duma the Peasant party leader, Aladyn, reminded us that the Constitutional Democratic party, of whom a considerable majority were landlords, could never understand or satisfy the peasants' demands. The leaders at that time were Petrunkevitch, Roditchev and Nabolov, all noblemen and landlords. These men were not members of the avowedly conservative "right wing" of the party, but of the center. Public spirit certainly plays a prominent part in their opinions. Nevertheless they are landlords, and so little were the peasants, their tenants and laborers, satisfied with their lukewarm advocacy of the peasants' cause in the first Duma that they decreased their number to a half in the second.

Many landlords are joining this conservatively liberal party, but the peasants are turning against it the more bitterly as the landlords join. But they can scarcely be expected to sympathize with the peasants who propose:

(1) An election law on the basis of equal suffrage which would give the peasants nearly two-thirds and the Constitutional Democrats and landlords less than a tenth of the members of the future Duma.

(2) The expropriation of the landlords for small compensation or none and the payment of the whole amount by the State, the sum to be raised by a heavy taxation of the landlords and the rich thru a graduated income or other similar tax.

Knowing also that the Czar and the

landlords will never surrender except to superior force, they, the peasants, are hoping at whatever sacrifice to be able to apply that force. The sincerest of the Constitutional Democrats, publicists like Struve, Milyukov and Herzenstein, have repeatedly acknowledged that the Government so far has yielded only to external pressure, either that of an impending revolution or of an impending bankruptcy. But since they have obtained control of the Duma, the Moderates and landlords have become aware that further revolution or even further democratic evolution would beyond the slightest shadow of a doubt throw the next Duma into the hands of parties far more radical and revolutionary than they.

The peasants feel that this process might be slow, might prolong their agonies for many years, and that at its end Russia might become not a modern democracy, but a modern autocracy like Prussia. After centuries of oppression they have little confidence in a party half composed of landlords and fought at nearly every point by their own elected representatives. A generation ago they had a great experience with a reform amended and carried, if not originally executed, by the landlord class. The generation they have lived out since has proved one of the most bitter of history.

The peasants of that time were even opposed to their emancipation without enough land to keep them from starvation. Warned by the emancipation and pauperization of the peasants of Prussia, and of the German and Polish parts of Russia a few years before, they feared an abject dependence on the landlords for bread more than they hated their blows. The landlords, on the other hand, came to look on emancipation even with favor before it was actually put into execution. They looked forward to the institution of a new peasantry, free, but not provided with enough land for their food, as a source of a cheaper and more reliable form of farm laborers than the serfs. Besides this they were lured by three immediate economic rewards. The state agreed to force the peasants to pay both for their liberation and for the miserable plots of land that the landlords were forced to leave to them. Besides

these immense sums in cash, the landlords also took the woods and the better half of the pastures, most of which had formerly been used tho not owned by the peasants. Such were the promises of the emancipation. The opposition offered by the landlords was merely a haggling for terms. And when the great measure was finally accomplished it more than fulfilled the landlords' anticipations and the peasants' fears. No sooner was it put into effect, in 1861, than no less than a thousand peasant revolts reached an importance that required the intervention of military force. But it took a generation for this landlords' reform to produce its maximum of peasant ruin. The famine of last year, following so many others, has brought the industry and class, on which all Russian society is reared, down to an economic level scarcely higher than that they occupied a century ago.

In order to collect the new dues required by the enormous sums handed over to the landlords, the screws of servitude to the autocratic state, which had never for a moment been relaxed, were turned on harder than ever. The serfs' bodies were taken from the hands of the landlords only to be turned over to another more brutal master, the state. The state has always been the worse of the two masters. In the generation that preceded the emancipation Nicholas I had forced a large part of the peasants to a military slavery of twenty-five years' duration and to the most inhuman "discipline." But what is less known is that this same terrible discipline was applied to all the miners of the land, to the post office and to all the lower employees of the state. And what is still more important is that a police system of an almost equally barbarous severity was also applied to half of the peasants working on the land! For to nearly half of the peasants the Czar was not only the great arch tyrant, but their sole master. The state owned literally not only the army which furnished servants and workingmen, the miners, the state employees, but also nearly one-half the agricultural serfs.

By the "emancipation" this state serfdom was simply extended over all the land. The police were given a power

more despotic and scarcely less immediate than that formerly the right of the serf owners. New servitudes replaced the old, and it was largely, if not entirely, on the landlords' account that their severity was increased. To make easier the collection of the state taxes, devoted for the greater part to paying indemnities and making loans to the landlords, and to prevent the escape of the landlords' quarry of cheaper labor, the emancipated peasant was again fixed to the land. He could not leave his village without a special and rarely granted legal consent. When the first rumblings of the present revolution were heard this measure was abolished "as a law," only to give place to an almost exactly similar regulation by the police. To make the collection of taxes more sure the village was made responsible as a whole for each delinquent taxpayer. It was then given the right to inflict corporal punishment or forced labor on its delinquent members. With the alternative of the ruin and destruction of the village by savage Cossacks hanging over their heads the villagers seldom hesitated to use their powers under the eyes and direction of the police. But this is servitude. What more is there to serfdom than corporal punishment, forced labor, and fixtures to the soil?

When, after two decades, the state found it could beat no more out of the pauperized and starving peasants, it imposed a new and immense and crushing burden of indirect taxes that he could not possibly escape. The plan worked so much better than the other that these taxes, as already indicated, have been increased from year to year until the wretched peasant is forced to pay several prices for his plow, the petroleum for his lamp, the shirt on his back, and even for his poor luxuries, sugar and tea.

Not only has the condition of the people long ago ceased to improve, but agriculture has gone backward and the very soil has deteriorated. The average peasant farmer is producing less per acre than he did at the time of the emancipation forty years ago. And this is the very period in which agriculture has made the most spectacular strides forward and the American farmer is getting almost twice as much from a day's

labor as before. Year after year the peasant's share of land is growing smaller, his horses and cattle are degenerating and decreasing in numbers from under-nourishment. The horses are already only about half the weight of those of France. They require less food, but even taking this into account, three of them still get scarcely what is necessary for two. Even the men are habitually underfed, according to a Government report, to the extent of 17 per cent. Farm machinery, and even harness and the iron needed for wagons, are almost beyond the peasant's reach and are often replaced by devices of wood and rope. The harrows are of wood and the plows penetrate only a few inches into the soil. So, when a dry year comes along, a recent investigation has shown that the peasant obtains all over Russia only half the crop of neighboring landlords who are able to follow a modern agriculture.

The frequent famines are worse in years of drought, but the drought is only a secondary cause of the suffering. With more means and modern methods the peasant would have twice his present crop even in dry years, and in good years he would be able to accumulate enough surplus capital to last him over until the next season, as do our farmers of the arid belt. As it is, he is forced by every drought to sell his farm animals and even his plows. It is at such times that the landlords contract for the peasants' labor for the next season in return for a little bread, at a half or a third of the usual starvation wages. The conditions after each famine increase the losses and sufferings of the next, and every dry

year brings a greater harvest of death. The annual death rate is already forty per thousand, twice that of any civilized land.

The landlords do not profit from the peasants' starvation alone. The permanent land hunger of the peasantry has reached such a point that the landlords are able to obtain, for land no more productive than at the time of the emancipation, four and five times as much rent as before. The lack of land is so great that the peasants are employing only one-fifth and their horses only one-third of their possible working time on their own land. To ward off starvation the peasant must either work for the landlord or pay him a rent that gives him as much profit as he could extort by direct exploitation of pauper labor.

So the landlords have prospered while the peasants have starved. Year after year they are sending out more and more grain from the country, while the peasants and their farm animals are more and more underfed. In 1906, the great famine year, Rus-

sian landlords had exported enough grain to feed all of Russia's starving millions. In some famine years, as in 1905, the exports are scarcely lowered at all.

The landlords have prospered not only because of the conditions created at the time of the "emancipation," but also by their steady influence over the Czar since that time. All the laws favor the landlords. The labor contract with the "free" peasants has been turned into a farce. The landlord or any of his family have a right to fine their laborers at their discretion, not only for neglect of work, but even for lack of respect! But still the

KRUSHEVAN,
Professional Jew Baiter, preparer of "pogroms" and
a leader of the extreme reactionary party.

landlords were not satisfied. Disagreeable and expensive quarrels with the peasants about wages and rents continued to arise. So a new official was instituted and endowed with all the despotic power of the Czar. The "land official" has become more hateful to the peasants than were the worst of their former landlord proprietors. He is responsible not to local authorities, but directly to St. Petersburg—and is inaccessible to any except influential persons. It is his special business to settle all disputes between landlords and peasants, backed by the full autocratic power of the Czar, prison, the knout, Siberia and Cossack invasion. But the Czar's ukase requires that he himself shall be a nobleman of rank, which is in most cases tantamount to a landlord! These new officials, surrounded and courted by landlords, have made full use of their powers. Villages have revolted by the hundreds, only to be beaten and shot into subjection by the savage Cossacks, their houses often burned and the women repeatedly outraged as in the days of Tamerlane. When terror-stricken villages have answered the despots' orders with loyal arguments about the true will of God and the Czar, it has almost become the custom for these gentlemen to answer, "I am your God and your Czar."

Landlord influence has governed Russia from the time of the institution of serfdom centuries ago to that of the hundreds of landlord sub-despots in the last decade and the landlords' Duma of the present moment. The peasants are not likely again to leave their destinies in the hands of any party where the landlords exert an important power. They showed in all three elections that they are more than ever attached to their own party and its program. The immense price the peasants have already paid in beatings, imprisonment, exile, starvation and violent death; the hopes that have been newly raised, the evident justice of their demands for a controlling voice in the nation's parliament and for the early possession of the land—tho evidently, starving as they are, they cannot pay for it and will not be able to for many years to come—and, above all, the results that their revolutionary movement has already brought to their cause, have decided all

the parties that represent them not to await anything even from the most liberal part of their former masters, and not to wait indefinitely for the installment of an indefinite portion of their demands.

Even the Constitutional Democrats concede that fear of revolution is still a leading motive with the Government, as it was at the time of the emancipation. Last Summer Herzenstein asked the Ministers in the Duma if they intended to wait before expropriating the landlords for another "illumination" such as the peasants had provided the year before when they had given over a hundred million rubles of landlords' houses to the flames. The argument seems to hold. Soon after the peasant disorders of 1902 and 1903 the Czar abolished corporal punishment and the confinement of the peasantry to their native village as normal institutions of peasant life. After the disorders of 1905 the Czar gave the peasants a large proportion of the seats in the new Duma, remitted half of their direct taxes to the state, shortened the term of service in the army and bettered the food and pay of the soldiers to the sum of thirty-five million rubles. After the disorders last year the peasants were given part of the crown lands, they were admitted for the first time to equality with other citizens before the courts and the law, and they were given for the first time the same rights as others over their own land. So far this year there have been few disturbances and no great reforms.

If we remember that this same movement of violent resistance of the peasants has procured them more respect from the police, has driven away some of the more obnoxious landlords, raised wages and lowered rents, and if we observe that this movement has become better organized, more sure and less bloody each year, we may realize why the peasants are clinching their teeth and holding up their heads, as never before in a thousand years.

The peasants are full of hope; but even if the situation of the Russian people is desperate, if it is hopeless for the present generation, it is because of great historical causes over which this noble nation has had no control. And the chief of these is not the Czarism, with its dependent army of Cossacks, officials and

police, but the existence of a deep-rooted and time-honored governing caste, the owners of the white slaves of the last generation, a caste whose interests are against those of the nation and diametrically opposed to the regeneration the nation demands.

Eighty noble landlords, members of the new Duma, for instance, are debtors to the notorious Nobles' Bank, that practically doles them out the government money, and nearly all the others have their hands constantly in the treasury of the state. There are not only positions for the landlords and their children in the army and the government bureaus; there are direct subventions to landlord organization and remissions both of the land and inheritance tax.

The majority of the first Duma is on trial at the time of this writing for hav-

ing provoked the disobedience of the people. The words of one of the people's own representatives addressed to the judges and the Government is the judgment of the Russian nation on the third Duma.

"We see in you," said Chersky, "in this, the greatest political trial of the century, the defenders of the interests of Stolypin's 130,000 landlords, and the enemies of the law and the people."

This, then, is the final alignment of the Russian nation—on the one side the Czar, the court, the Government officials and the officers of the army, and the 130,000 landlords—on the other the 100,000,000 peasants, the working people and nearly all the middle class.

The power may long remain with the Government; justice is with the nation.

ST. PETERSBURG, RUSSIA.

In re Spinsters, Widows, et al.

BY A SPINSTER

THE "et al." in the title does not include bachelor maids who dwell in apartments, dine at restaurants and sup from chafing dishes. This article is intended exclusively for childless women who are attempting to keep house and make a home.

I had a mother once upon a time—and it was not such a long time ago, either, tho the years seem endless when one lives without a mother—a most charming combination of reckless ability, unerring intuition and witty timidity. She was born the heiress of a cultured gentleman farmer, and always had means and servants at her command, so that the torrents of life's problems struck her with unexpected power when she became the wife of a poor minister.

She could work when occasion demanded, work with a will, but would never consent that either she or I should continually carry the heavy household duties. So for many years she attempted to solve the servant problem and "succeeded," as she said, "by a succession of failures."

As far as my life is concerned, she left me the heritage of a successful solution—and perhaps there are others to share therein.

THE PROBLEM.

As my mother stated it and as it falls to me:

To find for \$3 a week an agreeable, trustworthy person who will carry enough of the heavy household duties so that I may have time and energy for a little social life and personal missionary work.

THE SOLUTION.

Two boys between the ages of ten and thirteen.

That one short sentence contains the boiled down experience of thirty years.

Two boys; *one* merely complicates the problem.

Not older than thirteen; younger is better. Bad habits are difficult to break at thirteen and well nigh adamant at fifteen.

Two boys are companions for each other; one waits on the other when one is ill, and they keep up a pleasant rivalry

about the work that makes it go easily. We have not as yet legally adopted any of the boys. One that we now have is the son of a poor country parson who has eight other children to educate and rejoices in entrusting this one to us. The other is an orphan lad whose aunt wept in thankfulness when we offered to take him and thus relieve her slim purse.

As for the lads themselves, they are exuberantly happy in the enlarged opportunities we give them. Any ambitious boy will delight to be with you if he feels himself developing under your care. We *insist* that a boy shall be trustworthy, and if, after six months, he does not prove so to be we put him back where he came from. Perhaps I had better say that of the boys we have taken under thirteen only one has failed in this line.

As soon as we find a boy is to be trusted he is given an account book and one dollar a week from which to clothe himself and pay incidentals—and how he grows after that! The parson's son seemed an inch higher the day he received his first dollar. The account books are inspected and balanced once a week, and all clothing is selected by us for two or three years.

"Can a boy clothe himself on \$52 a year?" you ask.

He can—and have a margin left for spending money—until the time of long trousers. Before he arrives at that distinction we endeavor to have each boy develop some line of outside income to increase his allowance; a little personal garden in the summer, a magazine agency for the winter, etc.

One boy proved such an adept at bread making that I allowed him to make several extra loaves each week for sale.

And how careful they are of their clothes when anything saved from the weekly dollar may go toward the coveted bicycle or magic lantern! All rents and tears are promptly attended to and stockings are darned to the last point.

A boy seldom likes to sew, but running the machine is not very objectionable, and I am saved much of my own plain sewing by the stronger muscles of these boys.

They cut and make their own blouses, with the exception of the buttonholes, and take great pride in having always a drawer full of clean waists.

They make a dozen neckties from one yard of madras and rejoice in a fresh one each day. They can wash, starch and iron them also, but I usually have a laundress one day a week, thus bringing my bill for "help" up to the stated \$3.

"How about the work?"

They wash all the dishes, sweep, mop, tend fires, carry up coal and down ashes, and keep the cellar clean; yes, and wash the windows, making a special frolic of the occasion.

"It's *my* turn to be outside. You were on the roof the last time. Come in from there."

"All ready, here comes my auto. Honk! honk! Hurry up, Bill; I want to get done."

"Doos you?" drawls Bill. "Gasoline gin out and——"

"Well, there's plenty of gas left," interrupts Joe, "and I'm sure you're *lean* enough. Great Scott!" and Joe goes flat on his belly looking over the roof after the cake of Bon Ami, while Bill squirms about in an agony of delighted giggles.

"Bees your auto goin' after it?" he chokes.

And so it goes, a breeze of laughter following them from room to room during the two hours of cleaning.

My father is aged and somewhat feeble, and "we two" are inclined to stagnate a bit when left too much to ourselves. It is so easy to get talked out when there are but two of you and physical weakness cuts off many of your socialities and church associations. The house grows too quiet and life narrows down more and more as the months slip by. It is well-nigh unbearable to find that one's entire vitality is absorbed by the daily routine of cooking, eating and keeping clean.

I have the greater part of the cooking to do and attend to my share of the eating, but the cleaning falls principally upon the shoulders of the boys, and so I am free to use some of my time and strength in other ways.

It is good also to have a bit of noise in the house—noise that is alive and cheery.

Had you thought that hearty laughter was becoming scarce, and that funny things had ceased to happen down your way?

Dear me! the very bubbling of the oat-

meal on the stove when it gets thick and spits viciously raises a gale of laughter in my kitchen, and the musical efforts of a cat on the back fence provokes more merriment than a visit to Francis Wilson.

"But can you really get your work done by two small boys and let them go to school, too?"

"Yes'm. Of course, I work myself. I don't plan to be a lady of leisure for \$3 a week, but I don't need to work too much or overtire myself."

I judge that you have already perceived that the "personal missionary work" is very much included in these boys. While I have several outside interests in that line, the most of my missionary energy is absorbed in fitting the lads for helpful citizenship. And it pays; oh, yes, it pays. Let me quote a few sentences from recent letters.

This from one of the first we took, who is now prospering in a distant city:

"I am glad to know that you have been watching me all these years since I left you, and from results I am persuaded to believe you have been praying while you watched. I firmly believe that the prosperity, health, and happiness given me is more in answer to the earnest prayers of devoted friends than to any innate worthiness in me.

"I have said very little to you of the gratitude I feel for the many helpful lessons I learned while under your tutelage, but like planetary bodies have endeavored to silently reflect the rays of light received from you over some poor mortal's world of moral, physical, mental or spiritual darkness. How well I have succeeded I leave you to judge from my record. I am firm in the belief that actions speak louder than words."

This from a bright little lad, half Chinese, whose pretty home is an honor to the village in which he lives:

"Well, I am sure my letter is long enough, for it has grown all out of proportion to my purpose in the beginning, but when I begin to talk to such dear friends as you I lose my purpose.

"Let me close by saying that I am glad you are watching me. I know that you and your dear father are constantly watching the career of every boy your Christian hands have touched and anointed.

"As you said in your last letter, God has something for me to do, and I am trying with all of my might to act well my part. I

am superintendent of my Sunday School; president of the trustee boards of my church and the village Academy; and all of these years of our separation I have 'touched not, tasted not, handled not.' I am out and out a White Ribboner; and my dear Della is no less a worker than I."

This from a little illegitimate lad who has become an honored preacher of the Gospel in the Far West:

"I have just heard of your dear mother's death. She has gone to join those who are watching over us from the land above. I thank my God that it was my good fortune to come under her influence. She did more than any one else to instill in my mind the desire to live a clean life."

One more from the pile at my elbow:

"You know how dumb I am; how I never have been able to express my feelings, but if all the English language was at my tongue's end I never could tell you my gratitude for those years of training and loving care."

This boy has become a prosperous physician in our own town and takes my father out in his auto when the rush of business permits. Of course, my father's benign influence is responsible for much of the good results in training these boys. As a friend said to me lately, "Just to live in the house with your father is a benediction."

Bump, bumpity, bump! There comes the parson's son tobogganing down the stairs. He just *can't* keep right side up, that awkward, loose-jointed Billy boy. He had a bit of fine china in his hands, too, but he held the cup aloft in one hand and the saucer in the other, and they came down safely without a nick.

"Why don't we try *girls*?"

We did, but girls can't shovel off the snow, carry coal and make garden.

What's that? You have your doubts about the quality of housework done by an eleven-year-old boy? What kind of sweeping can he do? Now, my friend, if you are one of those finicky old maids who always keep the chairs and tables straight, scours the brasses every week and cleans cracks with a hairpin, don't try my solution. *Don't!* It would doubtless be a wholesome experience for you, but would drive the boys to despair and make you miserable.

HORACE FLETCHER.

Horace Fletcher and Fletcherism

BY FRANCES MAULE BJORKMAN

THE best argument in favor of Fletcherism is Horace Fletcher. On his last birthday he was fifty-eight years old. When he was forty-five he was rejected by a number of life insurance companies as a bad risk. For the thirteen years since then he has lived on about one-third of the quantity of food regarded by physiologists as necessary to keep the body in good running order—and yet last summer he dropped in casually at the Yale gymnasium and proceeded to double the best endurance

records of the champion athletes of the university.

Altho on the verge of sixty, Mr. Fletcher bounds out of bed between three and five o'clock every morning. Without a thought of breakfast, or even for a cup of coffee, he falls to upon his immense correspondence or the book that he almost always has on the stocks, and puts in a day's work before noon. His average output is about 7,000 words. He does not employ a secretary, and since he is seldom settled long enough in one

place to set up a typewriter, he turns them all out by hand.

He retired from business years ago, but he is, nevertheless, always up to his ears in work. In fact, nowadays he makes a business of spreading his gospel of mastication and optimism among the people and of enlisting the support of scientific authorities. Wherever he goes, he talks Fletcherism to everybody he meets, and when he has made a convert he puts him on his list of correspondents and keeps in touch with him forever after. He gives parlor lectures to private parties, and he addresses learned bodies. He seeks interviews with men who can subject his claims to the rigid tests of science, and he gives interviews to men who can scatter them out to the general public in a popular and picturesque form. To any scientist who wishes to investigate his theories he offers himself as a subject for laboratory experiment. For years he has been working every means within his power to introduce Fletcherism at West Point and Annapolis, and to secure its adoption by the army and navy.

"How can I help but work?" he said once to the writer. "I feel like a man with a life preserver surrounded by thousands of drowning people. I've just got to do what I can to give them the thing that I know will save them."

Great as the quantity of his work always is, he usually manages to clear it all away before noon. Then, unless—what is very rarely the case—he is hurried or worried or out of sorts, or unless he is engaged to dine out in the evening, he takes the one meal of the day that an average man would regard as worthy of the name. If things have gone wrong with him he waits. The gospel that he preaches to others: "Never eat when you are mad or sad, only when you are glad," he practises conscientiously himself, and nothing can persuade him to take a morsel unless he can sit down at the table physically fit, in a good humor, and with plenty of time before him.

Then, however, he proceeds to enjoy himself with all his might and main. People who picture the founder of Fletcherism as a lean ascetic sitting over a plate of prunes or a bowl of breakfast food and solemnly counting his jaw movements would have to make a radical

revision of their mental image if they could see the real Horace Fletcher breakfasting at his ease at the Waldorf-Astoria, where he usually stays when he is in New York.

First of all they would see, instead of the hungry diet crank of their imagination, a chubby little man, with a skin of almost infantile pinkness and whiteness, a cherubic smile and a pair of twinkling blue eyes framed in a pair of big, round spectacles, looking for all the world like a sort of spiritualized Santa Claus without the whiskers. He would probably be sitting at the table where he could get the most sunshine and see the most people. Before him would most certainly be spread a meal dainty enough for a king.

The first time that the writer had the pleasure of dining with Horace Fletcher this meal consisted of a tomato omelette, new asparagus with butter, and a glass of cream. The next time Mr. Fletcher was host to a party of friends, and therefore the meal was designed to appeal to their tastes rather than his own. It consisted of chicken gumbo, pompano, hashed brown potatoes, a green salad and strawberries and cream. With it he ordered Burgundy and champagne, primarily for the sake of his guests, but he himself sipped away about a fourth of a glassful of each in his own peculiar epicurean style. The next time his own tastes had their way with him, and he ordered crab flakes in cream and a caramel custard. The next time the same conditions prevailed, and he had a portion of potatoes au gratin, a piece of apple pie, a canteloupe, and a glass of cream. The last time he was again playing host, and his order consisted of chicken en casserole, lettuce salad, a glass of cream, and a melon mousse.

He doesn't count his "chews" and he doesn't discuss or even think of his food while he is eating it. On the contrary, with mild firmness he persistently steers table conversation as far away from the subject of diet as possible—usually to light, amusing and even frivolous topics. He eats everything, but his taste inclines to light rather than to heavy foods, and to sweets, salads, eggs, milk and vegetables rather than to meats. He does not take any stimulating drink regularly, but on occasion he will sip a small cup of coffee or a glass of wine, or even a cocktail

or high ball, with as much enjoyment as anybody. Furthermore, he will never spoil your appetite for a dish or a drink by telling you that it is "poison."

The whole business of eating having thus been disposed of, Mr. Fletcher usually gives himself up wholly to amusement for the rest of the day—and there is no boy with a greater capacity for just out-and-out playing than he has. He is "in" for everything. During the first years of his experiments with reduced diet he was an enthusiastic bicyclist, and on his fiftieth birthday he made a century run without difficulty and without experiencing any bad after effects. Now he is just as enthusiastic an automobilist. He has a keen zest for all cleanly and wholesome sport. In his young days, as president of the Olympic Club of San Francisco, he had a wide reputation as an amateur athlete, and he has retained his interest in athletics to this day. When he was a mere boy he was accorded the honor of showing the Mikado how to shoot, and he is still a champion marksman. At one time he studied painting under some of the best masters in Paris, and altho he decided after a time that he was not cut out for an artist, his love for and interest in art is just as strong as ever. He has always been a good deal of a "society man," and he has an unaffected liking for the little elegancies of polite intercourse. He is always exquisitely dressed. He enjoys dancing. He was one of the founders of the famous Bohemian Club of San Francisco, and today he belongs to the most exclusive clubs of a number of cities, both in this country and in Europe. Many years ago he was president of the Philharmonic Society of New Orleans, and his fondness for and appreciation of good music is just as keen now as it was then. He has written one book dealing with social problems. Since he took up the task of trying to prove to the world the truth of his theories in regard to human nutrition he has gone in extensively for science. His home is full of objects of art and the best books of several literatures.

This home is in itself remarkable. It is an ancient casa on the grand canal in Venice. Here, whenever he is not gallivanting about the world, he lives a life of idyllic ease and comfort with his wife,

his daughter, his daughter's husband, Dr. Ernest Van Someren, and the two little grandchildren with whom the Van Somerens have presented him.

Dr. Van Someren was the first member of the medical profession whom Mr. Fletcher succeeded in interesting in his discovery of mouth digestion. Before committing himself, however, Dr. Van Someren kept Mr. Fletcher under observation for many weeks, during which, of course, he was a frequent visitor at Mr. Fletcher's home. The result was that when he finally announced himself converted, he also announced himself a candidate for Mr. Fletcher's daughter's hand in marriage.

Mrs. Van Someren is a true daughter of her father and a worthy wife of her husband. She not only practises Fletcherism herself, but she is bringing up her two children on strict Fletcheristic principles. So strong is her faith in even the most extreme of the Fletcheristic doctrines, that she once underwent a fast of forty days to cure a gastric ulcer which she had contracted from eating infected shell fish. She not only lived thru it, but received such benefit from the treatment that on another occasion she fasted for sixteen days to rid herself of a case of ptomaine poisoning. This was just before her last child was born, and many and violent were the protests of the medical associates of her husband. They declared that the child could never be delivered, and that if it were it could never live, but at the proper time Mrs. Van Someren refuted them all with the unanswerable argument of a splendid eight-pound boy, who has never had a sick day.

Despite its many attractions, Mr. Fletcher is never in this charming home for very long at a time. All his life he has been an incorrigible globe trotter, and he is constitutionally unable to "stay put." At the age of nine he started away from the little Massachusetts town where he was born to run away to sea, and altho he was brought back before he had gone very far on that occasion, he has been more or less "on the go" ever since. When he was sixteen he started for the Orient, and he is today one of the very few men who can boast of having seen the Japan of feudal times when the tycoon still stood between the sacred person of the Mikado and the eyes of the

vulgar herd, and the China of the last days of the great Taiping rebellion. He has made four complete trips around the world, two of them before the time of ocean steamships and transcontinental railroads—thirty-six trips across the American continent, sixteen voyages across the Pacific, and an uncounted number of runs across the Atlantic. He has explored unknown territory in Africa, Central America, Mexico and India. He refers to such remote spots as the Vale of Cashmere as casually as New Yorkers talk of Bronx Park.

Before he made the fortune that now enables him to travel as a man of leisure he gratified his love for globe trotting by getting jobs that took him off to foreign lands on business. As a consequence he has had no less than thirty-eight different occupations.

"It sometimes required a great deal of ingenuity," he says, "but by practice I became at last so proficient in finding excuses for travel that my friends got up a saying that if I took it into my head that I wanted to see the North Pole, I would invent a business that would make it necessary for me to go there."

Even in his present activities Mr. Fletcher is still primarily the explorer of unknown territory. His own cure having been effected, he had no reason for following out his scientific studies other than a boyish delight in experiment and discovery. He has made no money out of them. On the contrary, they have cost him a small fortune. The experiments at Yale and Cambridge have been carried on largely at his expense. He devotes the entire proceeds of his books to developing and propagating his ideas. His lectures have always been given free or for the purpose of raising money for experiments. Without the slightest notion of compensation, he has undertaken several times to cure people of diseases ranging all the way from gout to insanity by the application of his theory of complete mastication in connection with the system of mental healing which he set forth in his first book, "Menticulture," written before he discovered Fletcherism.

While this is, of course, partly due to his desire to prove his contention, it springs primarily from the overflowing kindness of his heart. Horace Fletcher

is a born altruist. He can never see any one in trouble without wanting to help him, and he can never see anything wrong without wanting to set it right. He has the sweetest and cheeriest disposition imaginable, and his mere presence is like sunshine. As a boy he was sometimes called "Old Fletch" and sometimes "Buddha." He is the kind of a man who invites affectionate nicknames. No matter what happens to him, he is always the same. Nothing can put him out of temper or upset his placidity. Cabmen, Pullman porters, hotel waiters, car conductors, hot weather and mosquitoes are alike powerless to trouble him. His friends have a saying that he would maintain his center of gravity in an earthquake.

With only slight modification he applies his formula for the practice of Fletcherism to all the acts of daily life. In order to get the highest good out of eating he says: "Taste the food in your mouth. Turn it about and gloat over it as if that were the last morsel you ever expected to get. Enjoy it until every vestige of taste has gone out of it. Eat only what you can enjoy. The body will take care of the rest."

When people come to him suffering with spiritual troubles he says much the same thing. "Appreciate the blessings that you have in your life. Gloat over and enjoy every passing minute as if it were to be your last. Do nothing in that minute that you do not enjoy. God will take care of the rest."

To meet the objection that this is dangerous doctrine, it is only necessary to point to its effect upon Mr. Fletcher's own life.

"I have never been satisfied with anything less than the *crème de la crème* of everything," he said once to the writer. "Because I have always known that the best was none too good for me and that the fact that I wanted a thing was the surest sign that that was the thing I ought to have, I have always been happy. The gist of my philosophy is that we must learn to trust our desires in spiritual as well as in material things. Just as the appetite is the only true guide to the food we should eat, the desires of the heart are the only true guides to our conduct of life."

NEW YORK CITY.

Men We Are Watching

BY A WASHINGTON JOURNALIST

One Row of Seats in the Senate

THE first session of the Sixtieth Congress presents some odd features even in the never ceasing Senate, as well as in the vicissitudinal House. For the "first time in the history of the world" there are ninety-two members. Compared with the chamber even as Senator Whyte, of Maryland, remembers it in the earlier days of his service—the days when he took part in the impeachment trial of President Johnson—it presents a complex proposition for analysis. It used to be the first requisite of the reliable correspondent up in the press gallery that he thoroly understand the relation of men to measures, and measures to men, and men to men. There is a great uncertainty about those relations now, to the oldest inhabitant of the seats over the President's chair, as well as to the neophyte. There is little natural spontaneity in legislation, but a grand liability for delay, where ninety-two men have inalienable right to express unlimited opinions on any topic under heaven, and to any extent which pleases them, irrespective of any and all colleagues.

Among other interesting incidents at present attracting the attention of watching eyes between the dolors of the Penal Code and the quips of the Currency Bill is the last row of seats on the Democratic side of the Senate. Some reckless writer dubbed it the "Freak Row," and the press caught the card and pinned it up. The more's the pity the less the truth, and there's very little truth in it. As a national characteristic it seems increasingly difficult for us to take ourselves or any one else seriously; albeit we are constantly growing more earnest. There are very few freaks in the Senate. There are few more earnest men anywhere than sit in that particular row; but an interesting combination of exhibits and contrasts it surely is.

The first seat on the center aisle is occupied by Senator "Jeff" Davis," mentioned in this column at the time of his precedent-breaking maiden effort some weeks ago. He is showing signs of a desire to harmonize himself with senatorial

traditions. A few days ago he donned the regulation black frock coat, but that was too much for him, and he has returned to his own constitutional gray.

Senator Robert Love Taylor

Next to the iconoclast sits Senator Robert Love Taylor, of Tennessee. The name does not mean much, as yet. "Bob Taylor" is better comprehended, but when you say "Fiddling Bob," why, all the world knows in an instant who you mean. He is the raconteur as well as the "fiddler" of the Senate, and fortunately is not viciously averse to the friendly nomenclature. How could he be? It would be going back on two of his stanchest advocates; for his fiddle and his stories have worked a way for him into many hearts in days gone. They have been an essential part of his political campaigns. They have paved many a path by which he has climbed to fame.

However, Senator Taylor is satisfied to rest, for the present, upon their friendly past, and is quite capable of holding himself where they have helped him. He is keen, cordial and entertaining in conversation, and watching ones are waiting anxiously to see him on his feet in the Senate. There are several ideas for which he stands which will add, in his exposition of them, to the interest of the *Congressional Record*. So far he has observed the secret of silence. In conversation, the other day, he said to me:

"For the first time in my life I have been making an effort—the most strenuous effort of my life—to accomplish the most difficult task I ever undertook; and I am really succeeding, to my own surprise and satisfaction. I am trying to keep still."

Senator Taylor was appropriately born in Happy Valley, Tenn., some fifty-eight years ago. Politics runs in the family. The Senator has already served in the House. His father served there before him and his brother after him. In fact, politics runs so strenuously in the family that Senator Taylor and his brother fought each other for the governorship of Tennessee, in the "War of the Roses," when "Bob" won the day. There are

those who still insist that it was the fiddle and the stories which won. But it was more than that, for Senator Taylor was elected to his third term as Governor in 1896.

He is a lawyer by profession, with a strong face of the old style, which is good to look at, a big, bald forehead, little foregone tufts of whisker in front of each ear and a light mustache. His voice is deep and musical, his accent Southern in the extreme, his words very easy of access and in an endless assortment. He understands the value of music in his voice and face and motions, and of harmony in etymology, as well as in handling the violin. He is always ready to meet you half way, with opinions of his own which are worth hearing, and ready to listen to yours. To have made his successful fight against Carmack, in the "War of the Feathers," which landed him in the Senate, is no slight credential, and he is evidently one of the agreeable additions to the sacred chamber.

Alabama's New Senator

The next seat is occupied by Bankhead, of Alabama, who lost his hold in the House thru the persistent campaigning of Captain Hobson, only to turn about and step into the Senate, after the retreating footsteps of the venerable Morgan. Bankhead is of the solid type of statesman gone, with a huge forehead from which the hair long since and most successfully retreated. He is sixty-six, with a long record of vigorous participation in affairs which has only increased his ability and inclination. He started a farmer boy, fought thru four years with the Confederate army, and has been well immersed in politics ever since. His record in the House is too recent for people to wonder, but not for them to watch with interest the outcome when Senator Bankhead breaks the ice and finds his feet in the Senate.

Senator William James Bryan, of Florida

The next chair is Bryan's—William James Bryan, of Florida. It is a long handle, but circumstances over which he has no control render it requisite. Senator W. J. is a stanch supporter of the "Peerless" W. J.; nevertheless he may be pardoned if he wishes, now and then, that one or the other of the roses had another

SENATOR WILLIAM PINKNEY WHYTE.
The Grand Old Man of the Senate.

name. Senator Bryan has several distinguishing qualities which are all his own, however. He was born in Florida, some months short of thirty-two years ago, so that he is not only the youngest member of the Senate by several years minority, but he is "the youngest ever," with the single exception of Henry Clay, who slipped into the profound circle with his profound propositions before there was any Congressional Directory, and therefore no necessity that, beyond a few friends who held their peace, any one should find out till the dead line was crossed that he came some months before he reached the constitutionally legal age.

Bryan comes heralded as picked from the top of Florida's list of orators. It will be a change from the silent Mallory, whose unfinished term he is serving, when he emerges from the natural constraint which is keeping him quiet. He also comes indorsed by the Governor as superlatively endowed with the three cardinal virtues which made Henry Clay, so that there is not a little suggestive similarity to encourage watching him. He has also proven himself a lawyer of exceptional ability and won forensic laurels on several critical occasions.

Senator Bryan is an unusually pleasant man to meet—grave, with a good face, smooth-shaven, dark, earnest, strong in features; a high forehead well covered

with black hair kept long and parted well on one side after the Southern style. He has heavy brows over clear, keen, steel-blue eyes and a mouth characteristically set to defy interpretation. His voice is low, his words and actions deliberate, reserved and modest. He is cordial, nevertheless, and democratic to the limit of his inevitable dignity. He is tall and slender—a fine type of the ideal Southern gentleman.

Bryan's is an interesting and prophetic

SENATOR ROBERT L. OWEN.

personality, with no uncertain indication of dynamic force under instinctive caution and natural deliberation. He is not one who is in any danger of escaping from himself, unless his temper should be roused.

Commenting, the other day, upon the quality and quantity of eccentricities which have been credited to him by the enthusiastic press, he said: "My sole ambition, at present, is to make for myself a place as one of the best representatives Florida has ever sent to the Senate. If I succeed in that, they may let me stay here; I may outgrow my lack of years and turn out one of the oldest instead of the youngest member."

Bryan is frank, sincere and earnest. He is one who will keep friends when he makes them.

Senator William Pinkney Whyte, of Maryland

Sitting next to Bryan is Whyte, of Maryland, who delivered one of the great historic orations on the floor of the Senate years before Bryan was born. Bryan is the "Baby," Whyte the "Grand Old Man," the oldest member of the Senate. But facts and figures concerning Whyte clash to incredulity. You never think of Whyte as among the old men of the Senate. When one of his important committees the other day suggested night sessions, Whyte had to remind them that he was really past eighty-three years old, and that being on duty from ten every morning to five or six each afternoon he thought was all he had any right to demand of himself. He stands straight as an officer on parade. His broad, square shoulders have a quick, elastic swing to them, his chest expands, his head goes back with a defiant toss, and in a clear, corner-finding voice he sends out every syllable, clean-cut and distinct. He walks at an energetic pace which outstrips many of his sedate colleagues. He has a strong, old-fashioned face, quick wit and

WILLIAM J. BRYAN.

a hearty laugh. There is nothing strained or artificial about Whyte. His greeting is always enthusiastically cordial, but you must say what you have to say quickly, for there are few busier men about the Senate. He is always in his seat or in some committee room, and precious little escapes him. A gentleman of fifty who rather resembles Whyte in size, and color and cut of hair and mustache, remarked to him the other day that he had just been honored by being mistaken for the Senator. Instantly, with a vigorous slap on the shoulder, Whyte replied: "Young man, the pleasure's all mine."

Twice Whyte has been appointed to the Senate by the Governor, twice he has been elected by the Legislature. He has crossed swords there with Sumner, Morton, Sherman, Cameron, Chandler, Conkling, Edmunds, Morrell, Sprague. It was Whyte, now a member of the District of Columbia Committee, who was author of the District of Columbia charter and who pushed thru Congress some of the first important measures which rendered possible the beautiful city of today; but he could hardly have been more energetic, enthusiastic and patriotic for the District then than he is now. Whyte is genial, cordial, optimistic, democratic, always exhaling sunshine.

Senators Gore and Owen, of Oklahoma

Next beyond Whyte sits Gore, the blind Senator, who was referred to in this column at the opening of the session—the first blind man ever elected to the Senate, and until the advent of Bryan the youngest Senator. Beyond him, occupying the last seat in the row, is his colleague, Robert Latham Owen, of Muskogee. He is a man of broad education and has risen to his position by steps as teacher, editor, lawyer and banker, giving evidence in all of extraordinary mental capacity and unusual ability to perform, successfully, that which is next to hand.

His father was at one time president of the Virginia & Tennessee Railroad. His mother was Narcissa Chisholm, daughter of the last hereditary chief of the Cherokees, so that Senator Owen is the second Indian in the United States Senate, and, like Senator Curtis, bears plainly the imprints in his strong, handsome face. He is a graduate of the

Washington and Lee University and has given good evidence of his shrewd ability as a lawyer in his handling of the affairs of the Indians, with whom he has been intimately associated ever since his appointment as Indian Agent for the five civilized tribes by Grover Cleveland.

He is tall and strong and straight, with the grace and dignity of the ideal Indian in his bearing as well as in his face. His hair is black, his smooth-shaven face narrow, dark and striking. His keen eyes are not easily forgotten when once they have been seen. He is among the wealthy members of the Senate, with large banking and oil interests in Oklahoma, besides his high standing at the bar; but in spite of suggestive incidents to the contrary he is easily approachable and an agreeable and charming conversationalist. Cordiality penetrates the atmosphere of somber reserve which clings persistently about him; but judging from my own impressions one never comes so close as to escape a feeling that he would rather not be one to rouse the new Senator's indignation. There are latent possibilities lying behind the face, which may be threats or may be promises for the future.

On the 25th of February Senator Owen made his maiden effort on the Currency bill, in one of the keenest, shrewdest, most graceful and witty speeches of the session. Two days later he engaged in a sharp running debate with Curtis (the other Indian) over the legal status of the five civilized tribes. There was an excitement in the interest of all who heard which rarely enlivens a debate in the Senate. No one interrupted. The two Indians fought their battle. Owen's oratorical powers are remarkable. Curtis is a keen and logical debater. For half an hour it was a duel worth watching. Then Gore, the blind Senator, Owen's colleague, rose, with: "Mr. President, I move that belligerent rights be recognized in favor of these two Indians."

With a peculiar smile Senator Owen walked over to the Republican side, shook hands with Senator Curtis and the two left the chamber arm in arm.

Altogether, that last row of seats on the Democratic side of the Senate Chamber, while far from freakish, is an interesting collection that is worth watching.

Christianity's Gain From the Old Testament

BY THE REV. JOHN M. THOMAS

[It is but one side of the story which the author considers in the present article; a succeeding article will treat of the less favorable influences that have come to Christianity from the Old Testament. The study in Sunday schools of the Gospel of John makes this topic timely. The reader will remember that Mr. Thomas is a Presbyterian pastor and the elected President of Middlebury College, Vermont.—EDITOR.]

THE Bible of the Christian religion consists of the Old and New Testaments. How has the New been influenced by the presence of the Old alongside it? Has it been an advantage or an injury? If partly gain and in some respects loss, what has been the service and what the damage? The following article is an attempt to set forth the good which the religion of Jesus received from its adoption of the Hebrew Scriptures.

The advantage to the Church from its possession of the moral law is obvious. Much of the moral instruction of the New Testament is but the ethics of the Old transferred to the New; and when we remember that, despite all its apologies and philosophies and purely religious benefits, Christianity has been of principal use thru the honest men and pure women it has produced, we perceive that one is not likely to overestimate the service of the Hebrew Scriptures to the Christian religion by virtue of the storehouse of moral precept they presented to the new faith.

Christianity received also much spiritual, purely religious good from the older teaching. It comforted the troubled and consoled the sorrowing with the words of the God of Israel to His ancient people. The music of the Psalter accompanied the gracious words of Jesus in instilling courage and hope into the Christians in the days of Nero, and, taught not less by the Twenty-third Psalm than by the Master's own words, they chiseled in the catacombs the rude figure of the shepherd and the lamb. From the time of the earliest Christian liturgies the pleading lines,

"Cast me not away from thy presence,
And take not thy Holy Spirit from me,"
have wrought with the petition, "Forgive

us our debts as we forgive our debtors," in the production of the humble and contrite Christian heart.

By its adoption of the Old Testament the religion of Jesus secured further the inestimable advantage of the union of the sense of age and permanence with the enthusiasm of a new revelation. Any one can feel the mighty seething of the revolutionary spirit as he reads the pages of the New Testament, and catch the pervading consciousness of living in the day of the world's new birth, but scarcely less obtrusive in early Christian life is the feeling of union and co-operation with the world-old processes of the creation of the heavens and the earth. The men of the early Church grew great with the faith that the whole drama of creation and of history to their time was but the prolog to the movement of which they were the leaders. Their Master was the "lamb slain from before the foundation of the world." He was the force spiritually effective at the time of the exodus from Egypt. He was "before Abraham"; and the literal descendants of the patriarch were looked down upon as a modern people by men who regarded their own ancestry as going back to the time when the morning stars sang together for joy. The Greeks were but infants in their sight. Thus the Christians walked the earth with a sense of the nobility of their inheritance, with conviction of its permanence as the oldest established institution of the world, and they united this feeling of stability and grandeur with the passion of a new day of revelation which was burning in their souls.

The Old Testament served further to bind the Christian disciples to the realities of the common earth. The Hebrew Bible is a plain man's book, and it deals

with topics of every-day importance in the common life of this planet. The burdens of the poor and the oppressed are its burden, the cry of the orphan is its cry, and the prayer of the ordinary mortal, who knows his transgression and whose sin is ever before him, is its prayer. What is commonly called its history consists largely of the stories of fireside and hearth. Its prophecy is but the straight speech of men fused to white heat by moral passion to men who were their neighbors and companions in business and toil. Its philosophy, if such we may call Job and the Proverbs, is the non-technical observation of common men, in the forms and language of the family living-room, on the questions which rise up from the simplest life; and the solutions are not philosophical explanations, but simple, sometimes illogical, conclusions of men of tact and good sense.

Revolutions always threaten to destroy themselves, and especially revolutions coupled with the flaming of religious zeal. Our old world refuses to be reformed in a minute, and they who undertake the task are usually consumed in the fruitless fire they have kindled. Subsequent generations look back upon their efforts, marvel at the amount of truth they perceived, and wonder how so much of real insight, as later recognized by the world, could have failed of success. This is to forget that enthusiasm can serve only as it yields itself to die, while the truth which lives to bless continued generations must fit itself in humble patience into the life in whose modest rise it will be content.

Few movements the world has seen have run greater peril of dissolution in the wild exuberance of fanatical enthusiasm than the evangel which startled Galilee with the cry, "The kingdom of God is at hand." Nothing is more certain than that after the death of Jesus the disciples watched daily for his return to earth, in splendor and great magnificence, and an ensuing dramatic assize of all nations and peoples, together with a new heaven and a new earth, the old creation melting away in fervent heat. Even Paul was not indifferent to such doctrine, was himself caught up into the third heaven, and could reason at times of heights and depths, principalities and

powers, the familiar objects of current mystical enthusiasm. It is not to be forgotten that the early Christians placed alongside the parables of Jesus and the moral precepts of Paul the grotesque imaginings of the Apocalypse, with its horses and dragons and weird and terrifying spectacles. In some sections of the Church the white and red horses of the Revelation enjoyed greater vogue than the parable of the prodigal son or Paul's poem on love. We children of the modern world pass over the spectacular and the apocalyptic and fix upon the moral and quietly religious, but the tendency of our brothers in the initial centuries was just the reverse.

It was here that the Old Testament rendered stupendous service. It was the Bible of the Church, the only infallible rule of faith and practice for Christian lives until at least the middle of the second century; and while it contained the Apocalypse of Daniel, it contained also, and made much more emphatic and prominent, the law of the Tables of Stone, the spiritual and moral ardor of the Psalter, and the stern, intense ethical insistence of Israel's prophets of righteousness. A company of men with such a handbook of rational, honest living could not lose themselves entirely in vapid speculations, and that they did not do so is the lasting honor of the Hebrew Scriptures.

Proof of this statement is written clearly in the fortunes of the Gnostics, who rejected the Old Testament in the supposed interest of Christianity itself, thinking if they could set the religion entirely free from Judaism, they would enhance its power and worth. That their schools went to pieces largely because of the immorality that attached to them evidences the steadying and purifying influence which the main body of the Church received from the Hebrew writings.

The example of Marcion, who was not strictly a Gnostic but who, like them, sought to purge Christianity of every Hebrew element, is similarly instructive. One can not refrain admiration, in many respects, from the arch-heretic of the second century, despite the blackness in which Tertullian draws his portrait. He was a layman, a wealthy ship-owner of

Pontus, and at the first was recognized as an orthodox Christian by the Church at Rome. Offended at the legal and ceremonial character of current Christianity, and convinced by Paul's letters that the Old Testament was not the gospel, but "weak and beggarly rudiments," he sought to reform the Church on the basis of what he conceived to be Paul's teaching. He held that faith, reliance on the unmerited grace of God revealed in Christ, is the essence of the gospel, and believing that the Old Testament was a stumbling-block in the way of this truth, he threw it overboard, and taught that the God of Jesus was a distinct and different being from the God of Abraham and Moses. Failing to persuade his fellow-Christians of this view, he toiled unselfishly and devotedly to build up communities who shared his doctrine, spending time and money freely in the effort. To his followers he taught brotherly equality, freedom from all ceremonies, and strict evangelical discipline. Redemption thru Christ, and that alone the gospel, was his watchword, and men converted by his teaching were among the noblest martyrs whose blood was the seed of the Church.

Had Christianity been able to take some of the truth of Marcion, and to keep it to the fore, how much of the barrenness of ritualism and the corruption of materialistic dogma would have been spared her! But unfortunately she could

not discern the wheat, since the mass of chaff was so great. Marcion gave over monotheism, the highest achievement of the religious spirit before Jesus, and taught two Gods, the Jewish deity, the creator of the world, jealous, stern and cruel, and the Christian God, the Father of Jesus, merciful, kind and gentle. He threw away the right of Christianity to a place in God's long process in the establishment of his kingdom, and committed the fatal error of dissociating his disciples from the great God who rules the world and holds all things and forces in the hollow of his hand. For him there was no fellowship with the God of creation, with the maker of the stars and the king of kings. His Church was not overthrown by the invective of Tertullian, but by its essential weakness and its religious poverty. A man must meet the master of all things and forces in the universe in his religion, or his faith is vain.

The overthrow of Marcion is a testimony, sufficient unto all time, that the law and the prophets, from which Jesus drew the nourishment of his soul, are an integral part of the faith which redeems in his name. It is evident also of the incalculable service to Christianity of the Old Testament, the book of one God, the maker of heaven and earth, the book of common life and of plain men and women, the book of stern commands unto right, whose reverent acceptance is the beginning of piety.

EAST ORANGE, N. J.

National Armament and International Justice

BY HAYNE DAVIS

AUTHOR OF "AMONG THE WORLD'S PEACE MAKERS," "THE SECOND HAGUE CONFERENCE"

WHAT is the relation between national armament and international justice? National armament is the *only effective* means now in the hands of our Government for insuring international justice. For the administration of justice in our State and national affairs we have armed forces, of

which the policeman and sheriff are only an evidence. Back of them stand the militia, the regular army and a law of the State that every citizen is bound to assist these officers of the law when called upon by them to break the power of any who dare to resist the constituted authorities. Furthermore, we have State

and national legislatures to say what the law is, courts of justice to say when the law has been violated, and these armed forces to see that the decisions of the courts are obeyed. But until a duly constituted international congress, and courts to supplement it, are established and in successful operation, the only means a nation has of insuring justice in international affairs is an armed force. Powerful — indeed, irresistible — forces are now operating for the purpose of constituting an international congress and courts of justice, and it is to be hoped that the day is not distant when such instruments of justice will have the right to declare and decide and enforce international law as the national Congress and courts now have to declare, decide and enforce national law. Meanwhile, what is the duty of one who is working for these things in regard to the Government's armed forces and to its naval and military policy?

For a long time I felt that such a person could entirely ignore the country's policy as regards preparation for war. It seemed to me an advocate of arbitration and peace could profitably spend his whole time popularizing the positive program of peace—that is, machinery for the administration of justice in international affairs as justice is now administered in State and national affairs. Admitting that it is the duty of the Government to maintain a suitable armed force, it seemed to me there were plenty of people who can see to that without my bothering with it. But suppose the peace societies take a hand in the military and naval program of the country by preparing memorials against the policy proposed by the Navy Department and presented to Congress by the President? This brings on the issue as to what is a proper naval policy in the very heart of the peace movement. The recent memorial presented to Congress has forced this issue, and all who have taken any part in the movement heretofore or who propose hereafter to take any part in it must now face this question squarely. They can no longer escape the issue, nor ignore the fact that the country is bound to have an adequate navy. What is an adequate navy? This does not depend upon any man's opinion or preference. An ade-

quate navy is one that is equal to the work to be done, and the naval work to be done depends on the conditions in which the country is placed. Conditions determine what armaments are needed, and all any one has a right to do when he concerns himself with the armed policy of a country is accurately to ascertain all the conditions, justly weigh them, and register the result. Opinion and preference have no more to do with it than they have in recording the temperature of the air or the number of inhabitants in the country. How many signers of the memorial have taken the time to investigate all the facts, and to qualify themselves scientifically to register the relative weight of the facts, and thus to formulate the true program dependent upon the facts, not upon human opinion? Such an investigation would include not only a careful analysis of the arbitration movement, but also of the naval and foreign policies of the principal countries. Manifestly the masses of the people have neither time nor means of doing this. But the general principle applicable to all circumstances can be apprehended, and means for its proper application can be found.

An adequate navy is one which is unquestionably superior when engaged in the waters adjacent to our possessions. That does not mean that it must be larger than any one or any half dozen navies. It means it must be *superior*, able to win, when engaged *in our waters*. Base of supplies would be a controlling element in ascertaining just what would suffice to make a navy superior. But certainly the representatives of the people in our Congress can never absolve themselves to the people if they fail to provide a navy that is superior to any enemy that ever dares to attack us in the waters adjacent to our possessions. They cannot excuse themselves for not knowing the attack would be made. They are placed at Washington to know, and to do what is demanded by the dangers which beset the nation's path, dangers which recent discoveries and consequent annihilation of space have increased, according to the judgment of many. Private persons can be deceived about these things. The representatives of the people who are entrusted with the

political treasures acquired during centuries of self-sacrifice must know.

Armament must be adequate till arbitration is effective. Does adequate armament necessitate four new battleships, or only two, or none? How does your memorialist figure it out?

What is effective arbitration? We have a right to our country and our island possessions. We have a right to make and execute the laws in our territory as we see fit. How many nations have agreed to respect these two vital rights of the United States? Not one. These are the most vital rights of every nation, corresponding to the individual's rights to life and liberty. And arbitration will not be effective till all the governments mutually agree to respect these two vital rights, and to arbitrate all other questions. Therefore, a scientific program for our country is adequate armament and effective arbitration, as correlative agencies for justice, armament being necessary until arbitration is effectively installed thru the formation and successful operation of the necessary agencies, such as a congress and courts of justice, in addition to mere treaties.

How far have we gone toward such a system in international affairs? Read the debates at the Second Hague Conference on what questions are arbitrable. Read the treaties recently ratified at Washington. All "vital" questions are reserved for settlement by the strong right arm. Whoever makes that reservation must make the arm strong enough to protect the vital interest better than a court of justice would have done. Where, then, do we stand? Whether we like it or not, all our "vital interests" are still dependent upon the armed forces for preservation when our policy internal or external does not please a foreign potentate.

Under such circumstances a commission composed of competent persons would seem to be in order, the members being relieved of all other duties and cares, and charged with the duty of fully investigating armament and arbitration in their relation to each other and to the peace and prosperity of the people of the country.

The things done and left undone by the Third Pan-American and Second Hague conferences, the events that pre-

ceded and caused the transfer of our fleet to the Pacific, the intricacies of foreign relations which jeopardize the rights for which our people are certain to defend with arms, all these things would come before such a commission. A thoro investigation, reported fully and showing on its face that every element has been carefully considered and justly weighed, would clear the atmosphere and usher in a day of better understanding in peace circles and also in official circles, which is even more important.

Those who favor such a commission can be of assistance now by saying so to their representatives in Congress, for a bill is now before the Committee on Foreign Affairs which calls for the appointment of such a commission. The Speaker of the House has not been so sensitive to popular opinion for many decades. It is a good time for the people to get a hearing at Washington. Meanwhile, adequate armament and effective arbitration seems to me the only program that is scientific and complete.

If the United States were able to control the action of foreign nations by a mere mental process, some milder plan would suffice. And those who dare to obstruct the Government in making what it considers proper naval preparation are under obligation either to control the action of other nations by mere mental influences and without the assistance even of a permanent congress where representatives of all governments assemble, without duly constituted international courts, without treaty agreements to protect our rights, or they must be prepared to say that an adequate navy now exists, considering the conditions that confront the nation, not the personal preferences or opinions of its citizens, in or out of the peace societies.

If you are using gas, do you do away with or impair the efficiency of your gas fixtures as soon as you are persuaded that there is a better lighting system? Is it not necessary to retain, in its first-class condition, the present system until the new system is actually installed and able to supply light? Those who depart from this simple wisdom in the huge world called internationalism may expect to enjoy a period of darkness due to their own conduct.

NEW YORK CITY.

Literature

The Question of Socialism

WHEN Mr. Mallock, in answer to the Macedonian cry of the National Civic Federation to "Come over and help us," went from city to city, delivering his lectures against Socialism,¹ some even of the industrial leaders whose cause he championed found his intellectual processes hazy and crooked, while the Socialists whom he attacked chortled with unholy joy. Apparently chastened by his experience and enlightened by the articles, pamphlets, letters and speeches that were showered on him,² he has rewritten and elaborated his discourses and gone far to redeem his reputation. This volume, on account of its compactness of argument, felicity of illustration and dialectical cleverness, cannot be ignored or scorned by the Socialist editors and pamphleteers who are preaching a new evangel. Fortunately the little volume by Mr. Kirkup,³ a clear, simple, sympathetic interpretation of Socialism, now issued in revised and enlarged form, can be used by a student as an alkali to neutralize Mr. Mallock's acid.

Mr. Mallock begins by bombarding with gusto the position concerning labor's claim to be the sole producer of wealth, which the early Marxian Socialists captured in order to command the Ricardian entrenchments of the economists of their day. But, as our author says later, educated Socialists abandoned that position when they had shelled the Ricardians into retreat, tho its occupation by belated agitators he considers sufficient justification for his renewed onslaught.

His central argument is that the progress of society is due to the energy, inventiveness, foresight and talent for organization of rare men whose qualities he sums up as "ability."

¹A CRITICAL EXAMINATION OF SOCIALISM. By W. H. Mallock. New York: Harper & Brothers. \$2.00.

²MR. MALLOCK'S ABILITY. By Morris Hilquit. New York: Socialist Literature Co. 10 cents.

SOCIALISM. A Debate. By H. Gaylord Wilshire and W. H. Mallock. New York: Wilshire Book Co. \$1.00.

³AN INQUIRY INTO SOCIALISM. By Thomas Kirkup. New York: Longmans, Green & Co. \$1.40.

All thru the book Mr. Mallock ingenuously assumes that the men who improve, invent, direct, organize, pioneer, are the actual recipients of the big prizes, and that, unstimulated by the hope of the whole reward which they now conquer, they would sulk and idle and reduce the world to beggary.

He is serenely unconscious of the difference between the moderate salary of the superintendent of a steel works, whose Vulcanic energy, mechanical skill and technical knowledge keep the complex system going, and the hundreds of surprise packages, each holding a million dollars, which have poured into Mr. Andrew Carnegie's safety vaults. His hosts of the Civic Federation did not tell him how Mr. Carnegie himself had related to them that his success was due to the group of men he gathered at the Pittsburgh works, and that he himself has no extraordinary ability except as a salesman.

Nowhere does Mr. Mallock attempt to show how Mr. William Waldorf Astor, receiving revenues from New York real estate which Edward VII might envy, and sustaining palaces in England as sumptuous as Warwick the Kingmaker's, has improved, organized, invented or made labor more fruitful. In fact, nowhere in the book is the existence of land rents hinted at; and when the problem of interest, the other chief object of the Socialist attack, is argued, it is only to contend that, on strictly ethical grounds, if the receiver of interest is not entitled to the unearned fruit, neither is anybody else, and if incomes were restricted, "ability" would sulk and reduce the mass to want.

This is fighting wide of the Socialist position. As Mr. Kirkup shows, Socialism, which must be understood before it can be combated, is so acutely conscious of the advantage, ethical and practical, which the owner of capital enjoys, that it proposes "an economic system in which industry will be conducted with a collective capital," a system under which,

"inasmuch as the working people would themselves own the instruments of production, the present monopoly of capital by a class, with all its inevitable consequences, would cease." They do not deny the moral right of the capitalist to his interest nor the advantage to society of using large capital. They only propose that the people who use the capital shall also own it, and get the moral and economic advantages which its ownership carries.

Mr. Mallock's other grand assumption that those who get the fat prizes in this generation are the rightful heirs to the fruits of all the genius, discovery and organization of past generations, while the multitude, the 90 per cent., being poor and in lowly position, are proved by that fact to have no claim on the accumulated knowledge and wealth of the ages, no part nor lot in the gifts which Prometheus and Archimedes, Arkwright and Bessemer, have handed down, is so comic that it needs but to be stated clear of the verbiage of a trained dialectician to be laughed out of court. As Mr. Kirkup observes: "In the highly organized industry of the present, which is really a co-operation of the whole working society inheriting the labors of the past, how can we discriminate the individual share of each worker?" Especially, how can we assume that the stockholders of a cotton mill might in justice take all the advantage of the genius which has created the spinning and weaving machines, while the operative in the mill is the disinherited son whose rightful claim on the product is measured by the amount of cotton he could spin on a grandmother's spinning wheel?

Neither of the writers under consideration penetrates to the nub of the American industrial situation, for neither discusses the trusts and monopoly. Both argue as if competitive industry were dominant and enduring, tho Mr. Kirkup, since he recognizes that in big corporations ownership tends to be divorced from management, is less belated than his fellow Englishman. All books made in Britain inevitably fire wide of the mark in America; no study of European countries can reveal American conditions, for we are a quarter of a century ahead of the foremost of other countries in our

industrial development, tho, unhappily, a quarter of a century behind them in our thinking upon social questions and our legislative regulation of industry.

Henry George himself insisted that his famous doctrine of the Single Tax was the antithesis of Socialism, and many of his disciples today eagerly attack all Socialist schemes, and laud competition and private industrial control. But the author of *The Fundamental Fallacy of Socialism*⁴ undertakes to make these unwilling bedfellows lie down together. He is a loyal Roman Catholic, and finds in the encyclical of Leo XIII on Socialism a complete refutation of the justice or practicability of the common ownership of land. George's contention that all he desires is that the land be taxed up to its full rental value, private occupation and use being permitted, the author takes to be tantamount to a demand for common ownership and a denial of the fundamental necessity, according to the Pope—the right to the exclusive personal disposal of the soil.

It is quite fitting that Henry George should be rebutted by a theologian, for in his own arguments he claimed an intimate acquaintance with the purposes and desires of the Creator. So, our author reasons, somewhat casuistically, if a field may never justly be owned outright, then neither may minerals, therefore neither may a tool made from minerals, therefore neither may a machine made with the tools which are wrought from the minerals, therefore Socialism and the Single Tax fall together.

Is not the logic invulnerable? But perhaps it is as good as Henry George's own argument that "the increasing need for public revenues with social advance being a natural, God-ordained need, there must be a right way of raising them—some way that we can truly say is the way intended by God." Of course, by the God-intended way he means the Single Tax. But the Pope says God never intended any such thing. So we are left in the end to puzzle out what system of taxation will be most favorable to the development of the whole citizenship and to hope that such will prove to be the "God-intended way."

⁴THE FUNDAMENTAL FALLACY OF SOCIALISM. By Arthur Preuss. St. Louis: B. Herder. \$1.00.

Three Phases of Art

IN none of the "Little Journeys," personally conducted by Elbert Hubbard, does he prove himself a better guide than in these *To the Homes of Eminent Artists*.¹ From Raphael to Whistler the pilgrimage is full of life and color—not only informing, but delightful. The author is always pithy, succinct and epigrammatic, tho not always reliable. As a matter of course, he is somewhat recalcitrant against tradition and is essentially modern, but this attitude is rather wholesome than otherwise in considering matters of art, where we are apt to vibrate between a state of crass ignorance on the one side and an almost equally stupid adulation on the other. Moreover, we have all learned to take Mr. Hubbard with a grain of salt, as he takes the rest of us with a whole spoonful.

Of how little importance, after all, is the artist's life compared with his product, two phases of which have inspired the study set forth in *The Child in Art*² and *The Christ Face in Art*.³ These two motifs define an art period. In pagan art there is no child. Happily it does not follow that the child is significant only in sacred or religious art; on the contrary, childhood is the adorable transition between the divine and the human, and is here portrayed in its endless variation, from the lifeless symbolisms of Margaron to the somewhat absurd but wholly charming fishing Cupid of Watts. The lovely child type strained the fetters of the Byzantine period, winning for itself a certain beauty of portrayal in the infants of Cimabue, and wholly conquering his great pupil, Giotto; and from that early date the babes of Bellini, Botticelli, Da Vinci, Raphael; the romping boys of Rubens, the little aristocrats of Van Dyck and Velasquez, the beggars of Murillo, the genre pictures of Millais, and the portraits of Reynolds, Romney, Gainsborough and our own Sargent live to prove the power and value of this inspiration.

But the supreme test of art is the face of Christ. To trace the history of the

attempts to portray this face, from the legendary contemporaneous likenesses down to the representations of the pre-Raphaelites, is the purpose of this third volume, a purpose conceived and executed in an earnest and able manner. "I am only a poor man," said Carlyle, "but I can say in serious truth that I would give one-third of what I possess for a veritable contemporaneous representation of Jesus Christ." This fervent longing of the great Carlyle, combined with the divine satisfaction felt by all the great masters with their efforts to express the face of Christ, serves as a measure of the subject's scope. Thus the author concludes this valuable book: "Art can never lay aside her brushes and say, 'Behold! my task is done.' Christ must dominate the art of the future as He has dominated the art of the past."

A History of Nursing, The Evolution of Nursing Systems from the Earliest Times to the Foundation of the First English and American Training Schools for Nurses. By M. Adelaide Nutting, R. N., Superintendent of Nurses, and Lavina L. Dock, R. N., Member of the Nurses' Settlement, New York. In two volumes. Illustrated. New York: G. P. Putnam's Sons. \$5.00.

For those who are interested in the history of efforts to make the lot of the ailing better and of trained skill that will help nature in every way to overcome the obstacles to good health, this history of nursing will supply a fund of information gathered from many and varied and distant sources and presented in a very attractive way. The work seems destined to take a place as a standard textbook in the history of a great department of human philanthropic endeavor. It begins with a suggestive chapter on First Aid Among Animals. It takes up the care of the sick as followed by primitive man, and then has chapters on Nursing in India, Ceylon, Egypt, Assyria, Palestine, Greece and Rome. Thence it passes to the hospitals of the early Christian Church and to the rise of Monastic orders devoted to nursing and the military nursing orders of the crusades. After this begins the history of city hospitals and their attendants in the modern sense of the word. Finally, there are chapters on nursing before Miss Nightingale's

¹LITTLE JOURNIES TO THE HOMES OF EMINENT ARTISTS. By Elbert Hubbard. New York: G. P. Putnam's Sons. \$1.75.

²THE CHILD IN ART. By Margaret Boyd Carpenter. Boston: Ginn & Co. \$2.00.

³THE CHRIST FACE IN ART. By James Burns. New York: E. P. Dutton & Co. \$2.00.

time, followed by a number of chapters on Miss Nightingale's work and the Treaty of Geneva and the Red Cross to a very promising conclusion in the development of nursing in America. When we add that there is an excellent bibliography, ten pages in length, and what seems to be a very complete index of fifteen pages, some idea of the value of the contents of the book can be appreciated. There are phases of the history of nursing much more interesting than others, but the mistake that would very probably be made by most people would be to think that from a practical standpoint the nursing only of the last few centuries was of any practical interest. Most people would be prone to think that there had been something like a continuous evolution in the history of nursing. Of this, however, there is little, if any, trace, and the chapter on The Dark Period of Nursing begins with the sentence "It is commonly agreed that the darkest known period in the history of nursing was that from the latter part of the seventeenth up to the middle of the nineteenth century. During this time the condition of the nursing art, the well-being of the patient, and the status of the nurse all sank to an indescribable level of degradation." The writers consider that the conclusion is irresistible that this state of things was coincident with a subjection of women in general, so little questioned, so intrenched, that it might almost be called absolute. Women had been reduced by the slow pressure of masculine domination to their lowest terms of self-expression, and the consequence was a failure of womanly efforts for the sick and a dearth of woman's care for the ailing that makes these two centuries of modern times the darkest in the history of civilization as regards humanitarian effort. Perhaps no book that has been written in recent years brings out more clearly the value of the Christian brotherhood of man in making life more livable, under unfavorable circumstances, than this scholarly and exhaustive history of nursing. We commend its really absorbing pages to all those who are interested in what men and women have done and may do to alleviate human suffering.

The Thirteenth the Greatest of Centuries.

By James J. Walsh, M. D., Ph. D.,
LL. D. New York: Catholic Summer
School Press. \$2.50.

History written in support of a predetermined thesis is no longer considered scientific history, but for all that it may be interesting, and in some secondary sense valuable history. Dr. Walsh's book, maintaining that the thirteenth is the greatest century in human annals, is, of course, not scientific, but interesting it certainly is, and, because of its abundant information, it is valuable too. Its thesis indeed is extraordinary. Never before, perhaps, has a man undertaken to prove a more astounding one. That an epoch should be placed at the pinnacle of historic time, which saw a Holy Roman Emperor decreeing confiscation, torture and death against heretics; which saw a whole series of holy Roman Pontiffs incorporating these laws of butchery in the official jurisprudence of a Christian Church; which saw the creation and consummation of the Inquisition; which saw scholastic philosophy condemned as "modernism"; Roger Bacon imprisoned as a wizard, and Magna Charta anathematized by a Pope—that such an epoch should be placed before us as the *ne plus ultra* of humanity, most men will consider preposterous. Moreover, a good many readers of the learned doctor's book will be not a little astonished that he does not so much as refer to these disturbing facts in the establishment of his conclusion. But we shall not judge Dr. Walsh too harshly if we keep in mind that doubtless it was not his purpose to write scientific, but only edifying, history. Much surely is permitted to a man who aims at edifying. The eulogist's license is at least as great as the poet's, and let us not quarrel with him for taking it. Having then put this volume in the class where it belongs, we may freely acknowledge its merits. It supplies information which makes it impossible for any one to imagine that the thirteenth century was a dark age. The Gothic cathedrals, the monastic schools, the universities of Paris and Oxford, Thomas Aquinas, Friar Bacon and Dante are glory enough for a single century, and proof enough not only that this

century was not dark, but that it was truly great. For having vigorously and eloquently insisted upon this, Dr. Walsh has done a good service, one that makes his book worth the writing and worth the reading.

Literary Notes

....We receive so many letters asking about the relative merits of encyclopedias that we know that our readers will be glad to have their attention called to an article on "Encyclopedias, Past and Present," by Louis Windmüller, in the *March Review of Reviews*.

....A volume of Communion Sermons, entitled *Christ's Service of Love*, by the Rev. Dr. Hugh Black, now Jesup Professor of Practical Theology in the Union Theological Seminary of New York, contains some thirty devotional and mildly hortatory discourses. (Fleming H. Revell Co. \$1.25.)

....A very good hymn book designed for church social and evangelistic meetings and for Sunday School and young people's meetings has been compiled by J. Allan Sankey, son of the evangelist-singer. The large number of new compositions has not crowded out the best of the old church hymns. A careful selection has been made of the most worthy and valuable of the old Gospel hymns. (Biglow & Main Co., 35 cents each, \$25 per hundred.)

....Carlyle might possibly change his opinion on "the last of the heroisms" if he could read Rev. Dr. Arthur J. Brown's book on *The Foreign Missionary*. (Fleming H. Revell Co. \$1.50.) Dr. Brown describes the qualifications, aims and motives of the missionary, the method of his appointment, his preparation for work on the field, his relation to the home church and the missionary board, and his varied spheres of activity and duty. The volume is full of facts and of common sense, and is an excellent text book for young people under appointment to missionary service and for mission study classes at home.

....*The Dictionary of National Biography*, the most comprehensive and authoritative of all biographical collections, has hitherto been out of reach of many libraries on account of its expense, so the announcement that it will be now issued in a form occupying less than half the shelf space and costing one-third the price of the original edition will be widely welcomed. The work was begun in 1885 and completed in 1900 under the editorship of Leslie Stephens and Sidney Lee, and its 31,000 separate articles cover practically all the notable names in the history of English politics, religion, literature, art and science, including many Americans. The new edition is to be published by Macmillan in 22 volumes at \$4.25 each.

....A special bulletin on *Rainfall in the Philippines* has been issued by the Weather Bureau at Manila (conducted for the insular government by the fathers of the Jesuit observatory in that city), in accordance with a plan adopted by the International Meteorologi-

cal Congress, held at Innsbruck in 1905. From the revised data on rainfall in the Philippines therein given we learn that the average of annual precipitation for the entire archipelago is 2,200 millimeters (86.6 inches), the extreme values being 900 millimeters (35.4 inches) and 4,000 millimeters (157.48 inches) respectively. As to rainfall, three kinds of climate are distinguished: The greater portion of the archipelago, facing the China Sea and being affected by the southwest monsoon, has a marked dry and wet season, 80 per cent. of its precipitation occurring during five months of the year; in the eastern parts of Luzon and the central Bisayas the prevailing northeasters give eight or nine months of rain and only three or four of drought; and the best climate of the archipelago, having a fairly even distribution of rainfall over the whole year, is enjoyed by a few districts of southeastern Luzon, by the eastern Bisayas, and by Mindanao and Jolo. Mindanao is almost entirely undeveloped as yet, and this fact as to its uniform distribution of rainfall should be encouraging to the American planters who have settled on that island during the last few years.

Pebbles

SCHOOLROOM MISTAKES.

THE following answers to examination questions in England will compare favorably to anything of the kind that our students can produce:

The Crusades were a wild and savage people until Peter the Hermit preached to them.

The chief crops of England are corns, the chief exports are Liverpool, Southampton and the river Thames.

The modern name for Gaul is vinegar.

A volcano is a hole in the earth's crust which emits lavender and ashes.

The Battle of Trafalgar was fought on the seas, therefore it is sometimes called the Battle of Water-loo.

"The Complete Angler" is another name for Euclid, because he wrote all about angles.

The two races living in the north of Europe are Esquimaux and Archangels.

The King carried his sepulcher in his hand. Chaucer lived in the year 1300-1400. He was one of the greatest English poets after the Mormons came to England.

An unknown hand threw a harrow at Rufus and killed him dead on the spot.

Stirling was famous for its sovereigns who used to be crowned there. A sovereign is still called a "pound sterling."

Subjects have a right to partition the King.

Alfred Austin was chosen by the Queen as Poet Laureate. He said: "If you let me make the songs of the nation, I care not who sings them."

The Imperfect tense is used (in French) to express a future action in past time which does not take place at all.

Becket put on a camel-air shirt and his life at once became dangerous.

Arabia has many syphoons and very bad ones; it gets into your hair even with your mouth shut.—*University Correspondent*.

The Independent

Entered at New York Post Office as Second Class Matter.

Publisher, Clarence W. Bowen.

Owner, The Estate of Henry C. Bowen,
130 Fulton Street, New York.

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Reinstatement of Negro Soldiers

DOUBTLESS Congress will pass the bill now before it, recommended by the President, to allow the re-enlistment of such of the three companies of negro soldiers dismissed without honor as can present reasonable evidence that they had no part in the "shooting up" of Brownsville, Tex., and no part in the "conspiracy of silence" charged by the President. Such a law ought to be past, and it will serve to restore, with full pay, such soldiers as suffered a real wrong on account of the President's order.

In saying this we do not say that the President's action discharging those soldiers was not justified on the evidence that came to him. He was informed on what ought to have been good authority that the "shooting up" was proved to have been done by soldiers, and that there must have been knowledge on the part of many other soldiers who had done it, but that they had evidently conspired to conceal the crime. If such was the fact the whole squadron thus infected ought to have been dismissed without honor. The fact that it would involve an injury and wrong to innocent men entirely ignorant

of the crime makes no difference. That is the unavoidable incidence of social conditions. The men were bound together by their enlistment in companies, and all must suffer. If in battle half the soldiers had been cowards and run away, the whole would have borne the disgrace. If a man is hanged for murder his innocent wife and children have to suffer—that is the penalty of association. The drunkard does not suffer alone for his crime. If one member suffer, all the members of the body or of society suffer also. Therefore no blame is to be attached to the order on the ground that it made innocent soldiers suffer.

Nevertheless the investigation by the Senate leaves it somewhat doubtful whether the shooting was actually done by the soldiers. While the evidence points that way, in part, and the majority of the committee so declare, and there are negroes in plenty who so believe, and one Southern negro bishop has so declared publicly; the President perhaps too hastily accepted the evidence brought him from what appears to have been a hasty and one-sided report by the officer detailed to make the investigation. That such soldiers as can show their innocence should be reinstated is only decent and right.

But this recommendation of the President brings out a fact which seems generally to have escaped notice, or memory, that a month after his order dismissing the soldiers the President issued a second order allowing the reinstatement of those proved innocent. The "shooting up" occurred August 13th, 1906; the order dismissing the companies was issued on November 9th, 1906; and the further order allowing reinstatement was dated December 12th of the same year. Under this order proceedings were begun, but these were interrupted by the investigation ordered by the Senate, and the time set has expired, so that the President now asks for legislation which will allow those innocent to be restored with all their back pay. There is certainly no evidence of wilful unfairness on the President's part, and it is clear that from the beginning he wished justice to be tempered with mercy.

We are not competent to pass any independent judgment as to the guilt or in-

nocence of those men accused. We know the temptation for revenge for insults received, but we also know that soldiers have no business to be rioters. This is the first sad blot put on the record of the negro regiments during these forty-five years. They have been brave and amenable to discipline, and their officers have always been proud of them and have defended their honor. We yet hope that the truth will somehow be made known.

A New Creed

ONE or two heretics may make a great disturbance; and one of the chief disturbers of the Churches in England is the Rev. R. J. Campbell, the successor of Dr. Joseph Parker in the London City Temple. He says such unguarded things about God in man, and as to the virtuous purpose of sin, strange, paradoxical things, that he has disturbed the leaders and teachers in the Congregational body to which he belongs; and the leaders and heads of the theological colleges, such as Drs. Forsyth, Fairbairn, Horton, Jowett and Garvie, have drawn up a creed and signed it as a counter statement of what is generally accepted as orthodox. It is short enough to be here given entire, as the last essay in creed-making:

"1. We believe in the Personality of God the Father, transcendent as Maker and Ruler of all things, and yet, thru his eternal Spirit, immanent in the world, and particularly in man and his history.

"2. We believe that sin, so far from being necessary to man's development, is, as a distrust of God, and disobedience to him, a perversion of the moral and religious nature, which, apart from redemption, would involve man in ruin.

"3. We believe that Jesus Christ, the only begotten Son of God, came into the world to reveal the holy love and grace of God, and to redeem men by the sacrifice of himself once for all upon the Cross for the sin of the world, so conveying to the individual believer the Divine pardon.

"4. We believe that this pardon is appropriated by faith in Jesus Christ, and that by this faith the Holy Spirit, producing union with the living Lord, regenerates human nature to eternal life.

"5. We believe that the regenerate are the true Church, to which, among other sacred obligations, is committed the task of transforming the world morally and socially, into the Kingdom of God.

"6. We believe that the Bible is God's Book, because it enshrines the divine revelation culminating in the historic coming of Christ, his

life, death and resurrection, and the gospel therein contained.

"7. We believe that all truth is to be received as from God, and that the apparent conflict between science and religion not only can be adjusted, but is at the present time approaching a reconciliation."

May we say that it begins badly, as if it were concocted by theologians far from the people? Who knows, except he be a skilled metaphysician and a theologian besides, the meaning of the words "transcendent" and "immanent" in the first paragraph. We confess that these words bother us when we try to understand what is meant. Is it meant that as "Maker and Ruler of all things" God is outside; while yet he is "immanent," inside of it all, by his Eternal Spirit? Or is "transcendent" something more than outside, something unrelated to the familiar categories of time and space and force such as we know about? And by "immanent" is something more meant than the divine presence, something inside us of which we may have conscious knowledge if we are spiritual enough? Or does it mean that all movements of mind and matter are acts of divine volition? We much prefer the answer of the Assembly's Shorter Catechism.

The second paragraph is a direct attack on Mr. Campbell's language, rather than his meaning. When he says that the drunkard or the roué in his crime is seeking after God it sounds blasphemous and is bad enough; but all he really means is that he is seeking after good as he sees it, and that good is what God wants him to have.

The third and fourth paragraphs are quite too theological in the use of such figurative words as "redeem" and "sacrifice," which are suitable enough in the pictorial and popular language of the Bible, but which, when put into a formal creed, seem to tie us up to a theory of God's part in pardon which we have little to do with; as our practical part is penitence and love. God's part can best be left to his own counsels. That fourth paragraph is formal, complex, stating a process which belongs to theology, not to simple faith which knows love and trust but does not understand much about what is meant exactly by "union with the living Lord," or just how the Spirit "regenerates human nature to eternal life."

There is no particular criticism to be made of the fifth and sixth paragraphs, when translated out of their somewhat stilted language. The last paragraph is almost a truism. It tells us that all truth is true, that truths cannot collide, and that we are learning more and more truth on certain lines, that is, in the relations between truths as related to the visible and the invisible. But we do not need seven wise men of Albion to teach us that. We knew it before.

With this polemic creed we would like to contrast the beautiful irenic confession of Faith agreed upon by the Tri-Church Council when it met in Chicago. That was religious, and it could be "understood" of the common people.

Concerning Middle Age

The Atlantic Monthly lately discoursed on Middle Age, with its usual pithiness. When is a person middle-aged, or possibly when ought any one to be at about the middle of life? Growing old has wonderfully changed since we were boys. Then the old men were doubled up at fifty, and Aunt Betsy at thirty was an "old maid." There are still broken-down farmers, but they are such at eighty years old; and a woman is a girl till forty, and quite marriageable at that age. The novel writers understand this, and are making their heroes and heroines out of riper timber. Where the circumstances are tolerably favorable we are able to keep our boys "only boys" up to twenty, and the girls are girls until twenty-five. We acknowledge that these conditions do not exist in the crowded cities, but that they do exist in the country is the pregnant fact. Going back to nature means, under present conditions, a lengthening out of all the periods of life.

If boyhood can be protracted to twenty under the new conditions, middle age ought to be set down, we think, at something a little short of sixty. Does this astonish the reader? Let him take note of the middle-aged people whom he knows, and he will find that many of them are absolutely in the full possession of every faculty at the age we have named. A few of the professions, or callings, wear as badly as ever—a few are even harsher

than formerly. The ministry is a good example; but then, the ministry has been the least of all occupations adjusted to the times. Salaries are even averaging lower than forty years ago. The rivalry of half a dozen sects in every little village puts the parsons to their paces in a furious competition. The minister preaches fully as often as in the days of Edwards and Norton, and he does it in the face of an astoundingly developed literature, which his predecessors did not have to meet. Trade competition pushes business men forward into a maelstrom where the struggle sucks down the many and sends the few floating off as millionaires. Here it is that "heart failure" comes in, and the competitors drop in their tracks, knowing nothing of either old age or middle age.

We imagine any one to be middle-aged when he has flexible joints and muscles—when his whole physical frame works with about the same simplicity and regularity as it did at twenty; and when his intellectual forces can be marshaled with pleasure and promptness. If the world talks to us at sixty as it talks to us at thirty, and we do not catch ourselves sighing for the past, we may fairly set it down that we are middle-aged. At this moment we are, however, looking out of the windows of the past. We voted for Lincoln, if not for Fremont. We shouted as boys for Fremont, and we would like to do it again. Yes, we should have the same enthusiasm if these old days were to be lived over again. We listened to Emerson and Phillips, and Sumner and Gough—and that was only yesterday. The day before we read "Uncle Tom's Cabin," when it appeared as a newspaper serial. Yet we resent the charge of old age. We are not old, nor do we intend to be. We think a good deal of this depends upon will. Our wills should be trained to take possession of our affairs and determine the conditions most favorable to a long life and a strong life.

The advent of middle age might be set down as, say, forty years. If boyhood comes up to twenty, youth can easily be extended to thirty-five or forty. Middle age may then subtly take possession and extend from forty until eighty. From that point an easy old age should conduct us gently and quietly on to one

hundred and ten or one hundred and twenty. The few exceptional cases might reach on to one hundred and fifty. We are not talking at all loosely in this matter, for, estimating what has taken place in the way of alleviating toil and giving us sanitary conditions, we incline to believe that human life may be prolonged to the ages designated. It is only fair to science and invention that we should make use of them in this way of living a well-rounded life. Eliminate the fury of competition and the rage for riches, and this sort of life would be natural—let us say it *will* be natural. Our schooling for the most part is still wrong-headed. It begins the struggle for life at seven or eight years of age, and intensifies it until graduation. It should be doing exactly the opposite. School life should be simplified until it becomes an adjunct of the simplest home life. Competition should be eliminated after the most complete manner. It is right here, in the school, that the nerves are put under their first strain, and the senses set into the background, while the pupils sit on patent seats—not seldom imbibing patent information. In daily life the sexes are still competitors, instead of co-operators, and everywhere to get at the head of the class, or the clique, is the chief object of knowing; and after graduation it is the chief end of doing.

We thank *The Atlantic* for suggesting this topic; but we do not agree that the preservation or the loss of either health or hair is the result of inheritance. The fact is we are not taking advantage of one tithe of the information given us by science. "You know better," says Mother Collins. "Yes, you know better than to grow old." You know better than to waste your health by turning night into day. You are living two years in one. You do not recuperate by natural sleep, until you are unable to do it when you wish. You insist on eating five times as much as you can digest or use. You act like fools in your acquisitiveness. You want more than you can use, and you pay for it forty times over its worth. A man who gives health and time and his outlook for a happy and long life for a heap of useless riches is irrational. The whole world is bound to cut out middle age, or make it un-

worthy a capital letter. The great, broad plain of smooth life that looks back smilingly to the hills of youth and forward with joy to the valley of old age is narrowed to a line.

A better outlook is surely before us. The streets of a great city do not present us an ideal; they would not if paved with gold. Man was not created as an experiment, with most of the samples broken up in the mold. The placid life is the wise life. Satisfaction and sunshine are better than wealth and fret. Why should we be burdened with capacities that our methods of life will never put in use? Why should the birds sing to deaf ears, and why are the lichens and the roses painted for eyes that are blind? The complete man—what a wonder will he be—all his powers in possession, and all his years fertile!

Parenthood

EVERY one knew beforehand just what President Roosevelt would say to the Congress of Mothers which met in Washington last week, for he has said it before, and there was nothing new to add. But it is one of those things which bear repeating frequently, for truth is trite and needs to be told to new people, and to the same old people, many, many times.

Possibly some of the best influences that will be recognized in history as coming from Mr. Roosevelt's administration are those that have been drawn from his abounding exuberance of utterance on topics that are not wholly, or not at all, official. Such has been his emphasis on the evil of race suicide and on the honor of motherhood and fatherhood.

The English papers are now noticing the fact that a certain student at Cambridge has achieved the great distinction of winning the Porson scholarship. His mother was the first woman to win the honor of senior wrangler, the highest possible at Cambridge. Her husband took the same honor. Now their son achieves the highest distinction. That fact illustrates the value of what has come to be called eugenics, a subject to which Francis Galton has called particular attention of late. The world is advanced by the co-operation of all

decent people of whatever grade of ability, but they must be led and directed by men and women of exceptional ability. Those who know they possess ability above the average ought, out of love and duty to the race, to seek partners also of exceptional ability, and then to desire an abundant family. So far society takes no precaution to secure an improvement in the human race. It allows marriage of the most incompetent, and even parents do not teach their children the value and virtue of seeking partners who possess brains rather than money. A good match is called one which provides an easy life rather than one which anticipates a blessing in the next generation. The poor and the worthless marry and have many children, while the choicest youth delay marriage for money's sake, and then have few or no offspring. That this is thoroly bad for society needs no argument. Marriage is a grace, even if celibacy is not always a disgrace.

It must be remembered that the simplest mathematical and mortuary consideration shows that merely in order to maintain the present population of any community or of any element in it, it is necessary that all who reach marriageable age should marry and have from three to four children, enough to supply loss by infantile mortality, and more are required to supply the lack from those who do not marry. It is a matter of common knowledge that those best educated, most ambitious, having the most ability, do not meet this condition. That means that the best blood fails to perpetuate itself, and the inferior fill their place. It is not easy—it is not pleasant—to press this privilege and duty of parenthood on self-indulgent people, who care for themselves, and who do not appreciate the spirit described by Cicero of the old man who planted an orchard from which he could not eat for the sake of his successors.

We cannot do better than to quote a part of Mr. Roosevelt's address to the mothers:

"The successful mother, the mother who does her part in rearing and training aright the boys and girls who are to be the men and women of the next generation, is of greater use to the community and occupies, if she only would realize it, a more honorable as well as a more important position than any successful man in it. . . .

"Unless the average woman is a good wife and a good mother, unless she bears a sufficient number of children so that the race shall increase, and not decrease, unless she brings up these children sound in soul and mind and body—unless this is true of the average woman, no brilliancy of genius, no material prosperity, no triumphs of science and industry will avail to save the race from ruin and death."

But we need similar lessons for fathers. It is parenthood that is to be honored and fostered. Especially does this duty and privilege belong to the fortunate, the exceptionally able and brilliant, to those whose children will be the world's leaders and masters, and who will be a crown of glory to old age.

Kentucky's Anarchists

KENTUCKY'S night-riders resumed work last week, after a few days' truce. At Birmingham, one hundred of them, masked and wearing badges, murdered two men and a young child. Several other persons were dragged from their beds and brutally whipped. At Brooksville, the raiders were content with burning a tobacco warehouse. Port Royal is a village a few miles from Clarksville, on the Tennessee border. There a band of night-riders took from his bed a prominent planter named Welch and whipped him with thorn bushes. Then, after "shooting up" the town, they departed, but were ambushed a few minutes later by unknown critics of their methods, who killed Vaughan Bennett, one of their number, and placed several buckshot in the body of his brother. The father of these young men is an officer of the tobacco growers' association, which Welch had refused to join. In Eddysville, the riders captured a judge and the city marshal, carried them away to the woods and whipt them.

The new Republican Governor of Kentucky, Mr. Willson, when in New York a short time ago remarked that the people of the State, being real Americans, were obstinate. "Wherever you find Americans, you are going to find hard-headed obstinacy." We quote from his explanation in the *Evening Post*:

"That's the main trouble with our people who are mixed up in this tobacco business. They're good people, well educated in the schools, Christians, honest, good citizens, but they are stubborn—almighty stubborn. They get an idea

into their heads and it's almost impossible to knock it out. But they are beginning to realize, I think, that they are not making anything out of this tobacco war. Before it started they were getting the highest prices they had ever received for their tobacco. Today the country is losing terribly. This rioting is demoralizing. I must admit that reports of it have not been exaggerated. While no one knows anything definite about these 'night-riders,' it is a fact worth noting that they are present in the districts in which tobacco associations are organized. Nobody knows enough to charge the members of the associations with being the riders, but the inference is strong. They are not right, and they are without the law and should be punished, but there is something to be said for them.

"This war is not like the feuds in the wild mountain counties. These people are educated, ordinary Americans, but, as I have said, they have stubborn natures. They will not permit themselves to be constrained by any one. Just stubborn, hard-headed Americans—that's what they are. It will all come out right in time. It is purely a business trouble, like one of your financial competitions in New York."

Now, the truth is that a large part of Kentucky has for many months been given up to rural anarchists, whose unchecked course of crime has been a foul disgrace to an American commonwealth that professes to be civilized. And the Governor of the State asserts that these masked midnight assassins, who murder little children with their parents, "shoot up" towns, beat half-clothed women in the streets, whip judges, and have burned a million dollars' worth of property, are educated Christians and good citizens whose only fault is their obstinacy! It is not surprising that a chief executive holding such views and regarding this carnival of crime as "purely a business trouble" has made little or no progress in the work of detecting the criminals and bringing them to justice.

We have some knowledge of the conditions which have attended and suggested the commission of these crimes since the formation of the Planters' Protective Association in 1904, and of the policy and operations of the other organization, the Society of Equity, in whose territory, it should be said, there have been very few outrages like those which have occurred so frequently in that tobacco district which is called the Black Patch. The movement, of course, on its economic side, is an attempt to meet Trust methods in buying with Trust methods in selling, and was due to an almost complete suppression of competition among purchasers

of the leaf tobacco grown in Kentucky. The methods of at least one of the growers' combinations have been much more brutal and criminal than those of any existing Trust of buyers or manufacturers.

It has been the function of the "night-riders" to compel by threats and violence, by arson and murder, the adhesion of unwilling planters to the association, or to inflict punishment for refusal to join. Incidentally, the boycott has been applied in social life, in the schools and even in churches. In our judgment, the circumstantial and other evidence is sufficient to connect the midnight assassins and incendiaries with one of the associations. The resolutions adopted at meetings and the addresses made by this association's leaders are proof enough, even if other testimony be not taken into account. So effective have been the methods of intimidation that, as the Governor said some time ago, witnesses having knowledge of the criminals will not testify, grand juries will not indict and petit juries will not convict. We are informed that one witness who ventured to testify against a band of night-riding marauders was promptly convicted of perjury by a night-riding jury. Non-assenting planters are not now the only victims of the lawless. The tobacco raids have suggested a revival of the Ku Klux, and negroes have been among the recent sufferers. And, as a result of the disturbance, there has been a loss of \$50,000,000 in the selling value of Kentucky farm lands.

What we see in a considerable part of the State is a failure of government. Clearly it is the duty of the authorities to make every possible effort for the detection and punishment of the guilty. If the associations were really opposed to the night-riders' violence, they could give the Governor effective aid. As he cannot look to them for assistance, he should consider the methods which were used for overthrowing and punishing the Molly Maguires in Pennsylvania and, later, for breaking up the white cap bands in Mississippi. If residents of the State will neither serve as detectives nor give testimony to promote detection, the Governor, if he is anxious to restore order, should use detectives procured elsewhere. In this way Governor Vardaman solved a problem closely resembling this one in Kentucky.

Insurance Against Unemployment

WHEN we had something to say recently about the extent of unemployment, we asked the question: "What are we going to do about it?"

This question has been asked a great many times since civilization began, and a great many different answers to it have been offered. Some of them have been speculative, some of them have been experimental. The Romans tried bread and circuses, and did not get the best results. The inventors of that queer administrative medley, the old English Poor Law, tried workhouses, provided with a sufficient stock of flax and hemp, "to set the poor on work." They turned out to be expensive. The communal workshops of Paris associated with the name of Louis Blanc were purposely discredited by a bourgeoisie government. Charity organization societies have fallen back on cord-wood and the buck-saw. There is obviously room for new suggestions.

We are not going to make one, however. We content ourselves with calling attention to one that is not unfamiliar, and that we think merits consideration. The best provision that man has yet invented for the certainties of death and the uncertainties of life is insurance. Life insurance, in spite of blundering and dishonesty, has distanced the savings banks as a provision for the family after the death of the bread-winner. Fire and marine insurance distribute losses that would ruin individuals. Accident and sickness insurance are on the whole the most satisfactory provision that can be made against temporary disqualification for work or business. Why, then, should we not insure workingmen against loss of wages thru unemployment in seasons of industrial depression? The principle is sound, and the practice would require neither extraordinary skill nor impossibly large resources.

The resources, however, would have to be ample, and the administration strictly impartial. It should be a government enterprise as the workingmen's insurance of Germany is. The weekly allowance during idleness should be less than the market rate of wages, and it should not be available where the idleness has been

voluntarily incurred by participation in a strike.

Sooner or later we must come, by one or another route, to a legal recognition of the proposition that, whether or not society owes every man a living, such an instrumentality as organized society cannot shirk the humane duty of preventing socially preventable misery. It has taken the community a long time to grasp the truth that under modern industrial conditions great numbers of workingmen out of work are not personally blameworthy for their misfortunes. We still too often think of the unemployed man in terms of a colonial or frontier philosophy. So long as land was abundant within a short walk of every town, and within a few miles of every city, and a thrifty man could pay for a small farm in a few years by the fruits of his own labor, it was pretty safe to assume that an unemployed man was either idle or improvident. But the day of such conditions is gone by. Society now reaps the enormous economic advantages of specialization, vast accumulations of capital, and concentrated management. But industrial progress has put hundreds of thousands of wage-earners at the mercy of other men, who, in turn, are at the mercy of the great rhythm of business prosperity and adversity.

Society should bear the costs of the production of its own great well-being. It should not permit them to rest upon a class which is not strong enough to shift them or pass them along. We should like to see the experiment of insurance against unemployment honestly and faithfully tried.

Misapplied Science

ALL science is divided into three parts: pure science, applied science and misapplied science. The first is our guide and inspiration; the second makes life smoother and swifter; the third blinds our eyes, leads us astray and sets us quarreling with each other. The amazing success of the scientific method in its proper fields has led to the belief that it can profitably be employed everywhere, and this makes a great deal of trouble in the world. The publishers have just dumped on our table a dozen cloth-bound

examples of such wasted energy. Here is a volume on cheiromancy, strictly scientific in its form, absolutely nonsensical in matter, devoted to the classification and interpretation of the wrinkles and the pimples of the palm, a model of thoroness and workmanship in its cross references, indexes, bibliographies and correct quotations from ancient and modern languages. Here is another, equally painstaking and quite as unprofitable, an analysis of chess problems. Next a volume, by a German scholar, naturally, contains a rigid classification of the writings of all the prominent anarchists, by means of a logical system of arbitrary definitions, a vain attempt to create a cosmos out of the most chaotic of sociological nebulae. And we have not time to count the books that are rendered unreadable and misleading by the application of scientific technique to the subjects of art, literature and religion.

This perversion of the method of science is essentially unscientific. As soon as the student enters the laboratory he is made to unlearn what his mother taught him, that "whatever is worth doing, is worth doing well"; the word "well" meaning "in the most careful and thoro manner." On the wall of the biological laboratory is the warning, "never use a higher power on the microscope than is necessary." In the machine shop he is told "do not make your tools too sharp"; the harder the material to be cut, the more obtuse must be the cutting edge. His instructors in physics and chemistry keep reminding him to drop his surplus decimals, because it is not only a waste of time but a positive falsification of the result to report a measurement as 7.94625 millimeters when the scale is only accurate to .001 millimeter.

But when the student goes over to the other wing of the faculty he finds another system prevailing. Here accuracy and thoroness are insisted upon as tho they were of value in themselves, not simply means to an end. He is taught to take unlimited pains in running down an obscure historical reference or the exact reproduction of a careless sentence from an ancient author. The difference between the sciences and the humanities in material and method is just this: the things studied in science are known to be

absolute, positive and unlimited, and the instruments used in their study are of recognized and ascertained inaccuracy. In the humanities, on the other hand, the materials are often of doubtful authenticity and uncertain value, and the methods are rigid and exact. The humanist loves learning for its own sake and takes delight in logical processes. The scientist gets along with as few facts as he can and does not do any more thinking than he can help to get his results.

The development of research work in our universities is responsible for much of the misapplication of science. The professor of chemistry has ten times as many problems in his notebook as he has students to set to work on them. The professor of literature is sometimes worried to find something hard enough to keep his students busy and important enough to be worth doing. Consequently he emulates his scientific colleague by adopting laboratory methods to his very different work. He sees the chemical student get a Ph.D. for measuring the angles of the crystals of parahydroxyazobenzene, so he brings up his students at commencement with a dissertation of equal bulk on the classification of the typographical errors in the first folio of Shakespeare or the use of sense adjectives by the minor poets of Missouri. Now the chemist did not care anything about the crystals. He cursed his luck when he found that he would have to measure them because the figures were not given in Beilstein. He needed them in his business. He believed they would throw light on the particular problems he was trying to solve and contribute to the elevation of the human race. He was seeking a missing link in his chain of reasoning. But the literary man wanted to add another grain of sand to the mountain of learning. He loved Shakespeare. He even loved the minor poets of Missouri.

That was right. It was his business to love and to teach his students to love poetry, both Elizabethan and Missourian. But the question is, Was that the best way to cultivate the appreciation and comprehension of literature? A student, who was taking the entrance examination at Yale, gave away the system when, in reply to the question of how he studied

Lycidas in the high school, he wrote: "The class went thru it line by line while the teacher explained away every illusion." Now an allusion is something to play with, to be caught on the fly. But his teacher had been training him in the mathematical analysis of the curves of projectiles, which, however valuable in science, is of no use to a ball player. The attempt to treat an art as tho it were a science is disastrous.

The Alexandrian grammarians were not distinguished by their contributions to literature, nor the medieval theologians for their spiritual power. Prophetic utterances, tho inspired and inspiring, are not to be used like axioms of geometry on which a volume of logical deductions can be based. Left plastic they may be a vital principle; petrified into a creed they are apt to be used as a weapon. In the art of moving speech, as in all the other arts, a certain degree of haziness and an obscurity in details are essential. There are many things in the world that would be spoiled if they were fixt, formulated and clarified. Even in the law precision of language is not always desirable. Justice would be the loser if the lawyers ever succeed in what they are always trying to do, to give an exact definition to the words of the jury charge "beyond a reasonable doubt." The scientific method is the most marvelous instrument of the human mind, but for many purposes of practical and the higher life it is not convenient and, therefore, according to the scientific principle of the adaptation of means to ends, it should not be used. There is, or may be, such a thing as a science of colors, a science of music or a science of religion, but these should contribute their results, not their method, to the art of painting, the art of piano playing and the art of living.

The Fulguration of Cancer

RECENT reports from Paris announce that a new method of treating cancer has been demonstrated in that city and that it has been received with great attention and even approbation by distinguished surgical authorities in the French capital. This new method consists in applying sparks of electricity at very high tension to the growth, with the idea of kill-

ing pathological cells and so eradicating the malignant condition. At the present time about one in thirty of the population of civilized countries dies from cancer. This means that a very large number of sufferers from the disease are constantly in existence. Hope is stirred up in all of them whenever such a new discovery is reported, and it is anticipated that at last the long-looked-for remedy for this awfully fatal disease has been secured. About once a year there comes some supposedly scientific announcement of a cure for cancer. During the course of the next twelve months, as a rule, the new cure proves to be as illusory as any of its predecessors. Within the last five years the X-rays and light, and then radium and then the trypsin treatment for cancer have each been exploited as cures for the affection and have each sunk back into oblivion.

Something, it is true, is gained each time. It has been found that the X-rays may be radically beneficial in the treatment of cancer that is superficially situated. The same thing is true with regard to radium, and also with regard to concentrated rays of light. With regard to trypsin, the possible remnant of usefulness after the exaggerated claims is much more dubious and remains to be seen. Whether fulguration will in the course of the next two years suffer the same fate remains to be seen. It may be said at once, however, that until a remedy for cancer has been tried for three years we can know nothing about it. The rule among surgeons is that unless there is a survival and absence of all symptoms after three years, any treatment of cancer cannot be spoken of as having accomplished any definite good. There are many forms of treatment that relieve symptoms for the time. There are even a number of surgical methods that are apparently curative for a year or more. The question of their efficiency can only be settled by time.

Much as we would like to welcome a remedy for this most hopeless scourge of humanity, which now carries away more of the population than practically all of the infectious diseases combined, that is, more than scarlet fever, smallpox, measles, and typhoid fever taken together, we must warn our readers of

the necessity for not allowing the hopes of suffering friends to be raised by newspaper announcement of cure. Such hopes are fated to be dashed to the ground, very probably, until we know more about the nature of cancer. Possibly some little good is accomplished by such announcements, since the attention of physicians and surgeons thruout the world is attracted to the new method of treatment and it is very thoroly tried in a very short time, so as to determine its efficiency without delay. As most of the suggested cures, however, have, as is true of this latest method of treatment, been in use scarcely more than a year, if indeed that much, the advisability of making such announcements is extremely dubious. Among physicians there is a feeling that many of the inventors of the so-called cures are more intent on gaining notoriety for themselves than in getting at the truth of the usefulness of their method of treatment. If all of the loudly advertised cures that have been announced in the last ten years had been kept to the inventor himself and a few friends working in sympathy with him, for confirmation and control, the world of medicine would have lost nothing and humanity might have gained much by not having to suffer bitter and grievous disappointment.

The Senate and The Hague

The Senate, having ratified all the treaties adopted at The Hague Peace Conference to ameliorate the conditions of war, is now considering the treaties that will tend to abolish war, all of which are expected to pass. In forwarding these treaties to the President for transmissal to the Senate, Secretary Root wrote:

"Let me go beyond the limits of the customary formal letter of transmittal and say that I think the work of the Second Hague Conference, which is mainly embodied in these conventions, presents the greatest advance ever made at any single time toward the reasonable and peaceful regulation of international conduct, unless it be the advance made at the Hague Conference of 1899.

"The most valuable result of the conference of 1899 was that it made the work of the conference of 1907 possible. The achievements of the two conferences justify the belief that the world has entered upon an orderly process thru which, step by step, in successive confer-

ences, each taking the work of its predecessor as its point of departure, there may be continual progress toward making the practice of civilized nations conform to their peaceful professions."

Our readers need not be reminded that THE INDEPENDENT has been one of the few papers in the land that has urged these views from the very beginning. When it is remembered that last summer the nations of the whole world, for the first time in the annals of history, assembled to discuss affairs common to all, and in their conference, besides taking many measures to make war more humane, created a supreme court of the world founded on the model of the Supreme Court of the United States, declared for the principle of obligatory arbitration in international disputes, practically prevented war between three of the five continents of the world, and took the first step in the creation of the "Parliament of Man," we can claim with reason that the Second Hague Conference did a great work and prepared the way for still greater accomplishments. Thanks largely to the inspiration and support of Secretary Root, our delegates were able to play the leading rôle in the Conference. Now let Secretary Root carry to a successful completion the negotiations for obligatory arbitration treaties with all our sister nations, and especially with Japan, and few men in our public life will have done more than he for the substitution of law for war.

The Secret of Diplomacy

The words *diplomacy* and *diplomatic* have in times past carried a Machiavelian note. It was thought to be the chief duty of diplomatists to circumvent and deceive each other, and so get an unfair advantage in the game of shrewd concealment and falsehood. The new style was signalized by John Hay, who was said to be an exponent of the American shirtsleeve diplomacy, which meant that of square dealing and frank truth-telling. This better method was admirably described by the new Japanese Ambassador the other day, when he said at a dinner given him by the Japan Society of New York:

"Ladies and gentlemen, there is no art in our game of diplomacy; it is the sincerity of

friendship that will not only adjust any difficulties that may arise between us, but lead us to march on the path of progress for the development of our common interests. Believe me, therefore, when I say that in our game of diplomacy my trump is hearts."

That looks like going to Japan for lessons in Christianity. It is the kind of diplomacy which the Hague conferences are advancing, in which questions of difficulty are to be settled by kindly arbitration instead of trickery or force. Whether called shirtsleeve diplomacy, or heart-trumps diplomacy, or Hague and arbitration diplomacy, it is no longer American or Japanese, but is coming to be cosmopolitan. Ring out the old; ring in the new.

Is Greek Dead?

President G. Stanley Hall, of Clark University, says he would cut out Greek from all secondary schools and colleges. He is quoted in an interview:

"These dead languages are so terribly dead they are not even ghosts of ghosts, shadows of shadows, intangible, evanescent, unreal, and the time spent in mastering these ghastly, ghostly tongues might so much better be spent in mastering something that would become of use to the pupil.

"Of what use is it to a young man, for example, to learn Latin and Greek? He is shut up absolutely to one profession—teaching—and that the poorest paid of any profession with which I am acquainted."

Money, money! "Poorest paid!" Nevertheless we believe teachers of Latin and Greek are as well paid as teachers of physics. There is something worth while besides what will be "of use to the pupil" in money-getting. It will be a sad day for the intelligence of the world when it ceases to honor the language of that little Hellenic peninsula which invented civilization, spread it over the world, gave it to us thru the agency of a race which possessed more genius than any other that has ever lived, first created philosophy, literature, science, criticism and the arts, and whose tongue, after conquering the civilized world, gave us the Christian religion, and again ruled the world from the Bosphorus until a wave of barbarism battered it down, burnt its libraries, introduced the Dark Ages, until the Renaissance and the Reformation again restored learning and culture by bringing

back Greek from Constantinople. But there is not much money in it—"the poorest paid of any profession"—more money than there is in astronomical research or high mathematics. Latin and Greek are not dead yet, nor will be so long as men love the true, the beautiful and the good.

Liquor Laws in England

The world must be growing better, judged from the increased attention given in this country and in Europe to the drink evil. And it is a question that cuts across all parties, as moral questions ought to. The work of reform is not done here or in Great Britain by a specifically Prohibition party, but by men of all parties. The British Licensing Bill, presented by the Liberal party, is already dividing the Conservatives. The alliance between the Anglican Church and the breweries is breaking, for the Archbishop of Canterbury and one or two other bishops have said good words for it, so that Mr. Balfour says: "Don't talk to me about bishops." To be sure, the Anglican *Guardian* and the Catholic *Tablet*, which usually pull tandem against any Liberal proposal, agree that the bill is cruel robbery. The robbery consists in the fact that the bill will, in fourteen years, close 32,000 public houses—that is, saloons—which have a market value to their owners, even altho the owners are paid for the loss. But still further it provides that after fourteen years no such payment will be made, but the proprietary right of remuneration will lapse. And, still further, the breweries will lose value. They have all been capitalized, the old owners made peers, and the stock sold to the public, that is, to the clergy and churchmen, the value of whose stock will fall seriously. It is not every religious man to whom the morals of the people seem of more value than the money in his own pocket. The investment may fail, like investments in gold or diamond mines; and the investors simply showed bad judgment in buying shares in property that was hostile to public morality and economy. In this better country it never occurs to any one to recoup to a saloon-keeper or a distiller his loss when law shuts out his business.

**Andover
Seminary**

It is at last decided, after long discussion and negotiation, that the Congregational Theological Seminary at Andover shall go to Cambridge to be near the Harvard Divinity School. Practically the two theological schools will, for instruction, be united, but the legal separation will continue, on account of the endowments. It must not be assumed that a Congregational and a Unitarian seminary are thus consolidated, for such is not the fact, altho people still are liable to think of the Harvard Divinity School as Unitarian. It is one of the great merits of President Eliot, himself a Unitarian, that he recognizes that the University does not belong to one of the smallest of the denominations, but to the whole people; and years ago Congregationalists and Baptists were put into the most important positions in the Divinity School, while the professor in charge of the religious interests of the university is an honored Congregational minister. Andover Seminary was at its strongest when Professors Park and Phelps had the leading chairs, after Moses Stuart had been its distinguished Hebrew teacher and the powerful advocate of the faith against the Unitarians when they were in their fighting prime. Then came the succession of teachers who left when students were driven away by the attacks of the aged Professor Park, Joseph Cook and others on the Second Probation Doctrine of Prof. Egbert C. Smyth. Then Professor Moore went to Harvard, Tucker to Dartmouth and Harris to Amherst, and the Seminary has never recovered, so that it has been a toss-up whether it should show in its catalog the more teachers or the more students. The removal to Cambridge ought, with a strengthened faculty, to recover its prestige.

**That Old
Serpent**

A new defender of the faith has appeared, Mr. Andrew Allan, who puts forward the following solution of an old problem in his book on "Matter and Intellect: A Reconciliation of Science and the Bible":

"The serpent which tempted Eve was probably a dinosaurian, and may possibly have been the iguanodon, a reptile which must have walked temporarily or permanently upon its hind legs, thus presenting a human appear-

ance, to which its magnificent skin or robe of feathers would add considerable beauty. Eve, therefore, seeing this human-like animal eating of the tree, and suffering no harm, would readily forget the prohibition, and be tempted to try the fruit for herself without any actual speech passing between the two."

This theory is certainly original and ingenious, whatever else one may choose to call it. Those who are reconstructing their religion out of such materials will find this worthy of a place in their collection beside the theory that when Joshua had the city of Jericho compassed seven times by the priests blowing trumpets, he was trying to find to which note of the scale the walls responded, so that by sounding this the seventh day they would be overthrown by the vibration; and the equally plausible explanation of Elijah's triumph over the prophets of Baal, that the liquid poured upon the altar from the twelve jars was not water, but gasoline.

**Workers' Conditions
in Germany**

Among the "Consular Reports" lately issued is one as to the work, wages and conditions of living of workmen in the textile mills of Germany. We take as an example the report from Plauen, where laces are made by machinery. Women and girls are employed very largely at wages of about \$3.81 a week for adults. There are stringent laws as to the hours of labor. The report says:

"The families of the working people are rarely small, and it is not infrequent to find a man and his wife and several children subsisting on \$3.81 a week. From this amount rent, clothing, food, fuel, and other necessities have to be paid. In many instances, however, the wife is also a wage-earner as well as the man, and the children go to work as soon as possible. Such families usually live in a kitchen and one other room. There the family cooks, eats and sleeps. The rent for such an apartment is rarely less than \$2.38 a month, the general price being about \$3.57. . . .

"Food is of necessity quite simple. One person thoroly acquainted with the life and conditions of operatives here says that the principal nourishment of the weavers consists of potatoes and salt, bread, and a so-called pepper soup, made of water, bread, a little fat, and plenty of pepper. Meat is seldom eaten, and when indulged in at all is usually in a form of soup meat or sausage. Operatives generally eat five times a day, and rye bread is nearly always taken. The first breakfast consists of coffee, made chiefly of roasted grain, and a piece of bread or roll. Sometimes a bowl of hot water with a little flour

stirred in is taken instead of coffee. The dinner is at midday. The morning, afternoon and evening meals are much lighter, and in them beer often occupies a place."

Potatoes, rye bread and pepper—it is not strange that they emigrate; and this is the kind of wages and living that keeps up our high tariff to exclude their products and which serves to depress their wages.

Child Labor Laws

We are indebted to a paper by R. F. Campbell, of Asheville, N. C., for the statement that the best State laws in the country regulating child labor are those of Wisconsin and Illinois. That of Wisconsin forbids child labor in mines or factories until the age of sixteen years, except by permit from a county judge or factory inspector, and then not under fourteen years. There is factory inspection, and children under eighteen are not allowed to work over eight hours a day. There are 19 Northern and Western States and 2 Southern States (Kentucky and Tennessee) which have a minimum age limit of fourteen years; 1 Southern State (North Carolina) has an age limit of thirteen years; 6 Northern and Western and 9 Southern States have an age limit of twelve years in factories. Florida, Louisiana and Mississippi have no child labor law, but it is to be remembered that these States have practically no cotton mills and few factories of any kind. Oklahoma has no child labor laws. South Dakota has an age limit of fourteen for mines, but allows children of eight to work in factories if they attend school twelve weeks in a year. There is plenty of room yet for reform.

Julia Richman, a district superintendent of schools in this city, tells the following story: In one of the East Side schools, in a class composed solely of immigrant children, averaging in age from twelve to fourteen, a teacher had dictated to the class a sentence containing the pronoun *you*. A boy who had misspelt the word listened attentively as his teacher said "y-o-u—*you*." Then he raised his hand and put the following conundrum to his teacher: "Vy de *vy*, and vv de *o*, ven *u* is *you*?" That question admits of no answer, for there is no

reason for it; it is utterly unreasonable. We do not sufficiently appreciate how hard it is for a foreigner, and for our children also, to learn to master our shocking miscalled orthography. Miss Richman mentions that in an evening school attended by 24 immigrants of the average age of 25, the word *kitchen* was spelt in seventeen different incorrect ways, and the word *altho* in 18 wrong ways, but the worst no worse than *although*.

The Free Art League is supported by artists all over the country, and they are engaged in a long and tedious campaign to secure into this country the free entrance of works of art. American artists do not ask protection from the rivalry of foreign artists. They say that the more such works are brought into the country the better for them, as it creates an atmosphere of art which helps them. Perhaps the absurdity is greatest in the case of paintings, sculpture and archeological objects from a hundred to five thousand years old, whose value is historical, and where the competition of living artists is absurd. The tariff only protects forgeries. A newly discovered statue by Praxiteles, if bought by Morgan, has to remain in his English collection because the tariff charge of perhaps \$100,000 is imposed to protect American industries. The Queen of England can see it, but not an American resident here.

Mr. Rockefeller and Andrew Carnegie and the General Education Board have no authority to dictate to colleges whether or not they shall survive, but there can be no question as to the right of the General Education Board to decide that it will give no aid to more than one full college within a radius of a hundred miles in such a State as Wisconsin. The new rule favors the University of Wisconsin, at Madison, Beloit College and Lawrence University, at Appleton. The other colleges, such as Ripon and Marquette, will get no aid unless they reduce their curriculum to include only freshman and sophomore years, and become feeders to the leading institutions. But that does not mean that they will yield, for they may stand out and seek patronage as long as they please.

The best way of naming streets of growing towns deserves more consideration than it has received. Of course, they can be named by successive numbers or letters, and that has an advantage in finding one's way. But these names are uninteresting and better ones can be chosen for rural regions. A New York suburb has proposed the names of Greek gods for fifty streets, but the religious Little Tim Sullivan objects, and there are better names. We suggest only one way. Name a series of streets alphabetically after trees, as Ash, Beech, Cedar, Dogwood, Elm, Fir, etc., and then line the streets with these trees as a lesson to the children. The order of Presidents, States or countries is another good way.

It is generally admitted that Christ's birth and the accepted beginning of the Christian era has been set three or four years too late. Luke might seem to have fixt the date pretty definitely, by telling us it occurred in the reign of Herod, when Quirinius was Governor of Syria, and that it was in the year the census was taken by order of Augustus. Now late discoveries of papyri in Egypt, including one secretary's copy of the regulation for taking a later census, show that the census was regularly taken every fourteen years. That would make the birth of our Lord to have taken place either seven or eight years B. C. Any day there may turn up a census order by Quirinius himself.

Two rival companies in South Africa command the main output of diamonds for the world. They have had a trust agreement between them as to sales and price. Now they threaten to fight, but it is almost incredible that they should not come to some agreement, as it is not to the interest of either of them to reduce prices and profits. Jewels are the most useless and most costly of all things, and the public generally need not worry at the outcome of the quarrel between the Premier and the De Beers syndicates.

Simeon Ford, who has succeeded Senator Depew as our chief after-dinner humorist, said something at a dinner in criticism of the President which did not quite approve itself to Secretary Taft, who was present, but who said that if

he could not take and enjoy a joke he would retire to a monastery. That remark sounds innocent enough, but it has offended some sensitive ones, who ask, "Why a monastery?" A Catholic journal answers somewhat snappishly that he ought to know that a monastery "is the last place in the world for the stupid or slow of wit." Secretary Taft was all right; he was referring to the Trappist monasteries where the monks are vowed to perpetual silence.

We occasionally hear the complaint that our churches have too many benevolent boards, and that they ought to be consolidated into two or three, instead of seven or eight. Thus, it is said, let there be one foreign mission board, one home mission board, and one educational board. A year ago, by direction of the Methodist General Conference, its three boards of Education, Freedman's Aid and Sunday Schools were united under one management, but now their directors have unanimously voted that it has not worked well, and they ask the General Conference, at its approaching meeting, to separate them again, that they may work independently.

It was in the debate in the Reichstag that the German Colonial Secretary admitted that in the late war in West Africa the seizure by the German troops of the food of the natives caused the starvation to death of seventy-five thousand of them. It is a horrible crime, and matches the worst we have heard from the treatment of the natives in the Kongo Free State.

We are requested by the editor of *Charities* to correct a statement in an editorial of March 5th. We quoted it as saying that there were 35,000 unemployed men in New York City, which is a number much smaller than other authorities have given. What *Charities* said was that there were 35,000 *homeless* men in the city out of work.

That a naval base should be established at Pearl Harbor in the Hawaiian Islands, as a protection to our whole Pacific Coast, is clear from all military considerations, and we trust the bill before Congress making a moderate appropriation for that purpose may pass.

Insurance

The Insurance Solicitor

THE insurance solicitor went forth to solicit. He was young and raw, but enthusiastic. Beginning, as all new solicitors do, with his friends, he asked each and every one to insure. In season and out of season he pointed out the uncertainty of life and how necessary it was to insure. He toiled not wisely, but too well all the week, and it got so that when any of his friends saw him approaching they turned quickly and went down a side street if there was any chance of so doing. At the end of his first two weeks of effort the harvest was nothing but leaves. The solicitor was surprised, not to say grieved. He spent much time in thinking over the situation, and being a bright young man, he came to the conclusion that there must have been something the matter with his "system." He resolved to try a new tack. Filled with a desire to win success as an insurance man, he picked out a prospect that seemed likely and carefully studied him. He set himself the task of finding out, as a preliminary, whether the man was married or single. He found out who his friends were and something about his tastes, as well as his income and financial responsibility. He studied his man with all the ardor that a good lawyer studies a difficult case. When he considered that he really knew the man he approached him on the subject of life insurance, using arguments that his study of the man had taught him must prevail. He landed the prospect. He had solved the problem of soliciting. Thenceforth he did not count the time lost that was expended in preparation for doing what he wanted to do, which was to write life insurance. Sometimes he spent two or three weeks in a field before he solicited a single case. It has been well said that it is an art to conceal one's art, and this may well apply to life insurance soliciting. The successful life insurance solic-

itor strikes when the iron is hot. He is on the ground at the psychological moment with an application ready for signature, and perhaps a blank check for the premium, that can be signed before the idea has grown cold. Life insurance is a great blessing, but even blessings must sometimes come in disguise. Tact is required on the part of the solicitor, and the highest kind of tact. No man who does not believe in himself and in the dignity of his work can hope to be a success in this most difficult field of commercialism, even if there be a touch of the vicarious in it. The idea of adequate preparation in canvassing cannot be too strongly impressed upon an agent if that agent is going to belong to the \$100,000 Club. The man who comes into the presence of a prospect with cringing or with apology merely invites the failure that is almost certain to come to him. Other things being equal, there are three things required of the solicitor in order to win success. The first is preparation, the second is preparation and the third is preparation.

AN interesting point for insurance canvassers along the line of methods in soliciting was recently made by an experienced agent in The Travelers' Insurance Co. Agents' Record as follows:

When I write one man in an office I try to take the policy back when he isn't there so as to show it to his partner. If his partner isn't there I try to read it to his cashier or the next man, and in that way if I write one policy I often write three or four.

As an example: I went into one civil engineer's office and talked to four or five men; three or four others came in after lunch. There were eight men in the office and I didn't write a policy. Two days later I met one of the boys on the street, he said, "You had better go back to Mr. Bride's office." I said, "Why?" "Why, he will take a policy. He said to the boys after you left, 'I wouldn't take a policy of that man because I wouldn't let him have the satisfaction of knowing he talked me into it.'" Well, I went back and wrote six.

Bank Speculation

NEARLY two and a half years have past since the failure of the banks in Chicago controlled by John R. Walsh. He was convicted in January last, and on the 13th inst., application for a new trial having been rejected, he was sentenced to be imprisoned for five years in the penitentiary. Nothing but his advanced age saved him from a longer term, for his offenses called for extreme punishment. Like the bank officers recently indicted in New York, Walsh unlawfully used the funds deposited in his banks for the support of his speculations and industrial ventures. Being president of the Chicago National Bank, he loaned to himself three-fourths of that bank's entire assets. The remarks of Judge Anderson, when he sentenced Walsh, permit the inference that he had in mind the recent offenses of Morse, Heinze and others of their kind in New York:

"No man can serve two masters. To my mind that is the key of this whole situation. The defendant was a banker, and president of a National bank. The proof showed that he loaned to himself substantially seven-tenths or three-fourths of the entire assets of this National bank—seventeen or eighteen million dollars—which was invested not in properties which had been developed, but in railroads and other properties which he hoped to develop. The banker was lost in the promoter, the speculator, the railroad man. The evidence clearly establishes this. He owed a duty to the bank, his master. He attempted to serve those other interests, the other masters. To my mind there has been in recent times no clearer demonstration of the statement that a man who is a banker ought to be nothing but a banker. Until at least those bankers who own and manage National banks understand that when they serve their bank they cannot serve other interests—until that idea prevails cases like this will probably continue to arise."

Many believe that we should have had no panic in October last if Morse, Heinze and the Thomases had not controlled national banks in New York. The ousting of them from their bank offices by the associated banks was the direct and immediate cause of that fright which drove the people to demand their deposited money and lock it up. At least two of these men had unlawfully used the funds of their banks to promote their personal ventures. Evidently they had obtained control of national banks and had become

officers of them in order that they might make such use of other people's money. To those who realize how enormous have been the losses and how great the suffering and misery due to this panic, and who also know what the direct and immediate causes of the panic were, the exemplary punishment of these speculators in bank deposits, following conviction on the indictments now pending, will be highly satisfactory.

New York State Bonds

THE most successful bond sale ever made by the State of New York was that of the 11th inst., when \$5,000,000 of fifty-year 4 per cent. highway improvement bonds were offered and bids amounting to \$81,530,000 were received, those which were accepted ranging from 106.456 to 109. This response points to a plentiful supply of money seeking investment in securities as to the safety of which there can be no question. The list of successful bidders includes the following:

Hanover National Bank, New York City, \$2,250,000 at 107.511, 107.001 and 106.751; Kountze Brothers, New York City, \$1,000,000 at 107.03 and 106.51; O'Connor & Kahler, New York City, \$150,000 at 106.677, 107.389 and 107.885; H. W. Poor & Co., Boston, \$350,000 at 106.87 to 107.17; Estabrook & Co., New York City, \$300,000 at 106.55 to 107.05; William A. Read & Co., New York City, \$745,000 at 106.456.

.... Willis G. Nash, who was recently elected president of the Mercantile National Bank, was born and educated in Albany, and his entire business career has been devoted to banking. He first entered the employ of the Mechanics and Farmers' Bank in Albany, and worked his way up thru all the positions until he became cashier. For the last fifteen years he has been cashier of the New York State National Bank, of Albany. William H. Taylor, vice-president of the Bowling Green Trust Company; Miles M. O'Brien and William Skinner are the vice-presidents of the Mercantile, and Emil Klein continues as cashier. The bank was started in 1850 and now has capital stock of \$3,000,000, surplus and undivided profits amounting to \$2,435,383, and \$11,787,071 in total resources.

The Independent

VOL. LXIV NEW YORK, THURSDAY, MARCH 26, 1908

No. 3095

Survey of the World

Legislation Desired by the President

It was announced by authority on the 21st that the President had decided to send to Congress this week a message recommending that action be taken with respect to several questions. The legislative program to be set forth in the message is in some measure the fruit of recent conferences at the White House with prominent business men, representatives of the Civic Federation, labor leaders and members of Congress. One of these conferences, in which the views of commercial organizations in the Middle West were presented, took place on the 20th. Included in the legislative program to be recommended are a declaration by Congress in favor of a revision of the tariff at a special session to be held soon after March 4th, 1909; an amendment to the Sherman Anti-Trust law "making important concessions to combinations of both labor and capital"; a bill limiting the powers of certain courts concerning the use of injunctions in labor disputes; passage of an employers' liability bill, and the enactment of the pending Aldrich Currency bill. Among those who conferred with the President on the 20th were the presidents and several members of the Chicago Association of Commerce, the St. Louis Business Men's League, and the Kansas City Commercial Club. About 4,500 business men, corporations and firms in the Middle West are members of these organizations. In an address to the President they said:

"We never were in a more prosperous condition than prior to the panic of last fall. Our labor was all employed, our capital profitably invested. In a short period these conditions have changed. Certain lines of business are

almost stagnant, brought about by the fear of the people as to the stability of some of our institutions. Money has been hoarded instead of flowing into the ordinary channels of investment, securities and the various commercial interests. Two primary causes are responsible for this condition: First, the gross violation of law by some corporations, and grafting by some public officials, and, second, a deficient currency system wholly incapable of responding to needs of commerce when fear and uncertainty are engendered in the minds of the masses."

Unrest and distrust were due at the beginning, the address continued, to the disclosures of the life insurance investigation in New York. Following these was the calamity in San Francisco. Grafting and bribery were unearthed there and in three other important cities, and "finally came the exposure of high finance, manipulation of the assets of great railroads and the conviction of their officials, with those of large industrial corporations, for utter disregard of the laws of the Nation and the States." It was not surprising that the confidence of the people was shaken:

"To you, Mr. President, we accord the credit due for compelling a respect of the law by the great and small alike. We believe that your work toward business morality will be remembered as a milestone, not only in the development of this country's business morals, but as a milestone in the progress of the world. We believe the business integrity of the average merchant in this country is of a higher standard than in any other; we therefore appreciate and commend all the more your fearless activity which has resulted in raising the standard, and we realize that no greater service has ever been rendered our country.

"No great good has ever been accomplished in any times without some suffering in consequence, but we now urge you to consider with extreme patience the unusual conditions that prevail, and, while abandoning no express principle, to adjust your executive actions to the requirements of this period of business

timidity. We ask you to indicate to the Congress the corrective measures you deem necessary to take. We believe that the first step toward resumption of normal business conditions can be taken by the Congress in response to explicit recommendations by the Executive."

It is expected that action concerning the tariff will be taken by means of a joint resolution. The proposed restrictions upon injunction practice are probably those to which Secretary Taft recently gave his support. Speaker Cannon has predicted the enactment of a new employers' liability law. Some think that there will be no legislation about injunctions and that the Sherman act will not be amended. These parts of the program have encountered much opposition in Congress.

Protest of the Labor Conference

Mr. Roosevelt has not been able to agree with representatives of organized labor concerning proposed amendments to the Sherman Anti-Trust law, and the disagreement may affect the national political campaign. He desires that railroads shall be permitted to make traffic agreements, subject to approval by the Commission, and that "reasonable" combinations in trade shall not be prohibited by the law. This is mainly on the side of capital. The nature of his proposed concessions to labor combinations has not been defined to the public. They are said to include a provision that the damages in such a case as that of the Danbury boycott shall be actual instead of triple. Certain members of Congress who have attended the conferences are said to have withheld their approval, at least until the appearance of the bill, which will probably be introduced by Mr. Hepburn. It is understood that Mr. Gompers (of the Federation of Labor) asked not only that labor unions should be expressly excluded from the combinations affected by the statute, but also that the President should recommend legislation that would practically legalize trade boycotts. This the President declined to do, and thereupon, it is asserted, the labor representatives declined to approve and support his legislative program. Mr. Gompers also asked, it is said, that the issue of injunctions in labor controversies be prohibited, and this was

opposed by the President. Last week, while the subject was under consideration, there was in session in Washington a national labor conference, called to discuss the recent boycott decision, and representing 118 national unions. On the 19th it laid before Vice-President Fairbanks and Speaker Cannon, for submission to Congress, a long memorial, sharply criticising the Supreme Court, and protesting against "the indifference, if not actual hostility, of Congress" toward proposed labor legislation:

"Labor and the people generally look askance at the invasion of the court upon the prerogatives of the lawmaking and executive departments of our Government. The workers feel that Congress itself must share our chagrin and sense of injustice when the courts exhibit an utter disregard for the real intent and purpose of laws enacted to safeguard and protect the workers in the exercise of their normal activities. There is something ominous in the ironic manner in which the courts guarantee to workers the right to be maimed and killed without liability to the employer, the right to be discharged for belonging to a union, the right to work as many hours as employers please and under any conditions which they may impose."

Reference is made to the decision in the Danbury hatters' case as "a perversion of the intent of a law by the judiciary," and Congress is asked to co-operate with the workers in creating a public sentiment that "will confine the judiciary to its proper function." The memorial asks for legislation excluding labor unions and farmers' combinations from the provisions of the Sherman act, and for the passage of a bill limiting the issuance of injunctions, the employers' liability bill, and the bill extending the application of the eight-hour law. One of the organizations which presented this memorial is the farmers' Society of Equity, now prominent in the tobacco controversy in Kentucky. On the 21st the leaders of the labor conference issued an address to workers, urging them to protest by mass meetings, by political pressure, and by letters to members of Congress, against the recent boycott decision, and to insist upon the legislation sought in the memorial. It calls upon the workers to stand by their friends and to "defeat their enemies, whether they be candidates for President, for Congress or for other offices."

The Fleet Will Visit Japan

When our Government's plans for the battleship fleet's movements westward from San Francisco were published on the 14th, it was noticed that no provision for a visit to Japan had been made. On the 19th an invitation from the Japanese Government was received and accepted. In his letter to Secretary Root, Ambassador Takahira said:

"Under instruction from his Majesty's Minister for Foreign Affairs I have the honor to communicate to you that the Imperial Government, having learned of the contemplated cruise of the United States battleship fleet from San Francisco to the Philippine Islands, are sincerely anxious to be afforded an opportunity to cordially welcome that magnificent fleet and to give an enthusiastic expression to the sentiment of friendship and admiration invariably entertained by the people of Japan towards the people of the United States. I am further instructed to inform you that the Imperial Government is firmly convinced of the reassuring effect which the visit of the American fleet to the shores of Japan will produce upon the traditional relations of good understanding and mutual sympathy which so happily exist between the two nations, and to express to you the hope of the Imperial Government that the fleet may be instructed to call at the principal ports of Japan in its extended cruise in the Pacific."

Replying to this, Acting Secretary Bacon wrote that the President, "highly appreciating this evidence of the hearty good will of the Japanese nation," asked that the Japanese Government be informed that the United States was "most happy to accept the invitation. It gives this Government," he continued, "peculiar pleasure to accept because of the long existing and unbroken friendship between the two countries, and the sincere regard of the American people for the people of Japan." The visit will be made at Yokohama. Baron Takahira explained that the invitation had been delayed until it was known that the fleet would cross the Pacific. The invitation and the prompt acceptance of it, he added, should quiet the disturbing elements in both countries and convince other nations that both were determined to maintain the friendly relations which had existed so many years. It is thought that an invitation will soon be received from China, and possibly one from Great Britain for a call at Hong Kong. In Australia, the news that the fleet is coming to Melbourne and Sydney has caused

great satisfaction, and there have been many public references to the warm friendship and mutual esteem which have characterized the relations of the two countries.—It was reported on the 17th that a final agreement had been reached concerning Japan's executive measures for the restriction of emigration to the United States and Hawaii.—Japanese servants and laborers at San Francisco have contributed, in sums ranging from 25 cents upward, \$211 to the committee having in charge the entertainment of the fleet.—At his own request, Rear-Admiral Evans, who is in poor health, will be relieved of the command after the grand review on May 8th. Thereafter, and until July 6th, Rear-Admiral Thomas will rule the fleet, but Rear-Admiral Charles S. Sperry will be in command when the ships leave San Francisco for Honolulu and during the remainder of the long voyage.

The Mail Subsidy Bill

In the Senate, on the 20th, the Mail Subsidy bill was past without a division. If the roll had been called there would have been only a few negative votes. This bill amends the Ocean Mail Service law of 1891 by increasing the rates for steamships of the second and third classes. Under the present law the rate is \$4 per mile of outward voyage for carriers whose speed is twenty knots, \$2 for those which make sixteen knots, and \$1 for twelve-knot ships. The highest rate is now paid for transatlantic service, but under the lower rates nothing has been done. The bill past last week increases to \$4 the rate for sixteen-knot vessels on routes to South America, the Philippines, Japan, China, or Australasia, 4,000 miles or more in length, and also doubles the rate for ships of the third class. These changes are in accord with the recommendations of President Roosevelt, Secretary Root and Secretary Straus. It is expected that, if the bill becomes a law, two new lines to South America, one to China and one to Australia will be established. During the last twelve months the number of American steamships regularly crossing the Pacific has been reduced from fifteen to eight. While the annual expenditure for foreign mail service under the bill is limited to the estimated

revenue from the service, the sum available for the new mail contracts is \$3,600,000 a year for terms of ten years. At the suggestion of Senator Bacon an amendment was adopted providing that if contracts should be made with two new lines from Atlantic ports to South America, the ships of one of them should call at two ports south of Cape Charles. In the course of the debate Senator Hale pointed out that the battleship fleet in its voyage around the world was depending upon the indulgence of foreign nations, as twenty-eight of the thirty-seven accompanying colliers had been chartered abroad. Only nine American colliers could be obtained. In time of war the aid of foreign colliers might be withheld. Measures should be taken to give the navy American auxiliaries of this kind.

Orchard Sentenced to Death

Harry Orchard, who confessed that he murdered ex-Governor Steunenberg, of Idaho, asserting that he had been incited to commit the crime by W. D. Haywood, George A. Pettibone and Charles E. Moyer, of the Western Federation of Miners, was brought before Judge Fremont Wood, in Caldwell, Ida., on the 18th, and sentenced to suffer death on May 15th. But the court recommended that the sentence be commuted by the Board of Pardons to imprisonment. When arraigned, some days earlier, Orchard had withdrawn his original plea of not guilty and had refused to substitute for it anything but a plea of guilty of murder in the first degree, saying: "I have told the truth, am guilty, and am ready to take the consequences." The proceedings at the time when sentence was pronounced were of a remarkable character, because Judge Wood, who had presided at the trials of Haywood and Pettibone (who were acquitted), expressed his belief that Orchard had told the truth. Having reviewed the history of the memorable case, he said:

"I am more than satisfied that the defendant now at the bar of this court awaiting final sentence has not only acted in good faith in making the disclosures that he did, but that he also testified fully and fairly to the whole truth, withholding nothing that was material and declaring nothing which had not actually taken place. It was the particular province of the

court to observe and follow this witness upon the former trials, and I am of the opinion that no man living could conceive the stories of crime told by the witness and maintain himself under the merciless fire of the leading cross-examination attorneys of the country, unless upon the theory that he was testifying to facts and circumstances which had an actual existence within his own experience.

"In passing upon this question it is immaterial that juries in the two cases tried have declared that they were not satisfied of the guilt of the defendants on trial. The statute of the State imposes a bar to conviction on the testimony of an accomplice alone, no matter tho he may be believed by the jury, unless there is other independent evidence tending to connect the defendant on trial with the commission of crimes. And, again, in each of the cases tried, the court, at the written request of each of the defendants, instructed the jury that a verdict of not guilty did not mean that the defendant on trial was innocent, but rather that his guilt had not been proven beyond a reasonable doubt in the manner and form prescribed by law. For these reasons it is at once apparent that the verdict of the juries referred to are not necessarily at variance with the views here expressed."

The Board of Pardons, he added, should take into account the fact that Orchard's confession and testimony had been the first direct evidence tending to fix responsibility for a series of atrocious crimes in the mining districts of Idaho and Colorado. Orchard, in tears, thanked the judge for his recommendation to the Board of Pardons, and asserted that no promise of immunity or mercy had ever been made to him.

Night riders murdered
Various Topics Hiram Hedges, a prominent farmer, on the 21st, at his home near Carlisle, Ky. He had insisted upon planting tobacco for a new crop, against the wishes of the tobacco growers' association. After the night riders had called him to his door, he consented to plow up his planted land, but they shot him as he turned to re-enter the house.—Upon the recommendation of the Interstate Commerce Commission, officers of the Chesapeake & Ohio Railroad Company will be prosecuted in criminal suits for giving rebates and destroying records. Evidence was procured by an investigation made a few weeks ago.—By a vote of 255 to 5, the House of Representatives has decided that the motto "In God We Trust" shall be restored to the new gold coins.—

By order of the Postmaster-General, an anarchist weekly paper, *La Question Sociale*, published at Paterson, N. J., has been excluded from the mails.—At the suggestion of the President, Senator Warner, of Missouri, has introduced a bill authorizing the President to permit the re-enlistment of negro soldiers discharged on account of the Brownsville affair who shall satisfy him that they are innocent. It is provided that soldiers so restored to the army shall receive pay for the time that has elapsed since their discharge in November, 1906.—The Elkins Anti-rebate law has again been sustained by the Supreme Court in a decision confirming the Circuit Court's judgment in the case against the beef companies and the Burlington road, relating to shipments from Kansas City.

✱

Germany The Reichstag is now without reporters, and speeches are postponed until they come back. Their strike originated in the debate on the colonial bill when Herr Erzberger, a member of the Center party, in criticising the treatment of the natives by officials, made the remark: "A negro also has an immortal soul." This appeared highly amusing to the occupants of the press gallery, who jeered and laughed at the speaker. The entire Center then rose in indignation, and Herr Groeber, the leader of the party, pointing at the reporters, called out "Pigs!" The ensuing uproar was stopped with difficulty by the ringing of the President's bell, and the reporters sent a written protest to the President of the Reichstag, Count Stolberg, demanding a retraction and apology from Herr Groeber. The President answered that he had not heard the expression, but that he would endeavor to induce Herr Groeber to withdraw it. This did not satisfy the reporters, who withdrew in a body and refused to take down the proceedings until the Reichstag made reparation for the insult. All of the metropolitan and provincial press representatives and foreign correspondents stand together, so not a word of the colonial debate on the following day appeared in print. The two semi-official stenographers confined themselves to what was legally required of them, the reporting of the

ministerial statements to the Government. Twelve deputies who were on the list to speak on the colonial question withdrew their names when they found they were not to be reported.—The socialists, anarchists and trades unionists took advantage of the sixtieth anniversary of the revolution of 1848 to make a demonstration in favor of universal suffrage. From early morning until afternoon processions of men, women and children past thru Friedrichshain Park laying wreaths upon the monument erected in memory of the 500 victims of the street fighting in 1848. The wreaths of the socialists were red, and those of the anarchists black. At the gate of the cemetery stood a lieutenant with a large pair of shears who cut off from the wreaths mottoes that were treasonable or incendiary. In the afternoon thirty-six socialistic mass meetings were held, and in the evening many large processions formed and marched thru the city singing revolutionary songs. The entire police force were on duty, and succeeded in turning the processions away from the Kaiser's palace, using the flat of their swords and seriously wounding some fifty persons. There were 10,000 troops stationed in the barracks, but they were not called upon.—The Appropriation Committee of the Reichstag, finding that the army budget would involve extensive loans, urged the Government to use for current expenses the \$30,000,000 in gold which has been stored in the Julius Tower at Potsdam ever since it was obtained as an indemnity from the French in 1871. Herr Sydon, Secretary of the Treasury, in reply, said that this must be reserved as an emergency fund in case of an outbreak of war, when a financial crisis would be likely to prevent the obtaining of money for immediate use. The committee agreed to the proposals of the Government to borrow \$65,000,000 and increase the imperial treasury bills from \$87,500,000 to \$118,750,000.

✱

Old-Age Pensions in France

The long conflict between the Chamber of Deputies and the Senate over the Workingmen's Pension bill is likely to come to an end thru the adoption of a compromise. A law was past in 1905 providing aid to persons

more than seventy years old who were infirm, incapacitated or incurable. Under this law about \$12,000,000 was bestowed last year upon 350,000 persons. The new Old-Age Pension bill which was past by the Chamber provides for an annual pension to all workingmen over sixty years old and who have worked for thirty years. The amount to be paid will be increased each year for those attaining the age of sixty until at the end of thirty years it will amount to at least \$72 a year for all workingmen. According to the bill, which is similar to the German law, workingmen will be required to contribute 2 per cent. of their wages and their employers the same during the thirty years period, and in case this does not create a fund sufficient to pay the minimum pension of \$6 a month the State is to provide the balance. This bill has been held up in the Senate for many months on the ground that the Government has not been able to furnish the committee which has it in charge with accurate figures as to the expense involved and a detailed statement of how the money is to be raised. This objection has considerable weight, since the estimates of the expense to the Government at the beginning vary from \$28,000,000 to \$180,000,000, and the number of persons entitled to receive pensions from one to two millions. The official estimate is that an annual charge of \$68,000,000 will be imposed upon the Government when the system is permanently established. Since the Ministry is committed to this measure as one of its principal reforms, and the delay in its enactment is arousing socialistic agitation, the Chamber of Deputies by a vote of 474 to 66 past a resolution calling upon the Government "to obtain from the Senate during the present year a favorable vote enabling the Old-Age Pension bill to be promulgated before the end of the legislature." This action has forced the Senate to come to terms with the Government, and a compromise has been agreed upon. According to this compromise the liabilities of the Government will be limited at present to \$20,000,000 a year, and the age at which pensions are to be given is raised to sixty-five years. Domestic servants and small farmers are to be excluded from

the benefits of the act.—A resolution approving of the principle of a progressive income tax has been past by the Chamber by a majority of two to one, in spite of the dilatory tactics of the Opposition.—The Senate has approved of the bill past by the Chamber providing that judicial separation shall be changed into a divorce after three years on application from either of the parties.—The Government has submitted a general amnesty bill pardoning all those who committed political offenses in connection with the viticultural riots last summer.

A Russian Duel

As a consequence of the trial of Generals Stoessel, Reiss and Fock for inefficiency and cowardice in the defense of Port Arthur a duel has been fought between Fock and Smirnoff in which the latter was seriously and probably fatally wounded. Smirnoff was a rival of Stoessel and had, in fact, been appointed to supersede him in the command of Port Arthur, but Stoessel refused to give up his position and there was jealousy and antagonism between the two factions during the siege. After the conclusion of the war Smirnoff presented a secret report charging that Stoessel had surrendered Port Arthur prematurely, and that Fock was guilty of cowardice and insubordination. The court-martial found Stoessel guilty and condemned him to be shot, and ordered Fock to be reprimanded. He challenged Smirnoff to a duel on the ground that he had made statements derogatory to his honor and reputation. The duel took place in the riding school under the supervision of the military authorities. A large number of military men and Government officials were in attendance and some ladies were present. The duelists appeared at 10 o'clock in full uniform wearing all their orders and medals, and took their places at fifteen paces from each other. General Kireieff, the chief Russian authority of the code of the duel, acted as referee. As he gave the command to fire the two men discharged their pistols without injury to either. This was repeated three times and at the fourth word of command General Fock shot his adversary in the abdomen above

the right hip. The wounded man was carried away to a military hospital, while General Fock received the congratulations of his friends. He will now be compelled to fight General Gorbatoffsky, commander of the western front of the defense of Port Arthur, who was seriously criticised by Fock during the court martial. Dueling is illegal in Russia, but is allowed in the army according to an edict of Alexander III.—The Emperor has refused to grant a full pardon to General Stoessel, but commuted his sentence to ten years imprisonment in the Fortress of St. Peter and Paul, and he has already begun serving his term. His room adjoins that of Rear-Admiral Nebogatoff, who was sentenced to imprisonment for surrendering the Russian fleet to the Japanese in the battle of the Sea of Japan. General Stoessel is admitted to the private mess of the officers of the fortress.—The return of the American fleet by the way of the Suez Canal is a disappointment to Russia, as it indicates the passing of the conflict between America and Japan.—The budget committee of the Duma has been able to effect a reduction in expenditures of \$38,500,000, but this still leaves a deficit of \$64,000,000.—The reactionaries are pursuing the policy of assassination similar to that of the revolutionists during the past few years. Dr. Karavaieff, leader of the Group of Toil in the Second Duma, was shot and killed by two men in his home in Ekaterinoslav.

Macedonian Reform

The substance of the plan proposed by Sir Edward Grey for administrative reform in Macedonia has been submitted to the Powers in a diplomatic note, and is being actively discussed thruout Europe. The contents of the note have not been officially divulged, but it is understood to provide for the appointment of a Turkish Governor-General for Macedonia, not necessarily a Christian, but one whose character and capacity commend themselves to the Powers. He shall have a free hand, shall be secure in his appointment for a term of years, and irremovable without the consent of the Powers. In addition to this, the Foreign Secretary proposes an extended sys-

tem of judicial reforms and the conversion of the *gendarmérie* into an efficient force. The Turkish troops are to be practically or entirely withdrawn in order to save expense, and to prevent interference with the new régime. To meet the objection that the Turkish troops are needed for the defense of the territory, the Powers are to give a collective guarantee that the Turkish domain there shall not be disturbed from outside so long as the suggested arrangement is in force. The European press in general received the British proposal coldly, regarding it as not probable that the Powers should agree to impose such a régime upon Turkey at a time when they are individually seeking concessions for railroad purposes. The Mürzsteg plan now in operation, according to which Austria-Hungary has the management of the *gendarmérie*, commanded by an Italian general, is admittedly ineffective. The *gendarmérie* now only numbers 1,074 men, out of a total effective force of 5,742, and the shortage is still increasing. General De Giorgis Pasha, the Italian officer who has had charge of the force, has died, and his successor has not been appointed. In reply to questions before the Italian Chamber of Deputies, Signor Tittoni, Minister of Foreign Affairs, expressed his approval of the project of Baron von Aehrenthal for a railroad thru the Province of Novibazar, and also of the Serbian and Russian railway plans. He suggests the following arrangement to prevent railway projects from interfering with the necessary reforms:

"If each Power openly or indirectly gave Turkey to understand that this or that concession would be a bait which would make it lukewarm or indifferent in the matter of reforms, then doubtless the English alarms would be justified, the European Concert would be virtually dissolved, and they would seriously have to consider Sir Edward Grey's warning as to the possibility of the dissolution of the Concert's ending in a war. But, in my opinion, all danger can be averted if the Powers agree to place the question of railways on a different plane and to lay it down that, railways being a powerful factor of progress, their construction must be regarded as an essential part of the work of reforms in Macedonia. Each Power should not limit its support to the railway specially interesting itself. The European Concert should rather give its collective support to all lines, provided they are of practical utility."

Senator Knox and the Presidency

BY JAMES FRANCIS BURKE

[The author of this article is a Member of Congress from Pennsylvania, a resident of Pittsburg, which is also the home of Senator Knox. This is the third in our series of Presidential possibilities, articles on Governor Hughes and Vice-President Fairbanks already having appeared. Other candidates will shortly be discussed.—EDITOR.]

THE great quadrennial question, "What is your platform and who is your candidate?" is already framed and ready to be asked with more directness than ever before by the people of the United States. And the answers are certain to receive more careful scru-

icies and their real purposes, and have a broader and deeper knowledge of public affairs than they ever possessed before.

The all important question is: Who is the logical successor to President Roosevelt? Whether by Democrat or Republican, the question is practically the

SENATOR PHILANDER KNOX.

tiny and more intelligent consideration than has ever before been accorded a great political issue since first the party lines were drawn. The people are more intensely interested in what has been done and what is going to be done. They have studied public men and their motives, public measures and their meanings, pol-

same, and the temper of the public mind must be met and satisfied in this particular. With the President himself eliminated, this question is everywhere asked, and the insight which the public has gained in recent years has trained it to know that the logic of succession depends upon the logic of purpose; the object to

be subserved in the choice of the next President. If President Roosevelt were not ruled out by the third term principle, if he were re-elected, what would he be re-elected for? It would be to carry on the regenerative work which he has inaugurated—the special policies with which he is pre-eminently identified. Every one realizes that above all else, as the key to his strength and popularity, the work of President Roosevelt has been the protection of the people against unrestrained aggrandizement, the abuses of corporations and the regulation of corporate interests for public safety. It has been the prosecution of injurious trusts and unlawful combinations. He has accomplished many things, but in this field he stands eminently as the hero of the people.

This is the work which must be upheld by his successor. This high purpose must be the essential spirit and rational action of the next administration. These policies and the wisdom with which they will be directed must be the transcendent issue of the campaign. A mere declaration of sympathy with the things that have been done will not prove sufficient to satisfy the exacting intelligence of the public mind today. Positive and effective identification with the work which has been done is better evidence. If the nominee of the Republican party should be Philander Chase Knox, the party can truthfully say: We appeal to the people upon the record of things which he has done. In the enactment of the most beneficent and far-reaching laws in the nation's history, excepting Theodore Roosevelt alone, Senator Knox has done more in the actual framing and enforcing of them than any other living man.

In one of the last public expressions of Hon. Charles Emory Smith, a lifelong friend of Senator Knox, his associate in the cabinets of President McKinley and President Roosevelt, in an editorial in his paper, the *Philadelphia Press*, Mr. Smith said:

"The one man who, beyond all others—so far beyond as to be 'Eclipse first and the rest nowhere'—as associated with the origin, evolution, execution and success of the 'Roosevelt policies,' is Philander Chase Knox, of Pennsylvania."

Later on in the same editorial he said:

"To grapple with these evils needed the moral energy and aggressive force of a Roosevelt. He made himself the incarnation of the national conscience . . . but President Roosevelt, with all his courage and all his determination, could not have accomplished what he did without the legal acumen and the masterful generalship of a Knox. In his very able Attorney-General the President found a sincere sympathizer and a legal pioneer of remarkable grasp and penetration and skill."

That the President fully appreciated this is evident in that paragraph of his address in Harrisburg, on October 4th, 1906, in which he said:

"During the last few years the National Government has taken very long strides in the direction of exercising and securing adequate control over the great corporations, and it was under the leadership of one of the most honored public men in our country, one of Pennsylvania's most eminent sons, the present Senator and then Attorney-General Knox, that the new departure was begun."

During his years of public service Knox has persistently prosecuted corruption in public life, routed dishonest men from public service, driven unfair discrimination and oppression from the channels of commerce, and proved to the American people that the Constitution of the United States, instead of being a helpless invalid, is a giant with the strength not only to curb but to crush the greatest evils that have ever been revealed in the political life of this country. His great speech in Pittsburg, in 1902, was the first beacon which threw illuminating rays along the unrealized powers and possibilities of Government control thru interstate commerce, under the authority of the Constitution, and as Attorney-General, Knox at once became the exponent and executive of the new policies. Where others stood mystified and uncertain, doubting the ability of the untried, unconstrued and supposedly inadequate law, Knox struck out into the new path and triumphantly carried before the Supreme Court a new and enlarged chart of governmental powers. He began the battle for national control and regulation of corporations engaged in interstate commerce, and his foresight and legal judgment were vindicated by signal victories which have changed the entire face of the

relation of the Government to the great agencies of trade.

Secretary Root, in a speech which he made as president of the Chicago National Convention, in 1904, presented the work accomplished up to that time by Knox, who was then Attorney-General, in a clear, concise and comprehensive way, which induces me to quote two paragraphs. He said:

"The Attorney-General has gone on in the same practical way, not to talk about trusts, but to proceed against the trusts by law for their regulation. In separate suits fourteen of the great railroads of the country have been restrained by injunction from giving illegal rebates to favored shippers, who, by means of them, were driving out the smaller shippers and monopolizing the grain and meat business of the country. The Beef Trust was put under injunction. The officers of the railroads, engaged in the cotton carrying pool, affecting all of that great industry of the South, were indicted and have abandoned their combination. The Northern Securities Company, which undertook, by combining in one ownership the capital stock of the Northern Pacific and Great Northern railroads, to end traffic competition in the Northwest, has been destroyed by a vigorous prosecution, expeditious and brought to a speedy and effective conclusion in the Supreme Court.

"The right of the Interstate Commerce Commission to compel the production of books and papers has been established by the judgment of the Supreme Court in a suit against the coal-carrying roads. Other suits have been brought and other indictments have been found and other trusts have been driven back within legal bounds. No investment in lawful business has been jeopardized; no fair and honest enterprise has been injured; but it is certain that wherever the constitutional power of the National Government reaches, trusts are being practically regulated and curbed within lawful bounds as they never have been before, and the men of small capital are finding in the efficiency and skill of the National Department of Justice a protection they never had before against the crushing effect of unlawful combinations."

Senator Knox was a vigorous and successful administrator of the Department of Justice because he possessed the convictions, the attributes, the poise, the reflection and the judgment which make the great man in any sphere. He brought those qualities with him from his private law practice at the call of President McKinley. He carried them with him to the Senate. They will be his, and equally effective for good, in any future field of responsibility.

More than this, Knox was the pioneer in railroad rate legislation. In 1905 he

left the office of Attorney-General to become Senator, and at once stood in the front of the battle as the first and foremost champion of the President's policy of rate regulation. His entire record on all of the vital and progressive questions of the day stands unique and alone. The principles of the Roosevelt policies are the principles of Knox. He formulated them and framed their legal bounds. He firmly believes in their fundamental object of public justice and corporate regulation. And this great work so successfully outlined and so auspiciously begun must be carried on. The American people must entrust the great task to one whom they believe by right, by intelligence, by energy, integrity and firm conviction to be the man best fitted; whose mental and moral equipment indicates him as best capable of facing and successfully furthering the gigantic problems of Government under its immeasurably increased powers.

To quote again the words of the President:

"We need common sense, common honesty and resolute courage. We need what Mr. Knox has shown, the character that will refuse to be hurried into unwise or precipitate movement by any clamor, whether hysterical or demagogic, and on the other hand, the character that will refuse to be frightened out of a movement by any pressure, still less by any threat expressed or implied."

This was not said in the heat of a political controversy, but at a time when patriotism, not partisanship, was the President's theme, and because of my faith in his ability to judge men, his words impress themselves upon me at this time with a double emphasis. More especially because the President, of all men living, knows the tremendous task which lay before Mr. Knox in the crisis which confronted the Administration when colossal aggregations of capital, grown accustomed to exercise unlimited power in the conduct of business institutions directly connected with the public, became arrogant to the point of denying the authority of the Government to exercise any control over them. When the danger became most formidable and the crisis acute, that redeeming characteristic of the American Republic—the ability to produce the right man at the right time—asserted itself, and Mr. Knox

not only illumined new pathways of American jurisprudence, but by heroic efforts put an end to the pernicious practices.

The man who did this was dealing with a big proposition. He had big men as adversaries. To win he must have possessed moral strength and intellectual skill of the highest order. Knox won. The United States Government is one of the mightiest engines ever perfected by man for the enforcement of law and the orderly regulation of human affairs; but upon the manner in which it is operated will always depend its proficiency. And considering the peculiar character of the emergencies that now confront us there are few men who present the abundant qualifications of mind and heart and temperament which mark the junior Senator from the Keystone State—Philander C. Knox. There is no more correct and comprehensive description of the man who is needed for the present emergency than to quote another tribute to Senator Knox by President Roosevelt when he said:

"The tremendous growth of our industrialism has brought to the front many problems with which we must deal; and I trust we shall deal with them along the lines indicated in speech and in action by that profound jurist and upright, fearless public servant, Attorney-General Knox."

And what class of men would not be benefited by the election of the great Pennsylvanian? The laborer remembers that it was Attorney-General Knox who, in the name of the United States Government, refought the battle which a humble laborer had lost because the courts declared the Safety Appliance law unconstitutional. It was not only the first time the Government ever undertook to intervene in a private lawsuit, but Mr. Knox was the first who declared that it could be done, and the courts not only agreed with him but finally reversed the decision in the laborer's case, giving him compensation and upholding the Safety Appliance law.

The colored man wants for President the kind of man Mr. Knox proved himself to be when he instituted the first peonage prosecution in the United States outside of New Mexico, and convicted and punished those who sought to rein-

troduce a species of slavery in the South in the name of contract labor.

The business man wants for President just such a man as Mr. Knox proved himself to be when, in the conduct of the negotiations for laying the Pacific cable, he procured for the United States Government the most advantageous arrangement that has ever existed upon the part of any Government with respect to any other cable in the world.

The diplomat and statesman want for President just such a man as Mr. Knox proved himself to be when, in handling the multitude of intricate legal and international problems in acquiring title to the Panama Canal, he found ways to dispel a thousand doubts, and, by personally supervising the negotiations at home and abroad, brought back with him from Paris a title which the whole world now admits to be without a flaw.

The promoter of the honest, well managed corporation wants just such a man for President as Mr. Knox proved himself to be when he outlined and recommended the passage of those laws creating the Department of Commerce and Labor, completing the Government's power to investigate the organization, conduct, management and business of all corporations engaged in interstate and foreign commerce.

The law-abiding American wants at the helm just such a man as Mr. Knox proved himself to be when he upheld the Chinese Exclusion Act and sustained the law to deport alien anarchists from this country.

The great mass of men who provide for their prospective widows and orphans wants such a man in the Presidential chair as Mr. Knox proved himself to be when, for the first time in the history of the insurance world, he startled the country not only by the disclosures he forced as counsel in the investigation of the Equitable Life, but by the bold and clear-cut remedies which he declared must be applied universally in order to place insurance management upon a basis that would justify its future support by the thrifty, law-abiding citizens of this country.

The Republican wants just such a man as Mr. Knox has always proved himself

to be in his treatment of party leaders and party policies.

He believes the Republican party is bigger than the individual and its power for good far more enduring.

For this reason his aim has always been to upbuild and never to undermine it; to ennoble it and not enfeeble it; to purify and perpetuate it and never to destroy or discredit it.

He believes that as it has accomplished the greatest achievements in our history and embodies in its future purposes the perpetuation of wise and far-reaching plans for the betterment of the human race, it is entitled to the best thought and the best service within the gift of every man who marches under its colors.

Now that the reader has been enabled to judge of the man by his public work, it may be proper in conclusion to state

that the general characteristics already revealed have always asserted themselves in his private affairs.

Senator Knox is no enigma; no narrow-gauged specialist; no crusader with a hobby.

He is just a warm-blooded, good-humored, big-hearted, cool-headed, broad-gauged American, fifty-three years old and fifty-three years sensible.

Whether surrounded by his delightful family in his Pittsburg or Washington home, or enjoying the ease of a philosopher on his beautiful farm at Valley Forge, he is the same even-tempered, clean-cut, companionable gentleman that he always gave promise of being from the days of his youth in Brownsville, Pa., the boyhood home of Blaine, and, if logic reigns, the birthplace of the next President of the United States.

WASHINGTON, D. C.

Travelers in the Air

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," ETC.

JUST at this time, if one could study the upper air at night, he would see it clouded with great flights of birds moving northward. Occasionally one of these flights passes over a star and puts it out, and I have seen them passing over the full moon like a great procession of spirits—rather dark ones. These flights of birds continue for something over a month. The bluebirds started from Florida about February 15th, and some of them are already in New England. The robins started on the evening of February 26th, at five p. m., and in clouds that darkened the sky for two hours. It was a marvelous sight, and I have never seen anything to compare with it since the pigeons used to make their migrations across New York. These flocks will have reached their Northern home in about three weeks. Blackbirds are singing all thru the pines, and with them big flocks of redwings give choral melody of a high order. I do not know of anything finer, even here

where the birds are singing more or less all the time. One flock after another moves northward, rather leisurely, and I am not quite sure when they will reach their destination. Catbirds show themselves occasionally in Central Florida, but most of them go farther southwestward for the winter. They will reach New York State about the 5th of May. So far they are mostly in hiding, and are as hard to hunt up as they are in the North.

I have referred to only a few of these migrants, but will you try to get a vision of their wonderful passage, covering the whole earth over a zone two thousand miles in width? Flock after flock; and, if you care to keep vigil, you will be able to discover a good deal about them at any hour of the night. Most of them drop down by day to feed, and partly for economic reasons and partly for safety, they do their traveling by night. The velocity with which they travel is far beyond anything that is attainable by man. They probably cover over 500 miles in a

single day. They do not, however, go in a straight line, but follow the larger valleys and river courses, which offer them a better chance for dining. The flight is also considerably influenced by winds and storms. I have the authority of Nuttall that birds do not assemble and classify themselves, or make any sort of social arrangements for their great migratory movements, but I know better.

You should have been with me during the last two or three winters, and you would have found nothing more interesting than this collecting of different sorts of birds and the arrangements for a common movement. Robins and bluebirds prefer the neighborhood of the lakes, and are found in vast numbers in the bayheads—that is, where the springs start that flow down to and feed the lakes. I can liken a robin assembly in one of these bayheads to nothing but a swarm of bees. They are on every bush and tree and all over the ground—chattering in a roar of robin conversation. It is unlike anything I ever saw or heard in the North, even in migratory season. At first it looks like a vast confusion and absolute disorder; but you will soon see that it is not, for there is discoverable a very definite movement in small groups. A half dozen or a dozen robins will spring up together, and move off into other groups. Organization grows more and more apparent to you as you watch them. To distinguish the leaders is difficult, but I am sure that I have been able to select those who direct affairs. However, the multitude is beyond all estimate. For half a mile I walk about, and they are so thick that they hit you in their flight. This gathering together and arrangement of their social affairs goes on for two or three weeks. This year I am not in the center of the organization, and last year was hardly in the rim of it, but the year before I found myself in the very core of this marvelous bird life. This year they are all about my lake, in numbers sufficient to make a very interesting study. Occasionally I happen upon some one Bobby by himself, and he looks at me so familiarly that, for a moment, I feel sure that he is the very fellow that built a nest in the grapevine by my window last June. When I say to him, "Bobby, do you remember those five

babies? Really, now, are you not the very fellow who ate my cherries—those May Dukes that I so much craved?" He snaps his tail and says something in Robinese that I do not quite feel sure about. Very likely he came from down the Hudson, or possibly he is only a denizen of the Central Park in New York—robins are so astoundingly alike! I often wonder how they can distinguish their own mates.

February is pretty well used up with this gathering together of the clans and their moving onward. Order, precision, certainty is everywhere. How do they *know* when to start? Do they have advance couriers, or do they go by instinct? Ask John Burroughs. I myself think that they have messengers, and that they know pretty well when the first spring showers will start the green patches of grass down the creeks, and when the first angleworms may be expected above ground. They know, too, just as we do, about how large a supply of barberries and high bush cranberries can be counted on in a pinch. These birds know very well that they run some risk in starting so early, and that they are certain to encounter more or less of snowstorms and cold snaps. But a bird never loses the boy spirit; he likes to dare a little. For this reason the robins are always ahead of steady spring weather, and occasionally they are the worse for it. For my part I like to fall in with them; and so I leave such berries and fruits on the trees and bushes as will help them thru a couple of bad days. A share of the persimmons, left to dry on the tree, will be appreciated; and the pine grossbeak, with his friends, the cedar-birds, will take the very last of the viburnum seeds.

Several hundred bluebirds sitting on the wire fences and filling the bushes, is a sight you may go far to see. I never dreamed of anything more beautiful. They are not very shy down here, but exactly what they eat I can not determine. Robins pick up insects and enjoy some sorts of vegetation around the lake shore. I have not been able to determine what it is they most feed on, as they run down near to the water's edge. Some of them loiter here until the mulberries are ripe. I would if I were a robin. It is about the most delicious food for all sorts

of creatures that even Florida furnishes. The trees are always full of cardinal birds and mocking-birds, and I believe that even the shrikes are sometimes tempted away from insect hunting to pick a few mulberries. Loquats are ripe before they start, and are eaten by blue-jays and mocking-birds, and I think by robins. This fruit is the shape of a small pear, of a lemon yellow color, and has the flavor of a cherry. They cling so close to the tree, in huge bunches, that the birds rarely pick them off, but stand on the bunch and pick holes. Its flavor ought to please a robin. The bluebirds evidently are getting all that they want, for they are in the most perfect plumage. But oh, that blue; it seems twice as blue as in New York! However, they fly so high up there that one can hardly see the color. As for music—well you know what bluebirds can do, and they do it here with such a hearty sweet will. You can imagine them preluding their New York songs under the influence of softer and sunnier skies. Either I am prejudiced, or they far surpass in sweetness of song any of our non-migrating birds. Why should they not?—they have traveled; they have seen the world; they are cosmopolitan in spirit. The mocking-bird is a rattler, and has a wanton way about him. Perhaps he might please Wagner, for he can make any sound that he pleases. As a rule even the shrike or butcher bird gives us sweeter notes, altho you can never be quite sure what he is going to sing. The red cardinal birds are, perhaps, more to be praised for rich and real melody; but the rule holds good that the migratory birds are the better singers. The catbird vastly outdoes the mocking-bird—altho a sort of second cousin, I believe.

Blackbirds are as pert here as they are at their Northern homes, but they have different manners, and they handle their voices very differently. They get into the tops of pines, eighty to one hundred feet high, and, at a signal, set off a musical program decidedly better than any other bird music I have heard in this section. It is like the Swiss bell-ringers—tinkling, rippling, joyous and, above all, a choral harmony. They rarely come down into our orchards and gardens. The flocks are moving leisurely north-

ward, and stop mainly to have a good time singing. I have heard only one orange grower make an unpleasant criticism concerning this corn-pulling torment of the Northern farmer.

There seems to be a tendency on the part of some of the birds to break up migration, or, at least, to prolong their stay in the South. This is precisely like the drift among our Northern birds, to stay all winter where they can find abundance of food. The herons are far more safe, especially the white egrets, than they were a few years ago—thanks to saner laws. The result is that they move about less, and are growing somewhat domestic. A blue heron nested in my garden last spring and raised a litter of babes. It was not much of a nest, but it was exceedingly interesting. A few robins are sure to stay in the North if their home is among cedars and pines and there is a good showing of wild cherries and similar food. I think a grove of mountain ash would be a tempting winter home for a good many of these fellows that now migrate.

I should like to see a flock of robins light on its arrival in the North. I never yet caught sight of an arrival; I am always asleep. There they are at day-break, and one of them (the one that sings "Hear This Birdie—This Beautiful Birdie") is on the top of the big spruce, just before my window; and there, at the very tip, and fifty feet high, he is pouring out his soul in gratitude for his safe arrival. Another one over back of my barn, who has for years been in love with an apple tree, replies. A church full of singers could not praise God any better. So with the bluebirds; the first that I know of them is a strong, clear, rich note, away up in the April sky, as far as I can distinguish the singer. What I want some time is to catch some of these flocks on their arrival and before they have scattered to their respective homes. It is a different thing, however, with the swallows or chimney swifts, for I know just when to expect them, and just where the big cloud will rest, and many a time I have watched them hour after hour discussing affairs and starting off in small flocks to different parts of the township. Evidently no bird has a right, entirely, to consult his

own individuality. Free and independent as a robin seems to be on your lawns, he has his location designated on the communistic principle. I do not remember that bird society has been thoroly studied, but it well deserves an Audubon.

Early in April you may expect the great blue heron about the marshy places and the lakes; and at the same time the purple finch's delightful voice breaks thru your budding vines, setting you on a quick hunt to get a glimpse of his crimson feathers. Some one says he looks as if he had bathed in the berry juices where he had taken his breakfast. The note of the vesper sparrow is easily compared to that of the bluebird, trilling down the long shadows of sunset—for he is not a lover of the morning. Then comes the well-beloved chipping bird or chipper sparrow, who is in love with the morning; and with him the warblers and the wrens. About the first of May, sometimes a few days before and sometimes a few days after, come, almost together, the four greatest American singers—every one a prima donna. These are the brown thrasher, the wood thrush, the veery and the catbird. All of them are very shy, but if you make your acres absolutely safe from guns and cats, and make them feel sure that they will never be disturbed, all four will leave the forest edges and wood lots and come as close to you and as familiarly as the robin. I do not believe that anybody will be quite tamed to this sort of civilization until he has had one or more of these birds nest near him and sing to him. I would not miss my catbirds for my cherries, and my wood-thrushes are as important to my household as my currant bushes. While you are in your balcony, reading or writing, suddenly a flash comes thru the vines, and into your honeysuckle or your cherry blossoms dips like a dart a ruby-throated humming-bird. Where he has been he does not intend to tell you, and if you can find his nest you will do better than I can. I never found but two in my life.

For a few days after locating, not much in the way of house building is accomplished. There is some courting, some sporting, a good deal of looking around, and not a little offhand play. My catbird uses up one day chattering with

me. And then he gives me a sample song, looking joyously and lovingly down into my face. We love each other; better yet we love to tell each other. I imagine he has found out that I myself go to Florida; I wish we could go together. Then for a few days he is busy hunting a safe place for his nest. The robin likes to take an old nest and fix it over, or build close by it, but the catbird is too cunning to be found in the same bush two nesting seasons in succession. He spies into every shrub, darts thru the hedges, and when he has finally settled down you will see very little of him for several days. It is not easy to watch a catbird building its nest. Mating is done promptly for the most part, but sometimes it is a noisy affair; but only when two fellows want the same girl. Then the affair becomes too entirely human to be pleasant. Hard names and hair-pulling, but no pistols.

This is the way with these friends and allies of man. We could not cultivate the earth without their help. There are a few hawks and some kinds of sparrows that are unmitigated nuisances; for not even a Government bulletin can persuade me to the contrary. These fellows and the crows, so far as they are migratory, move in the daytime, and they are in no sense our companions or friends. But the great universe of birds, the real undegenerates, are our companions and co-operators. A man is not half a man who can find any sport in killing them, and a woman has never felt genuine religion who will encourage the slaughter of God's babes. Perhaps they do not reason as much as some men; they reason more than most men. And when Mr. Burroughs falls back on the argument that all reason is only the expression of Infinite Wisdom, he makes no substantial cleavage between us and the birds—God's choir. To me religion is co-operating with the Divine Will. To keep a day holy and read a sacred book cannot compensate for interference with His plans. Agriculture depends on seeing what God is doing, and what He wishes to have done. So it is that Religion and Industry are co-ordinated. My robin song is the revelation of Infinite Goodness; and the bluebird so trills of heaven that I dare not fail to hear it. Do you remember

what Maurice Thompson once sang in
THE INDEPENDENT? I recall it now:

"A migrant song bird I,
Out of the South I fly,

Urged by some vague, strange force of des-
tiny;

To where the young wheat springs,
And the maize begins to grow,
And the clover fields to blow.

I have fought

This vague mysterious power that flings me
forth

Into the North;

But all in vain. When flutes of April blow,
The immemorial longing lures me, and I go."

What is there in our human adjust-
ments so really perfect as this bird migra-
tion? We are trying our inventive and

mechanical skill to the utmost to secure
safe and easy carriage thru the skies; but
up there tonight whole families, yes,
whole communities, are moving in easy,
graceful flight, illustrating a flawless in-
dividual and social economy. Alas, I
have just learned that a mean Cracker,
who can neither fly nor sing, nor read nor
write, nor otherwise prove a reason for
existence, has brought into our village a
bag full of slaughtered robins. Over my
own acres and all around the lake I set
up "No Shooting on These Grounds."
Let the whole of the United States soon
be covered with similar protective signals.

SORRENTO, FLA.

The Jeanes Bequest to Swarthmore College

BY JOSEPH SWAIN, A.M., LL.D.

[When the retiring Miss Jeanes made her conditional bequest to Swarthmore College she did not imagine that she would stir up the most startling educational sensation of the year. We are glad to have the president of the college tell why it was declined last week. —EDITOR.]

The managers
of Swarthmore
College have de-
cided one of the
most interesting
questions that has

Swarthmore Col-
lege that they have,
after careful delib-
eration, unani-
mously declined the
conditional gift of

ever been raised for settlement by
any American college. No grow-
ing college of high standard has
ever known what it is *not* to be
poor. It is therefore a serious mat-
ter for any college deliberately to de-
cline a sum of money, large or small,
which may be used in adding needed
teachers, increasing salaries, or in any of
the numerous ways that would promote
the interests of the college. It is the
more difficult for a college to decline a
gift when that gift requires the college to
give up certain things which, in the judg-
ment of many, should be given up in any
event. Under these circumstances it is
greatly to the credit of the managers of

Anna T. Jeanes. I am, therefore, glad
to comply with the request of THE IN-
DEPENDENT briefly to review the case.

Anna T. Jeanes, a wealthy member of
the Society of Friends in Philadelphia,
died September 24th, 1907. She was a
woman of very simple habits and had
for herself very little use of her wealth.
She had given liberally to her own re-
ligious society for many purposes and
had also given to many worthy enter-
prises outside. She built the German-
town Home for Aged Friends, where she
lived for some time prior to her death.
Her largest single gift while living was
\$1,000,000 for the education of colored
children in rural schools.

Miss Jeanes had never seen an intercollegiate game of any kind. She had formed the opinion from reading the newspapers that intercollegiate football was wholly bad. She dwelt in conversation on its evils as she understood them. She was very independent, having decided opinions of her own. It was known to a very few before her death that she would make a gift to Swarthmore College on the condition that intercollegiate athletics should be abandoned. It was believed that no one could influence her in the matter unless it were to have her strike out the item altogether. Personally, I believe the managers have done more for higher education in declining the conditional gift than they could possibly have done with the money, even if the amount had been large and there had been no string to it, notwithstanding the present needs of the college.

The item in the will of the late Anna T. Jeanes is as follows:

"I conditionally give, devise and bequeath to Swarthmore College my coal lands and mineral rights in the State of Pennsylvania, together with my five-eighths ownership in the Rebecca Steadman tract (Hazel Brook Colliery), on the condition that the management of the aforesaid Swarthmore College shall discontinue and abandon all participation in intercollegiate athletics, sports and games, but should the management of Swarthmore College fail to accept and carry out these conditions, I will and direct that the aforesaid coal lands, mineral rights, and ownership shall be sold and the proceeds thereof (amount realized) shall be included and merged in the assets of my estate."

Many suggestions have been made on the theory that the money could be accepted without giving up intercollegiate athletics. It will be observed, for example, that the letter of the will does not require that the students shall give up anything whatever. "The management . . . shall discontinue and abandon all participation in intercollegiate athletics," etc. As the management has never engaged in these games, it is clear that there is nothing for them to give up. It has been suggested that the students could join a club in the borough and play with other colleges as members of the club, thus technically evading what is thought to be her intent. I have received numerous letters from lawyers and others, saying that such a restriction as

the one imposed by the Jeanes will would be against public policy, that the college should accept the gift and the courts would ultimately decide that the condition is not binding on the college. There are many illustrations of cases in which the conditions of testators have been declared void for some reason by the courts.

One letter from a thrifty lawyer in Vienna, Austria, seems worthy of insertion here:

"To the Highly Honorable Quaker College in Swarthmore, Pennsylvania, United States, North America:

"HIGHLY HONORABLE COLLEGE—I have read in the papers about the bequest of twelve millions which the recently deceased Miss Jeanes left to your famous Quaker College, but which the highly honorable College cannot accept because Miss Jeanes connected with the gift certain apparently impossible conditions. Now this bequest can nevertheless be accepted, since there is a thoroughly unobjectionable plan which will not infringe the conditions of the testator, and yet will justify, in the fullest measure, the acceptance by the highly honorable College of the gift, without thereby obligating it to fulfil the condition of the will.

"I am prepared to acquaint you with this plan, provided the highly honorable Quaker College guarantees to pay me a fee of 10 per cent. in cash of the whole sum which it receives, immediately upon its entrance into the legacy.

"Awaiting your answer with this guarantee, whereupon I will acquaint you with further details, I remain,

"With high respect,"

The consensus of views of lawyers consulted, however, is that, unless the board of managers of the college is willing to say, in spirit, at least, that intercollegiate athletics will be permanently given up, the executors could not legally turn over the property to the college.

Whatever may be the legal aspect of the matter, the board did not for a moment consider taking merely a technical view of the case, but desired to meet it squarely as a moral question. They would either accept the gift and have the college give up intercollegiate athletics forever or decline it. Had the will been worded in such a manner as would have enabled the board to take the gift so long as the policy of no intercollegiate athletics was regarded as wise, thus permitting of experimentation, the case would have been very different. This was not

regarded by lawyers as feasible under the wording of the will. With this interpretation it seemed clear to many of the managers that the question of the amount of the gift should not enter into the case, yet they thought, as trustees of the college, they should know all the facts in the case before rendering a decision. A committee was therefore appointed to find out the value of the bequest and the legal rights of the college, should they accept it.

As the whole educational world and the public generally have taken a great interest in the announcement by the press that a bequest worth from one to three million dollars had been given to Swarthmore College with the condition mentioned above, it seemed to me that the decision of the board in the case was not one affecting Swarthmore alone, but one which might affect the policy of donors to other colleges also, and therefore of importance to higher institutions of learning everywhere. I therefore sent letters to twenty-five representative presidents of colleges and universities in the United States, asking three questions. As the value of the property was not then known—the value assumed by the press not being given out by any one who knew the worth of the property—it seemed to me that the general question of the acceptance of such conditional gifts being raised, no matter whether the gift was large or small, the board should meet the whole question in order to be of the largest service to higher education. It was this thought which led to the three questions asked of the presidents. The questions were as follows:

"1. In your opinion, have the trustees of a college the right to bind for all time an institution of learning by such a restriction as the one mentioned above?

"2. If so (*i. e.*, if the principle of accepting conditional gifts be approved), should the gift be accepted in case it amounts to \$1,000,000 or more? Please give reasons.

"3. If the gift should be \$50,000, what then?"

The summary of all answers was as follows:

Question 1.—Eleven negative, seven affirmative, five non-committal, two say yes, legally; no, morally.

Question 2.—Thirteen negative, seven

affirmative, four non-committal, one unanswered.

Question 3.—Seventeen negative, four non-committal, four unanswered.

As my own statement to the board of managers was included as an integral part of the board's report of the case, quotations from that statement may be taken as fairly representing the line of thought of the board which led them to decline the gift.

A college exists for the education of the whole human nature of the students. It should be free to teach the truth as each generation of teachers sees the truth, and be free to use such methods as seem best for the development of the mind, body and character of the students. It should be free to make use of every available opportunity for this purpose. Swarthmore College at present has no restrictions which the authorities of the college cannot change, excepting those in the charter, which can be changed only by legislation.

There is no college in America today which is the same college that it was twenty-five years ago. Old subjects have new aspects and new subjects have been introduced. Conditions in general have changed. There is no reason to suppose that there will not be marked changes in the future. There are, therefore, grave objections to the board deciding whether any special thing shall be done or shall not be done, say ten years hence. To require that a particular thing shall or shall not be done fifty or a hundred years hence is still more objectionable, and to say that any particular policy shall be the policy of the college forever is unwise and even dangerous. Each board should be free to decide what is best from year to year. In general, gifts to a college should be given in such a manner that the board would be free to use them in a way that seems best at the time, though of course every college is glad to receive gifts for the maintenance of special departments or other special objects.

Conditional gifts, which necessarily restrict the use of other funds or other gifts of the college, should be accepted, if at all, with great caution. Of course, certain conditional gifts are entirely

legitimate. The conditional gift of Andrew Carnegie to Swarthmore was a proper one. He gave \$50,000 for a library building when he was assured that the college had secured an equal amount of new endowment, the income of which is to be used for the maintenance of the library. So far as one can now see, this is a helpful condition. The condition has been fulfilled and there seems good reason to believe that the endowment can always be used as directed. One cannot imagine a time when a library will not be useful. At least the condition imposed does not in any way restrict the freedom of judgment of the trustees in the use of *other funds* of the college.

Gifts of money for needed buildings or for endowments are, of course, legitimate. Gifts which are coupled with a condition relating to material equipment, and which require that other gifts shall be secured before they are available, may be highly desirable, but there is a fundamental distinction between such gifts and those in which the condition restricts the freedom of the institution, either in its educational work or in its social life. A college might be asked to so limit its usefulness, in compliance with the individual caprice of a testator, as no longer to deserve the name of a college.

The best college life is neither created by contracts nor by arbitrary rules and regulations, nor in general by revolutionary methods, but thru the natural laws of evolution. The college life should grow up thru the action of the students and teachers working together in freedom.

It is necessary to regulate this or that from time to time, but the regulations of one generation may be entirely unnecessary or even harmful to another. A study of the rules and regulations of almost any college of a generation ago, compared with those of today, will at once show the folly of trying to fix the social life of any institution in any particular thing, by arbitrary decisions.

A policy which has grown up in freedom and under the sanction of the authorities of a college, if given up at all for financial reasons, should be given up with great caution.

It is conceivable that a conditional gift,

such as the one under consideration, might be so large that new facilities could be provided with its assistance which would more than outweigh the limitations involved. Yet the fact remains that if such limitation is once accepted there is no reason why limitations in other directions may not be made. If a college agrees to give up intercollegiate athletics for a certain sum of money, why may it not agree to continue intercollegiate athletics forever for a certain sum of money? Why not agree to have or not have forever military drill as a part of the college curriculum? If any body of trustees assumes to be wise enough to decide such matters for all time, why not decide in a similar way on the propriety of teaching or not teaching the doctrine of the free coinage of silver, or the gold standard, the doctrine of materialism, or what not? Suppose that in the middle of the eighteenth century a college should have been richly endowed on the condition that it should teach loyalty to the king, or even more recently, to justify human slavery. Can we imagine a more difficult position than that of an institution bound to a trust, the terms of which had become absolutely at variance with the development of society?

A college must be loyal to its students, to its alumni, and its friends. It is not probable that under ordinary conditions any college would be endowed with so large a sum as to make it independent for all time without additional gifts, nor is such a condition desirable. A growing college must continue with each year to have increasing income. A college must commend itself to each new generation. To sell for a consideration a privilege which is regarded by students, and to say the least by many alumni, as a wholesome and healthful custom, is not likely to bring unity and co-operation among the friends of the college. No one is wise enough, under all the present conditions at Swarthmore, to foresee what the effect of the unqualified acceptance of such a gift would have on the future of the college. Swarthmore, as well as any other institution of learning, needs money, but she needs still more the continuing love, counsel and support of her students, alumni and friends.

Two hundred and twenty-five years

ago, inspired by the teachings of George Fox, William Penn left all the opportunities of the Old World to come to the new and establish this colony on the Delaware. His "holy experiment" embodied the most advanced ideals of civil and religious liberty of his time. He tried to found a state in which every man would have the power to follow the light of his own individual soul. Can the board of managers of Swarthmore College afford to stultify themselves by denying the future right of individual judgment to themselves and to their successors, even in matters deemed by them

of minor importance? The college should not be responsible for an act which would belie the fundamental teachings of the founder of our society, the sage and seer of Swarthmore Hall; nor should it belittle the faith of the founder of the Commonwealth of Pennsylvania. Swarthmore's historic position has been one of freedom. That freedom is above the price of endowments.

These are a few of the considerations which led to the belief that the conditional gift of Anna T. Jeanes should be declined.

SWARTHMORE, PA.

Across the Atlantic

BY ROBERT FROST

LEANING, one speaks between surrounding
hands,

With lashes lowered as deeming not to see,
And the tide smooths the beaches at her feet.
"Sister," she says, "I faintly hear thy word,
But hear thy word in heart-beats—speak again.
Darkness comes down upon you speaking
there;

The waves go toward you standing under
stars;

They come to me in sunlight further west;
Somewhere between they leap to the wind's
love.

It is the old sea there, no man's abode,
Not time shall make less desert than it is,
And yet no more, no more the sundering sea.

"Once she held in the hollow of her wave
The little, tossing missive boat you sent.
Days, nights, she had it in her power to
whelm,

But paltered with its fate and let it pass.
Time to come then between us for all time!
The ship, light-riding, came and went again,
Empty of India's jewels, to its port
To find before it there da Gama's fame
And nought to match against his prize in hand
But truth that lit the yards like Elmo's fire.
And the old sea was less the sundering sea.
She has strewn wrecks since then and ships
from port

She has hurled back ashore and banked with
sand.

Too many have come with sails, to sink them
all;

And now they trample flat the waves they run.
Ever the sea is less the sundering sea.

"But demon-like she hides her secret thought;
She veils her face in mist and folds her hands;
She murmurs 'What have I to do with men?'
What had she ever, space made palpable,
What but keep aching heart from heart too
long,

What but keep life too long from half the
world?

But she has said it, little has she left
Could she but hear the word we pass today—
Perhaps she hears in the green moated gloom,
Or feels like leaden touch thru all her cold,
Like sea-stones smitten feebly under sea,
Like bell-stroke deadened downward from the
keel.

I deem she hears. Could she but comprehend
And say if I speak less than truth to thee:—
It needs not shipping to come safely thru,
Sister; it needs not ropes of iron more
To hold, or she will part me from thy word:
Thy softest word shall reach me thru her
storm.

Sister, dominion has past from her brow—
Forget the sea, no more the sundering sea."

DERRY, N. H.

Metropolitan Operas

Enrico Caruso is undoubtedly the greatest lyric tenor of the time, yet he has his limitations, and some of them are surprising. Thus, for several seasons, Mr. Conried endeavored to induce him to assume the part of Manrico in "Il Trovatore," and was finally compelled to place it in the hands of Heinrich Knote, who was remarkably successful in it. Possibly this aroused Caruso's jealousy; at any rate, altho the Munich tenor was here again, Caruso took the rôle into his own hands this time. The result proved that his hesitancy was not without just cause. He had to transpose one of the principal arias a whole tone down, and there was evidence that Verdi's style in this opera is somewhat too robust for his voice. Nevertheless, he sang most of the music beautifully, and with Emma Eames as Leonora and Louise Homer as Azucena the opera has proved one of the big successes of the season.

Next to Caruso, the artist who has the greatest drawing power at the Metropolitan is Geraldine Farrar. Her voice has improved since last season in beauty, flexibility and evenness, and as an actress she recalls Emma Calvé in her best days. Some object to her methods because she is no respecter of traditions, but insists on doing everything her own way; to others this constitutes one of the principal charms of her art. It gives it an individuality that musical epicures enjoy greatly. Moreover, her way is usually better than the traditional one—more

realistic and interesting. She is a pupil, to the present day, of Lilli Lehmann, yet she does not imitate her ways slavishly. Instead of going to the opera house to see how others do it, she studies the text and the score and tries to find out for herself how the composer wants things done.

Of the eighteen rôles in Miss Farrar's repertory New Yorkers have now had a chance to hear ten, the latest two being Violetta in "La Traviata," and Mignon in Ambroise Thomas's opera. She does not, of course, execute the florid music in Verdi's operas with the brilliancy of Madame Tetrassini, but she sings the melodies more sweetly and expressively, and as an actress she is more sympathetic than any of her rivals in this rôle. It has been truly said of her that her Violetta dies "not of phthisis, aided and developed by dissipation, but of a broken heart." Her Mignon is simply enchanting in its diverse aspects, as a gypsy girl, a jealous rival of Filina in the attire of a page, and in her native land as an Italian beauty.

The Filina in this revival of a once very popular French opera was another American, Miss Bessie Abbott, who has also appeared as Gilda in "Rigoletto." Her beautiful voice is well trained, but it is rather light for so large an auditorium, and as an actress she is mediocre. She lacks the ambition, the determination to reach the top, which is one of Miss Farrar's chief assets.

It is likely that Miss Berta Morena, who arrived for the last four weeks of the season, will prove as popular an art-

ist as Miss Farrar. This is the third season of her engagement by Mr. Conried, but until this year illness prevented her from crossing the Atlantic. In Germany she is at present the most beloved of the Wagnerian sopranos, and the affection felt for her is based on many good qualities, the most important of which is a voice imbued with deep feeling, a voice that speaks to the heart, and enlists our sympathies at every moment. It is beautiful in quality, too. Beautiful also is the face of Morena, as beautiful as it is expressive; and it is undeniable that in a rôle like Sieglinde (in the "Walküre") or Elizabeth in "Tannhäuser" we are more deeply moved by an artist whose voice and face are beautiful as well as expressive. Miss Morena, in a word, is one of those ideal Wagner interpreters in whom diverse winsome qualities are blended so well that they form a harmonious whole which one forgets to analyze and has no desire to criticise.

For lovers of Wagnerian opera the great event of the season will be the cycle of four "Nibelung" operas to be sung, with Morena and all the leading German vocalists, on the Monday, Tuesday, Thursday and Saturday evenings of the week beginning April 13th.

Manhattan Operas

Oscar Hammerstein engaged Madame Tetrassini for fifteen performances at his opera house, but by the end of the season she will have sung about two dozen times, nearly always to crowded houses. His other leading prima donna, Miss Mary Garden, also has become very popular, and with an occasional Nordica, Schumann-Heink and Calvé night, the manager has succeeded in overcoming the chief weakness of last year's performances—the paucity of great women singers. His season altogether has been such a great success that he will doubtless start with a big subscription list for next season. Last year "society" avoided the new opera house, but this year not a few of the social leaders were to be seen occupying boxes at the Manhattan on the important nights.

The public is to be congratulated on Mr. Hammerstein's success as much as he is himself. He has given agreeable

variety to the operatic repertory by his production of French operas like "Pelléas et Mélisande," "Louise," "Thais" and "Les Contes d'Hoffmann," and to the lovers of ornate song he has given great delight by importing Madame Tetrassini. The public has shown a preference for her in "Lucia," which is her own favorite opera, and in "La Traviata." Since our last writing she has appeared for the first time in "Dinorah" and in "Crispino e la Comare." The last named, by the Ricci brothers, is more old-fashioned than the oldest of the Donizetti operas that have kept the stage. The music is tuneful but artificial, and even the brilliant vocalism of the prima donna could not arouse much interest in it. "Dinorah" proved to be one of her most effective parts, the "Shadow Song," in particular, affording her a rare opportunity for the display of her dazzling vocal tricks.

The return of Emma Calvé for three performances of "Carmen" revived the interest in that splendid opera. The eminent French soprano has grown too corpulent to enact the coquettish Carmen of the first act as she used to, but in the tragic episodes (especially the card and murder scenes) she is still incomparable as an actress, while her voice has retained its luscious quality and agility to a surprising degree.

The most astonishing thing regarding the Manhattan season is the success of the vague, unmelodious, enigmatic "Pelléas et Mélisande." At the first performance, it will be remembered, Mr. Hammerstein made a brief speech, in which he said that "if a work of such sublime poetry and musical grandeur meets with your approbation and receives your support it places New York at the head of cities of musical culture throughout the world." Evidently New York has reached that place, for Debussy's opera has been sung seven times to crowded houses, which is more of a success than it achieved at its first production in Paris.

For next season Mr. Hammerstein promises half a dozen new rôles for Miss Garden, and the same number for Madame Tetrassini. He has re-engaged all of his best singers. He has announced that he will give no more half-rate Saturday night performances, but will pre-

sent operas on Sunday nights, at the usual low Sunday prices—an innovation which will excite much discussion and probably some protest. He seems to fear no interference, because, as he says, “under the law recently passed by the Board of Aldermen, all educational and musical performances are allowed on Sundays.”

Soloists and Concerts

Josef Hofmann, who may safely be called the greatest pianist of the day with the exception of Paderewski (in Russia and Mexico he is even more popular than his rival), is a prolific composer, but he seldom plays any of his own works. There was great surprise when it was announced the other day that he had written five concertos, the third of which he would play at a Philharmonic concert. It proved to be a euphonious piece with individual themes worked up with skill, and a genuine instinct for orchestral as well as pianistic coloring. It is not likely, however, to be played by other pianists—at least not for some time to come.

The young Dutch pianist, Jan Sickses, who became a professional musician much against the wishes of his family and friends, gave a concert in Mendelssohn Hall at which he proved himself an adept in Chopin, and particularly also in light airy pieces of the higher drawing-room style like Mendelssohn's scherzo in E minor, R. Strauss's “Rêverie” and Nedbal's minuet.

Jan Kubelik has not given a recital in New York this season, but he has twice filled the vast Hippodrome with enthusiastic audiences eager to hear him play pieces ranging from the Mendelssohn concerto (with the Russian Symphony Orchestra) to such an extraordinary freak as an arrangement for violin alone of the sextet from “Lucia.”

Walter Damrosch's cycle of Sunday afternoon Beethoven concerts has somewhat unexpectedly proved a popular success. The Philharmonic also has played several of the Beethoven symphonies, and Dr. Muck ended the Carnegie Hall Series of the Boston Symphony Orchestra with one of these works. There is much regret because Dr. Muck has to return to Berlin.

His place will be taken by Herr Fiedler. Dr. Muck's last evening concert was devoted entirely to American composers. It will be remembered in his favor that he has paid more attention to our composers than any other conductor imported from Germany. It is to be hoped he will make the Berliners acquainted with some of the scores he learned to like here.

In the line of choral music there is nothing of special importance to record unless it be the formation of a new Bach Society by Mr. Sam Franko, and the completion of the fifteenth season of the Musical Art Society, which makes a specialty of the old seventeenth and eighteenth century church music and usually sings it admirably.

The Month in Painting and Sculpture

Sculpture exhibitions in New York are generally secondary to painting thru lack of exhibition facilities. We have had no such chance as Baltimore is to enjoy toward the end of next month when, as the guests of that municipality and with expenses for transportation all paid, the members of the Sculpture Society show works of all kinds and sizes under excellent conditions. But the St. Gaudens exhibition at the Metropolitan Museum has been as great a pleasure and, perhaps, in point of interest expressed by the public, a greater success than was anticipated. The Farragut, Shaw, Sherman and the two Lincolns make a magnificent showing for a short life, to say nothing of the innumerable smaller portrait works. The masterpiece in relief is the portrait of the children of Prescott Hall Butler. Occasionally in the reliefs the treatment of backgrounds shows forcing in undue undulations, always suggesting a marble technique and in bronze giving false relations. The experiments in various heights of relief in the same panel throw one back again upon the question of what is the best convention, and the lowest reliefs here answer that question as it is answered by the frieze of the Parthenon as compared, for example, with the Ara Pacis reliefs of Rome. The St. Gaudens exhibition will be open until April 13th.

At the Bauer-Folsom Galleries, 396 Fifth avenue, Clara Hill showed thirty

works in sculpture that were not without promise, tho, as in so much work that attempts the decorative here, taste seemed unsteadied by feeling for the properly ornate. The best things were statuettes in colored clay that in several cases had charm of movement.

At the same gallery now (until March 28th) is an interesting group of portraits and small works by five sculptors. Six works by James Earle Fraser show the influence of St. Gaudens strongly, but are nevertheless the most important among the forty-six shown. A bust of the son of H. P. Whitney is a memorable one for its perfect realization of the charm of handsome boyhood. Donatello inspired the movement, but the selection from the boy posing shows Mr. Fraser to be a sensitive portrait sculptor. In the relief of St. Gaudens he goes again to the fifteenth century men for inspiration in composition, but there are no better masters.

Rudolph Evans is represented by a mask of Miss Maude Adams with a good suggestion of her personality, another bust and three portrait medals which are simpler and better in treatment than the numerous medals and plaquets by John Flanagan, who models cleverly but doesn't know how to leave out anything, so that his portraits of bejeweled and belaced ladies are all too suggestive of the "vulgarity of American millions," like Senator Clark's house on Fifth avenue. In his work, as in that of most of the French medalists of today, the fact that the modeling is done in large size and reduced in the machine seems to lead to pitfalls in design and in treatment of hair and accessories that few men can avoid. Flanagan's portraits of men are much the best of his works. Richard E. Brooks does low relief rather vigorously and at times successfully, but his bust of Oliver Wendell Holmes is dry and uninteresting and his "subject" works are the usual rococo things in feeling. Edwin W. Deming shows nine animal and Indian subjects in which the feeling is far ahead of the technique. "The Toiler of the Plains" is the best. These works were all better seen than the pieces shown at the Academy, where, excepting a brilliant little bronze rooster called "An Outcast," by Laëssle, there was little of interest.

The Spring Academy

If our editors visit the present exhibition as carefully as they did the last, they will have occasion to talk about "the futility of American art," for they will find the same preponderance of landscape and portrait, but a higher standard of merit in both fields than the Academy has given us before, and one truly imaginative picture at least, "Legend, Sea Calm," by A. B. Davies, the man whose vogue will some day be as great as Whistler's. The best new portrait for this year—the Academy has in several cases requested works seen before elsewhere—is that of President Seelye, of Smith College, by Edmund C. Tarbell, that sane, sensitive painter who has given us such exquisite genre works in recent years, and to whom the Pennsylvania Academy recently gave the gold medal of honor. This portrait seems his best work so far and should put him among the selected few. The Sargents in the exhibition are delightful, and those of the two children seem to have gained since last seen. Shannon's work looks pasty and painty, as it did in his last exhibition at Knoedler's. There are works of all "schools," including those following or among "The Eight," and a few still of the old men like E. L. Henry, J. G. Brown, etc., so that a visit to this Spring's Academy gives one a very much juster outlook upon American art than has been possible for several years in these galleries.

At Montross's

Horatio Walker has entered the field of the subject painter with "The Enchanted Sty—Circe and the Friends of Ulysses," a not altogether successful attempt. Theatrical and yet in sections powerful and again beautiful, which is to say that unity is a little sacrificed, by artificiality in lighting and arrangement. It is not imaginative enough—makes us see the proscenium arch and the heads in the orchestra. Eighteen other and older pictures by him delight us as usual with their beauty of color and feeling for his pastoral subjects.

The Ten American Painters show at Montross's March 17th to April 4th.

A movement for the decoration of

public schools has been started by a number of people interested in the general betterment of environment for city children, and a meeting of a committee in connection with it was held in the Girl's Technical School in East Fifteenth street on March 10th. Mr. Stoddard, whose decoration entitled "Womanhood" has since been installed in the Auditorium there, spoke on what had been done in St. Louis by the children themselves, who have formed "Art

not quite clearly see the best way to proceed, altho he admitted the desirability of having the innate sense of beauty in the human child given as good a chance as possible. Further meetings and discussions will be held and the interest of the public is solicited. Miss Levy, Astor Court Building, can give information in regard to the movement.

Mr. Raphaël Lewisohn, of Paris, shows at Oehme's until March 31st a number of most virile works, which, with

RAPHAEL LEWISOHN'S "HARVEST TIME" AT THE JULIUS OEHME GALLERY.

Patron" societies in the schools and bought with their aggregated pennies original works for their schools. This seems a far better scheme to develop than that of merely hanging framed photographs of old masters in the rooms—tho, perhaps, that must come first. Mrs. Anna Garlin Spencer spoke beautifully and sensibly in regard to the need of making the schools in each district the civic centers of deepest importance in the lives of the children. Mr. J. W. Alexander made a short speech that contained much real wisdom, confessing that he did

their honest values and in most cases sensitive color, are refreshingly free from artistic cant or any insincerity. We have had no one of his particular movement over here whose works are so invigorating. The beautiful "Summer Morning on the Oise" should surely stay in America where it can be often seen. "The Harvest Time" is powerful in realization and beautiful in design. "The Water Carrier on Her Morning Trip," the water colors and sketches are all masterly.

Emil Carlsen is the opposite in tem-

A JAPANESE PRINT BY SUZUKI HARUNOBU, IN THE YAMANAKA COLLECTION.

"This is a very charming, small, square print of a young lady walking with her maid. Here it is hard to say whether the charm is more due to the willowy young figures swaying in opposite directions or to the frankness and fullness of the color mosaic. The background has been printed of a lovely gray. The lady's overdress has the grace of its lines enhanced by its embroidered pattern of willow branches in snow. Date, 1766 or 1767."

perament to Lewisohn and gives us splendidly designed landscapes with powerful movement in line and air and wave or cloud, but always without the presence or suggestion of animate life. His work has equality of grandeur that amounts to loneliness. He gets surer in his technique every year, but his northern ancestry seems to have given him a vision of a coldly intellectual world only. His fifteen pictures were tonic, however, as well as successful for what they did convey of the sea and the sky and the woods.

Japanese Color Prints

The exhibition of Ukiyoe paintings and prints at the Yamanaka Galleries from February 27th to March 14th was

one of the best that has been seen in New York for many years. The catalog as prepared by Prof. Ernest Francisco Fenollosa contained twenty-three Japanese paintings and 156 color prints. The collecting of Japanese prints has grown tremendously in popular favor both here and in art circles abroad during the past twenty years. The Yamanaka exhibition contained only the most carefully selected examples of the best periods and masters, all of which were characterized by a remarkably perfect state of preservation. The exhibition ranged from Torii Kiyonobu (1705) to Hiroshige (1850), and was highly educational as regards the rise and progress of color printing in Japan.

Drama

The financial stringency of the winter has had one good effect—it has made playgoers more discriminating. For the last three years theaters could not be built fast enough in New York City to hold the crowds, and almost any play could get enough of them to keep afloat. This year the mortality among mediocre plays has been appalling, but the houses that offered the best in each kind have been as full as usual. "Paid in Full," a new play by Eugene Walter, gets packed audiences at the Astor Theater and deserves them. The remark of the old sea captain at the close of the climax, "It's good to be decent," might apply to the play, for the scene to which it refers is here played inoffensively, altho it is essentially the same situation that in a hun-

dred French plays and even in Maeterlinck's "Monna Vanna" is pruriently suggestive. The scenes are those of ordinary middle-class American life, with real people in real situations, with real emotions and talking real language. The heroine for a change is neither vicious nor hysterical, and the humor of the piece is not the product of forced epigrams or horse-play. Among the seven characters there are two wholesome cheerful individuals and a third who is better than he seems, an unusually large proportion of decency for a modern play and sufficient to compensate for a most despicable "hero." All the rôles are admirably acted. It is good "team play" in place of the ordinary star-and-sticks combination.

After the phenomenal successes of "The County Chairman" and "The College Widow," which have added so much to the joy of this nation, Mr. George Ade fell on an evil day and wrote a couple of theatrical failures. At last he has retrieved his temporary misfortunes and has produced another genuine comedy entitled "Father and the Boys," which bids fair to have a record breaking run. "Father and the Boys" is not so American a comedy as his previous efforts. Indeed the setting may be laid almost anywhere in the five continents. But the American kindly humor and gentle extravagance turn up at all expected and unexpected moments, keeping the audience in an uproar from the rise to the fall of the curtain. William H. Crane, who takes the part of the Father, is a hard-headed, kind-hearted American business man who has scraped together a fortune so that his boys will not have to suffer the privation and hardships that he has endured. The boys, however, instead of settling down to business, are inclined to take up anything but the practice of making a living. Father finally realizes that he must take drastic measures, so he decides to go out into the giddy world and "cut up" a bit. This so scandalizes his doting offsprings that they reform and marry the girls of the old man's choice. The comedy—which borders on the farce—is healthy, humorous and kindly, the cast excellent, and Mr. Crane is at his best.

Mr. E. H. Sothern proved his versatility last week by changing abruptly from the ludicrous Lord Dundreary to

that most serious of mortals, the Russian student, and his personal success was equally decided in both. He handles tragedy as well as farce, and can adapt himself to introspective as readily as to melodramatic acting. The new play, entitled "The Fool Hath Said 'There Is No God,'" does not take well, apparently because it lacks unity. From its title one would suppose it to be a morality; for the first two acts it is a study in morbid psychology; the third and fourth acts run along the familiar lines of a Sherlock Holmes detective play, and the fifth is a conventional happy ending. The author, Laurence Irving, has taken his theme from Dostoyevski's great work, "Crime and Punishment," which was itself somewhat uncertain of purpose, for it marked the transition of Dostoyevski from a radical to a conservative. But the book had a moral force and meaning that is quite lost in the play, whose ethics is badly mixed. Rodion, the anarchistic student, commits a murder to save Sonia, an orphan girl, and he is brought to repentance and punishment in the most orthodox manner. Sonia commits perjury to save him, quite as great a crime for her, and there is no intimation that she needs either repentance or punishment. It is a pity that the Sothern-Marlowe combination is broken up, for we have this year no company so competent for the production of Shakespeare and other high class plays.

The announcement that Madame Vera Komisarzhovsky was coming from St. Petersburg with a full and competent company of Russian actors to give a series of modern plays aroused favorable anticipations. Remembering the excellent work done by Orleneff and Nazimova in a little East Side hall with the most limited of stage facilities, it was hoped that these players of greater reputation in their own country might have something to teach us in dramatic art. But the visit of the Russian company was a disappointment, and the seats were mostly empty except for their compatriots in the gallery. The language was not an insuperable objection, for most of the plays were familiar, and we listen with pleasure, if not with complete comprehension, to opera in Italian, French and German. In fact, some in the audience knew the plays better than those on the stage did, for the murmur of the prompter's voice

could be heard most of the time. Their acting was admirably natural, harmonious and devoid of extravagances and eccentricities, but so restrained and realistic that it seemed commonplace and unimpressive. In Sudermann's "Fires of St. John," for example, Madame Komisarzhovsky failed to convey the hidden passion of Marikke as did Nance O'Neill a few years ago.

"The Rector's Garden" is an American comedy in four acts by Byron Ongley. The scene is laid in a New York village at a time just previous to the late Spanish-American war. Dr. Prince, the rector of the parish, is passionately fond of flowers. He discovers a like passion in his fair young neighbor, Miss Blanche Cincioni, a lady of Italian birth and name, but of decidedly American characteristics, who has taken a summer residence next to the rectory. The natural result of their neighborly intercourse is a deeper and much more universal passion. The appearance on the scene of a jealous West Point cadet, who thinks he is madly in love with the charming young Italian, introduces some discordant and mildly exciting episodes. The vocabu-

lary of the doctor's Irish gardener and the antics of the housekeeper and sexton, who also become the victims of Cupid's darts, furnish amusement thruout the play. The piece is clean and wholesome, and was prettily staged and well performed, but affords no opportunity for any great display of dramatic skill.

Sam Bernard's new play, "Nearly a Hero," affords him one more opportunity to shine in farce. Mr. Bernard makes another application of the methods that lifted him out of the commonplace into a stellar role, and "Nearly a Hero" is pleasingly funny. In the new play Mr. Bernard sings quite tunefully "A Man Is a Hero" and "A Singer Sang a Song."

Barnum & Bailey's Circus came to town last week and is installed at the Madison Square Garden. Freaks that once appealed to patrons have been relegated to the rear, and in the place of these superannuated attractions there is now a horse balloonist and automobiles that emulate Beatrice Harraden's ships and pass in the air. The menagerie has been enlarged and the standard features are better than ever.

My Latest Experiment

BY N. O. NELSON

[INDEPENDENT readers need no introduction to Mr. Nelson, whose great profit sharing business in St. Louis, whose model village at Leclaire, and whose free home for consumptives in the Far West he has already described in our columns. Were there more rich men of his type in this country, social and industrial conditions would not be as we find them today. We excerpt from Mr. Nelson's letter accompanying the present article the following quotation: "I find it feasible and attractive to do a full day's miscellaneous outdoor labor in field, barn and woods, and at odd times and evenings direct my company business and other affairs, do my considerable private correspondence, fill my own co-operative magazine and some pages in others, read some books, THE INDEPENDENT, and several other periodicals. The division of intellectual work from manual labor is arbitrary, artificial, and damaging to both classes."—EDITOR.]

LAST winter I lived in a laborer's district of a large city, on a level with my neighbors except that I did less labor than they.

This winter I and a friend are farming in a remote Southern neighborhood, on a level with our neighbors except that we work much more than they. We work six full days a week, they about two.

We are all small farmers, 10 to 15

acres in cultivation, one or two small horses or mules, small cattle and razor-back hogs. We live in two or three room houses, set on blocks 18 inches high, boarded up and down, not painted, plastered or ceiled. Almost every one raises cotton, from three to six bales, worth \$50 a bale; most raise some corn for the plow animal, but more is bought than raised. Cattle and hogs graze on the old fields and feed in the woods the year round.

a good many dying from exhaustion in the cold February rains.

My friend and I have fenced, plowed and built a house and barn on part of an abandoned farm belonging to some friends, and I offer like improvements to any who want farm homes, free of charge for any number of years.

The land of the vicinity is good, undulating but not hilly. With proper cultivation and fertilizing it raises a bale of cotton, fifty bushels of corn, one and a half tons of Japan clover to the acre, and ample yields of Irish and sweet potatoes and all vegetables. It is on the same latitude as Mobile, healthy, and has magnificent woods of magnolia, beech, gum, oak, with some maple, walnut, hickory myrtle, bay, holly, plum, grape and berries. The woods are full of birds, squirrels, rabbits, coons and 'possums.

The people are free and emphatic in criticising themselves. They say they work too little, buy their food and feed instead of raising it, starve their stock and rob their land, buy on credit and mortgage their farm and crop. They have done this for more than this generation; they expect to do it for generations to come.

They know how to do better, know what is needed, but make no start at doing it. There are several Northern and border State farmers in the vicinity, all of whom are prosperous, have large, well fed stock, large crops, good implements, barns and houses. The examples have not been contagious. The explanation lies, I think, in the easy-going, comfortable inertia begotten by the mild climate, which requires little protection of houses and clothing, the enjoyment found in outdoor recreation, as visiting, hunting and gathering at the country store, and aversion to regular labor.

What Northern farmers and city mechanics regard as prime necessities these neighbors of mine consider superfluities; they prefer the time to the things. They take enjoyment at first hands; they borrow money, but not trouble; they have no master, not even their creditor; they let him walk the floor, not they.

Who is the wiser, the prosperous possessor of broad acres, fat herds, a big house and a bank account, or these my

gentle, obliging, care-free and property-poor neighbors?

THE RACE QUESTION.

I have lived all my life in the Slave States, with negroes about me; I never owned one, but I have hired many; I think I know them and their attitude better than the writers and politicians. I am at home with Southerners and know some of the intellectual negroes. Both sides overestimate the existing difficulties and prophesy falsely of the future.

My neighbors are about half of them white and half of them black. A few of the blacks own their farms, most of them rent on shares, some of them for cash. They are a little poorer than the whites, work about the same, are intelligent, peaceable and take life easy. The whites are very vigorous in their denunciation of the negro in the abstract, but the negro neighbor they treat as well and think as well of as they do white men. They are insistent that the abstract negro shall keep in his place; the actual negro never gets out of his place or disturbs their equanimity in the least. This is what I have found everywhere—the abstract negro, the imaginary social conglomerate, fiercely assailed, the individual negro treated just like any other man. The hue and cry about negro domination, diluting the Anglo-Saxon blood with the African, the irrepressible conflict between these races, springs from such diseased imaginations as those of Thomas Nelson Page, Rev. Thomas Dixon and Governor Vardaman. These men would do immeasurable harm were it not that the real people of both races never hear of them, and the fact that the great mass of both races live neighbors and friends together, need and want each other. The white man keeps to himself anywhere, so does the Jew and the Hindu and the Jap, and so does and ever will the negro, of his own choice.

There is no race question in this my neighborhood, nor in my Alabama iron works, which also is half whites and half blacks.

THE LAND QUESTION.

The versatile author of "Three Acres and Liberty," my genial friend, Bolton Hall, is a Single Taxer, as I also am. As Single Taxers, it is our solemn duty to

insist that land monopoly is the sole cause of poverty, and of crowding the cities, and of the big fortunes; that if land were accessible by simply paying for or making the improvements, there would be such a rush away from the cities and factories that wages for those who remained would ascend to the full product of their labor. Like many another paper theory, this cavalier way of accounting for and disposing of poverty and riches collapses the moment you get away from Author Hall's sixteenth story William street cloister and into the field of fact. I will take Mr. Cocksure Single Taxer into the large portions of every State in the Union and show him farms for sale at about the proper value of the improvements. I will show him farms abandoned by the owners and not rentable at any price. I will show him farms rented at a price that will no more than maintain and replace the improvements and pay the taxes. I am a Single Taxer, I object seriously to land-made fortunes, but I know the fallacy of much that is claimed for it.

Here and elsewhere I make a standing offer to pay for tracts of land, divide it among settlers, charge them the cost price, and give them five to ten years' time to pay for it, with little or no interest. I have made this offer known in city and country without takers. On the tract I am improving here I have made it known in this neighborhood and in a not far distant city, that I will furnish any family the land they can work, cleared, fenced, a house, horse and cow, free of any charge for a year, and thereafter to only pay for the wear and tear of the perishable property. So far I have two takers. I count on more for next year. This simply means that there is no rush for three or twenty acres and liberty, or for the work and responsibility of farming. There was no rush in the early times of Leclaire for homes on terms as easy as paying rent.

THEORIZING AND EXPERIMENTING.

The deductions of writers on social subjects are mostly valueless. They do not know the facts, they are not qualified to ascertain the facts. If they get correct statistics, which they rarely do, they do not know their relations. The long

drawn farmers' bulletins miss their mark because they are based on conditions which the mass of farmers do not have, and they are written in a form that is jargon to the farmer. I am a child labor reformer, and I know harm has been done the cause by the ignorant writers who include my neighbor children of twelve to fifteen years, who help their mother and father at the light outdoor work of cotton picking, among the million and three-quarters victims of capitalist greed. Other writers luridly picture the Southern farmer under the heel of the extortionate merchant, when the fact is that the whole profit on what my neighbor buys in a year is not one-tenth as much as he could save by raising his living at home and by moderate management and industry in his crop making.

This is, after all, a very free country, and the bulk of the people are the architects of their own fortunes and misfortunes. So say my neighbors here, and so they have said elsewhere in town and country where I have neighbored with them.

Our neighbors are practically all of ante-bellum stock, white and black in about equal numbers. The whites came originally from the Carolinas, beginning a good century ago, and in the fifties the country was settled almost as fully as it is now and land was higher. There were then some large slave owners and planters; there are some non-resident landlords now, and some residents who rent on shares to the blacks. The large majority own their farms, planting about ten acres in cotton and five in corn. I call this advisedly a typical Old South community, because my friend and I have been among the farmers in many parts.

We are farming and living as new settlers, with such improvements as we have been able to put up in four months, beginning early in October. We work as the neighbors work, except that we work six days a week and they two or three. We live as they do, except that we have some hotbed vegetables and eggs and milk, which only some of them have in the winter, and we have larger mules. We are not here as investigators or missionaries, but to enjoy labor on the land

and winter out of doors, and to learn from them. In time we may cast to windward some lines of economic and social stimulus, and experiment on turning the tide away from the cities, instead of toward them, by offering tempting opportunities for becoming owners of farm homes.

Farms are worth from \$10 to \$20 an acre, very little more than the cost of clearing and the scanty improvements, sometimes not any more. A Northern farmer passing along the main road would be mystified and utterly disgusted. He has seen nothing like it; he cannot at all understand it. No one but a resident can understand, and few of them can explain it. There is no lack of intelligence, there are scarcely any illiterates, the school year is eight months, and the teacher's pay is \$55 per month.

I have said the cultivated farm averages about fifteen acres; the Northern farm is about sixty. But the fifteen acres are not well cultivated; the corn is plowed, not cultivated, once, and is commonly grown up in high weeds and thick grass. The yield is from five to fifteen bushels of very small corn. The cotton is plowed over once, the ridge rows scraped and the plants thinned. It is not fertilized, and the yield is from a quarter

to a half bale an acre. There are no side crops, except occasional patches of cane and sweet potatoes. There are practically no vegetable gardens and no fruit, except rare peach trees and figs.

Some make their own meat, many buy it. Butter is not an article of diet. I know of none who make any. A majority have milk, but without feed it takes several cows to supply a family.

The people are generous, obliging and hospitable. They use good English, have soft voices and good manners. My township of six miles square, thickly populated, has no one on public charity, no one in insane asylum, two in State's prison for quarrel assault. It has no consumptives, and no orphan on the public hands.

The schoolhouses are boarded up and down, unpainted, shutter windows, bench seats and no grounds. The stock is about half the Northern size; milk cows with calves bring \$20. I bought two and have refused others at that price.

Given the good land, mild climate, good health, fair schools, Anglo-Saxon, Huguenot and Irish ancestry, and fully average intelligence, the puzzling question is the inertia and backward condition of every physical and economic aspect.

ST. LOUIS, MO.

Pain Peace

BY ARTHUR GILMAN

AUTHOR OF "THE STORY OF BOSTON," "THE STORY OF ROME," ETC.

THIS is the Hôtel Dieu—the House of God. I lie in my bed, with two ample windows on each side of it that throw the light of day upon me, by which I can read and write, for that is all that I can do, except talk. I may not move, for movement brings more pain, and I am here to try to escape that. I am in the tower. My visitors, who bring me flowers and fruit, look out of the four windows into the tree tops, and tell me that I am in a conservatory, and so I am.

I know not who may occupy the other rooms. My door opens upon a passage and I see the white-capped ministers of

mercy flitting by, but where they go or why they go I can only guess. Once I saw men carrying a limp form covered with a sheet, and I could imagine that a patient not yet free from the ether was passing from an operating room. One day a visitor spoke of an ambulance that stopped at the door, and another told me of a friend who had suffered from a fall and might be near me; but for all particular knowledge of who my neighbors are I might as well be in another world, so great is the reticence of those who care for me. Gossip is unknown.

I am passive. Mine it is only to be served. If pain can be luxurious, this is

the luxury of pain. Others care for all my needs. My very thoughts are anticipated. Thrice each day Evangeline, who carefully watches me from 8 to 8, brings me my necessary sustenance, and it is not mere "nourishment." I am one of the few patients who may eat what normal human beings crave, for my pain is not to be permitted to lessen my physical vigor.

There must be some authority that controls and directs an establishment that moves with the smoothness and regularity that is shown here. That is inevitable. There is a Triad, I soon found, that is all powerful, and under it there are those white-capped damsels who go so noiselessly from room to room, carrying comfort and good cheer to the sufferers on the beds.

It fell to my lot to be under the special charge of that one of the Triad whom I knew as Saxon Edith with the golden hair. She it was who came to my bedside when the doctor came. She took the doctor's directions and was responsible for carrying them out. When the imperturbable surgeon sought to allay my suffering by giving more and sharper darts of pain, her face was suffused with signs of sympathy that I knew were not professional—they were human, and I cannot forget them. To her the sufferer was not a "case," but a fellow mortal. Doubtless this is true of the surgeon, too, but his hand could not tremble, and he could not permit sympathy to interfere with the steady management of the instrument he held.

I lie here day after day, almost in the same position, for, as I said, movement means increase of pain. I may read, I may write, but I cannot reach my books or my papers! The table that bears my breakfast is equal to the support of my heavy books, and it may be put at an angle convenient for reading. Evangeline—she of the raven tresses—will bring to me by daylight any book that I wish; and from 8 at night to 8 in the morning Santa Filomena—"the lady with the lamp"—will help me as long as I wish to read after she has touched the button and given me the light; that is, as long as I am permitted to read by night. To these twain I am indebted for

comfort by sunlight and by gaslight. I am conscious that I am growing lazy in this luxury of pain. What can a mere man grow to when he is not permitted to do anything for himself when he cannot reach a book from a table, take a step, or even arrange the papers that are permitted to lie on his bed?

In order to keep my mind active in an agreeable way I have read books that all readers on this side of the Atlantic must be interested in—books by my own friends and acquaintances as far as possible, and about men and women whom I have known. First on my list stands that frank expression of his kindness by Howells, about my own friends as well as his, which he calls "Literary Friends and Acquaintances"—a book that revives memories of many that are gone, and seems almost as a conspectus of contemporary American literature.

One after another I have taken up the "Autocrat of the Breakfast Table," the "Poet" at the same homely board, the "Professor," too, occupying the Autocrat's place, and "Over the Teacups," a book of the same sort with another title. The author is said to have revisited Pittsfield after many years and to have gone to the shop where an ancient apothecary had been wont to put up prescriptions—perhaps Dr. Holmes's own. The apothecary, fearing that Dr. Holmes might suppose that he was the same one whom he had known, explained that he was his son, and the genial doctor replied that he recognized the father in every "liniment" of the son. So one cannot fail to recognize the Autocrat's "liniments" in everything that he wrote, whether he called himself poet or professor, or what not. As I reread these volumes, the first of them now fifty years after, it seems to me the author is veritably speaking to me. How many memories of the man himself they bring into my room of pain!

Always on my bed there lie the poems of Longfellow, and one after another I read them over. "Christus" took me many days, and I read in connection with it the "Life" of the poet, by his brother, and especially his journal. "Christus" is of all Longfellow's poems the one that most completely absorbed his thoughts and stirred his feelings for

a large part of his life. It cannot fail, it seems to me, to move any reader who thoughtfully studies it. It is remarkable how much of this feeling of the poet is recorded in his journal, at the time that the sacred poem was in process of completion, from 1849 to 1872. It is no less evident that it is the product of intense study of the scriptural narrative, and, in fact, of the Bible as a whole. When he began its composition he wrote:

"I long to try a loftier strain, the sublimer song whose broken melodies have for so many years breathed through my soul;"

and, when the work was near completion:

"The subject of 'The Divine Tragedy' has taken entire possession of me, so that I can think of nothing else. All day pondering upon and arranging it."

Lowell happened not to be one of the volumes on my bed, but Lowell the man was a companion of my lonely hours, and "The Two Angels," full of friendship and devotion as it is, was a link in the chain that bound his name to that of Longfellow—a chain that is marked thruout the journal of the elder poet.

Another of my companions was entitled "Cheerful Yesterdays," and still another "A Part of a Man's Life," for Colonel Higginson mentioned many of those whom I have known, and some of his experiences on Western prairies have also been mine. Did I not cross the State of Iowa, as he did, in 1856, before the railroads had accomplished that feat, the year that Omaha was born, when as yet it was but a map or a few stakes marking the present streets?

Last among the books that were my companions was the "Life of Channing," by Chadwick, a book that took me quite out of range of the men whom I had personally known, tho it was suffused with the atmosphere of Boston and brought back many whose influence on the town has been permanent. The book is filled with records of theological disputation, and this may interest a class of readers; but for me the delicate health of Dr. Channing was the important fact. I have heard much about a sound mind in a sound body, the inference being that

a mind can be sound only in a healthy physical system. As I have never had the advantage of a sound body, I have ever been antagonistic to the apothegm. "Here is another instance on my side of the argument"—so I meditated as I read in the Hôtel Dieu. "Jonathan Edwards is another," I added.

The reading of my day furnished the basis for conversation with the surgeon when he made his call the following morning, and especially entertaining did we find the many professional touches in the book of the Autocrat. Unique among hospital experiences, I think, were my daily conferences with the Triad, as I have called the members of the governing board. Every evening, after my dinner, just before Evangeline, "good angel" literally and truly, was ready to do her final duties preparatory to the transfer of her responsibility to Santa Filomena, the Triad surrounded my bed to say good night, and for a little space we discussed the parts of Holmes, or Longfellow, or Channing, or Higginson, or Howells, that had been my meditation during the day. Blessed is the patient whose condition permits him to read and write, to confer with his friends and visitors about other things than his pains. Happy he who has a doctor able and willing to stop awhile to make incursion into literature and turn his thoughts from his surroundings; thrice happy he who has a Triad interested to sympathize with such efforts!

There is a time for everything under the sun. There is a time to be committed to the Hôtel Dieu and there is a time to be allowed to leave. There are two doors by which one may go out. The first opens upon God's Acre, where there is peace forever, and many there be who go thru it. It is interesting that the French unite the name of Divinity with the house of pain and the Saxons with the enclosure of peace, where pain is no more! The other door opens upon the life that now is, and sends the confined one out to a new experience, where he may give thanks and labor more abundantly with the blessedness of health. This door opens to me and I go out.

Literature

Spain in Decadence

IN contrast with the volume of literature on the Fall of Rome there is a striking dearth of material in English for a study of the period of decadence in the once magnificent Spanish Empire. It is with interest, therefore, that one opens the book by Mr. Hume on *The Court of Philip IV*,* and interest develops into a real pleasure on the discovery that this is more than a mere recital of royal gossip and princely escapades; that it is, in fact, a worthy sociological study frankly recognizing the intimate relation that court life bears to national life.

From contemporary unpublished manuscripts and untranslated letters and records Mr. Hume is able to draw a detailed and vivid picture of wastefulness, idleness, pretense and vice on the one hand and penury and misery on the other. The desire to escape from any form of labor seems to have been the predominant ideal thruout society, and the author attributes its predominance to the "unfounded inflation and unreal exaltation" which had begun in Spain almost a century earlier. The climax in Spanish pride of this type was reached under Philip IV, who was dedicated at his baptism to the task of vindicating the Catholic faith thruout Europe—a tremendous enterprise, indeed, and one requiring unlimited resources, but this fact was overlooked. Ignorance of the basis of national wealth led to a grave neglect of home industries which entailed vast foreign imports for which cash had to be paid in lieu of commodities. On the peasant, therefore, fell the principal burden of sustaining the decadents whose Mecca was Madrid, the center of social gayety and religious pomp. With Mr. Hume's point of view, the court life under Philip IV consequently becomes a national drama, the actors in which are the personifications of the prevailing social, religious and economic sentiments.

The principal rôles are assumed by the

nominal monarch, the real ruler, his Minister, Olivares, and his two queens. Of King Philip himself, Mr. Hume makes a most fascinating study, altho the monarch was a pitiable enough figure from the standpoint of achievement. In his religious naïveté he attributed the woes which he was finally forced to see overwhelming his nation to the machinations of the evil one who stood ever watchful of a chance to wreak vengeance on his people for their king's personal sins. As a result he was forever wavering between pleasure (his business) and remorse. It never seemed to occur to the mind of the King that his foreign relations or trade interests had aught to do with the prosperity of his subjects. Given, then, an impoverished nation seeking to uphold aggressively a "vague mirage of Spanish honor," there is abundant material for a dramatic plot.

It is impossible to enumerate here the many interesting lines of investigation in this concrete sociological review—the pompous ceremonies, the manners, dress, customs, amusements, modes of living of the Spaniards; the diplomatic struggles between the monarchs of Spain and England; the correspondence between James Stuart and his "baby" Charles, who was pressing his suit in Madrid for Philip's daughter as his "wench"; the rivalry of Richelieu and Olivares; the results of the incestuous marriages of generations in the royal family of Spain. Suffice it to say that Mr. Hume's claim to have described an important period directly from the sources in a distinctly human and interesting way is well sustained.

George Matheson

SCOTLAND has produced a goodly fellowship of remarkable ministers, but Matheson of Inellan and Edinburgh, who belonged to the generation that is just now passing, was one of the most unique and gifted men ever ordained by a presbytery. Almost totally blind from the age of eighteen, a dynamic power in

*THE COURT OF PHILIP IV. By Martin Hume. New York: G. P. Putnam's Sons. \$4.00.

utterance, before whom Queen, scholar and peasant alike yielded obedience, a student of all subjects of human interest, from the most abstruse German theology to the latest scientific discovery and the most ephemeral modern novel, author of over a dozen books of wide range of appeal to all classes, from the delver in theories of natural religion to the invalid who can read scarce a page at a time, the writer of at least one immortal hymn, Matheson richly earned the sympathetic and appreciative biography which Dr. MacMillan has prepared.* The pathos and heroism of the life of the blind poet-preacher hold one in fast attention to the story of his work. Despite his failing vision he won distinction as a student, but he did not truly find himself until the pulpit of the quiet seaside parish of Inellan began to draw from him those mystical, poetical orations which characterized his ministry for over thirty years. At first the sermons were carefully written and committed to memory in two or three readings. By accident, thru sudden failure to recall what he had prepared, he discovered his larger power in *ex tempore* discourse, which thereafter was his custom. There can be no question of the great influence he exerted as a speaker, and that over minds of the most diverse caliber. Most men under his limitations would have excused themselves from parochial duties, but his activities in this direction were constant, and for eleven years in Edinburgh he performed the full work of a parish of nearly 2,000 members, in addition to a literary output equal both in quality and quantity to that of trained writers of the first rank.

It is in his writings that Matheson's enduring significance must be sought, and by them the question must be determined whether his influence was that of a leader and prophet, or the passing stimulus of a gifted personality. His biographer rightly fixes upon his devotional writings as his distinct literary contribution, and declares that "he will rank for all time coming as one of the select band of devotional writers whose names the world will not willingly let die." In 1882 he published "My Aspirations," a

collection of brief "meditations" on a text or two of Scripture which he employed in his church services in the place of a Scripture lesson, and between that volume and "Rest by the River," which appeared about a year ago, shortly after his death, there issued a large number of books, quite of a kind in their uniqueness and elevation of thought, their singular purity and quietness of spirit, their intensity of religious faith and devotion, and their certainty of the worth of things spiritual in this life and immortality in the life to come. Many of these books are almost too well known to need mention—"Moments on the Mount," "Times of Retirement," "Representative Men of the Bible," "Studies in the Portrait of Christ," "The Spiritual Development of St. Paul."

The latter volumes, and especially the study of Paul, differ in form from those first mentioned, but they belong, nevertheless, in the same class. They are not biography nor history, but mystical transport in biographical form. Adam or Enoch serve Matheson as well for "representative men" as heroes of whom authentic information has been preserved. His persons are only ideas clothed with flesh by his own genius, and usually, in the case of historical characters, not the same flesh as that they actually wore. Matheson's Paul, for example, is by no means the man of Tarsus, but only the preacher's own self, transformed into Pauline shape by the pathetic sympathy which arose from his conviction that Paul's "thorn" was an affection of the eyes, and interpreted in a vocabulary wrenched from Paul's epistles.

After the above paragraph it is perhaps needless to say that Matheson came deeply under the influence of Hegel in early manhood, thru the teaching of the Cairds, and that the impress of this philosophy never left him. Personalities were scarcely real to him; they faded into ideas while he still heard their speech. Christ was "more than an individual," Matheson declared. "He was the head of a body—the body of humanity." It is assuredly a question whether this generation, which derives its life from persons, which craves facts rather than abstractions, and worships the "God of things as they are," will long nourish its

*THE LIFE OF GEORGE MATHESON. By D. MacMillan. New York: A. C. Armstrong & Son. \$2.00.

devotion on pabulum of whose unreality it cannot remain unaware. Be that as it may, George Matheson lived a great and noble life, which it is good to follow in the patient detail in which his biographer has set it forth: "An obstructed life, a circumscribed life, but a life of boundless sanguineness, of quenchless hopefulness, a life which has beat persistently against the cage of circumstance, and which, even at the time of abandoned work, has said not 'Good night,' but 'Good morning.'"

Augustus St. Gaudens

MR. CORTISSOZ's memorial,* as he says in his short foreword, is a monograph, not a life of St. Gaudens. Everything Mr. Cortissoz writes is scholarly, and this elaborately illustrated volume is a beautiful tribute, and yet there is a feeling of strain, of an effort to make a book out of a monograph, and there is a suspicion of padding in the makeup of the volume, with its thick paper and many blank pages.

Just now there is a tendency to overpraise St. Gaudens. He surely lacked the highest decorative sense. This is made evident in the illustrations in the present volume, a large part of which are of medallion portraits of a decorative character. In all there is a decorative idea, a feeling toward a decorative ideal, but in how few is it attained! In some the details are almost childish and in many cases the lettering is very crude. In characterization, to take the portraits as portraits, there are many weak examples shown, both in this book and in the exhibit of St. Gaudens's work now open at the Metropolitan Museum in New York. The boy in "The Children of Jacob H. Schiff" is most unconvincing, and the portrait of Mrs. Schuyler Van Rensselaer is commonplace.

That many of the sculptures of St. Gaudens have charm no one can deny. It was but natural that one of so much personal loveliness should get this quality into his work. The baby Homer St. Gaudens is delightful, and so are many others, among them the somewhat

neglected "Diana of the Tower," a perfect decoration, the right thing in the right place. Aside from this quality of charm the circular medallion portrait of Robert Louis Stevenson was St. Gaudens's first distinguished work (1887). "The Adams Monument," at Rock Creek Cemetery, Washington, is almost great sculpture. One wonders what the man might have done had he gone ahead on this line. Mr. Cortissoz says, "It has the bare majesty of a passage from Homer," and that it "is remembered with a sense of profundity and supernatural wonder," but he also admits that it was "his one memorable effort in the sphere of loftiest abstraction." St. Gaudens never gave it a name, and the one word which seems to describe this heavily draped and hooded figure sitting at a tomb is—Inscrutable.

The marching "Puritan," at Springfield, Mass., is fine; as Mr. Cortissoz puts it, "His stout staff seems to ring upon the ground and it has a touch in it more pictorial than he elsewhere cared to employ." But the "Lincoln," in Lincoln Park, Chicago, was his greatest work. In it "he put to shame the artists perpetually complaining that they are handicapped by the nature of modern clothes." Mr. Cortissoz thinks it "one of the salient statues of the world, a portrait and a work of art of truly heroic mold," the final word of art on this subject. But again came a drop in the quality of St. Gaudens's production. The "Logan," the order for which was given as an enthusiastic appreciation of the "Lincoln," was a complete failure.

Later came, from this strange man, the two other important monuments. They are fine; are they great? The Shaw Monument, in Boston, in which "he marshaled the uplifted muskets and flags in an array neither restless nor inert," would have been more impressive without the personally conducting angel, traveling just above the muskets and more obvious than ethereal. And in the Sherman, in the Central Park Plaza, New York, many do not quite see "dramatic grandeur," as does Mr. Cortissoz, tho they admit that it bears "the stamp of style" and, perhaps, that it "breathes the authority of a man of genius."

*AUGUSTUS ST. GAUDENS. By Royal Cortissoz. Illustrated. Boston: Houghton, Mifflin & Co. \$7.50.

The Black Bag. By Louis Joseph Vance. Indianapolis: The Bobbs-Merrill Company. \$1.50.

The reader of "The Brass Bowl" will take up Mr. Vance's new novel, *The Black Bag*, with an agreeable expectation of being entertained by a real story of unusual adventures, and his expectation will not be disappointed. There are sure to be thrills and surprises, if not on every page, at least in every chapter in Mr. Vance's exciting tales. The contents of "the small black gladstone bag of considerable weight," the struggle for which makes this story, are quite too valuable to be given away. A *résumé* of a plot in a novel of adventure is always an injustice to reader and author alike. The bag is quite as good a bit of stage property as the bowl; and both alike contain, among their other secrets, the valuable one of keeping the reader's interest to the end.

Haiti: Her History and Her Detractors.

By J. N. Leger, Envoy Extraordinary and Minister Plenipotentiary of Haiti in the United States. Two editions, English and French, published simultaneously. New York: The Neale Publishing Co. \$3.00.

Altho Port au Prince lies no farther from Cape Sable than Havana from New Orleans, our information concerning Haiti is rather scanty. Travelers seldom stop long enough on the island to observe more than the surface of things, and their criticisms are generally too sweeping to be impartial. M. Leger has endeavored in the first part of this volume to explain the trend of events which have for centuries marred the prosperity of the island. Men of all nations, from the Spanish and French freebooters to the German gunners of the "Panther," have bent their energies either on enslaving the Haitians or on demanding from them by warlike methods payment of heavy indemnities. Then agriculturists and merchants alike suffered untold losses as a consequence of frequent internal disturbances. The author states that the era of civil dissensions and of international difficulties is at an end, but unfortunately the news of the day does not confirm this optimistic view. With over 500 schools to educate the young generation (a very satisfactory average for a population of two mil-

lions), with a mild climate and a fertile soil, Haiti cannot but arise strong and prosperous above the ruins left by war and revolution. In the last chapter of his book M. Leger disclaims the gratuitous charges of cannibalism, voodooism and other savage practices preferred against his countrymen by prejudiced travelers. This is the first book in the English language discussing Haitian affairs from a Haitian point of view.

The Confessions and Autobiography of Harry Orchard. New York: The McClure Co. \$1.50.

This book is and will probably remain one of the puzzles of literature. The judge who tried the Haywood case was convinced that he told the truth, the whole truth and nothing but the truth; the jury, on the other hand, evidently disregarded or discounted his story. The Rev. E. S. Hinks, of St. Michael's Cathedral, Boise, contributes "a personal note of introduction" to this volume, expressing the belief that Orchard was converted under his ministrations, and Professor Munsterberg, of Harvard, applying his psychological tests of veracity, pronounced him a truthful man with nothing to conceal. On the other hand, the labor men all over the country, in mass meeting assembled, have vehemently declared him a liar, and the Socialist party is likely to nominate for President the man whom he accuses of paying for his murders. On the assumption that his confession is true he is condemned to death; on the assumption that his confession is false the men he named as his accomplices are acquitted. And the general public is doubtful or divided on the question of whether he has told the truth or lies, or rather when he has told the truth and when lies. The perusal of this book will not help them to a definite conclusion. It is a plain narrative of a long career of crime, told for the most part without feeling or comment, tho punctuated at intervals by what appear to be perfunctory expressions of remorse. Its value is seriously impaired because there is no information as to how the book was written, whether by Orchard himself or by dictation or by some one else from various conversations.

Highways and Byways in Kent. By Walter Jerrold, with illustrations by Hugh Thompson. New York: The Macmillan Co. \$2.00.

This exhaustive and informing volume leaves nothing to be desired in its survey of one of the most interesting and in some respects quite the most important of English counties. The scene of Cæsar's first entrance into Britain, of the incursion of the Saxon conquerors, Hengist and Horsa, of the first labors of Augustine and his co-workers bringing Christianity to the island, the history of Kent is almost the history of England. Here, a few miles from the sea, the first abbey and the first church were built, and the See of Canterbury is still the first in the kingdom, and around and within the walls of its cathedral have been enacted tragedies which have changed the course of civilization. And without the "Canterbury Tales" English literature would have been immeasurably the poorer. Physically the coast of Kent presents many a bold headland, of which "Shakespeare's Cliff" is most renowned, and many stretches of low-lying marshes extending far inland. Roman camps can still be traced, as some think, and in the "Isle of Thanet" both Roman and Saxon remains have been discovered within this generation. Kent has its rugged and picturesque scenery, but it is for the tamer beauty of well-kept fields, and blossoming hedgerows, and trim lawns, and noble parks that it will be visited. In this respect it has not its equal in England, and, for that matter, perhaps in the whole world. And for climate—and in England we must expect English climate—Kent has, no doubt, the best in the island.

Janet of the Dunes. By Harriet T. Comstock. Boston: Little, Brown & Co. \$1.50.

Now and then a novel appears that is like a window casement flung wide upon some quiet shore or distant corner of the world, and we turn from the contemplation of the hived poor in a "problem" story, or from romance of tainted finance to a vision of scenes where yet falls ancient peace with the evening tide, and where the people that move among them appear to have been at home there since the foundation of the world. It is difficult to define the difference between them

and the fashionable immigrants of light literature who pass so irrelevantly from one novel to another, heroes and heroines trained to enact all the exciting vices of our times. But there is a difference and Mrs. Comstock's new story of the east shore of Long Island makes it plain. She calls it a "story of the Dunes and the Hills and the Light." And in it she has attempted to memorialize the courage of a crew of silent men with their captain of one of the United States Life Saving Stations. She also interprets with admirable humor and insight other island folk. They sin the same sins that are rendered so debauching in stories of finer folk, but they sin with the simplicity of children with a Father in Heaven who is known to forgive transgressions. And probably the "native's" relation to the "summer boarder" was never more shrewdly or divertingly portrayed. But by all odds the most attractive feature of the book is Janet, the heroine herself. This girl belongs by adoption to her Captain Daddy, of one Light, and to her Captain Davy, of the other Light. She flits back and forth between the mainland and the dunes from one to the other, making the incidents of the tale, and showing herself the curious product of what men accomplish when they attempt single handed as it were to rear a woman. She is brought up against the wind and the weather and upon whatsoever things are of good report, and she is of an innocence and wildness which no mother hand could have accomplished. There would have been somewhere a betrayal of sex from which Janet, with her old captain daddies, was saved. From the point of view of her artist lover the girl was a strange, wild flower, misplaced among the dunes, a pimpernel far from home, but from the delighted reader's point of view she is adorable and logical, granted the situation, and most refreshing after the sophisticated heroines that belong to modern fiction as fever belongs to the sick man. And the author is to be congratulated upon discovering a set of characters that stand up like landmarks pointing to eternal things. Captain Davy, who sings his great hymns as he watches his Light, is like an old man-psalm, and Captain Daddy's comments to Janet are whimsical scriptures, half of the sea and half of the human heart.

Literary Notes

....*Paul Anthony, Christian*, by Hiram W. Hayes, is written with more skill than is usual with propagandist novels. The scenes are laid in Burma and the teachings of Christian Science are intercalated with the story of a love affair between a Burmese Prince and an American girl missionary in such a way as to make them more readable and plausible than they are in "Science and Health." (Reid Publishing Co., Boston, \$1.50.)

....*More* is the succinct title of a study of present financial conditions, written in a very businesslike style by an American business man, Mr. George Otis Draper. He discusses in a positive, plain-spoken and somewhat superficial way the remedies that have been proposed for existing evils, and opposes anarchism because of its confiscation, socialism because of its supervision, regulation because of its incompetence, and tariff reform because it would destroy industries. His remedy is *more*, an increase of wealth thru greater personal economy and industrial efficiency, instead of endeavoring to secure a greater equality of distribution thru legislation. (Little, Brown & Co., Boston, \$1.)

....The American people, East and West, are watching with interest and hope the career of Governor Hughes, of New York. They have great confidence in his ability and sincerity, but have had hitherto no opportunity to learn his views on national issues. To enable them to get acquainted with the man and his principles THE INDEPENDENT has prepared a volume of Hughes's speeches and official papers, prefaced with a character sketch by President Schurman, of Cornell University. The book is published by G. P. Putnam's Sons at \$1.50, and copies will be ready for delivery in a few days. We will be glad to enter the orders of our subscribers and send them an early copy of the volume as soon as it appears.

....Under the title of *Theories of Style* (Macmillan. \$1.10) Dr. Cooper, of Cornell, has made a very handy compilation of papers on the subject of composition and rhetoric. The range of selection is fairly representative and includes pretty nearly all the best authorities, from Plato and Longinus to Stevenson and Pater. It is too bad that where Lewes is admitted Matthew Arnold should be excluded; for his remarks on English prose in the essay on Academies is worth a dozen more abstract discussions. In compensation, however, there is a high proportion of foreign critics, French and German, who naturally appear in translation. It should be added that some few of the pieces are not very generally known, in spite of their importance, or are difficult to come at elsewhere.

....Prof. Morris Jastrow's *Religion of Babylonia and Assyria*, a greatly enlarged edition of which in German is being issued by Alfred Töpelmann, Giessen, has reached its twelfth part. This, with the thirteenth, on "Omens and Dreams," will complete Dr. Jastrow's two volumes, to which will be added a

supplemental volume on "Myths, Temples and Worship." It will contain a full translation of all hitherto known myths, a full account of worship, sacrifice and ritual, and a collection of all the art material available that bears on the religion of the Euphrates Valley. It will be unfortunate if all this cannot be made available also to the English reader.

Pebbles

A GOOD DRESSING DOWN.

FIRST she collared him, then she cuffed him, then while he panted she suspended him and said "Shoe!"—*University of California Pelican*.

SOCIALIST MAXIMS.

LET Carrie Nation own the Trusts!
Workers of the World: unite! You have nothing to lose but your change.
To each according to his ability; from each according to your ability.—*Columbia Spectator*.

LOEB—Gentleman to see you, sir.

T. R.—Mollycoddle?

Loeb—No, sir.

T. R.—Undesirable citizen?

Loeb—He doesn't look it.

T. R.—Conspirator? Poltroon?

Loeb—Not that I can see.

T. R.—Deliberate and unqualified, etc.?

Loeb—I think not, sir.

T. R.—Well, why didn't you tell me it was Taft? Show him in.—*The Cleveland Leader*.

LAY the jest about the julep in the camphor balls at last.

For the miracle has happened and the olden days are passed.

That which made Milwaukee famous doesn't foam in Tennessee,

And the lid in Alabama is as tight locked as can be;

And the comic paper Colonel and his cronies well may sigh,

For the mint is waving gayly, and the South is going dry.

By the stillside on the hillside in Kentucky, all is still,

And the only damp refreshment must be dipped up from the rill.

North Car'lina's stately Governor gives his soda glass a shove,

And discusses local option with the South Car'lina Gov.

It is useless at the fountain to be winkful of the eye,

For the cocktail glass is dusty and the South is going dry.

It is water, water everywhere, and not a drop to drink.

We no longer hear the music of the mellow crystal clink

When the Colonel and the General and the Major and the Jedge

Meet to have a little nip to give the appetite an edge—

For the eggnog now is nogless and the rye has gone awry,

And the punchbowl holds carnations and the South is going dry. —*The Voice*.

The Independent

Entered at New York Post Office as Second Class Matter.

Publisher, Clarence W. Bowen.

Owner, The Estate of Henry C. Bowen,
130 Fulton Street, New York.

A WEEKLY MAGAZINE, FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Secretary Taft as a Conciliator

IN his address at Plymouth Church last week Secretary Taft devoted his attention to the negro problem, but necessarily in a somewhat guarded and perfunctory way. He could not "sail in," for the Brownsville matter was excluded. The dismissal of those soldiers was the President's act, not his, and he could not criticise the President's act while in the Cabinet. He ignored the matter utterly, but the President has himself asked Congress to pass an act reinstating such soldiers as shall be able to give satisfactory proof that they had no part in the raid or its concealment. That ought to be satisfactory, altho we have noticed that some of the less responsible negroes say that not one should apply unless all are taken back. That is like silly schoolboys who will leave school if certain offenders are punished.

Mr. Taft told the long story of negro progress since emancipation. He also gave at length the political history, the three Amendments, the Reconstruction period, the suppression of the negro vote, and the unjust operation of the laws whose language recognizes no color, but which can be and is so worked that, as

in the case of the hunter who aimed so as to hit it if it were a deer, and to miss it if it were a calf, it would take in all the white men and shut out all the black. He said the law shutting out the illiterate voter is all right where there is an ignorant population, and that the offense consists in not enforcing it impartially.

Here we do not agree with the Secretary. We have long opposed an educational qualification. We hold that the suffrage is more educational than the lack of it. We hold that if you give the ballot to all the people, the intelligent and wealthy, who pay the taxes, are thus forced to educate their masters and to support the public schools. We believe that a degraded and ignorant class have not the impetus to lift themselves, and that no ambition for the suffrage will make them learn, and that the superior class will not care to raise them and share power with them. Such a class likes to keep itself conveniently small. Education in England and elsewhere has followed, not preceded, the extension of the suffrage. It was a wise provision of law which immediately after the Civil War made the most ignorant white or black man of the South a voter, and then established the common school. The statistics which Mr. Taft gave as to what the white South has expended on negro education would bear some sifting.

It was natural and proper that in his address Mr. Taft should speak particularly of industrial education, for the meeting was called in the interest of Hampton Institute, and Dr. Booker T. Washington was the other principal speaker. On this subject he spoke strongly and well, and yet he did not seem quite to apprehend the condition of negro thought to be met as well as he does that of the Filipinos, which he has more particularly studied, and where his attitude has been above all cavil or criticism; and it must be remembered that the racial difficulty is one, whether it affects ten million negroes or ten million Filipinos.

There is a sharp division among the progressive negroes. One class is opportunist, moving forward, but along the lines of least resistance. They yield quietly where they must, make the best

of conditions as they are, keep still, vote little, do not offend their neighbors' prejudices, make much of the industrial and primary education which fits them to be good farmers and mechanics and solid, useful men in their station in the community. Doubtless they feel the indignity of Jim Crow laws and the exclusion from the ballot, and they move up and on, and they believe in the higher education, but they do not say much to disturb their neighbors. Of that wise and prudent and every way honorable class Dr. Washington is the shining example.

Because he is that example he is the target of not a little opposition and even abuse from another wing of negro intelligence. They are fighting men. They dwell much on wrongs. They belong to what is called the Niagara Movement. They include some of the ablest and best, and some of the bitterest negroes in the country. The talk about industrial education surfeits them. The best, the highest they feel is none too good for the race. Why should industrial education be talked to us by white men who send their own boys to college? They resent the Jim Crow car, the exclusion from waiting-rooms, the single dollar given for negro schools where three are given for white schools, the suppression of their political rights, and the many lynchings. Prof. Burghardt DuBois, in his "Heart of the Black Man," utters their voice.

Now it is the latter growing class that Secretary Taft and the Republican party need to conciliate. They can't forgive Brownsville. That wound has cut deep and does not heal easily. The former class will hold no long resentment, and yet it is the former class which the Republican party seems to have in mind. For the offended negroes it does no good to excuse or explain away the laws which somehow exclude the negro vote, or to talk optimistically of the future. Nor does it please them to tell how fine a thing industrial education is for the negro. They know it is no better for him than it is for white people. Nor is it any comfort to them to ask, as the Ohio Republican platform stupidly does, that in States which shut out the negro vote the representation in Congress should be reduced. They know that is mere wind;

and if it were feasible they would not sell out their right of suffrage in that way by compromising with a wrong, and that to their permanent injury.

We are not certain that the Republican party and its leaders have sense enough to get out of the snarl they have got into by the Brownsville order. They never suspected that it might endanger the Presidential election. They do not get any fair sense of the feeling that causes the situation. The only salvation for them is in the fact that the negro voter cannot stand for a party that has the unanimous support of all the Tillmans and Vardamans North and South.

Test-Tube Sociology

WHETHER sociology is a science or not is a debated question, but we can safely say that the most of those who are now actively engaged in talking and writing on sociological subjects are not scientists. They lack the distinguishing mark of the scientific temperament, the desire to put a theory at once to the test of experiment. Any one who has watched a chemist, for example, at the moment when a new idea strikes him will know what we mean. He at once gets absent-minded and nervous. He is impatient to be off to his laboratory and his fingers twitch for his test-tube. He does not try to convert anybody to his theory. He will not even talk about it, still less organize a society for its propagation. He values a theory solely as a guide to research after the manner of the pragmatists. If he can't test it he soon loses interest in it.

But the average social reformer is different. He loves his theory, the favorite offspring of his intellect and his philanthropy. He appears tacitly to realize that if his theory ever got put into practice it would be killed or become so disfigured and distorted that he would not want to own it. So he keeps it in its original purity and perfection, and calls upon the world to admire it, quite ready like a knight-errant to fight all those who refuse to acknowledge that it is the most desirable thing in the world. A utopia must be kept in its place. If it gets established anywhere on earth it ceases to be a utopia.

Sociology is today what physical science was in classical times, a subject that anybody who can talk thinks himself competent to discuss and that nobody feels called upon to try. The brightest men of Greece for centuries argued about the number of elements there are in the world, but none of them took enough interest in the matter to find out. The ancient philosophers really did not want to find out the answer to this and other world riddles. They frankly admitted that they preferred the pursuit of truth to the attainment of it. The amount of time and brain power that has been spent in trying to explain why a sick man dies at the turn of the tide, why rain always follows a battle, why a bowl of water weighs less when a fish is put into it, and other things that are not so, would, if capitalized and properly invested, be sufficient to abolish poverty. All of the statements in Aristotle's "Physics" have long ago been tested by experiment. Few of the ideas of Plato's "Republic" have ever been tried at all.

Now this is not because of the difficulty of sociological experimentation such as the length of time needed, the expense of the material and the lack of laboratory facilities. People in every generation have wasted wealth and human life unsparingly in efforts to force other people into compliance with their ideas of political economy, civics and sociology, but they do nothing toward demonstrating the value of these ideas. The money spent in a war to determine the very insignificant question of which of two cousins should be king or where the boundary of a tariff zone should be drawn would suffice to carry on an extensive experiment in eugenics for a century or two. But men are always more willing to die for a creed than to live by it. A thousand men would volunteer to fight behind a street barricade in any large city, but few of them would contribute ten dollars to test the truth of the theory for which they would lay down their lives. The real revolutionist, the sort of a man who accomplishes real revolutions, is not the ranter against society, but the man who will wear a becoming and artistic necktie when it is not in fashion.

It is because we feel that the greatest

obstacle to social progress is the lack of empirical facts that we give more space than other periodicals do to experiences such as Mr. Upton Sinclair's experiment in co-operative living at Helicon Hall last year, to Dr. Van Eeden's communistic colony in Holland two weeks ago and Mr. N. O. Nelson's rural settlement in this issue. These are not important undertakings in themselves, they do not present such attractive pictures as Wells's "Modern Utopia" or Morris's "News From Nowhere," but we venture to say that they are worth more than a shelf full of volumes of sociological speculation and exhortation. These three men have found out something by the only way that anything can be found out. In spite of unforeseen and discouraging impediments no one of them has lost his enthusiasm or his faith in his ideal. Mr. Sinclair still believes in the phalanstery. Dr. Van Eeden is even now planning a new system of co-operative production. Mr. Nelson is still a Single-Taxer. But they all know more than they did before, and they, at least, think the information they got is worth the price they paid for it. Sociologists must adopt the rule of the laboratory: "Every experiment that teaches us something is a success, whatever the result."

In aeronautics we are told the difficulty is not the invention or construction of a flying machine, but learning to fly. So in co-operation it is easy enough to devise a system; the difficulty is training men to co-operate. It should be thoroly understood that there is at the present time in this country no impediment in the way of a group of individuals entering into any form of co-operation ranging from a joint stock company to complete communism on any scale. The forms of law are easily complied with, and if successful, people would not have to be persuaded to come into it. If a democratically managed co-operative enterprise cannot compete with unorganized business men or autocratically controlled trusts, then we will know that there is something wrong with the plan or with ourselves, and we will not attempt to force its universal adoption until we find out how to remedy it. The communism of the family proves its value by enduring in the midst of a world of competi-

tion. Dr. Van Eeden, when asked how many persons and how much money would be needed to start his co-operative system, answered "Two men and one dollar." If sociology is practically to benefit the world as chemistry has done, it must proceed according to the methods of the chemist, who is continually trying experiments, and always in test-tubes before attempting them on a large scale.

Dr. Van Eeden's Message

THERE is nothing like a bit of variety now and then injected into one's stock of ideas. The disturbing power of one new idea is often astonishing. It runs amuck in the mind regardless, tumbling staid old propositions about in shockingly disrespectful ways, and compelling cherished convictions to get down on their bended knees and beg for mercy. The man who lets loose a new idea in the world is a revolutionist, a disturber of the peace of neighborhoods and nations.

But, then, what would we have! Stagnation is death. The static mind is an intellectual corpse. A new idea is the quintessence of life. It is like food to the starving, or keen fresh air to the half asphyxiated.

Really new ideas are not the most frequent apparitions in nature, however, and for the most part we have to depend for our intellectual quickening upon a rediscovery of ideas that have been lurking about the world thru all the millenniums since Abraham of Ur cut loose from the effete civilization of Ur-Bau's kingdom and got himself hither and yon on the frontiers of Canaan. Admirable old emigrant! He scattered ideas and offspring from Mesopotamia to the River of Egypt, and raised the mischief of discontent in a self-satisfied human race!

Next to those unhappy beings whom Mr. Mallock calls the *ca-pit*-alists, there is no class of human creatures more desperately in need of intellectual shock and tribulation than the Marxian Socialists. Self-imprisoned in the philosophic shell of their *materialismus*, they have been in grave danger of prematurely knowing all there is to be known. This would have been deplorable, because, goodness knows, we need the Socialists, the

anarchists, and all the rest of the dangerous elements to make the *ca-pit*-alists take notice of something besides Theodore Roosevelt's fiendish antagonism to prosperity. They are in danger of fixation of mentality. But how is their intellectual circulation to be restored if all the provocative forces of society settle down into a deathlike equilibrium?

Happily, there are multiplying signs of disturbance and flux. To tell a Marxian Socialist that there are other ways than the Marxian of stating the socialistic problem, and that there are other people in the world besides themselves who have something to contribute to the reinterpretation of social relations, is like telling an old Athanasian that some people besides those who repeat the Creed may have the good luck to be saved. But it does the modern Calvinist good to discover that God works in other mysterious ways not less than by the Westminster plan, and it does the Marxian good to learn that Socialists who are not orthodox nevertheless, now and then, perceive truths of social philosophy that challenge attention.

So, we feel sure, nothing but good can come of such a challenge to intellectual contentment as Dr. Van Eeden brings in his insistence upon the necessity of attacking the problem of social reorganization from the business or industrial end. Quite apart from the question whether the particular plan that Dr. Van Eeden advocates is workable, his contention that the working classes must acquire the art of industrial co-operation, as well as the habit of political activity, if they are ever to achieve the ends which socialism sets before itself, is altogether sound. The labor movement has discovered that trade unionism and its weapons of strike and boycott are inadequate. It is certain that the socialistic movement will discover that political methods alone are, in their turn, inadequate. Human society is an immensely complex thing, and its reconstruction will involve an enormous number of readjustments calling for endless readaptations of human purpose and aptitude. The Marxian Socialist understands that the so-called state socialism controlled by a business man's government does not secure socialistic results, even tho it goes the length

of public ownership of natural resources, and provision against want thru pensions and insurance. He will, in like manner, discover that social democracy will be equally disappointing if it is to be controlled by labor bosses, as indifferent to the general welfare as any *ca-pit*-alist has ever thought of being. The masses must learn the art of socialized co-operation in both industry and politics if they are to realize their dreams. If Dr. Van Eeden helps them in some measure to grasp this truth he will have accomplished something well worth doing.

Mr. La Follette on the Panic

WE notice that several Eastern daily journals of prominence do not take Senator La Follette's speech on the panic seriously. This, we suppose, is because his assertions as to the cause of the panic seem to them too absurd for discussion. We believe the assertions to be unwarranted and unreasonable, but he is an earnest man and we assume he is convinced that they are true. Moreover, his views about this matter have been held by many of the American people. His speech will not only confirm them in their beliefs but also probably increase the number of persons thus misled. It should not be ignored, nor should it be discussed flippantly.

It is unfortunate that Mr. La Follette, before declaring that the panic was deliberately planned and caused by a few men of great financial power, did not study carefully and without bias in New York, where the panic originated, the actual history of the beginnings of the disturbance. We are confident that if he had done so the charges which accompanied his attack upon the Aldrich bill would not have been made. Such accusations should have been based only upon the results of a most thoro investigation. Even in his list of about one hundred men whom he holds responsible for a wicked use of great power there is evidence that his inquiry was brief and superficial. To those who know how weak some of these men really are, that some are separated from others by undying enmity, and that a considerable number of them are incapable of using their power to cause widespread suffering and

misery, the list is only proof of the ignorance of the man who made it.

We do not undertake to defend all the practices of some of the New York banks, but if the Senator and others in Washington who have attacked the banks of this city for their course during the panic should ascertain by careful inquiry just what that course was, their sense of justice would end their assaults upon these institutions. We refer to the banks of the Clearing House Association. Their conduct deserved praise, not censure. If Mr. La Follette will compare the payments which placed their reserve \$50,000,000 below the limit with the selfish hoarding of hundreds of banks in the interior, which speedily raised their reserves far above the legal requirements and boasted of it, he will have a basis for further investigation that will change his unjust opinions.

The panic was not deliberately planned and brought about by the Senator's one hundred men. Would it be possible for one hundred Americans, selected on account of their wealth and financial influence, to "create artificially periods of prosperity and periods of panic"? If the list should be made with expert knowledge of financial and industrial relations, no one hundred men of this kind and rank, no fifty men, could be found who would work in harmony to accomplish such purposes. A sufficient number of heartless and utterly wicked magnates having the requisite power could not be collected and united for such raids. We know how great the power of some men in this class has been. We have said that a dozen men who could be named were able, by united effort, to compel reform in the railway service by putting an end to unlawful practices that yielded to them no personal profit but excited the injurious hostility of the public. They have not been induced to work together for such purposes, nor, in our judgment, could they be induced to work harmoniously with two or three dozen more in an organized raid upon the prosperity of the United States.

If Congress had appointed an impartial commission to ascertain the causes of the panic, the country would know more about them and Senators and Representatives would not be so ready to air

their incorrect theories and assertions. The immediate cause was the withdrawal and the locking up of deposited money in New York, followed by similar action elsewhere, and the hoarding of funds by banks as well as by the people. This alone was enough to cause distressing stringency and to check industry. These withdrawals were caused by fright, and the direct cause of this fright (which spread from New York) was the ousting of the Heinzes, Morse and the Thomases from their national banks, followed speedily by the removal of Barney from the presidency of the Knickerbocker Trust Company, the run upon that institution, and the closing of its doors. We shall not go further back in the record now, but if Mr. La Follette and others in Washington will begin an earnest inquiry with these fundamental and undisputed facts, they will soon arrive at sound conclusions which they can use to the advantage of the American people.

Legal Exceptions to Morality

THERE are plenty of social and popular exceptions allowed to strict morality, or even to generally admitted morality. We quietly ignore lapses from virtue, if the culprit has escaped the newspapers, or, perhaps, the law. We blame certain offenses in a woman which we do not seriously blame in a man. We excuse in ourselves breaches which we would not openly excuse in any one else. We admire the man who shrewdly grabs a million when we would send to prison the less guilty tramp who has taken a dollar. We hang one man for murder, but we give our sympathy to a mob which kills a "scab" in a strike. If John Doe sets fire to Richard Roe's house we send him to jail, but if a masked company of men conspire to burn the tobacco factories in Kentucky and whip those who displease them, the Governor and the police do not bother to prevent or punish it. Common murder we condemn, committed for private malice; but organized murder for national malice we call war, and we kill by the thousand for the nation's glory.

But these are rather social and popular infractions of ethical laws. There are other cases in which written law makes

special exceptions in favor of certain persons at certain times or places, allowing them to do without punishment what otherwise both law and common consent declare to be criminal. Just now two such cases are in the public mind, one in this country and the other in Europe.

Gambling is confessedly immoral. Any quantity of gambling is done, even in church fairs, but it is even so condemned. Acts of Congress forbid the mails for gambling. Our States have a multitude of laws against it. And yet gambling, forbidden elsewhere, has its protected reserves where law allows it to be carried on, permitted to certain people but forbidden elsewhere to others. Kentucky has just past a law permitting gambling on race-courses, but forbidding it outside those grounds. Nothing can be more absurd than such a law. And just such a law now exists in the State of New York. The police are very vigorous in shutting up the outside resorts where they bet on the races, but protect those who do just the same thing within the fence. The Constitution forbids it everywhere in the State, but the Legislature nullifies the Constitution just to protect a certain number of rich malefactors who run the racing associations. Governor Hughes denies that such an exception to morality should be legally allowed, and the Legislature hesitates.

Another case of such legal exception to morality is illustrated by the Russian duel the other day. Russian law forbids dueling in general, but a special exception is made to relieve military officers of the stigma of the offense. A tradesman must not fight a duel, but a colonel or general can. Perhaps it is thought that his business is so exceptionally immoral that he rests outside the moral code, living in a realm far removed from God and light of Heaven, and so within moral topsy-turvydom. Accordingly when General Fock was convicted of cowardice at Port Arthur and General Smirnoff escaped, the former challenged the latter to a duel. It was made a great event in military society. A spacious riding school belonging to a cavalry regiment was made the scene, and officers filled the floor and ladies lined the galleries. They shot to kill, and General Smirnoff was fatally wounded,

while General Fock escaped. Punished? Not at all; protected, honored; for the law lets them shoot at each other with all deliberateness, but forbids their servants to do it.

Of course what is moral in the army is moral outside of it. What is immoral in the shop is immoral in the barracks. But it takes time to teach a nation that no business, no profession of arms, no genius, no office is above and beyond the law of good morals. It has taken us in this country time to learn it as to dueling, and we have not yet learned it as to gambling. What condemned dueling in this country was its blundering fatality in a case much like that of General Smirnov and General Fock. It was the duel between Aaron Burr and Alexander Hamilton. Burr survived and Hamilton was killed. Hamilton's life was of value to the nation, while Burr was scarcely less than a traitor to his country. The result proved that the duello settles nothing right. It is likely to kill the wrong man. In Russia the really brave and honorable officer dies, and his guilty antagonist escapes. May we not hope that this sacrifice may do for Russia what Hamilton's death did for public sentiment in this country, or a good part of it, a century ago?

It ought not to be difficult to remove from our statute-books the exceptional privileges granted to certain people to commit crimes. But to harmonize and solidify public sentiment, so that social laws shall make no exceptions, but condemn equally the rich and the poor, the man and the woman, for sins against public and private morality—that is task and labor. To secure this equality is the business of all moral teachers and social reformers.

The Liberty of Ritual

It is not strange that the Ritualist faction, or section, or, if you please, true churchmen, in the Church of England, should begin to join with the Dissenters in seeking the liberty which would come with separation of the Church from the State. They fully believe that true public religious worship requires certain forms and acts that are forbidden by English law, and they perform those acts,

beyond all question, illegally. They feel that they must do them, law or no law; and yet they would prefer not to be compelled to disobey law. It is the ridiculous, not to say immoral, condition into which the union of Church and State puts religious people that the law of the State may forbid religious acts which the conscience of the worshiper requires. In its extreme this condition logically creates the Inquisition; in England it creates the investigation which has proved enormous disobedience of the English law as laid down in the Prayer Book, which is an English law-book; and such disobediences may be punished, and sometimes are punished, by suitable penalties, fortunately not of the kind that were customary in the days of Queens Mary and Elizabeth.

Under process of law a commission was appointed to investigate these irregularities. Those who committed them generally refused to testify; the evidence was secured by means of witnesses who attended the suspected services and made notes for the purpose of testifying. The evidence they gave abundantly proved, to the minds of the commissioners, that there was an immense amount of lawless religious worship in the services as conducted by Ritualists. These illegal acts were all in the line of what is called Romanizing. These acts are thus summarily designated in the report of the commissioners:

"In a large number of the services of Holy Communion as to which evidence has been given, vestments, the confiteor, illegal lights, incense, the lavabo, the ceremonial mixing of the chalice, the wafer, a posture rendering the manual acts invisible, the sacring bell, and the last Gospel, are all, or nearly all, in use, and unite to change the outward character of the service from that of the traditional service of the Reformed English Church to that of the traditional service of the Church of Rome."

Now these performances in the service of the Holy Communion may be very foolish, or very wise and right, but it is none of the business of Parliament to investigate them, except as religion is controlled by law. If a presbyter thinks himself a sacrificing priest, and that by his act the body of our Lord has entered into the wafer, and the people to whom he ministers think so, he ought to have the right to hold the wafer up and say,

as they do, "Behold the Lamb of God who taketh away the sins of the world." To forbid it is as much sacrilege as to perform it if one does not believe it.

This is believed by multitudes in the Church of England, and these acts are performed, and against all law. There were 559 churches in different parts of the country in which serious irregularities were discovered, nearly all of this sort; and these were not all that exist. Is it strange that those whose consciences require them thus to disobey the law should be indignant at the investigation? They called the witnesses spies. One worthy clergyman declared that under military law they would be shot.

But why have a law of Parliament which shall tell people just how much ritual they shall put into their worship? Why forbid them to put into visible practice their conscientious belief in the real presence? It is not merely a medieval anachronism, it is an offense against both liberty of conscience and good morals. It is amazing that it should be endured that the Church should allow Dissenters and even Jews and Atheists to dictate thru Parliament how Christians should worship. Dissenters may worship as they please; Catholics and Jews may practise any forms they wish, but if one chooses to belong to the Established Church he must submit to law as laid down by Parliament or be a lawbreaker. It is not strange that Ritualists begin to join hands with the Nonconformists to ask that this anomaly should come to an end. It is a chief reform which ought to be in the near future, but we fear is not.

Orchard's Death Sentence

They said, the defenders of Haywood and Pettibone, that Orchard, who confessed that he had killed Governor Steunenberg and other men at the instigation of the officers of the Western Federation of Miners, would escape punishment—another example of the power of the predatory rich. But he has been put on trial, has pleaded guilty, and has, as he expected, been sentenced to death. To be sure, we doubt if he will be hanged, but he will doubtless be a prisoner for life. Judge Wood, who presided, suggested that the Board of Par-

dons might consider whether the sentence might not be commuted to imprisonment, on the ground that Orchard had, as he believed, told the truth in his testimony at the trials of Haywood and Pettibone, who escaped conviction by the jury. This means that in their case the judge believes that the jury were wrong. It can mean nothing else, for if Orchard told the truth, as Judge Wood and so many other people believe, the men who instigated the crime and whose tool Orchard was, were guilty. It is very difficult to believe that any Socialist party will, as is said to be the intention, make Haywood its candidate for the Presidency. His qualification for the nomination is not his statesmanship, but simply the fact that he was reputed to be what the jury would not declare beyond reasonable doubt that he was. Orchard and some other men committed those murders. They were paid to do it, and their expenses were paid. There was a conspiracy of murder and there were conspirators. The most likely name before the public as conspirator is that of Haywood; and this is the man to be nominated, and this is the reason. It spells not socialism, but anarchy.

**The Flag in
Porto Rico** We have a letter, dated at Guayama, from an American residing in Porto Rico, who is surprised to see some of the conditions there which do not look to him quite American. He says:

We who are true patriots and lovers of our country and flag are pained to see the flag completely ignored, and the Spanish flag and colors in full evidence wherever the present Bishop of Porto Rico goes. He is an American citizen, officiating in an American Territory, but is received amid the bunting and arches adorned with nothing but Spanish colors.

We published in our issue of February 13th an extract from an article by Archbishop Blenk, formerly in charge of the Catholic Church in Porto Rico, in which he spoke severely of the work of Protestant missionaries in that island. We commend to his attention this statement, which raises questions as to the influences there tending to loyalty. The same correspondent speaks of seeing prisoners marched by the police to sweep out the

Cathedral in anticipation of the bishop's coming, and also of the denunciations in the churches of the law allowing civil marriage, declaring that all thus married are adulterers and their children bastards. They are at liberty to talk that way if they think so, but in time they will learn the lesson taught in France and Italy and the United States. Such language in churches explains the hostility expressed toward the American Government and the preference for the Spanish flag.

A New Renaissance

Not long ago we published the full translation of the correspondence of the Jews in Egypt as to the rebuilding of their temple in that land, at a date when the Jews were still alive who were mentioned by Ezra and Nehemiah. We have also given an account of the discovery of reported Sayings of our Lord, of the papyrus containing Theopompus's continuation of the histories of Thucydides and Xenophon, and of the discovery of a large fragment of a lost tragedy of Euripides called "Hypsipyles." But these are not all by any means. Professor Grenfell in a late address said:

"To the French we owe texts of Alemanos, Hyperides, and quite recently of four comedies of Menander, that is to say of the prince of the new comedy; to the Germans we owe texts of Timotheus and Didymus; to the English, who have been favored by fortune, other texts of Hyperides, texts of Aristotle, of Pindar, and all that is known of Herondas and Bacchylides. What a glorious list, and who can say what the future holds in store for us? Few branches of knowledge have made such progress in latter days as Greek studies. One might imagine one's self back again in the luminous days when an Aurispas, a Philadelphos, brought back from the darkness of the East the forgotten treasures of Hellenic literature to cast them as spoil before the brilliant avidity of Italy, shining in the glorious dawn of the Renaissance."

Why will not some American publisher give us all these in a volume in the original Greek that will make them accessible to the scholar?

Religion by Motto

Almost unanimously the House of Representatives has voted that the motto "In God We Trust" must go back on the gold coins, and the Senate can hardly fail to concur, and we do not believe the Presi-

dent will veto the act. So our nation will be religious again. Even those Representatives who never think of God except when they swear voted for pious gold. Those who trust in gold and not in God voted the lie on the coin. On or off makes no difference. The country is not a bit more God-fearing when it goes on, nor one bit less so when it goes off. Religion does not attach to temples or metals, not to Mount Gerizim or Mount Zion, for he that worships must and can worship only in spirit. Whether the motto on the coin is a lie or the truth depends on the spirit of the man who holds it. It is amazing that it is so hard to learn the lesson of our Lord at Samaria. We are not greatly impressed by the effort to inculcate religion by public mottoes. We have seen "Prepare to Meet thy God" or "Swear not at all" painted on stones by the wayside, or pasted on seals on the back of letters, but we have never heard of any conversions by such means, altho we have known profanity provoked in that way. It was not worth while to take the motto off the coins, and it is of no particular importance to put it on. An act giving citizenship to the Porto Ricans, or the removal of the tariff on Philippine sugar, would be ten thousand times as religious as this superscription, which has in it no least power to give to God the things that are God's.

Idealism and Experience

Prof. Borden P. Bowne does not like it that because of his idealistic metaphysics he has been claimed by the Christian Scientists as holding a philosophy which supports their views. He says in *The Christian Advocate* that it makes no difference what a man's philosophy is; it is his experience that must guide his conduct. He puts it admirably:

"Whatever our metaphysics, the order of experience is practically as real for the most determined idealist as it would be for the most besotted realist. If any one is in doubt on this point let him make the experiment. Let him consider whether he could stand out of doors in scanty clothing thru a January blizzard, whether he could safely swallow strychnine in large doses, handle a live wire, put his hand in the fire, chop off his fingers, sit comfortably on a cake of ice, renounce food, and so forth. Here is a large field for experiment for any one who doubts and

wishes to try and see. And before long it will appear that there is an order of experience which for all practical purposes is real. That is, we do not produce it and we cannot escape it. We have to adjust ourselves to it whether we like it or not, if we expect to live. Now a Christian Scientist who admits this differs practically from the rest of us in nothing but words. His theoretical difference, if there be any, lies in the field of metaphysics, and that is purely a matter of speculation."

President Alderman's Philosophy

President Alderman, of the University of Virginia, made an address in this city last Sunday on "The Growing South," in which he had much to say of the so-called negro problem. The praise it has received in the press measures the easy attitude which tends to let things alone that do not concern us here, and assumes that local communities can best judge of the righteousness of local conditions. Just as in the days before the Civil War it was said that the North had no business to criticise Southern slavery, so now it is said that it has no right to meddle with laws and sentiments that suppress the suffrage. Dr. Alderman expressed such a view; and he added:

"In a community of 10,000 white inhabitants and twenty-four negroes the question is an academic one and the doctrinaire and the sentimentalist have a beautiful time with it. In a community of 10,000 white inhabitants and 1,800 negroes there is less philosophy and more silence. In a community of 10,000 white inhabitants and 10,000 negroes the policeman supersedes the philosopher in relative importance and the problem moves along as best it may over the rough ways of democracy."

It is not a question of "philosophy," but of Christian ethics. Substitute *Christianity* for "philosophy," and you have the exact quarrel. Even justice and equal rights can rule "sentimentally" where there are few negroes, but when whites and blacks are in equal numbers, then overboard goes Christianity, and we justify "the rough ways of democracy." He says the South has done right in forbidding the negro the ballot:

"The white race shall control the political development of the Southern States as it will and ought to control the development of the rest of this Republic. As we were European in our origin and structure, so shall we remain, refusing to become either Asiatic on one side of the continent or African on the other."

But those negroes are not Africans; they

are all Americans of ancient lineage, as truly Americans as the mixt descendants of the First Families and the indentured pauper immigrants of Virginia. We quote one more passage:

"It has been settled that the negro, having humanity, personality, economic value, shall be trained for citizenship in this Republic and that the South itself shall exert intelligent and discriminating influence upon the character of that training, because it is its duty so to act, and because extraneous influence may carry the negro further from understanding and sympathy with his environment.

What does this mean? What is this "extraneous influence" that is deprecated? What is the "discriminating influence" that is to be exercised on his training to give him "economic value" and yet keep him from seeking the ballot? Is it Christian justice?

Politicians by profession dodge the liquor question, but Governor Folk, of Missouri, in a recent address in Pennsylvania, said:

"The question in the minds of the people of the United States today is the liquor question. Wherever you go thruout the whole country you find the people talking, not the tariff, insurance or corporation matters, but of the liquor business."

But the party papers do not. It bothers the politicians because in the cities so many political headquarters or clubs are in saloon premises. It is local option that is making the people discuss this question. The saloon people who are fighting local option may find that they are driving the people to State prohibition.

In November, 1906, the voters of Montana, by an overwhelming majority in every county of the State, adopted a constitutional amendment making the initiative and referendum a fundamental part of their State government. More than a year ago the Legislature enacted the legislation necessary to give effect to this amendment, and indeed went beyond the letter of the constitutional requirement by making the initiative and referendum applicable also to municipal government. We give these facts by way of correction of a statement in our issue of March 12th. It is a duty, sometimes, to correct the errors of others; always a pleasure to correct our own.

It is a loss to Maine and to the country that so independent and able a man as Mr. Littlefield announces his refusal to serve another term in Congress. The only reason is that he feels it to be his duty to himself and his family to resume his profession of the law, as he cannot afford longer to be a Congressman. We believe that Mr. Littlefield has been able to make a comfortable and modest living for his family out of his salary; and this raises the question whether it is not a higher ambition and a nobler duty to serve one's country than it is to amass a fortune for one's children.

The oldest of Methodist papers, representing the Wesleyan Zion in Boston, denounces the removal of Andover Seminary to Cambridge as a "grievous betrayal," and says:

"If Harvard College and Harvard Divinity School have stood, and now stand, for any one theological negation, it is an avowed disbelief in the Deity of Jesus Christ."

That statement is utterly untrue. Harvard College has existed for over two and a half centuries, and for only three-quarters of one century did stand for that, and it does not stand for it now.

At this late day a bill is recommended by the committee for passage by Congress which will make citizens of the one million people of Porto Rico. As the committee says they "are clearly entitled as a matter of right to be accorded the privileges and the honor of American citizenship," we may believe that the bill is as good as past. But it has been sadly delayed. But Porto Rico ought to be made a full Territory, and soon after a State.

It is sincerely to be hoped that this storm of passion in Hong Kong against the Japanese may not spread in China, for another war would be a terrible calamity. But the feeling aroused by the quarrel over the return to Japan of the vessel carrying arms may suggest that Japan cannot be expected to pick a quarrel with the United States while she has another ancient enemy at her very shores, with Manchuria and Korea as a constant bone of contention.

It is a good example which an American living abroad sets to the rich Englishmen. He promises to give \$100,000 to Oxford University when the subscriptions reach \$500,000. That ought not to be a burdensome sum to be raised for that old university. We would not think it serious for Yale or Harvard. Columbia University asked for millions and got them.

The Methodist Episcopal Church entered India fifty years ago with one borrowed preacher. Now it has gathered into its fold in Southern Asia a Christian community of nearly two hundred thousand souls, and in the Indian part of its field it has three hundred young men under definite promise to enter the mission work and a larger number of young women. And yet we are told that missions are a failure.

The most extraordinary boycott in history is that of the newspaper reporters for the Reichstag. They refuse to report until a gross insult is apologized for, and their journals support them; and the Cabinet and the members of the Reichstag refuse to speak so long as their speeches cannot be reported. So the pen has another victory over the sword.

The Russian debt is four and a quarter billion dollars, and Russia proposes to go on borrowing at the rate of \$75,000,000 more for the next five years. But who will dare to lend? It will be a terrible crash when Russia is unable to pay the interest on her debt, an eventuality which makes the Continent shudder.

Is it because so many people now go to college, or, possibly, because that is the sort of a church and minister that college people like, that one in four of the resident members of Dr. Jefferson's Broadway Tabernacle Church in this city is a college man or woman?

Dr. Hamilton says he never called President Roosevelt crazy; he "had never diagnosed his case." No, he had not, and that made it intolerable that he should have insinuated as much.

Insurance

The Increasing Number of Accidents

INDUSTRY, commerce and transportation have all made tremendous advances during the last fifty years. We live faster, if not longer, than did our fathers and forefathers. Side by side with the improvements and material advances that characterize the age in which we live appears a dark shadow which is found in a remarkable increase both in the number and the gravity of accidents. This is, of course, due in part to our commercial expansion, since half a century ago the longest railway owned and operated only a scant three hundred miles of roadbed, and the productive industries were conducted upon a corresponding scale. In comparison with present conditions and what we are doing now, the world of fifty years ago was a remote and primitive, not to say barbaric age. In the interval of time that has elapsed between then and now, the country's population has more than trebled; railway mileage has increased more than sevenfold, from a total of 31,000 miles to more than 225,000 miles, to which additional miles are constantly being tacked on. The density of population constantly grows in our cities, and great industries, under the inspiration of their captains, are employing ponderous machinery that tremendously increases output, but collaterally increases the peril of daily life. Danger now lurks on every hand. It arises not only from increased and rapid travel, but also from congested streets, and the perils of work and recreation have increased out of all proportion to the increase in population. Investigations recently made in Europe show that fatigue now figures as one very important cause of accident. With the establishment of boards of health and public service commissions, the statistics of the Interstate Commerce Commission and the widespread publicity given to fatal and disabling injuries among all classes of the population, accident insurance is daily made more prominent in the public eye.

Figures printed in *Agents' Record*, published by the Travelers Insurance Company, set forth that the railroads killed 44 in New York City during the month of January. The number of accidents ran up to 2,500 during the same period. The following table shows apportionment of moving causes as well as the various classes of persons who suffered injury:

| | |
|--|-------|
| Car collisions | 170 |
| Persons and vehicles struck by cars..... | 934 |
| Boarding | 479 |
| Alighting | 416 |
| Contact with electricity..... | 34 |
| Other accidents | 1,888 |

Total 3,921

The following injuries to persons were recorded:

| | |
|--------------------------------|-------|
| To passengers | 1,444 |
| To persons not passengers..... | 570 |
| To employees | 486 |

Total 2,500

The total number of accidents in December was 3,993 and total killed 51.

All of which makes pertinent the query: Have you an accident policy? If not, why not?

A SPECIAL line of work that will be new to many of our readers lies in the scheduling in a systematic manner of the contents of private residences for insurance and other purposes. At least one man in New York City devotes his attention to this line. His method consists in giving such a detailed description of every article and listing the same as regards the relative importance of the property, with notes on the locality of the property in the house, so as to make the entire work one of easy reference and of great value as to adjustment in case of fire or burglary. All insurance policies state as a part of their text that in the event of loss you must file a complete inventory, with your loss claim. This is not an easy thing to do from memory, and it would seem that the work of preparing such inventories was quite legitimate, notwithstanding the novelty that now characterizes it.

New England Railroads

OWING to the opposition in Massachusetts to the proposed merger of the Boston & Maine and the New York, New Haven & Hartford Railroad Companies, a merger which was prevented by the Legislature, some surprise has been caused by the favorable report of three of the five members of the Special Commission on Commerce, to which the question was referred. The New Haven Company already owns more than one-third of the Boston & Maine stock. Many restrictions and safeguards are required by the Commission. Some of these are designed to prevent any increase of rates, or any transfer of either company to a third without the consent of the Railroad Commission. The main argument of the majority report is that consolidation will help New England by giving her more weight and influence in the railroad system of the country. Probably there are some transportation advantages to be gained by a merger under the restrictions proposed. The chief objection is that the consolidated interests could exercise great political power, which might be exerted against the public good.

✻

Banking Reform

SOON after the beginning of the recent panic, it was seen in New York that additional legislation affecting banks and trust companies doing business under State authority was required. It will be remembered that recommendations were made by the very competent commission appointed by Governor Hughes. In due time, bills embodying the substance of these recommendations, together with other bills for reforms suggested to the new Superintendent of Banks, Mr. Williams, by his own experience and inquiries, were introduced in the Legislature at Albany virtually from the Banking Department. There are twenty of these measures now pending, and as a whole they involve important improvements in the conduct and official supervision of the

trust companies and State banks of New York.

In one day of last week five of these bills were past in the Assembly. One of them increases the vault cash reserves of trust companies. Another requires a bank or trust company director, upon reelection, to make oath that his qualifying stock was not hypothecated during his previous term. Among the bills pending in various stages are those which increase the cash reserves of banks; require full written statements of all loans and discounts to be made at board meetings at least once a month; reduce the maximum of any secured loan from 40 per cent. to 25 per cent. of the institution's capital and surplus; provide many new restrictions and safeguards with respect to loans on mortgage; require adequate and distinct capital for branches, and give the Superintendent such power, concerning embarrassed or insolvent institutions, as is exercised over national banks by the Comptroller of the Currency. The long list of these measures, of which we can make only brief mention, bears testimony to the ability, expert knowledge and diligence of the new Superintendent. Much will be done for the promotion of banking reform by the enactment of them.

✻

....The annual statement of the Electric Storage Battery Company for the calendar year 1907 shows that the year's net income was \$821,274. Dividends amounting to \$812,450 were paid, and the net surplus after payment of dividends was \$3,669,327. The company's total assets are \$22,063,407. Its capital stock is \$18,000,000.

....In the United States Steel Corporation's annual report, issued last week, it is pointed out that, altho unfilled orders on hand December 31st were only 4,624,553 tons, the bookings in January were 25 per cent. better than those in December, that another increase of 25 per cent. was shown in February, and that the average daily orders in March have exceeded those of February by at least 25 per cent.

NEW YORK, THURSDAY, APRIL 2, 1908

No. 3096

Survey of the World

A Message From the President

The President sent to Congress on the 25th a message of about 4,000 words, recommending that action be taken upon several subjects to which in previous messages he had directed attention. He asks for modification of the Sherman Anti-Trust law, the prohibition of child labor in the District of Columbia, a new employers' liability law, legislation regarding injunctions in labor disputes, the passage of a currency bill, the establishment of postal savings banks, a permanent Waterways Commission, and provision for procuring information to be used in revising the tariff. There will be "ample time," he says, for a consideration of these questions before the close of the session. Child labor should be prohibited thruout the nation; at least, a model bill on this subject should be past for the District of Columbia, where child labor is not regulated by law. An employers' liability law, drawn to conform to the recent decision of the Supreme Court, should be enacted "immediately," and it should be applicable to employees of the Government as well as those of the railroad companies. Concerning injunctions in labor disputes, the President says:

"No temporary restraining order should be issued by any court without notice; and the petition for a permanent injunction upon which such temporary restraining order has been issued should be heard by the court issuing the same within a reasonable time—say, not to exceed a week or thereabouts from the date when the order was issued. It is worth considering whether it would not give greater popular confidence in the impartiality of sentences for contempt if it was required that the issue should be decided by another judge than the one issuing the injunction, except where the contempt is committed in the presence of the court, or in other case of urgency."

The Interstate Commerce law, he says, should be amended so as to give railroads a right to make traffic agreements, which shall be subject to the approval of the Commission and be made public. The Commission should also be empowered to pass upon the issuance of all securities hereafter issued by interstate railroads. When receivers are appointed by a Federal court for "a common carrier or other public utility concern," the Attorney-General should be empowered to nominate at least one of the receivers, "so that the management may not be wholly redelivered to the man or men the failure of whose policy may have necessitated the creation of the receivership." [Evidently he has in mind recent railroad receiverships in the South.] The Sherman Anti-Trust law should be amended "because of uncertainty as to how it affects combinations among labor men and farmers." All such combinations, if and while existing for and engaged in the promotion of innocent and proper purposes, should be recognized as legal. This law was "most unwisely drawn." Legislation was needed to control, in the interest of the public, the business use of enormous aggregations of corporate wealth, but this law is an example of the kind of legislation which is drawn in such sweeping form as to become either ineffective or mischievous. In the modern industrial world combinations among business men, among laboring men and among farmers "are absolutely necessary":

"Some of these combinations are among the most powerful of all instruments for wrongdoing. Others offer the only effective way of meeting actual business needs. It is mischievous and unwholesome to keep upon the statute books unmodified a law, such as the anti-trust law, which, while in practice only partially effective against vicious combinations, has never-

theless in theory been construed so as sweepingly to prohibit every combination for the transaction of modern business. Some real good has resulted from this law. But the time has come when it is imperative to modify it. Such modification is urgently needed for the sake of the business men of the country, for the sake of the wage-workers, and for the sake of the farmers. The Congress cannot afford to leave it on the statute books in its present shape."

It has now become uncertain, he says, how far literal compliance with the law, if secured, may result in the destruction of the organizations necessary for the transaction of modern business, as well as of all labor organizations and farmers' organizations, "completely check the wise movement for securing business co-operation among farmers, and put back half a century the progress of the movement for the betterment of labor." He suggests that the main prohibition of the statute shall be retained, and that there be added a provision that the contracts in restraint of trade, which are subject to the prohibition, be past upon by governmental authority, for example, by the Commissioner of Corporations. The filing of any such contract with the Bureau of Corporations might be required, and after a stated time the Bureau, or the Department of Commerce and Labor, might forbid it. If not forbidden, the contract "would then only be liable to attack on the ground that it constituted an unreasonable restraint of trade":

"Labor organizations, farmers' organizations, and other organizations not organized for the purposes of profit, should be allowed to register under the law by giving the location of the head office, the charter and by-laws, and the names and addresses of their principal officers. In the interest of all these organizations—business, labor, and farmers' organizations alike—the present provision permitting the recovery of threefold damages should be abolished, and as a substitute therefor the right of recovery allowed for should be only the damages sustained by the plaintiff and the cost of suit, including a reasonable attorney's fee. The law should not affect pending suits; a short statute of limitations should be provided, so far as the past is concerned, not to exceed a year."

And all suits brought for past causes of action should be brought only if the contract or combination "was unfair or unreasonable." In all suits hitherto brought by the Government, the President says, "the combination or contract was in fact unfair, unreasonable and against the public interest."

Labor, the Tariff and the Waterways

We should encourage, the President says, just and fair agreements between employer and employee. A strike is "a clumsy weapon for righting the wrongs done to labor," and we should seek to extend the process of conciliation and arbitration as a substitute for strikes:

"Moreover, violence, disorder, and coercion, when committed in connection with strikes, should be as promptly and as sternly repressed as when committed in any other connection. But strikes themselves are, and should be, recognized to be entirely legal. Combinations of workmen have a peculiar reason for their existence. The very wealthy individual employer, and still more the very wealthy corporation, stand at an enormous advantage when compared to the individual workingman; and, while there are many cases where it may not be necessary for laborers to form a union, in many other cases it is indispensable, for otherwise the thousands of small units, the thousands of individual workingmen, will be left helpless in their dealings with the one big unit, the big individual or corporate employer."

He points out that the law of June 29th, 1886, recognized the right of laborers to combine for the regulation of wages, hours, etc., and that the law of June 1, 1898, recognized strikes as legal, while forbidding participation in, or instigation of, force or violence against persons or property, or attempts by violence, threat or intimidation, to prevent others from working:

"The business man must be protected in person and property, and so must the farmer and the wage-worker; and as regards all alike, the right of peaceful combination for all lawful purposes should be explicitly recognized. The right of employers to combine and contract with one another and with their employees should be explicitly recognized; and so should the right of the employees to combine and to contract with one another and with the employers, and to seek peaceably to persuade others to accept their views, and to strike for the purpose of peaceably obtaining from employers satisfactory terms for their labor. Nothing should be done to legalize either a blacklist or a boycott that would be illegal at common law."

It is urgently necessary, he says, that there should be financial legislation. Postal savings banks should be established. They are imperatively needed for the benefit of the wage workers and men of small means. "The time has come when we should prepare for a revision of the tariff"; and revision should be preceded by careful investigation. Material should be collected, "so that the Con-

gress elected next fall may be able to act immediately after it comes into existence." He suggests that at the present session the proper committee might be directed to gather the needed information, and that the committee might be aided by Government agents from the executive departments, "designated by the President, on his own motion, or on the request of the committee":

"One change in the tariff could with advantage be made forthwith. Our forests need every protection, and one method of protecting them would be to put upon the free list wood pulp, with a corresponding reduction upon paper made from wood pulp, when they come from any country that does not put an export duty upon them."

Ample provision should be made, he says in conclusion, for a permanent Waterways Commission, and for the beginning and prosecution of the actual work of waterway improvement and control. Many bills granting water power rights on navigable streams have recently been introduced:

"None of them gives the Government the right to make a reasonable charge for the valuable privileges so granted, in spite of the fact that these water power privileges are equivalent to many thousands of acres of the best coal lands for their production of power. Nor is any definite time limit set, as should always be done in such cases."

He gives notice that he "shall be obliged to veto" any water power bill which does not provide for a time limit and for the right of the President or of the Secretary concerned to fix and collect such a charge as he may find to be just and reasonable in each case.

Dr. Hill Opposed at Berlin

Much surprise was caused at the White House and in diplomatic circles at home and abroad when it became known last week that the German Government, or Emperor William, was unwilling to accept Dr. David Jayne Hill, now Ambassador at The Hague, as the successor of Ambassador Tower. Dr. Hill's nomination for the place has been confirmed. In November last, the customary overtures were made, and the German Foreign Office's response was entirely favorable. The Foreign Office now asserts that there has been no change in its attitude. The objection appears to have been made by the Kaiser in personal

communications to Mr. Tower, of whom he is quite fond, and whose approaching departure he views with much regret. His reasons are said to be expressed in a letter from Mr. Tower which will arrive in Washington before the end of this week. Owing to Dr. Hill's ability and admirable service in various capacities, and to the puzzling phases of the incident, the matter has been a prominent topic in the American and European press. There have been many guesses about the Kaiser's reasons. At this writing, the latest, and perhaps the most trustworthy, report is that the Kaiser thinks Dr. Hill, being a man of small fortune, would not be able to give the Embassy the social rank which it has recently attained by reason of Mr. Tower's great wealth and lavish expenditure, and that also he has been led to believe that the atmosphere of the Embassy, if controlled by Dr. and Mrs. Hill, would be too severely intellectual and scientific. There appears to be no warrant for the surmises that Dr. Hill (then Assistant Secretary of State) offended Prince Henry during the latter's visit to this country, or that his books and other published writings contain something displeasing to the Kaiser. Dr. Hill recently engaged apartments in Berlin and looked at several houses offered for his use. The news was permitted to leak out in Berlin several days after it had been sent to our State Department. Some think Mr. Tower deserves criticism. The President is disappointed and greatly displeased.—On the 30th it was reported from Berlin that the Kaiser had withdrawn all his objections to the appointment. In a bulletin from the Foreign Office it was said that the "doubts as to whether Dr. Hill would feel himself comfortable" in the Embassy at Berlin had been removed.

The Anarchists By the explosion of a bomb in Union Square, New York, last Saturday afternoon, Selig Silverstein (or Cohen), who had intended to throw it at an advancing platoon of police, lost his right arm and both of his eyes, and Ignatz Hilderbrand, his friend, was instantly killed. Silverstein's injuries are mortal. An organization called The

POLICE DISPERSING THE CROWD AT THE MEETING OF THE UNEMPLOYED.

Unemployed Conference, formed by persons prominent in the Socialist and Socialist-Labor parties, had planned a public demonstration, with speeches by Robert Hunter, Morris Hillquit and others, in Union Square. But a permit was refused by the Park Commissioner, and the courts declined to enjoin the police from interfering with the meeting. Thousands came to the Square (the meeting having been advertised by circulars and in the Socialist papers), and were driven from it by the police. Comparatively few were still in the Square when the bomb exploded. Silverstein had lighted the fuse, but had miscalculated the time required. And so the approaching platoon of police escaped. After the explosion, Silverstein repeatedly admitted that he had made the bomb, that it exploded in his hands, and that he was about to throw it at the police, whom he hated and whose escape he deeply regretted. He is twenty-two years old and he came from Russia. His uncle and his cousin say that while he called himself "a radical socialist," he was really an an-

archist. The police say they have found in his room in Brooklyn letters from Berkmann, the anarchist who attempted to kill Henry C. Frick, and is now associated with Emma Goldman. The Conference has published a statement deploring the explosion, asserting that it had no connection with or knowledge of Silverstein, and declaring that all its members are law-abiding citizens. It also severely criticises the police and the Park Commissioner, saying that the latter "placed at naught the constitutional rights" of those who desired to hold the meeting.—After taking much testimony a coroner's jury in Chicago reported that Chief of Police Shippy was justified in killing Lazarus Averbuch, the anarchist who attacked him in his house and shot his son and a coachman. The account published at the time was fully substantiated by the evidence.—Dynamite was exploded near the bed of General Bulkeley Wells, manager of the Smuggler Union mine, near Telluride, Col., at 2 a. m. on the 28th. He was blown fifteen feet and severely shocked, but not killed. In the same building his

THE VICTIMS OF THE BOMB, UNION SQUARE, NEW YORK.

predecessor, Arthur L. Collins, was assassinated by some one who shot thru a window. Steve Adams, known in connection with Harry Orchard, is soon to be tried for that crime, and General Wells was mainly responsible for bringing him back to Colorado for prosecution.—Having directed that the anarchist paper, *La Question Sociale*, of Paterson, N. J., be excluded from the mails, President Roosevelt wrote to the Department of Justice, last week, urging the prosecution, if possible, of the editors and publishers, and asking for a report as to additional legislation that may be needed. He pointed out an article in the paper "advocating the murder of enlisted men of the United States Army and officers of the police force, and the burning of the houses of private citizens." The Post Office Department has translated other articles. In one of them the assassination of President McKinley is spoken of as "one of those little accidents which give us great pleasure." The editors, Ludwig Camimitta and Francis Widmar, say they will continue to publish the paper. They protest

against the President's action as "a blow at the free press."

Negro Shot by a Congressman

Representative James T. Heflin, whose Congressional district in Alabama is the one in which Tuskegee Institute is situated, shot a negro named Lundy, on the evening of the 27th, in Washington. Mr. Heflin was in a street car, on his way to a Methodist church, where he was to deliver a lecture on temperance. In February he advocated in the House a bill (introduced by himself) providing separate street cars in Washington for negroes. On the evening of the 27th, Lundy, intoxicated, was in the same car, and was annoying passengers by drinking whisky out of a bottle and by using vile language. Heflin reproved him. There was a scuffle. Lundy was ejected from the car. Immediately thereafter, Heflin, who remained in the car, shot at Lundy, who was in the street. The first bullet lodged in the ankle of Thomas McCreary, a horse trainer, who had just helped his wife to leave the car. The second gave Lundy a wound in the

head. Heflin says Lundy was reaching for his hip pocket; that he shot at the man's feet to frighten him, and that the bullets must have glanced upward from the pavement. He publishes copies of threatening letters received by him since he asked for separate cars for negroes, and explains that on account of these letters he has recently, by permission from the authorities, carried a pistol. Lundy will recover. He has a bad record, having been arrested twelve times in the last two years. Heflin was arrested and then released on bail.

Governor Johnson's Candidacy

Answering an inquiry from the publisher of a Minneapolis paper, on the 27th, Governor John A. Johnson wrote at length concerning his attitude toward the Democratic Presidential nomination. He did not believe, he said, that "any American citizen should be an active, open candidate" for the nomination, but if the Democratic party believed him to be more available than any other man, he would be "happy to receive the honor." He had done nothing and should not thereafter do anything to bring about the nomination of himself:

"If, however, those who have the welfare of the country and of the Democratic party at heart should feel that I am necessary in this year of grace, I certainly shall respond to any call which may be made upon me. I desire it to be understood that in no sense am I to be a candidate for the purpose of defeating Mr. Bryan or any other man; that the only consideration which would induce me to allow the use of my name would be the feeling that I might be necessary to the cause. If the Democratic party should see fit to nominate Mr. Bryan, or any one else, the action would meet with my approval, and the nominee certainly would have my unqualified support."

Important Railway Decision

An important decision affecting recent State legislation concerning railroad rates was announced last week by the Supreme Court. The question came up in connection with appeals involving Judge Pritchard's release of the Southern Railway's ticket agent at Asheville, N. C., who was sent to the "rock pile" for selling a ticket at the old rate, and the fining of Minnesota's Attorney-Gen-

eral for proceeding in defiance of the Federal court's injunction against the new rate law in his State. In both instances the Federal judges were sustained and the rate laws involved were pronounced unconstitutional, upon the ground that the penalties provided for violation of them are so enormous that the companies are restrained and prevented from resorting to the courts for a test of the validity of the statutes, and thus are deprived of "the equal protection of the laws." Eight Justices concurred in this decision, and only one, Justice Harlan, opposed it. Obviously, the new rate law of Alabama and all other similar laws which State Legislatures have sought to make "injunction-proof" by very severe penalties and in other ways are covered by this decision and will be annulled if brought before the Supreme Court. The decision is very clear upon the point that Federal courts have jurisdiction in cases in which it is alleged that a State law is at variance with the Federal Constitution.

Thomas Car The Thomas car, which has led the field across the North American continent in the international automobile race from New York to Paris, arrived in San Francisco last week, and has now been shipped to Alaska. The car will reach Valdez on April 6th, and will strike inland to Fairbanks, expecting to go down the frozen surface of the Yukon River to Nome. In case of an early thaw the racer may be held up until the renewed cold weather in the fall. The Italian Zusta is speeding thru lower California in a desperate attempt to reach San Francisco in time to express the car to Seattle and catch the same steamer as the Thomas. The third racer, the French DeDion, is crossing Nevada, and the fourth, the German Protos, is temporarily disabled in Wyoming with a broken shaft. This car is 1,487 miles from San Francisco. The leader reached the coast on the forty-second day from New York, having covered 3,832 miles. The best day's run was 332 miles and the poorest 11 miles. It is declared by experts familiar with the topography that it will be impossible for the machines to make

their way across Alaska. Secretary Taft has intrusted a letter of greeting addressed to General Picquart, French Minister of War, for delivery by the Thomas car. He congratulates the French Republic on the termination of a great international event and the interest shown by all countries in the race.

The members of the Reichstag, finding that it was of no use to deliver their speeches unless they got into print, prevailed upon Herr Gröber to apologize for the insulting epithet which he applied to the reporters for laughing at the Centrist debater who said that negroes had immortal souls. The reporters thereupon called off their strike and returned to work. Chancellor von Bülow, in a brief review of international questions, said that the Algeciras convention in regard to Morocco was equally binding on all the signatory Powers. France had no occasion to reproach Germany for interpreting this convention in a narrow sense and it was not the intention of Germany to do so in the future, but she should expect France to carry out its terms in a peaceable and friendly spirit. In regard to the Tweedmouth letter about which the *London Times* made a sensational announcement, the Chancellor said:

"We wish to live at peace and quiet with England. We therefore feel bitterly when a section of English publicists persistently talk of the German danger, altho the British fleet greatly outnumbers ours, and altho other countries possess stronger fleets than ours and increase them with equal zeal. Notwithstanding this, public opinion in England is constantly fomented against Germany by a reckless, malicious polemic. We do not dispute England's right to adopt the fleet standard she considers necessary. We ought not to be blamed for not wishing our naval constructions to be regarded as a challenge to England. If in connection with these statements we consider the Emperor's letter to Lord Tweedmouth, in which one gentleman speaks to another, and the fact that the Emperor prizes most highly the honor of his rank of Admiral in the British Navy, and that he is a great admirer of British education, the British Navy and the British people, then we obtain a perfectly correct idea of the tone and tendency of the contents of the letter."

Herr von Schön, the Foreign Secretary, declared that no idea existed of making the Baltic a closed sea, and that Russia

had made no proposal to alter the political status of the Aland Islands, but he intimated that a conference of the countries concerned in the Baltic question might be convened at Berlin to arrange a new convention for the peaceful adjustment of the questions involved.—

The new Associations bill as introduced by the Government made the use of the German language compulsory at all public assemblies with the exception of international congresses and election meetings. This met with strenuous opposition by the radical supporters of the Government, and a compromise has been effected, according to which an exception is to be made in those districts where the indigenous inhabitants of non-German origin constitute more than 60 per cent. of the local population. In such cases the use of their mother tongue is to be permitted at public meetings for the next twenty years, provided that three days' notice of the meeting be given to the police.—The punitive expedition sent out against the band of rebellious Hottentots under Simon Copper in German Southwest Africa was successful in dispersing them, but the Germans had to fall back on account of losses and the failure of water supply. The expedition consisted of 430 white men, with 700 camels and four machine guns. The loss in killed and wounded amounted to 31, including the commander, Colonel von Erckert.

Macedonian Reforms

Chancellor von Bülow, in his speech in the Reichstag, said that the trouble in Macedonia was not due primarily to a strife between Christendom and Mohammedanism, but to the bitter struggle between the various Christian races. The Macedonian barbarities were outrages on humanity and civilization, but to make the dissensions between the Powers an occasion for European war would be intolerable. So far, he said, the efforts of the great Powers to extinguish the conflagration had been rendered futile, because fresh fuel was continually being thrown on the fire from the outside.—In reply to the British proposals for Macedonian reforms the Russian Government has proposed another plan which it regards as more like-

ly to be accepted by the Sultan than the British one. Russia holds that it would be impossible to obtain an agreement among the Powers for the appointment of a Governor-General of Macedonia as proposed in the British note, but it is recommended that the Governor-General, appointed as at present, be given a term of seven years, not to be dismissed without the consent of the Powers. Russia is willing that the reforms shall be undertaken by the representatives of the Powers interested instead of by Russia and Austria-Hungary alone as at present. The Russian scheme further provides for an Inspector-General, who shall reorganize the *gendarmerie* and have a seat on the board controlling the finances, tho without a right to vote; that all superior European officers may be admitted into the Turkish civil service; that Turkey shall accept in their entirety the judiciary reforms recommended by the Powers; and that the *gendarmerie* be reorganized and increased and directed by European officers.—The late General De Giorgis, the Italian officer who first had charge of the *gendarmerie* in Macedonia, has been succeeded by Count di Robilant, who was one of the Italian representatives at the Hague Conference.

Korea Durham White Stevens, foreign adviser of the Korean Government, was fatally shot on the 23d in San Francisco. The evening before a committee of four Koreans had called upon him at his hotel and accused him of being an enemy of the Korean people and had beaten him. These Koreans, or others, attacked him at the ferry station as he was starting for Washington. One of them, I. O. Chaeng, struck him in the face and then shot him twice. He died on the 26th. Mr. Stevens was a graduate of Oberlin in 1871; studied law, was secretary of our Legation at Tokyo in 1883, and was appointed by Japan as secretary of the Japanese Legation at Washington. Afterward he went to Japan and was in the diplomatic service of that country. In 1904 was appointed foreign adviser of the Emperor of Korea. He had recently been appointed counsellor to the staff

of Marquis Ito, Governor-General of Korea. The Koreans in San Francisco attacked him because they held him responsible for the Japanese protectorate over Korea and for the alleged oppression of the Korean people under Japanese rule. On the ship which brought Mr. Stevens to San Francisco there was also on board an appeal from what is called "The Righteous Army" of Korea, urging all Koreans in this country to work against Japan and Japanese influence. The men who attacked Stevens were probably moved to some extent by this appeal.—On account of the assassination of Mr. Stevens, Marquis Ito, Japanese Resident-General of Korea, has returned to Seoul. He says:

"I regard the death of Mr. Stevens as a national disaster and a personal loss. He was honest and fearless, with a well balanced mind, and I regarded him as a fine type of the American. I am returning to Korea determined to pursue a policy whereunder I hope to restore that country to a condition whereby the mass of the people can live protected from extortion and corruption. I cannot immediately change conditions which have existed for centuries, but I can already see some light ahead. I shall miss Mr. Stevens, who was my fearless assistant during a recent period, when the difficulties of the situation were so tremendously increased by the agitation of the foreign and native adherents of the old régime."

The Tokyo Club has started a fund for the erection of a monument to Mr. Stevens. The subscription list is headed by Marquis Inouye and Marquis Tsuzuki. The Korean and Japanese Governments are expected to appropriate \$100,000 for the family of Mr. Stevens.—General Okazaki, who has command of the Japanese forces in Korea, has suppress the Korean insurrection by a series of three swift attacks on the camps of the insurgents, and is pursuing the scattered bands. The Korean Cabinet, offended by this use of Japanese troops, is urging the substitution of native conscripts and the dismissal of all Japanese officers except a few instructors.—The bill introduced by Baron Katsura and past by the Japanese Diet for the colonization of Japanese in Korea has two objects—diversion of emigration from America and the introduction of a better class of emigrants into Korea than the adventurers who followed the armies into the peninsula.

ROBERT MARION LA FOLLETTE.

Senator La Follette and Representative Government

BY GILBERT E. ROE

[This article is prepared for THE INDEPENDENT by one who was for a number of years a law partner of Senator La Follette in Wisconsin, and who actively participated in all the political contests in which Senator La Follette was engaged up to 1900, when Mr. Roe removed to New York City. Mr. Roe speaks of all the matters he discusses at first hand. This article is the fourth in our series of Presidential possibilities. We have already printed articles on Governor Hughes, by President Schurman; on Vice-President Fairbanks, by ex-Secretary Foster, and on Senator Knox, by Representative Burke. Others will shortly follow, —EDITOR.]

ROBERT MARION LA FOLLETTE is the greatest democrat this country has produced since Abraham Lincoln. "Persistency," "indomitable will," "bulldog tenacity" and many similar expressions have been used to describe that quality in Mr. La Follette which makes him return to a political contest, after an overwhelming defeat, with the same equanimity and

confidence he would be expected to show had he been successful. These expressions, however, do no more than hint at the element in his character they were intended to describe. It is simply his democracy, his faith in the justice of the final judgment of the people. This makes him persevere in whatever he undertakes politically with perfect confidence in ultimate success. Mr. La Fol-

lette is a lawyer, and, of course, long ago learned that a meritorious cause is often lost in the court of first instance, but that if the cause justifies it an appeal should be taken to a higher court, where a more adequate presentation and a more careful consideration is apt to produce a different result.

All Mr. La Follette's political contests have meant simply the presentation to the people of a cause he believed in and advocated. If the decision was adverse he appealed—to the people; he presented his case a little better and secured a more careful consideration, usually with the desired result; but if the necessity arose, he never hesitated to appeal again and again to the same tribunal, with absolute faith in the correctness of its final judgment. And this faith is fine. It is a principle of law that a judge who has heard and decided a case shall never thereafter on appeal take part in deciding the same case. The reason for this rule is that it is presumed that a judge who has once reached a conclusion on a cause can never thereafter decide it impartially. Mr. La Follette pays to the great mass of American voters the compliment of believing that, whatever views they may previously have entertained upon a question, they will, after the facts are fully presented, decide it correctly.

The idea of *giving* the people good government is no part of Mr. La Follette's political philosophy. He aims at self-government. He is quite content if he can help break down the intricate political machinery which has been interposed between the people and their representatives. Alexander Hamilton, discussing in "The Federalist" the duties of the Chief Executive, admitted that "the republican principle demands that the *deliberate sense* of the community should govern," but, he added, this "does not require an unqualified complaisance to every sudden breeze of passion or to every transient impulse which the people may receive from the arts of men who flatter their prejudices to betray their interests." Mr. La Follette seems not to apprehend much danger from a "sudden breeze of passion" or "transient impulse" on the part of the people of this country. He believes, if we may judge by his

work in behalf of direct nominations, that the great danger lies in the possibility that the people will become weary in the struggle for good government, because their will is so often thwarted and ignored, and in the end become indifferent to that government in which they have so little real part. Mr. La Follette's convictions in this respect are not the result of mere theories. He, as much as any man in public life, has suffered from the "sudden breeze of passion" and transient impulse of the mass of voters.

When he was thirty-five years of age he had already served six years in the House of Representatives. He had won for himself a place upon the great Ways and Means Committee of the House, and as a member thereof had written the agricultural schedules of the McKinley bill, which did more to popularize that measure with the mass of the people than any other feature of it. He was the youngest member ever appointed upon that great committee. He was recognized as the leading orator in the House of Representatives and one of the most indefatigable workers on its committees. While he had incurred the enmity of political bosses in both parties, in his native State and out of it, since he had never asked for nor received their support, their opposition meant little. In that year, however, and while the candidate of his party for a fourth time, nominated unanimously, he went down to defeat at the polls. It is true that it was the year of the Democratic landslide, in which McKinley and hundreds of other Republicans suffered defeat. It is also true that the "interests" which Mr. La Follette had opposed in Congress worked for his defeat, and that he neglected his own campaign in order to speak in the districts of his Republican colleagues, both in and out of his State, believing them to be harder prest by their Democratic opponents than himself; but all of these conditions combined could not have overcome his popularity and effected his defeat had it not been for a sudden breeze of passion on the part of the people of Wisconsin. The "Bennett law" issue, as it is still called in Wisconsin, which many thousands of the Republican voters of the State be-

lieved involved their personal and religious liberty, revolutionized the partisan politics of that State in a single day. It gave the State four years of Democratic administration, and sent two Democrat United States Senators and eight Democrat members of the House of Representatives to Washington. Altho there can be no doubt that it appeared to Mr. La Follette at this time that his career had been cut short and his most cherished hopes and ambitions destroyed, without the slightest blame attaching to him, he bowed cheerfully to the verdict of the majority, and, without resentment and with unshaken confidence in the final judgment of the people, he returned to private life. He believed that if the people worked an injustice on account of a "transient impulse" they would be equally quick to make reparation, and the subsequent events in his career go far to vindicate his opinion.

As a corollary to Mr. La Follette's unusual democracy, one other quality in his character must be appreciated in order to understand him and his work. He has the point of view of the man who works with his hands. No class-conscious laborer has this point of view more distinctly than the senior United States Senator from Wisconsin. His inheritance, certainly his environment and early training, did much to give him this point of view; his quick sympathy and innate desire for fair play did the rest. As a boy, upon a farm where all the work was done by the members of the family, Mr. La Follette learned the lesson of primitive life—that it is necessary to work in order to eat. A little later he worked in order that the other children of the family and himself might have the benefits of an education, and still later that his old mother might be provided with the comforts of life. And the work that he did, and the work that every one did whom he knew, was manual work. He had never heard of the idea of getting something for nothing, or that success meant profiting by another's misfortune. When, somewhat later, Mr. La Follette became a student at the University of Wisconsin, the necessity of doing manual work in order to maintain himself there and help support the rest of the family was still

heavy upon him. He carried his load easily, however. He won the highest oratorical honor that institution could bestow, and a little later, as its representative, he won the interstate oratorical contest. Soon after graduating from college he was admitted to the bar on examination, and shortly thereafter was elected district attorney for Dane County, in which Madison is located. The salary of that office, then \$800 a year, was the first money he had made except by the labor of his hands. At the expiration of his first term as district attorney he was re-elected, being the only Republican on the ticket who was elected. During his administration of this office one of the wings of the State Capitol at Madison, then in process of construction, fell, and it was the resourcefulness of the investigation into the causes of the fall, and the relentlessness of the prosecution, as conducted by the boy district attorney, that first pointed public attention to those qualities of the man which have won the confidence and respect of many and the fear and hatred of a few.

Why has Mr. La Follette always kept his intensely democratic point of view and his sympathy with and understanding of the man who works with his hands? It is true he was born and educated to that point of view, but the same is true of innumerable other men who in later life have not been noted for democratic principles. The answer must be found in the quality of the man. When he began the practice of law he did not seek the favor of powerful corporations. If corporate business came to him to do, he discharged his duty as attorney faithfully, but his sympathy with men made him the natural advocate of the individual as against mere corporate interests. When he entered public life he did not ask permission of the bosses of his party. He neither refused their aid nor courted their favor. He simply made common cause with the people, whom he knew and believed in, and who knew and believed in him. Thrice member of Congress, and three times elected Governor of his State, and today United States Senator, his point of view is exactly as democratic as it was when as a boy and young man he worked

with his hands to support himself and help support the other members of the family.

It would be interesting, if space permitted, to refer to Mr. La Follette's record as district attorney, the notable cases successfully prosecuted, and the efficiency of his administration of that office; of his splendid work in Congress, his refusal of a Federal appointment by President McKinley, and his brilliant work as a lawyer at the bar.

Mr. La Follette's great work for better things in politics began in his native State fourteen years ago. The political conditions of Wisconsin at that time were neither better nor worse than those in many other States. It had for years been dominated by the great lumber interests and the railroads. In 1894 the younger and more progressive element of the Republican party brought forward as a candidate for the Republican nomination for Governor the Hon. Nils P. Haugen. Mr. Haugen was the only Republican representative in Congress in the State who had kept his seat in spite of the Democratic landslide of 1890. Mr. La Follette, as a private in the ranks of his party, did what he could to secure Mr. Haugen's nomination for Governor, and altho he did not succeed he displayed those qualities of masterful political leadership which from that day to this have made him the unquestioned leader of the progressive element of his party in his State. In 1896 the same element was again in the field disputing for mastery with the leaders of the old political machine. In this campaign Mr. La Follette was the recognized leader, as well as the candidate, of this wing of his party. The issues which finally became so clearly defined were, at this time, not fully understood. There was a good deal of mere instinct in both the leader and his followers. They wanted a cleaner, more efficient and economical administration of the affairs of the State. Fortunately they couldn't get that alone. The old caucus and convention system of nominating candidates was in force. Mr. La Follette had a majority of the delegates, but when the convention met in Milwaukee and balloted for Governor many of the delegates elected for him voted against him. Enough of them

were "influenced" to vote contrary to the expressed will of the people who elected them to give a small majority to the opposing candidate, and Mr. La Follette was defeated. The bosses of both parties held a jollification meeting, and drank to what they fatuously declared was the political death of the disturber La Follette. He smiled and went home, and told the people how their delegates had betrayed them. One issue had been made clear in the politics of Wisconsin. The caucus and convention must go, and in its place must come a primary election law under which party candidates would be selected by direct vote of the people. Having carefully elaborated his argument, Mr. La Follette, on the 22d day of February, 1897, in an address before the students of Chicago University, outlined his plan for the abolition of the caucus convention and the substitution therefor of the direct vote by the Australian ballot. This address, widely published and circulated in Wisconsin, was the opening gun of the campaign, which continued without cessation until the day, six years later, when, as Governor of Wisconsin, Mr. La Follette approved the most complete primary election law ever enacted by any State.

In 1898 Mr. La Follette was again a candidate of the progressive wing of the party for the Governorship, and the history of 1896 was repeated, except that the convention substantially adopted the La Follette platform, and in the legislation of the ensuing year gave some slight recognition to the principles he had advocated. During these campaigns Mr. La Follette had spoken in almost every town and hamlet in the State. A sentiment had been built up so overwhelming that when, in 1900, he again appeared as the candidate of the progressive element of the party, the old machine was able to make only the semblance of a fight, and he was almost unanimously nominated. And he was elected by the largest plurality ever given a Governor in the State. After the election, however, it was found that while the machine had promised to make no opposition to the reform program of the progressives it had quietly secured the election of enough members of the State Senate (one-half the members of

which held over from the previous election) to block effectually the passage of a primary election law and any of the other measures which the people had been promised and for which the party had declared in its platform. Here was a fine opportunity to compromise. The bosses of the old machine, "stalwarts," they called themselves, were ready to concede such legislation as the "deliberate sense" of the State would finally approve, but they would not permit the passage of such radical measures as the "transient impulse" of the people was demanding. Many of Mr. La Follette's earnest supporters urged him to compromise. The stalwarts would concede a primary election law if the radicals would break their promise respecting the taxation of corporations and particularly the railroads; or, failing this, they would permit an optional primary election law or one applying to county offices only. "It was the best they could get," "a half-loaf is better than no bread," "make haste slowly," were some of the platitudes brought forward in favor of the compromise. Self-interest was appealed to. How could Mr. La Follette face the people in another election and admit that he had failed? He smiled, and said that he thought that he would have less trouble in facing the people than the other fellows would. And the event proved that he was right.

He knew that it was both dishonest and inexpedient to accept makeshift measures in place of the clear-cut primary election and taxation laws which had been promised. He knew that any half-way measure would have all of the weaknesses and none of the strength that the complete measure would have. "Obstinate" he was called, and "tenacious" and many other things, but here his fundamental democracy, his firm instinctive faith in the average voter came into open play. He believed that if he simply went to the people and told them why he had failed they would understand and place the responsibility where it belonged. He rejected all offers of compromise, and stood absolutely for the fulfilment of the platform pledges. Little was accomplished at that session in the way of legislation, but much was accomplished in the way of

finding out who the men were that were obstructing the popular will. Mr. La Follette, in the campaign which followed, read the roll call showing how these men voted on the important measures which had come before the Legislature, and the people did the rest. At the next election Mr. La Follette was not only re-elected Governor, but a Legislature was chosen a majority of which represented the people—the sentiment of the State.

At the opening of the session of this Legislature Mr. La Follette presented a message in which, elaborately and forcefully, he urged the claims of the people to the legislation which they had twice been promised. He was careful to impress upon the Legislature the fact that, under the Constitution, the function of the Executive was merely to recommend legislation, not to enact it. But that message reviewed the history of the political struggle in the State up to that point, and indicated clearly the duty of the Legislature to the people. A primary election law was past, abolishing all caucuses and conventions, and providing for the nomination of all candidates by direct vote of the people. The law, so far as it could under the Constitution, included United States Senators, and required that they should be designated by a popular vote. It was thought proper to refer the law for final adoption to a referendum vote of the people, and accordingly at the succeeding spring election it was adopted by a majority of over 50,000 votes.

The Wisconsin primary election law in its operation has been very successful. Many of those who strongly opposed its passage, including former United States Senator John C. Spooner, have, since it has been in operation, strongly commended it. Other remedial legislation was also past by this Legislature, including the long promised law taxing the railroads of the State on the actual value of their property, the same as private individuals were taxed. The passage of this law was preceded by most careful investigation; it has been approved since by the courts, and it adds annually more than a million dollars to the revenues.

But a new trouble arose. Mr. La Follette and others who had carefully investigated the question saw that the rail-

roads, by increasing their rates or by a mere change in classification (which would hardly be recognized as an increase), could shift the entire burden of the increased taxes upon the people of the State. The taxes would be increased, but so would the rates for railroad service, and, in the end, the people would pay as of old.

The remedy which immediately suggested itself was to regulate railroad rates and forbid excessive charges. With all the force at his command Mr. La Follette urged the Legislature to adopt this course. In a special message on this subject, he said:

"It is true the farmer, the small dealer and consumer cannot afford to appear here in person; that he cannot afford to hire some lobby agent to represent him and that he must depend upon his representatives in the Legislature to guard and protect his interests.

". . . Special interests and the agents of special interests may be conspicuous in the legislative committee room and in the legislative lobby. They properly are heard here day after day. . . . They appear to be the only ones concerned. Let us not be misled. Out in the State, back in your respective districts, are those who will not consent to pay higher rates upon everything which enters into their daily lives in order that a small number of favored individuals may rest secure in special privileges. Whether he works upon the farm, in the factory or in the railway service, every man in this State has come to know that he pays the freight when he houses and clothes and warms and feeds his family, and that exorbitant transportation charges falling upon each article of consumption in the aggregate becomes a burdensome tax upon every man who must take account of the rapidly increasing cost of living."

The efforts of the Executive, however, were unavailing. The railroads brought to Madison hundreds of shippers who were, or believed they were, the "favored individuals" receiving "special privileges." These shippers, added to the regular railroad lobby, gave that body the unusual appearance of really representing some of the people of the State. The question was comparatively new, the members of the Legislature were not thoroly informed, they hesitated, and the measure was lost.

The conduct of Mr. La Follette at this point, better than anything else in his career, shows his character. He knew that if the law regulating railroad rates was not passed, the law increasing the taxes upon the railroads would be nugatory and soon repealed, and also that the re-

peal of the other reform laws would follow in due course. On the other hand, he knew that if the State was once able effectively to regulate railroad rates, reasonable rates, good service and economical management would be the result, the regulation of all other public service corporations would follow, and the evil power of the railroads and other corporations in the politics of Wisconsin would be gone.

If he ever hesitated as to his course no one knows it. With the adjournment of the Legislature and the final defeat of the rate regulation measure he announced his candidacy for Governor for a third term, and went to the people principally upon the issue of railroad rate regulation. He was far too good a politician not to know the difficulty of what he had undertaken. It was the custom of the State that a Governor should serve but two terms, and in all the history of the State there had been but one exception. If he retired quietly from the Governorship at the end of his second term it was well understood that a United States Senatorship was awaiting him. He could point proudly to his record. In letter and in spirit every promise made to the people had been kept. He could escape the bitter and lasting enmity of the railroads and spare himself the pain of seeing some genuine friends turn away, themselves deceived by the charge that personal ambition led him to become for the third time a candidate for Governor. He saw that his defeat apparently meant political death. He knew that he would have against him every great corporation, practically every individual of great wealth, the press of the State, and what was left of the old political machine, reinforced by the newer Federal one. He knew also that the work and stress of such a contest would seriously endanger his health, which was already showing the effect of the strain to which he had subjected himself. Probably some men would have done what he did either from a strong sense of duty or a willingness to sacrifice themselves for a cause. It is doubtful whether Mr. La Follette was much moved by either of these exalted motives. Here again he was moved by his democratic faith. He believed that the people would understand the issue and support him. He confidently ex-

pected to win, not lose the fight. He saw no reason to ponder the consequences of defeat, because he confidently expected victory. The primary election law would not go into effect in time to be used, but he believed that, when the issue was presented, the people would carry even the caucuses of the State upon the issue presented and control the nominating convention.

The weeks and months of the campaign that followed, preceding the State convention of 1904, are now a part of the best remembered political history of Wisconsin. The previous campaigns were play in comparison. The scars of that conflict can still be found in almost every community of the State. Suffice it to say that the convention assembled at Madison, Wis., in June, 1904; renominated Mr. La Follette for a third term as Governor, and adopted a platform which, among other things, provided:

"Justice to the people of this commonwealth demands that they pay no more than a reasonable charge for the transfer of passengers and freight within the State, and the Republican party pledges itself to enact and faithfully administer the law creating a State Railway Commission, empowered to fix and enforce reasonable transportation charges, so far as the same may be subject to State control."

A minority of the convention bolted and pretended to organize another convention, the delegates of which were recognized by the National Republican Convention that met in Chicago soon after. The Supreme Court of the State, however, held the La Follette convention to have been regular. The bolters nominated an opposition candidate for Governor, the Hon. Edward Scofield, who had been twice Governor of the State. But at the election that fall this popular man polled 12,136 votes against 227,253 for Mr. La Follette. Truly the people understood.

In the legislative session of 1905 the law regulating railroad rates and railroad service was promptly past. One of the first acts of that body was to elect Mr. La Follette to the United States Senate, but he refused to accept until in the regular session of the Legislature, and a special session, subsequently called, the laws promised were passed. He then resigned as Governor to take his position in the United States Senate, in January, 1906.

Most of the laws enacted upon the initiative of Mr. La Follette during the five years he was Governor may be grouped under two heads—first, those designed to place the machinery of government more directly in the hands of the whole people; second, those designed to protect the man whose chief asset is his labor from the encroachment of organized capital. Under the first head should be placed the primary election law, the civil service law, the anti-lobby law, and the law referring to a referendum vote in cities the question of granting franchises to public service corporations. Under the second head is naturally grouped the laws increasing the taxes on corporations, and particularly the railroads, and providing for a physical valuation of their properties; the laws regulating railroad rates and controlling the operation of all public service corporations; the labor legislation, including the law relating to injuries to employees; the child labor law; the law requiring accidental injuries of employees to be reported; the establishment of employment offices in various cities, and the requirement that the employers of factory labor provide decent sanitary conditions for their employees.

Thruout this legislation and all the rest that he has fathered run the two ideas which have dominated the public services of Mr. La Follette, namely, his desire to place the government as completely as possible in the hands of the people, and his desire to protect the man whose principal asset is his labor. It is a remarkable fact, which testifies to the care with which all this legislation was enacted and the thoroughness of the investigation which preceded it, that not one of these laws has been held invalid by the courts. Corporate interests are safer in Wisconsin today than ever before, and even the corporations are coming to recognize this fact, particularly now when they are confronted by the prospect of more drastic and careless legislation in other States.

More important, however, than all the laws which have been past in the State of Wisconsin since Mr. La Follette began his campaigns is the political interest and the civic spirit which have been aroused in the people of the State. All Mr. La Follette's work in Wisconsin has

meant one thing—representative government for the people. The government of Wisconsin, like that of nearly all the States, and like the National Government, has not been in fact representative of the whole people. It had represented wealth, and not the man who produced the wealth. It had represented corporate interests as against the interests of individuals. It was inevitable that the interests represented should have discriminated in legislation, in their own favor and against those not represented. To place all interests on an equality under the law, to place the machinery of government directly in the hands of the whole people, and to arouse the civic spirit to keep it there—that is what Mr. La Follette did in Wisconsin. And, as United States Senator, Mr. La Follette has shown the same qualities that he showed as Governor. Much to the surprise of those who knew him only thru the misrepresentation of censored press reports, he has gone about his duties quietly, but in a way that gets results. Soon after he entered the Senate that body was engaged in the discussion of railroad rate regulation. Mr. La Follette believed that his years of study of the question and his practical experience with it in Wisconsin qualified him to speak on it. It is a convention of the United States Senate that a new member must sit in silence for a considerable time, and not participate in the debates of that body. Mr. La Follette was sorry to violate the convention of the Senate, just as he was sorry to violate the custom in Wisconsin which permitted a Governor only two terms. Nevertheless he had something to say upon the rate bill, and he said it. The Senate began by not listening. Noticing this, Mr. La Follette remarked that the people would listen if the Senators did not. And before he finished his speech the people of the country were listening, and so were most of the Senators.

Since Mr. La Follette came to the United States Senate he has injected into national politics the proposition that a physical valuation of railroad property is necessary. There can be no intelligent regulation of railroad rates or railroad service without it. The idea has been received in some quarters with unexpected favor, and there is evidence that

it may be realized speedily. Whether he accomplishes his purpose this year or the year after, or at some subsequent time, does not give Mr. La Follette much concern. If he lives that question will be thoroly discussed and understood, and the people will be given a chance to vote on it. He believes he knows what the result will be.

He has found that there are certain rules and conventions of the Senate that can be turned to account. That body has always been so small and select, and its members so certain to be right (or wrong, according to the point of view) on all important questions, that the rules allow great freedom of debate and permit a very small minority to force a roll call on any question. In the House of Representatives, on the other hand, where there are always certain to be some aggressive members who really represent the people, it has been found necessary to adopt rules which practically eliminate the individual and minority from the work of legislation. But the Senate has apparently rested secure in the belief that such individuals would never find their way into that body, and has therefore not armed itself against such danger. Taking advantage of this situation, Mr. La Follette speedily adopted the plan of requiring the roll to be called and the vote of the members upon the questions in which the people were vitally concerned to be recorded. When he discusses these questions before the people on lecture tours, as he does between sessions of the Senate, he simply reads the roll call. If the vote of the Senators is such as their constituents approve, the Senators are very glad to have this done. If the votes of the Senators are wrong, Mr. La Follette reads them just the same, and leaves it to the people to decide what they will do about it.

Mr. La Follette reached the Senate in time to prevent thousands of acres of valuable coal and oil lands belonging to the Indians being taken away from them and past over to speculators and ultimately to the trusts. Incidentally, also, he was instrumental in preventing the Government's disposing of thousands of acres of other similar land to the same interests. He has initiated much legislation in the interests of labor. He stands firmly for a reduction of the tariff and

the regulation of the whole matter by a commission of experts in which all interests will be represented. He has taken an active part in the discussion of financial measures, and strongly opposed the idea of making railroad bonds a basis for an issue of currency.

If, however, this article has succeeded in its purpose of representing the character of the man and the ideas which influence his public acts, it is unnecessary to go into details respecting his work. His friends and enemies alike know where he stands, and will stand, on

every question involving representative government. His friends undoubtedly expect to see him advanced from the Senatorship to the Presidency, and his opponents fear it. Mr. La Follette is perhaps the least concerned about this of any one. He knows that whether in official position or out of it the work he must do is precisely the same. He believes it possible to realize Lincoln's ideal democracy—"the government of the people, by the people, for the people," and to this end he is working.

NEW YORK CITY.

Parliament, Publications and Persons in England

BY JUSTIN McCARTHY

THE course of the year thus far has been peculiarly marked by some parliamentary elections ending in the defeat of Liberal candidates and either in the re-election of anti-Ministerial representatives or the election for the first time of candidates opposed to the principles of the Government. Of course, to a Ministry with so great a majority the loss of a few votes could not in itself seem to be anything like a serious calamity. But then, coming so suddenly as it has done, it has sounded something like a distant note of reaction. The immediate result has been to fill the Liberal party as with the forewarning of such an event and to animate the Conservatives with exulting confidence in just such a prospect.

The conditions, it must be said, are not now by any means such as they would have been if the omens had been made manifest at the opening of a Parliament some few years earlier. The alarm to the Liberals does not come now in any sense from that part of the House of Commons where the Irish members hold their seats. The Irish National party and the Irish people have on the whole full confidence in the Government and the party led by Sir Henry Campbell-Ban-

nerman, from whom they have already received the most earnest assurances of effective measures for the promotion of Catholic education on fair terms, for the further improvement of the legislation on behalf of the Irish tenantry, and for the passing of some adequate measure destined to endow Ireland with the right of self-government at home. The Ministry are therefore justly confident that in any struggle between them and the Tory party they are to have the unflinching support of Mr. Redmond and his followers.

The danger now is understood to come altogether from the rapid growth of Socialism in English cities and towns, from the fact that the open and avowed Socialists have a proportion of representation in Parliament utterly unknown there a very short time ago, and that most of the working-class members, those who had been in the House for several years, are now identifying themselves with the Socialist movement. Here we have at all events an entirely new state of things to encounter, and keen observers of the parliamentary assembly are telling their friends that many men of influence on the Tory side of the House are already beginning to give the Socialists an encour-

aging word or two every now and then and to act as if some parliamentary advantage might be made out of them in the event of the Government being brought into embarrassment by any sudden crisis.

Outside the House indeed there are alarms of a still more serious character, for a large number of peaceful citizens have got into their minds something like an absolute terror of this open and avowed tendency toward Socialism on the part of those who represent the English workingmen.

So far as my own study of this living subject is concerned I may say that I am not by any means disposed to take an alarmist view of it. I have no serious fear that the class of English workingmen from whose ranks we have latterly had so many members sent into the House of Commons will be likely to show themselves in any sense the wild enemies of property and order. There are even yet many legislative injustices which bear exclusively upon the workingman—injustices which

would in all probability be left for an almost indefinite time unremedied if some political organization were not created and maintained to direct especial attention toward the social troubles which call for instant redress. But, be that as it may, it is certain that there is at present a widespread depression among some Liberals and a great alarm among others because of the danger supposed to be threatened by the growing relations between those whom we describe as the working members and those who an-

nounce themselves as representing the principles of Socialism.

The Government, however, appears to be taking close account of all those still existing injustices to the working classes in town and country, and may be trusted to do its very best in order to establish a better condition of things for these millions of toilers who hitherto have known little or nothing of British legislation but its disqualifying and repressive provisions.

My Irish fellow-countrymen in the

United States will have seen with satisfaction before this article appears in print that an early day has been given by the Government for the discussion of Mr. John Redmond's motion calling upon the House of Commons to affirm the principle of Home Rule for Ireland. Mr. Redmond has now for the first time during several years a thoroughly united National party to support him. Mr. T. M. Healy, Mr. William O'Brien, and some other Home Rule members, who had recently held themselves aloof from the party, and some of whom had fre-

SIR HENRY DRUMMOND WOLFF.

quently and severely criticised its policy, altho they could not oppose its principle, have now joined with the great majority of the party and openly proclaimed their change of attitude in the House of Commons. The expected debate, now close upon us, will therefore have something of a special historical interest, and will, I feel confident, draw from Mr. Birrell, the Chief Secretary for Ireland, an emphatic declaration of the Government's unchangeable resolve to accede to Ireland's national appeal. Mr. Birrell has indeed on many occasions made public declara-

tion of his Home Rule principles. Sir Henry Campbell-Bannerman, the Prime Minister, has been a convinced Home Ruler for many years, and I know that Mr. Gladstone was in favor of Home Rule even before his illustrious father had come to recognize the justice of Ireland's national demand. That there are some members of the present Government who are but lukewarm in their support of the demand is, I believe, quite certain, but I do not suppose that any of these will make the coming debate on Mr. Redmond's motion an occasion for giving expression to any qualifying or hesitating opinions on the subject. A measure for the concession of Home Rule to Ireland is not indeed likely to be brought forward in the present session. One excellent reason for the delay is that the Government will have to fight out the whole question between the House of Lords and the House of Commons on the subject of education before Home Rule can be dealt with, and I presume that full official explanations and assurances will be given during the course of the debate to be opened by Mr. Redmond.

I have been much delighted of late by the reading of Sir Henry Drummond Wolff's two volumes just published and bearing the title of "Rambling Recollections." The title of the work is very appropriate, for Sir Henry has committed to pen and paper the varied memories of his most active diplomatic service here, there and everywhere thruout the whole civilized world just in the order of their coming back into his mind and without any attempt to subject them to any rigid process of symmetrical arrangement.

Every one who knows Sir Henry Drummond Wolff, and I have had many opportunities of knowing him during a long extent of years, must know that he is a man endowed with the richest gifts of observation and humor, and can make his figures and his incidents live and move before the eyes of those who listen to him, and I may add that no one who comes into his company is likely to do anything but listen when once he begins to speak. The moment, therefore, that a reader opens these two volumes he is sure to chafe and grumble at any interruption which compels him for the time to discontinue his study. Among Sir Henry's other experiences was that of

several years as a member of the House of Commons, where, as many of my readers will remember, he formed one of the famous Fourth Party. Those who belonged to that very exclusive party—it held only four members—were Conservatives in their political principles, but they could not pledge themselves to all the doctrines of the Conservative leaders during those days, and they therefore sat together in the House of Commons and spoke and voted according to their common principles and inclinations. The members of the party were the late Lord Randolph Churchill, Mr. Arthur Balfour, Sir John Gorst and Sir Henry Drummond Wolff.

It was in the House of Commons, of which I was then a member that I first made the acquaintance of Sir Henry Drummond Wolff, and that acquaintance-ship has, I am glad to say, been kept up ever since, altho there are sometimes very long intervals during which we never meet, as neither of us now pursues a parliamentary career. I may say, however, in perfect sincerity, that even if I had never known anything personally of the author of these two volumes I could not have read them without the most genuine delight in their contents and without feeling an irrepressible desire to commend the reading of them to all over whom I could have any powers of persuasion. I may add that these volumes are published by Messrs. Macmillan, of London.

I have just heard, and heard with deep regret, the news of the death of Sir James Knowles, the founder, proprietor and principal editor of that most important monthly review which was first named *The Nineteenth Century*, and when that period of time came to its close was designated *The Nineteenth Century and After*. The review had held from its opening down to the present day its place on the highest level of English periodical literature, and has ever, I feel sure, been quite as highly esteemed in the United States as in Europe. The old-time quarterly reviews may be said to have long since past out of the orbit of modern science, literature and politics, and *The Nineteenth Century*, *The Contemporary Review* and *The Fortnightly Review*, this latter established and for a long time edited by Mr. John Morley, were called into being in

order to supply the intellectual requirements of the newer day. I had the honor of knowing Sir James Knowles for many years and used to meet him often in London, and I always regarded him as one of the living forces of intellectual expansion in these countries and, indeed, in all countries where men and women love to read and think. Sir James at the time when I knew him was very much to be met in London society, and especially in the homes of eminent statesmen on either side of political life, and I often thought that he frequented West End dining-rooms and drawing-rooms rather as an observer and a student than for any mere personal enjoyment. I have no doubt that he must have signed the address which was presented to the great literary leader, George Meredith, on the attainment of his eightieth birthday. The address had been in preparation for some time and was signed by a multitude of admirers. It was presented to the great novelist at his residence near London only a day or two before Sir James Knowles's death, but I feel no doubt that Knowles must have sent his signature to that tribute of admiration long before the coming of the birthday. Sir James was some years younger than Meredith, and it shows as a strange and melancholy coincidence that the friend who had signed the birthday tribute of admiration, the friend who was younger in actual years, should have died within a day or two after its presentation. I may say that I knew George Meredith during many years and have published my recollections of him in the volumes which I described as my "Reminiscences." He has come at last into the fulness of his fame, having, during his early years and, indeed, thru some of the years when his genius soared along its highest level, been neglected or ignored or possibly undiscovered by the great majority of English novel readers. Men like Sir James Knowles understood and appreciated him from the very opening of his career, and it is some comfort to feel well assured that such are the men by whom Meredith would have desired to be recognized in his reality. It is, indeed, an event in the literary history of England when the same week encloses the national tribute to the genius of George Meredith

and the passing from life of the founder of *The Nineteenth Century*.

A book which I have only just read—tho it was published in the autumn season and I had heard much about it—is "The Ghosts of Piccadilly," by Mr. G. S. Street, the well known novelist and essayist. It is published by Archibald Constable & Co. and is illustrated by many portraits of those of whom Mr. Street writes. I have read Mr. Street's book with intense pleasure. The "ghosts" are, of course, those of the great people and the well-known people who have lived or stayed in Piccadilly from its beginning until last century, from Lord Clarendon to Lord Palmerston, and including among others Charles James Fox, Scott, Byron, Wellington, Macaulay. Nothing can be more delightful than a book of this kind when written by the right author. Mr. Street's book is enchanting, written with great knowledge of the time, with sympathy and with charm of style. One's only regret is that it is not longer, but fortunately it is a book one can read often and with, I am sure, increased pleasure. If it were not for this the reader would feel more regret than the author does in saying goodbye.

In "The Blue Lagoon," which was published a short while ago by Mr. Fisher Unwin and has already had a great success here, Mr. de Vere Stacpoole shows the same imaginative faculty and the same sense of beauty which belonged to "The Crimson Azaleas." The story is of two children—a boy and a girl, cousins—who, wrecked in the Pacific, drift about for some time in a small boat with an old sailor, and land, after many exciting adventures, on one of the small and uninhabited islands in that region. The adventures are wonderfully told, but "The Blue Lagoon" is much more than a story of adventure; the descriptions of the Pacific, of the island, and of the life there are extremely beautiful. The story itself, besides the adventures, is most interesting as a psychological study, but I will not tell anything of it, as it might diminish—tho it could not spoil—the reader's pleasure. Paddy Button, the old sailor who saves the children, is delightful and is certainly one of the best drawn Irishmen in fiction.

To One Who Never Got to Rome

(Edmund Clarence Stedman)

BY ROBERT UNDERWOOD JOHNSON

On his long-deferred and only trip to Italy, Stedman entered the country from the north for what proved to be a very brief sojourn, for soon after reaching Venice he was suddenly obliged to return to America. It remained his cherished wish to see the Eternal City, and the Roman Committee of the Keats-Shelley Memorial long hoped that he might be present at the proposed dedication of the Keats House, contemplated for the 23d of February, 1908. He died five weeks before that day, when the lines which follow were written. As the active and devoted chairman of the American Committee, he took a leading part in this project. Probably his last words written for publication on a literary topic were in praise of the two poets, including a transcription from "Ariel," his ode on Shelley.

You who were once bereft of Rome
With but the Apennines between,
And went no more beyond the foam,
But loved your Italy at home
As others loved her seen:

You knew each old imperial shaft
With sculpture laureled to the blue;
Where martyr bled and tyrant laughed;
Where Horace his Falernian quaffed,
And where the vintage grew.

The Forum's half-unopened book
You would have pondered well and long—
And loved St. Peter's misty look,
With vesper chantings in some nook
Of far-receding song.

Oft had you caught the silver gleams
Of Roman fountains. To your art
They add no music. Trevi teems
With not more free or bounteous streams
Than did your generous heart.

I hoped that this Muse-hallowed day
Might find your yearning dream come true;
That you might see the moonlight play
On ilex and on palace gray
As 't were alone for you;

That your white age might disappear
Within the whiteness of the night,
While the late strollers, catching ear
Of your young joy, would halt and cheer
At such a happy wight;

That you—whose toil was never done—
Physicianed by the Land of Rest,
Might, like a beggar in the sun,
Watch idly the green lizard run
From out his stony nest;

That you, from that high parapet
That crowns the graceful Spanish Stairs
(Whose cadence, as to music set,
Moving like measured minuet,
Would charm your new-world cares),

Might see the shrine you helped to save;
And yonder blest of cypresses,
That proud above your poets wave.
Warder of all our song, you gave
What loyalty to these!

The path to Adonais's bed,
That pilgrim feet will ever wear,
Who could than you more fitly tread?
Or with more right from Ariel dead
The dark acanthus bear?

Alas! your footstep could not keep
Your fond hope's rendezvous, brave soul!
Yet, if our last thoughts ere we sleep
Be couriers across the deep
To greet us at the goal,

Who knows but now, aloof from ills,
The heavenly vision that you see—
The towers on the sapphire hills,
The song, the golden light—fulfils
Your dream of Italy!
NEW YORK CITY.

The Late Duke of Devonshire

THE Right Hon. Spencer Compton Cavendish, the eighth Duke of Devonshire, whose death at Cannes took place on March 24th, was born on July 23d, 1833. He was graduated at Trinity, Cambridge, in 1851. Two years after leaving the university he accompanied Earl Granville on a special mission to Russia. He was elected to the House of Commons shortly after his return to England. He acquired intimate knowledge of parliamentary business and in March, 1863, toward the close of Lord Palmerston's second administration, he was made a civil lord of the Admiralty. In April of the same year he became Under Secretary of War. He served as Secretary of State for War under Earl Russell, who succeeded Lord Palmerston in 1865. Under Mr. Gladstone he found a place in the Cabinet as Postmaster-General. In 1871 he became Chief Secretary for Ireland. He was subsequently Secretary of State for India and in 1882 went back to the War Office. In 1892 he became Chancellor of Cambridge University. He married at the age of sixty. The Duke of Devonshire was one of the three richest peers in Great Britain. He owned nearly 200,000 acres in eleven counties in England and in three counties in Ireland. His rent roll has been estimated at nearly \$1,000,000. His principal country estate was Chatsworth, in Chesterfield, which is one of the most gorgeous palaces in England. Its gardens are world famous.

How to Save the Wild Turkey

BY DWIGHT W. HUNTINGTON

[This is the fifth article by the author of "Our Feathered Game," in his series of how to prevent the extinction of American game. Already these articles have commanded wide attention, for they call for a radical reversal of our game protective policy. This article will be followed by others. The illustrations accompanying this article are from paintings by the author.—EDITOR.]

THE former abundance and wide distribution of the wild turkey plainly indicates to those who understand game preserving that this magnificent game bird, the largest and best pheasant in the world, can not only be saved from extinction, which is most imminent, but that it soon can be made plentiful and cheap in the markets, even in States where it has become extinct. Any farmer who owns a large woodland, or many small ones, where mast is plentiful, easily can stock his farm with wild turkeys, and the birds will remain in or near the covers where they are turned down provided trespassers are excluded, all vermin (including roving dogs and cats) is destroyed and the place is made attractive as well as safe.

The wild turkey formerly was abundant from New England to Mexico and as far West as the eastern limits of the great plains, where, Nuttall tells us, the feathers of the wings, used as arrow plumes, were bartered by the Eastern Indians and those of the plains. In early Colonial days the turkeys were abundant, "coming about the homes of the settlers in large flocks." It is hard to realize that at the beginning of the nineteenth century turkeys were so abundant; "they sold for 6 cents apiece, tho the largest ones, weighing from 25 to 30 pounds, sometimes brought a quarter of a dollar."* Audubon, Wilson and other ornithologists tell us of the former great abundance of these birds. Irving, in his "Tour on the Prairies," mentions large flocks of turkeys which were shot near and even in the camps. Cody, better known as

"Buffalo Bill," has described a turkey hunt which resulted in the killing of a tremendous number of birds with all sorts of weapons.

Like other game birds, the turkeys brought better prices as they diminished, and the incentive to destroy them was increased. A live wild turkey now is worth \$25, and, if I remember rightly, a gentleman who always endeavors to have one of these birds for his Thanksgiving dinner has paid as much as \$25 for a dead bird. The turkey has become so scarce that every one who has a chance to kill one makes the most of it, and unless these birds are properly looked after by those who find it profitable to do so they surely soon will become extinct. The turkeys already are extinct in New England and thruout the greater part of their former range, and since vermin is everywhere over-abundant when compared with the game and a large number of birds is always necessary for their preservation the turkeys cannot be saved by game laws, even tho they prohibit shooting at all times.

There is no bird, excepting the heath hen, that calls for more immediate attention from those interested in preserving our game. If they would save this magnificent food bird from extinction they must act quickly or it will forever be too late.

The salvation of the wild turkey is far more important than the salvation of the bison, about which much has been written recently. The turkeys will thrive, as we have observed, on the farms where there are woodlands, if they are protected; they are splendid food birds—far bet-

*Dr. Judd in Bulletin U. S. Dept. Agriculture.

ter than poultry—and feed largely on mast, which is now wasted. The beef cattle, which have taken the place of the bison, supply the markets with better meat than “buffalo humps,” and, altho I have killed many buffalo, I never regarded buffalo shooting as very good sport. The turkeys, however, may be made to furnish excellent sport, and the turkey crop may be made to yield millions of dollars annually if the birds are properly handled.

Many laws protecting these birds have been enacted in all of the States where they still survive, but the turkeys continue to diminish and we have here incontrovertible proof of the failure of our legal system to save a valuable game bird from extinction. One reason is that here, as elsewhere, the laws are unexecuted in the woods. As Dr. Judd says: “So-called sportsmen go out in the late summer ostensibly to shoot squirrels, but really to pot turkeys on the roost.” Turkeys also are easily trapped in pens made of fence rails, into which they are tolled by grain, and many are shot by gunners in ambush, who are skilful in imitating the call note of the hen in the spring. There are few country boys who would overlook a chance to pot a wild turkey at any season, “law or no law,” as I heard one of their elders say, and many of the parents would not hesitate to shoot a wild turkey on sight. Some, no doubt, are entirely ignorant of the laws protecting the turkeys at all times or at certain seasons,

and forbidding the use of traps. I have seen a wild turkey shot out of season by a man who was perfectly familiar with the game laws, and who, under ordinary circumstances, respected them. We were shooting woodcock in the summer and the wild turkey flushed before the pointing dogs. The loud whir of wings often causes those who know the laws to momentarily forget them, as my friend did in the Indiana woods.

The fact that the wild turkeys have been easily domesticated ever since the start made by the Aztecs, and the fact that they belong to the pheasant family, prove they may be as easily handled on the game preserve as the pheasants are. The true pheasants have been reared by the thousands, not only on the English preserves, but on many preserves in America.

Now that wild turkeys are worth \$25 each, no more profitable crop can be reared. Wild birds are cheaper to rear than tame ones, since the mast is their principal diet.

Tame animals running wild often return to a wild state,

like the horse on the plains and the camel in Arizona.* There is a record of some domestic chickens (which were hatched under a partidge and permitted to follow her about) assuming the habits of their foster-mother, hiding in the grass, etc. I have long entertained the opinion that the tame bronze turkey, which closely resembles his wild ancestors, might be made

*The camel was introduced by the Government and used as a pack animal on the desert.

THE GOBLER.

wild again if permitted to run in the woods, and that a desirable wild bird for shooting on the preserves might be produced by crossing these birds with wild

keys in the spring and release them in territory well adapted to their prosperity, and where, a few years ago, this game was found in considerable numbers, but where at this time, because of the lack of adequate protection, it has

CALLING.

gobblers. Dr. Kalbfuss, secretary of the Pennsylvania Game Commission, I learned recently, has the same opinion. He says:

"I have determined to trap certain wild tur-

become extinct. Some of the male birds thus secured I desire to retain in captivity with certain females of a species found near Hope-well, in Bedford County. The birds of this species at this time appear to be about one half wild and are reported to be capable of foraging

ENTERING THE TRAP.

for themselves even during the severe winter weather, and, I believe, with the addition of the wild blood thus introduced, will make typical wild turkeys, able to care for themselves anywhere at any time."

It is certain that these birds will be delicious for the table, since they will obtain much natural food and will, therefore, have the flavor of the true wild turkeys. If the birds fly well they will make excellent birds for the preserve and will command big prices in the markets until they become plentiful, when they should be sold for much less than tame turkeys are today. Like the true wild birds, they will be free from the diseases which often make the rearing of tame turkeys unprofitable. The experiment is interesting and I hope it will not be long before we see the "Kalbfuss turkey" abundant and cheap in the markets, and that the birds may first serve a good purpose in the woods. While there is every reason to believe these birds will do well on preserves or on protected farms, they will not last long on unprotected ground.

The methods of hand-rearing pheasants may be used in handling turkeys,

tame turkeys being used as foster-mothers instead of the barnyard hens; or the turkeys may be bred wild in protected woodlands. They will, no doubt, increase rapidly in a wild state, provided the breeding grounds are made safe and attractive, since they are prolific and formerly were very plentiful when there was no shooting, notwithstanding the checks of vermin and climate.

To rear turkeys successfully in a wild state it is necessary, as we have observed, that the woods be made safe and attractive. Altho they are usually found in large woods I believe they will do well in a number of smaller woods, provided they be connected with hedges or strips of cover, so that the birds can travel from one wood to another. Like all of the other birds, they will stray in search of food, water, grit or dusting places. They prefer woods containing oak, beech and chestnut trees, since they are very fond of the acorns and nuts. In the South the pecan nut is a staple food. Wild turkeys are also fond of grasshoppers, crickets, locusts and other insects, and spend much time chasing them in the

open fields and in grass-grown woodland glades just as the tame birds do.

Turkeys often resort to swamps in the woods, and seem to regard the swamps as especially safe, frequently roosting in trees standing in the water. Like the ruffed grouse, they are often found in berry patches on the mountains. They are fond of fruit of all sorts, wild grapes, cherries, apples and berries, including the strawberries, gooseberries, blackberries, huckleberries and all of the other berries eaten by the wood grouse.

Altho the turkeys are not migratory and are usually found feeding on the same ground day after day, they will move when the food supply gives out, usually to places where acorns are abundant. Nuttall says the turkey "is not migratory, but from the necessity of wandering after food." Plenty of acorns, chestnuts and beech nuts will hold the turkeys and prevent their wandering, provided,

of course, there be water and grit, crushed shells and gravel. They are very fond of corn and wheat, and may be drawn to any part of the preserve by feeding them with grain. Corn is used by the trappers to lure the turkeys to their traps, and they have been known to follow the scattered grain for long distances. A stream of water or ponds bordered with rushes and sedge are attractive to the turkeys, and may also hold many wild fowl if the ducks are reared on the preserve. Turkeys, ruffed grouse, partridges or quails and wild ducks may all be shot on the same ground, on a well-ordered preserve, and the annual rental of such a place may be made larger than the present value of the land.

There should be a wooded tract near the center of the preserve, where the cover of all sorts (including saplings, brush, briars and vines) is dense and dif-

TURKEYS ROOSTING.

ficult and where the birds can find a safe refuge and an abundance of food. When the shooting season is open, the birds flushed on other parts of the preserve which escape the guns will fly to this refuge, and they may occasionally be driven out of it (without shooting), so that they will afford sport on other parts of the preserve. It is as important that the turkeys should have a safe woodland refuge as it is for the ducks on a duck preserve to have a safe pond or lake. It is absolutely necessary that a gamekeeper should be on the ground to protect them.

Foxes, hawks, owls, crows and other enemies of the ruffed grouse destroy both the turkeys and their eggs, and to insure success all vermin should be exterminated before the turkeys are turned down. The crow is one of the worst enemies of turkeys. Dr. Kalbfuss says:

"I was told a story in Bedford County, Pa., some two or three years ago, of a single crow taking every egg laid by a wild turkey. My informant said he had frequently seen the crow toll the wild turkey away from the nest by aggravating her, and then fly over her head and snatch the egg."

This is the method used by the crow when robbing the nests of pheasants and other game birds, and many eggs are thus destroyed.

It is best to keep the turkeys in confinement for some time before they are liberated, and even to partly domesticate them, and the best time to turn them down is late in the spring.

Many gamekeepers regard the turkeys as too wild and shy and even migratory to be held even on large places, but in this they are wrong; there can be no doubt that food and protection (not the legal kind, but the gamekeeper's kind) will not only cause the birds to remain on the place, but even to become tame. There is, in fact, a danger that they may become too tame for sport. Naturally the turkey is a most unsuspicious bird, and those who have seen him before he was persecuted have described him as so tame and simple as to appear stupid.

The following account of an experiment made with the wild turkey in Eng-

land proves not only that he can be held on the preserve, but that there is danger, as we have said, of his becoming too tame for sport:

"Some thirty or more years ago all the shooting world became impressed with an idea that the American wild turkey would make a splendid addition to our native game birds, and there arose a big demand for imported eggs. Our only experience of these birds was upon an estate in Oxfordshire, where about fifty were reared and turned into covert with the pheasants. They thrived splendidly and proved not in the least difficult to rear from start to finish, their only regrettable tendency later being to resort to the stubbles where the domestic variety were feeding. However, they finally took to the coverts and remained there. When the shooting day arrived they were found perched on the top of the tallest tree in the wood, utterly refusing to be dislodged by anything the keepers might do beneath with the hope of inducing them to take flight. They even saw one of their own number brought down with a gun, and still refused to move.

"At the end a small boy was directed to scale the tree and frighten them off, and he started on his errand, for it was well known that the turkeys could fly if they liked. When the boy nearly reached them the gobblers of the party displayed such aggressive tendencies at their own domain being invaded, and made such a tremendous noise, that he retired precipitately, and the birds were left in peace. The turkeys proved utterly worthless from a sporting point of view, and their appetite for food was enormous, one turkey costing as much for feeding as a dozen pheasants. In the end the majority fell victims to foxes long before the shooting season closed, and those left were stolen by Reynard from their nests directly they commenced to sit. A turkey is so large a bird that it could hardly escape the notice of a passing fox, and had the birds proved a success for sport they could never have been relied upon to increase naturally where foxes or dogs were allowed to prowl."

The gamekeeper who had charge of these turkeys was too solicitous, evidently, about his new game, and overfed it probably from its infancy. The pheasant is a good eater, and a turkey which received enough food for a dozen pheasants, if it did not die from overfeeding, would naturally become tame when associating with tame birds on the stubble.

The foxes do a great deal of damage to the birds on preserves in fox-hunting neighborhoods, and the foxes and all other vermin should be exterminated, in places where wild turkeys are to be preserved, before the birds are liberated.

Warships as Playthings

BY PARK BENJAMIN

IF there was no good military reason for dispatching the fleet to the Pacific, it was silly to send it there. If there was such reason, it is silly to bring it immediately back. This should not be lost sight of in the jubilations incident to the arrival of the ships in Magdalena Bay.

Some other things are also worth thinking about. The ships have steamed leisurely from port to port, now and then changing formation. They have found their coal, transported in hired foreign colliers, waiting for them; also their abundant supplies. That this coal and these supplies should have been on hand promptly and surely is extremely creditable, not to the fleet, but to the Bureau of Equipment of the Navy Department. But if the cruise had been attempted in war time, foreign coal ships could not have been obtained. Nor could we have sent the fuel in our own vessels, because we have only eight colliers, where we ought to have at least forty. And, in any event, sending coal over long distances to one's battleships is a risky business, because the enemy will always have plenty of fast cruisers whose aim it is to catch our coal vessels and appropriate their cargoes; and this not merely because such cargoes are just as valuable to the enemy as to ourselves, but because without fuel battleships cannot get anywhere, and become merely obstructions to navigation.

Then there is another difficulty: the ammunition supply. The magazines of our ships are small, the rate of fire of the guns is high (it has frequently been pointed out that at present speed a battleship in action can use up her ammunition in about half an hour), and therefore there must be some means for ammunition renewal. We have not got any means approaching adequacy, and it is rather a problem how we are to get it. The Chief of the Bureau of Ordnance says, in his last report, that during such a long cruise "the means of communication, so far as ammunition and explosives

are concerned, will be peculiarly difficult," and that he has been "greatly embarrassed under the comparatively limited demands of the last few years in keeping up the supply of ammunition in the Pacific." The only remedy he seems able to propose is two ammunition ships, or "floating naval magazines," one in each ocean, to accompany or follow the fleet. These vessels also would be of entrancing interest to the enemy; and if they were intercepted the fighting value of the fleet would be even more problematical than if its coal supply were cut off. A hostile person with a big revolver is a formidable object, but when all his cartridges are in the pockets of a small boy, who can be waylaid and relieved of them, he no longer seriously frights the souls of fearful adversaries. Twelve-inch guns without powder are about as dangerous as twelve-inch telescopes.

Whatever the value of ammunition ships may be, we have not got them any more than we have enough colliers, so it is quite safe to say that had we been at war the voyage of the fleet around Cape Horn would not have been attempted; and hence self-felicitation on the theory that the journey has been accomplished under anything like war conditions is altogether wide of the mark.

That no ships have broken down, that there have been no troublesome accidents, that the fleet formation has been accurately maintained, that the cruise has been completed ahead of the schedule time, that every vessel came into Magdalena Bay ready for any service is something to be proud of. But all this depended on the sea-going personnel—and that personnel of the navy has never yet failed in any task assigned to it. It is always efficient, never has been otherwise, and did its work just as well and just as thoroly years ago, when it had nothing but miserable wooden tubs to navigate, as it does now with the steel battleships. Nobody supposed that its late achievement would be otherwise than well done; but that is a very different

thing from concluding that a condition of preparedness for war work now fully exists in the fleet.

It does not; nor can it exist until the fleet has had, and keeps on having, full and thoro practice in battle maneuvers. And these have been disgracefully neglected, despite the fact that England, France, Germany, Japan and Italy have been and are steadily at them. Battle maneuvers are not cut and dried drills, but the practical working out of problems involving unknown factors by squadron pitted against squadron under battle conditions and under the strict scrutiny of impartial umpires. Rear-Admiral Converse, in his report concerning the strictures lately printed in *McClure's Magazine*, has not only confused these things, and this in the teeth of his own prior official statements, but has attempted to make the public believe that the long list of drills which he gives as accomplished by the fleet were in reality battle tactics. No one knows the difference better than he; no one knows better who brought about the few hours of attempted battle practice last year, after the repeated protests of the General Board of which he was a member, and no one quicker than he would expose the evasion if he were a criticising and not a criticised official.

But it was announced that all this would be remedied when the ships reached Magdalena Bay. That with the eight great cruisers of the Pacific fleet, and with the "Nebraska" and "Wisconsin" added to the sixteen battleships which had made the voyage, battle tactics on a scale to satisfy the most exacting would be carried out.

Alas for the anticipations. The usual target firing goes on, and then—more parades, more shows. Should not the Secretary of the Navy, completely eclipsed at Hampton Roads, have his turn as central figure in a big naval review at the other end of the line? What could better boom his Senatorial aspirations? And so battle tactics vanish, and in their place comes "children's day" and the civic functionaries meet and eat and the landed crews stamp thru the mud of the San Francisco streets. That's what a navy is for—that's why we pay a hundred millions of dollars and more a

year for it. That's why we have spent a billion and a quarter on it since 1883.

After that, after the tumult and the shouting dies and the captains of industry and the Sunday school children depart, are the battle tactics then to come? No. A junketing expedition of colossal proportions has next to be attended to. The fleet is to go to Australia and be entertained there, and to Japan and be entertained there, and probably to China and be entertained there, and to the Mediterranean and be entertained there, and to England and be entertained there, until at last we shall be able to boast that we have encircled the globe, not, like Great Britain, with our drum beat, but with the popping of the corks of our champagne.

And then after sixteen months or so from the time they left Hampton Roads, the ships will be back on the Atlantic Coast, and will have cruised something like forty thousand miles, all of which will be translated into wear and tear of machinery—and a battleship's lifetime is well under ten years. Will the dangerous ammunition hoists have been corrected? No. Will the stupid conning towers have been got out and something rational substituted? No. Will any of the recognized defects requiring navy yard work have been permanently disposed of? Hardly. Will the practically worthless "Kearsarge" and "Kentucky" or the rapidly obsolescent "Illinois" be any more "fit to lie in the line" than when they started? No—much less. Will the fleet, as a whole, be any better as a fighting force for this long journey? No; on the contrary, deteriorated; how much cannot now be surmised.

But, says the enthusiastic citizen, it will be a great object lesson to the Powers. It will. They don't believe, perhaps, that after designing ships with the armor belt placed with reference to a certain assumed flotation line, we deliberately upset the possibility of that flotation line being the actual one by piling into the ships weights not allowed for in our calculation. They will see the belts under water and doubt no longer. Perchance they don't believe that we would really put ammunition rooms directly under the open bottom of a turret, so that burning powder grains could fall

directly on the cartridges coming from the magazines. They will see that too. They may even scout such a possibility as our having afloat eight-inch and twelve-inch guns liable at any time to blow off their own muzzles, because, to quote the Chief of Ordnance, "not strong enough to stand the pressures resulting from large charges of slow burning smokeless powder." Samples of these inspiring weapons, the number of which the Chief of Ordnance refuses to state "for military reasons," may be exhibited to them.

And what an opportunity will be afforded for the direct asking of questions by the inquisitive foreigner. As, for example, why is it that, despite our beneficent tariff, the Navy Department is unable to secure ordnance material at home, and asks Congress to enact that "it is to the manifest interest of the United States to make purchases in limited quantities abroad, which material shall be admitted free of duty," adding that this permission is "almost absolutely necessary"? How is it that we have to buy abroad at least 100 more torpedoes, because our supply is "still deplorably inadequate" and because we have no other recourse "if the torpedo fleet is to be fully equipped for war within a reasonable time"? This adds interest to the torpedo flotilla which accompanied the battleship fleet on its voyage. As for armor piercing projectiles, is it not remarkable that at this stage in our naval history only two firms in this country are at present "even attempting to furnish projectiles of large caliber," and that we have got to buy these death-dealing bolts from the very people at whom the fortune of war may hereafter compel us to throw them?

Why does not the Navy Department send along with the fleet a lecturer to explain how the blunders in the armor belt have been perpetuated for upward of ten years; how Admiral Sampson unavailingly tried to get the belts of the "Kentucky" and "Kearsarge" raised; how the murderous open-turret hoist was protested against by the seagoing officers as far back as 1901, and the protests suppressed, stuffed into pigeon-holes, and afterward found half-eaten by cockroaches, with the result that we killed fifteen men

in the interval; how we are eight years behind other navies in the use of oil fuel and steam turbines, and how we have no adequate reserve of either ammunition or guns? That would interest our foreign friends, even if they do know it already.

And, lastly, there is the object lesson furnished by the commanders of the fleet. Rear-Admiral Sperry, in his sixty-first year, retires September, 1909. Rear-Admiral Emory, in his sixty-second year, retires next December. Captains Schroeder and Wainwright (soon to be made Rear-Admirals), each fifty-eight and with only something over three years to serve. If we were going to have any battle tactics, the question might well be asked, What's the use of educating these men as Admirals? but inasmuch as we are not, perhaps age does not so much matter.

So the parade continues around the globe—the biggest voyage of the biggest war fleet since the world began. And at home the Senate Naval Committee muddles itself over the armor-belt problem, and suppresses the adverse reports made long ago by Admiral Evans and the General Board, and heckles Commander Sims and the other reformers in the Navy who want to tell how wrong things are in the Navy Department organization, when that is the last thing the committee—barring Senator Tillman—wants told. And the country thinks this performance is an "investigation"; and naturally confusing it with the insurance and like inquiries wonders when the startling proof of graft and malfeasance will be dragged forth. There is no such proof to come, and now that the defects have been exposed no one believes that these particular shortcomings will ever reappear in any new ship or fail to be corrected, so far as this can be done and the exigencies of parades will permit, in the old ones. But the fact is manifest that the organization of the Navy Department is antiquated, inefficient and self-obstructive. Its defects "have increased, are increasing and ought to be diminished." The prevalent criticisms on the armor belt, ammunition hoists, etc., exhibit concrete instances in support of this. The real sea officers—the men we have trained from boyhood to fight the battles of the country, without whom

the Navy cannot exist—are condemning their tools and the system which makes them. The toolmakers, of whom we can hire in the market as many as we want, are fighting their own battle in behalf of their own handwork and of the system which gives them arbitrary and misplaced power.

But what is there to be gained in re-

organizing the Navy Department if the fleet cannot be kept to its proper work? If we must have marine shows let us construct a special fleet for that purpose, beside every vessel of which the Venetian Bucentaur or Cleopatra's galley will be as the primitive dugout. Warships are deadly weapons. Why play with them?

NEW YORK CITY.

“Kentucky's Anarchists”

BY AUGUSTUS E. WILLSON

[The following letter from the Governor of Kentucky is sharp and to the point, and the assurance will be welcome to the whole country. In answer to our telegram, Governor Willson consented to the publication of this letter.—EDITOR.]

SOME friend has just sent me your issue of the 19th of March with editorial on “Kentucky's Anarchists.” I do not write this for publication, because I never make explanations or defenses of this kind, but I write you this personal letter for the information of your editor.

The young gentleman who interviewed me for the *Evening Post* seemed to me to get further wrong than any disinterested and sensible young man that I ever talked to. I did not say that any man mixt up in the night-rider tobacco business was a Christian or honest or a good citizen, nor did I ever use the expression “almighty stubborn.” They are cowards and criminals and felons, and should be killed when making attacks and should be in the penitentiary when detected after attacks. I did not in any way condone or apologize or smooth over their infamous conduct. I have not done it in Kentucky where they are, and I certainly did not do it in New York, where I was a thousand miles from them. I did not say there is anything to be said for them; such a statement is grossly false and inexcusable. There is nothing can be said for them; but I am hopeful that the work which has been carried out without ceasing since the beginning of these troubles will develop presently that something is done for them, and that some of them will be done for. Nor did I indulge in

the observation about feuds in the wild mountain counties. Nor did I say night-riders are educated ordinary Americans, nor did I indulge in any silly talk about its being purely “a business trouble, like one of your competitions in New York.” I cannot think of any more idiotic stuff than this that you have quoted, and I cannot conceive of a man, speaking as directly, as positively and as seriously as I have done, being presented to a great host of readers, like those of your paper, in such an absurd and stupid attitude. It is utterly inexcusable in that reporter. I do not believe in palavering and smoothing over penitentiary crimes that destroy liberty. I believe in killing the criminals while in attacks, and in putting every one not killed in the penitentiary, if it took a thousand. This organization is most dangerous. It is a secret oathbound organization, where only a small group know each other, and different groups do not know who are in the other one, and the head of the organization has the power of life and death over the members, and it has spread like wild-fire. There are thousands of members of this concern, but there is no compromise with them. They will be brought to book. The matter will come out all right, not by neglect or toleration, but by mercilessly following up, attacking and destroying this organization.

FRANKFORT, KY.

Men Versus Women: An Indictment

BY IDA HUSTED HARPER

FROM the time that Eve created in Adam a taste for cider by giving him a bite of her apple, women have been cautioned that they must not do this, that or the other, lest they drive men to drink. They must be everlastingly on their good behavior or they will be responsible for all sorts of dreadful things which men never would have dreamed of doing had they not been driven to it. Now, at this beginning of a new century, it looks as if men had conspired to drive women to extremes in every possible direction. That impudent action of the New York Board of Aldermen in passing an ordinance forbidding women to smoke in hotels and cafés was enough to make every woman look for a cigaret and a public place to smoke it in. When Alderman Sullivan was told that his ordinance was not constitutional, he is reported to have said: "That doesn't make a particle of difference." And so it doesn't when it affects only women. The courts of New York and other States have decided that no hotel or restaurant need give food to a woman after six o'clock unless she brings some man to share it with her, and by the same law she may be refused a night's lodging. The lawmaking power is entirely in the hands of men, and when they choose to enact a statute that women shall not eat at all except in the privacy of home they can do it without fear of the consequences. Neither the national nor State constitutions protect women in their rights as citizens, and not in one State in the Union are the laws exactly as fair to women as to men.

The young men follow in the footsteps of their fathers. A girl student at Cornell University, in a fair contest, with unprejudiced professors as judges, is selected to represent that institution at the intercollegiate debate. Instantly the students of the other two universities, Columbia and Pennsylvania, declare she shall not do it. Why? Because she is a woman. They would not have dared make an objection to the meanest man

Cornell might have chosen of whatever creed or color, but, with their fathers' example before them, they do not hesitate to strike at the rights of a woman.

When the women of Chicago University won more than their share of the honors, the president put them off to one side in separate classes where they could not compete with the men. Why was it not the men themselves who were "segregated" until they were smart enough to hold their own? With the number of women at Tufts College now threatening to exceed the number of men, the president sends out an appeal for somebody to build another college for the women. Why not for the men, if they are to be in the minority?

Dr. G. Stanley Hall and other college presidents are advocating a special course of study which women must take to fit them for wifehood and motherhood. What right has a university to compel any class of students to prepare themselves for a certain vocation? On this hand are presidents and professors objecting to the higher education of women because it is apt to delay marriage or defer it altogether. On the other hand are those who decry the expenditure of time and money on this education because women take it only for general culture and do not adopt professions or go into research work; and yet either of these occupations would operate directly against marriage.

School boards composed wholly of men make regulations that no married woman shall teach; the general Government rules that women in its employ shall lose their positions when they marry. Then all join in a chorus of disapprobation because educated and competent women are showing a disinclination for marriage.

The wage-earning men denounce women because they accept less pay and lower the standard of wages. Then they bar women out of their trade unions, the most potent means of keeping up the standard, and deprive them of the ballot,

the strongest weapon which labor has for the protection of its rights.

Women have tried for sixty years to get the suffrage, only to be met with the jeering assertion by those who can give or withhold it: "You'll have to prove that you want it as much as women in other countries do." Then, when it is proposed to adopt the tactics of those women, the cry is, "Oh, no, such methods are not at all suited to this country." "Convert your own sex; there are not enough women asking for it," is the universal taunt. And then the metropolitan dailies print big caricatures of a great mob of English "suffragettes" clamoring for their rights, and put over them the sarcastic caption, "Will New York Women Ever Do This?"

Yes, it is probable they will, and a great deal worse if they are driven to it; that is for the men of this country to determine. The present generation of women has moved on a long way from the patience, submission and supineness of the one preceding. It is logical to believe that the next will be still more spirited, independent and determined to have fair play and a square deal. The past generation were thinking of this fair play and square deal; the present are talking about them; the next will get them. As long as women were without education, without property, without voice, without organization, they were compelled to occupy an inferior position and accept whatever was dealt out to them. Now they have all four of these requisites to obtain equality of rights, but have not fully learned how to use them. That is the lesson for those of the present to master and pass on for the younger generation to apply in whatever way will accomplish the purpose.

When the pioneer women suffragists started out on their fifty years' war, among the other epithets hurled at them was that of "man-hater." As a matter of fact they loved the men of their own families and circles of friends quite as well as other women did, but they were the first to run counter to the general scheme of things as fixt by men, and the latter made a personal affair of it. The women said, "Give us better laws"; and the men answered, "You don't love us or

you would be satisfied with the laws we have made." Finally the women demanded, "Give us the chance to make the laws ourselves or to help choose those who do this"; and the men replied, "You must positively hate us or you never would insult us by such a request, but we love you too much to grant it." And so they have continued up to the present day, on the same principle that parents punish children, "for their own good." Children reach an age after a while when they decide for themselves as to their well-being, and women feel that they, too, have about arrived at this point.

There should be no antagonism between men and women. The problems and struggles of life are very much the same for both, and they should stand together. Both are equally interested in the welfare of the family and the community, and this can be secured much more easily by their united effort. From every point of view it is highly desirable that they should dwell together in peace and harmony, but this is wholly impossible on any other basis than equality of rights.

When girls in college are stigmatized as "co-eds" by boys who are just as much co-eds themselves; and when they are made continually to feel that they are interlopers because they are less in numbers, and have a constant struggle for their rights in the student body, a burning resentment is engendered which it will take years to eradicate; and this is the situation today in nearly every co-educational institution. When, for the very reason that girls have proved their superiority in scholarship, they are set aside in "annexes" or in classes by themselves, with the stigma of "segregation" placed upon them, is it to be wondered at that their hearts are filled with bitterness and that they carry this out into life?

The principal of a New York public school said not long ago: "When we have our teachers' meetings and we women sit there and look at those male principals, who do exactly the same amount of work as we do and often not so well, and yet get nearly twice the salary, we hate them with all the intensity we are capable of." They would be saints if they did not feel exactly this way, and yet this hostile at-

mosphere must influence unfavorably the teachers' meetings and the work in the schools.

A woman who is rendering a great educational service to other women and is frequently brought into contact with the members of Congress, often says, "I cannot put into words how I loathe those men as legislators." Women in all parts of the country, whose efforts to better conditions take them with bills to the Legislatures, invariably come away with a most profound contempt for the cowardice, double-dealing and treachery which they meet with from many of the members. This lessens their respect for the whole body and arouses the feeling that, whatever the sacrifice, women must secure some power over the lawmakers and the laws of the State.

From time too far back to reckon, men have had their clubs and societies and banquets from which women were rigorously excluded. After generations of loneliness and resentment, the women have now gone headlong into these entertainments themselves, and are creating a life in which men have no part. Each year sees the gulf between them widen; the women thinking less about the men, caring less for them, and this is very far from the ideal state for both sexes—but it did not originate with the women.

It cannot be denied that there is a growing disinclination for marriage on the part of women. Their anxiety to marry used to be a standing joke that couldn't have the changes on it rung too often, and every man, in his own estimation, ranked with the horse that had taken first prize at the races. Now the most of them are entered as sweepstakes, with very few takers. Why? The nature of women has not changed. Their desire for a home and their love of children are just as strong as they ever were. The change lies in their having learned that they can maintain a fairly comfortable home without a husband, and have something more than a life interest in one-third of it. While nothing entirely compensates for the lack of children, they have found many substitutes which give a satisfactory fulness and completeness of existence. Unequal laws as to property, children, etc., made by men; the rules of the Church requiring obedience,

and its refusal of divorce, even for just cause, all are strongly discouraging to matrimony. They did not matter so much when it was marriage or nothing for a woman, but they matter a great deal now that she is comparatively a free agent to order her life to her own liking. The woman also whose education and ability give her a good earning power hesitates about seeing this obliterated by marriage. The fact that two-thirds of the divorces are granted on complaint of women may also cause the unmarried to ponder. Men themselves, in every capacity—legal, clerical, official and domestic—have put all these obstacles in the way of marriage. While women in constantly increasing numbers have too much pride and good sense to accept the conditions, none the less they have a feeling of regret and disappointment that, because of them, they must forego the possible pleasures of married life, and this creates a sentiment of dislike toward those who are responsible.

The wage-earning women have their special grievance, for into their homes, where once they were busy all day long with tasks that had been their own undisputed possession since the beginning of time, men entered and took them all away, carried every one to the great factories; and when they followed their occupations, their very own and their mothers' and their grandmothers', men met them with the question, "How do you dare come here and steal our work?" And so in their hearts too is a sense of deep wrong and cruel injustice.

And then when women at last find courage to protest at the universal injustice practised against them they are met with the injunction: "Now mind that you don't say one word against men. Vinegar never catches flies. If you want any more concessions be sure to express your gratitude for past kindnesses. Men can only be won over by soft words and sweet womanly actions. Speak low, look pretty and don't ask anything as a right, but only as a great favor."

Women would like to recognize a higher standard than this for men. Notwithstanding the evidence of all the past ages to the contrary, they still wish to believe that men have a strong sense of justice and equity to which women can

appeal in a manner that would be creditable to both of them. It is men themselves who say: "If you want to get anything from us it will have to be thru flattery, blandishment and cajolery." For some reason, perhaps higher education, perhaps financial independence, perhaps a knowledge of the little of real worth that has been gained by such means, women of high purposes are beginning to rebel against them. A class also has been developed who have studied the results of years of dignified, orderly methods on the part of still other women to secure needed legislation and have found them expressed in one word—failure. And so they have determined not to appeal to either masculine vanity or masculine reason. The tactics of this class are finding their first expression in the new phase of the movement for the suffrage.

Exactly twenty years ago Elizabeth Cady Stanton said in one of her matchless arguments before the United States Senate Committee on Woman Suffrage:

"You have now the power to settle this question by wise legislation, but, if you cannot be aroused to its serious consideration, like every other step in progress, it will be settled by violence. The wild enthusiasm of woman can be used for evil as well as good. Today you have the power to direct and guide it into channels of true patriotism, but in the future, with all the elements of discontent now gathering from foreign countries, you will have the scenes of the French Commune repeated in our land."

The beginning of the fulfilment of this prophecy is seen in the open-air meetings now taking place in Madison Square. The forum is changed from legislative halls, where two generations of women have made their pleadings to selected representatives of one-half the people, to this great public thoroughfare, where delicate women face the rigors of the weather to plead their case before a promiscuous crowd of loafers, aliens and

the former occupants of workhouses and prison cells. To this action do one portion of the women feel that they have been driven. And now they promise that in the near future vast processions of the women of New York shall parade its streets to emphasize in this public and unpleasant way their demand for a sacred right which has been given without the asking to all the hundreds of thousands of men who will line the gutters and jeer them as they pass.

It is for men to decide how long this contest shall be kept up and what extremes it shall eventually reach, for it will never cease until its object is attained, and no one can foretell what form it will assume when it is reinforced by women of less self-restraint and stronger personal grievances than those who have directed it in the past. It is for men to say whether the antagonism of women, which now is plainly on the increase, shall grow stronger or diminish and die out because the cause for it has been removed. Women of the future will be satisfied with nothing less than exact justice.

When Mrs. Rose Pastor Stokes said a short time ago, "Much as I love the Stars and Stripes I love the red flag better," there was a loud outcry from the newspapers. In editorials and letters from the people it was iterated and reiterated that the flag of the United States guarantees the fullest liberty and opportunity for every citizen, and for this reason it deserves the strongest loyalty from all. It does not guarantee these rights to the women over whom it floats, but it flaunts its Stars and Stripes around the whole world as the symbol of a country whose written Constitution denies absolutely to one-half its citizens a voice or a vote in their own government.

NEW YORK CITY.

The Selection of Rhodes Scholars

BY A COMMITTEEMAN

THE time is at hand for the assignment of the Rhodes Scholarships for 1908. As is well known, these assignments are made by local committees of school men in the several States under the provisions of Mr. Rhodes's will interpreted and supplemented by instructions from the trustees of the will. These instructions are embodied in a memorandum drawn up by the trustees and put into the hands of the several local committees for their guidance and direction in the selection of the scholars. Among other provisions the memorandum contains the following:

"Candidates may elect whether they will apply for the scholarship of the State or Territory in which they have acquired any large part of their educational qualification, or for that of the State or Territory in which they have their ordinary private domicile, home or residence. They may pass the qualifying examination at any center, but they must be prepared to present themselves before election to the committee in the State or Territory they select."

This is an official and authoritative provision established by the trustees, and is, therefore, not within the discretion of the local committee to observe or to neglect. Its meaning is perfectly plain; a student living in one State and educated in another may, in his discretion and entirely without prejudice to his interests, apply for the scholarship in either State. This admits of no dispute. For some years, however, I have had reason to believe that both the spirit and the letter of this provision, plain as it is, are ignored or evaded by some, at least, of the local committees, and that there is some tendency arbitrarily to restrict the scholarship for a given State to a student *educated within that State*, thus using the scholarship as a means to foster local educational interests.

To ascertain how widely this condition prevailed, I addressed a letter to several chairmen of local committees in different States requesting information on the following points:

1. As to the constitution of their committee; and, in detail, as to the following matters:

2. Have you a system of rotation by which the scholarship goes first to one institution and then to another from year to year?

If you have such a system, what provision do you make for a successful examinee who is not educated in any of your colleges?

3. Do you, in theory or in fact, permit the fact that the examinee has been educated in one of your own State schools to enter in any way or degree into your appointment?

4. How, without a personal knowledge, do you determine such questions as popularity, influence, ability for leadership?

Replies to these letters have brought out some interesting facts connected with the assignment of the scholarships in several of our States. In general the attitude of the local committees is one of full and frank adherence to the provisions set forth in the memorandum of the trustees, but a contrary attitude is sufficiently widespread to create surprise, if not alarm; and a belief that some committees are dealing lightly with the trust is confirmed by the correspondence that lies before me. Three letters will make this point clear.

The following letter from the president of a Northern university is worthy of quotation in its entirety, as showing how far it is possible for a committee to misinterpret the spirit and depart from the letter of explicit instructions provided for its guidance:

In reply to your questions about the Rhodes scholarships I will answer as follows:

1. The committee in our State is the president of the State University.

2. As there are only four institutions in the State, we agreed in advance that the oldest institution should have the right of first appointment, and the others in the order of their foundation. We have had candidates from the other colleges take the examination, even though the college from which they came was not entitled to the appointment in the year in which the examination was taken. This has insured the probability of a candidate qualifying. In case the candidates from the institution which had the right of naming the scholar should not pass the examination, the State could be represented. It is the recommendation of the Rhodes Trustees that after this first round of appointments we open the examinations to any one in the State who wishes to compete.

3. I think my statement about numbers 1 and 2 will answer your question number 3, altho

if no candidate should be successful in the examination I suppose it would be the right of the institution whose turn it was to name a candidate to name such one as it deemed qualified.

4. The faculty of the institution from which the young man comes has, up to the present time, decided such questions as popularity, influence, ability of leadership, etc.

It seems quite idle to comment upon this communication. We would not paint the lily or the rose nor mar the sweet simplicity of this utterance.

The following from the president of a Southern university:

2. There has been a system of rotation in this State, but Dr. Parkin seems to think that it ought to be abandoned, and the committee is to consider that question.

3. I think it essential that a student who is sent from a State should have been educated in that State. I do not know what the other members of the committee would hold as to this. (This is supplemented in a postscript thus)—As I see it, this appointment should be used to benefit the State as well as the individual. The student should be a good representative of what we have and are.

In this same letter this president requested my opinion on the points involved. I replied as follows:

My own view is:

1. That the State committees are strictly and unqualifiedly limited by the terms of assignment set by the trustees of Mr. Rhodes's will and embodied in the memorandum delivered for our guidance.

2. This being true, I hold unqualifiedly that any system of rotation is contrary to the provisions of the trustees, and therefore radically wrong. I hold, furthermore, that the requirement that a student should be educated in the State from which he may receive a scholarship is a direct and immediate violation of the conditions specified by the trustees, which clearly and explicitly state that a man may apply from the State in which he is educated or the State in which he has his residence.

3. I do not believe that the scholarship committees have any right to use the scholarships for any purpose other than that specified in the will and determined by the rulings of the trustees.

To which he replied:

As you state in your letter, the trustees fix the regulations; and, as you intimate, Dr.

Parkin looks after the enforcement. Any discussion by us is, therefore, out of order.

From a far Western State comes another letter full of surprises. In answer to my second question the president of the State University, who is also chairman of the committee, says:

Each college presents its candidate and the choice is made between them.

In answer to the question as to the chances of an examinee who is not educated in any of the State colleges he says:

Examinees are limited to the colleges.

And in answer to the third question he says:

Yes, limited to schools in the State.

These letters show plainly that in these States, and I might include others, the local scholarship committees are assigning the Rhodes scholarships on a basis not only contrary to the explicit provisions of the trustees of Mr. Rhodes's will, but contrary to the simple and fundamental ethics of the situation. They show that in these States, at least, a student who may have successfully passed his examinations and otherwise fully satisfied all the requirements of the will and the trustees thereof, has no earthly chance of receiving the appointment unless he has, in addition, satisfied certain wholly arbitrary and unwarranted requirements set up by the local committee of assignment. He may present himself in all good faith, only to find too late that his case has already been adversely decided and that he has been deprived of his opportunities and privileges without justification as without recourse. This condition is both absurd and vicious. Every candidate for a Rhodes scholarship should receive a square deal under the plain provisions set by the trustees of the will, and should not be deprived of his rights or prejudiced in his interests under any circumstances or for any cause whatsoever.

A Great Empire Builder

THE most remarkable characteristic of Lord Cromer's *Modern Egypt** is the many-sidedness of its appeal to readers. There is an element of romance in the story of the regeneration of that land of

them valuable additions to his store of knowledge concerning the last quarter of a century of European diplomacy and politics. The student of political science finds a vast amount of wisdom and experience in the solution of insoluble prob-

LORD CROMER.
Author of "Modern Egypt."

ancient civilization which gives the volumes a place beside the older stories of discovery, conquest and achievement. The reader of modern history finds in

*MODERN EGYPT. By the Earl of Cromer. Two volumes, pp. xviii, 594; xiv, 600. New York: The Macmillan Company.

lems and the success of impossible policies. The ethnological student finds new material in regard to the character and development of the races in that most cosmopolitan country on earth. To most Englishmen the greatest appeal of the

book is in the detailed story of General Gordon and his ill-fated mission to Khartum. The two volumes have also a lesson for those who look to an international policing of the world and the establishment of something of the nature of an international parliament. But beyond all the interest of these several appeals, and of a wider and more enduring character than these, is the appeal of Lord Cromer's book to Christian readers as a comparative study of Christianity and Moslemism and as in itself an irrefutable proof of the superiority of Christianity as a social system in its straightforward story of sane, wholesome, devoted Christian effort on the part of men who gave themselves as wholeheartedly and devotedly to the service of their fellow men as any band of missionaries who ever ventured forth to preach the gospel.

While Earl Cromer writes—as he acted—as a Christian English gentleman, he gives full credit to Moslemism for all that there is in that religion of power to help humanity, and in his analysis of the inhabitants of Egypt he owns that the Christian Copts have in all the centuries since the Christian era made little more progress than the Moslems.

It is not difficult to discover what Earl Cromer considers the weakest point of Moslemism—the chief reason of the complete failure of Islam as a social system. The rigidity of a system in which religion and law are crystallized into one inseparable and immutable whole is a fatal drawback; but Lord Cromer gives the first place in his indictment to the treatment of women.

He writes:

"It may be asked whether any one can conceive the existence of true European civilization on the assumption that the position which women occupy in Europe is abstracted from the general plan. As well can a man blind from his birth be made to conceive the existence of color. Change the position of women and one of the main pillars not only of European civilization, but at all events of the moral code based on the Christian religion, if not of Christianity itself, falls to the ground. The position of women in Egypt and in Mohammedan countries generally is, therefore, a fatal obstacle to the attainment of that elevation of thought and character which should accompany the introduction of European civilization, if that civilization is to produce its full measure of beneficial effect."

Loyalty to his friends and colleagues,

readiness to give all the credit that can possibly be given for good intentions and pure motives; readiness also to take upon himself his full share of blame for any mistakes in which he had a part; absolute freedom from jealousy and malice, characterize every line of Lord Cromer's history. But not less characteristic of the great Pro-Consul is his frank exposure of the mistakes that were made both in England and in Egypt in regard to the sending of General Gordon to Khartum, and the long-delayed relief expedition which had to be sent out in the hope of getting him away again. Much of the secret history of that disastrous episode has already been published in the biographies of Gladstone and Granville, and the Queen's Letters. But some essential links are supplied by Lord Cromer, who was in closer and more continuous touch with Gordon than were the English statesmen. The sole conclusion that can be drawn from the story—the conclusion that Lord Cromer emphasizes again and again in his criticism of the Prime Minister and his Foreign Secretary—is that government by negation is impossible; that the men responsible for the conduct of affairs cannot fulfil their duty merely by acting the part of the candid critic and finding the objections that lie against all possible alternatives. The catastrophe at Khartum was due undoubtedly to the fact that Gladstone and Granville found it impossible to determine upon a policy and act upon it with vigor and determination. There was possibly no policy that would have been wholly good; but any policy, chosen haphazard and consistently carried out, would have been better than Gladstone's plan of closing his eyes to facts and allowing the country to drift. Lord Cromer writes: "Connected as I was by general political sympathy with a Liberal government and by ties of long-standing family friendship and relationship with some members of Mr. Gladstone's Cabinet, I came to Egypt with a hearty desire to aid to the best of my ability in the successful execution of his Egyptian policy. I thought I understood that policy, and, if I understood it rightly, I felt sure that it met with my general concurrence. I soon found, however, that I was pursuing a phantom which constant-

ly eluded my grasp, and that even when I understood something of the general principles that were guiding the action of the Government, the vacillation shown in the execution of the detail was simply heart-breaking. I could not blind myself to facts to please Mr. Gladstone, and directly I stated the facts and pointed out the inevitable conclusions to be drawn from them, I found that, however clear they might be, they were ignored. . . . Mr. Gladstone ignored all unpleasant facts."

Three of the men who have helped to recreate Egypt have now written the story of its regeneration. Lord Milner came first with his "England in Egypt," which gives chief place to the renewal of material prosperity thru irrigation, sanitation and the abolition of class privileges. Then came Sir Auckland Colvin's "Egypt," which gave the first place to finance and the gradual emergence of the country from bankruptcy. Lord Cromer's volumes complete and supplement these earlier works. In them the story is treated on broader lines and in more authoritative fashion. Lord Milner and Sir Auckland Colvin each spent a few years of a full and distinguished career in the land of the Sphinx, but Lord Cromer has given twenty-eight of the best years of his life to the redemption of the Egyptian from starvation and barbarism and to the building up for him of a stable, just and beneficent government.

Since the days of Cæsar, Lord Cromer is the first great ruler who has written his own story in such vigorous, clear and noble language.

The Struggle in the Far East

It is evident that the peace of Portsmouth did not eliminate Manchuria and Korea from the field of international strife. It only substituted commercial rivalry for the arbitrament of arms, and according to Mr. Weale the latter is only postponed, not obviated. In *The Coming Struggle in Eastern Asia*¹ he reiterates the warning of his preceding book, "The Truce in the Far East," that Japan is not to be trusted, that the Anglo-

Japanese alliance was a great mistake, and that British and American trade in the Far East is being destroyed. He believes that Roosevelt's intervention

"saved Japan from an impossible position—a position from which there might have been no escape whatsoever except in military disaster and in national and financial ruin."

From a study of the battlefield, where all the available forces of Russia and Japan were drawn up, with their outposts only 500 paces apart, ready for the great battle that never was fought, he comes to the conclusion that the Russian position was impregnable and that it was thru the weakness of Witte that Japan was able to get the boundary line established 106 miles north of her farthest line. He finds that southern Manchuria is, like Korea, treated as a conquered country by the Japanese, who disregard the rights of natives, violate concessions, counterfeit trademarks and restrict foreign commerce in a high-handed fashion. Apart from his political argument the book is of value for the large amount of information it gives of the present condition and future prospects of Eastern Siberia and Manchuria and the financial and commercial statistics of Japan and China.

Quite the opposite, and, as we believe, a juster, view of the effect of Japanese domination on the continent is given by Professor Ladd in the account of his visit to Korea as the guest of Marquis Ito.² It is indeed seldom that an individual, outside of official and missionary circles, and fitted to study international affairs as well as race psychology, has the opportunity to do what Professor Ladd has done in the interests of international good will and in the right understanding of the work of missionaries. Here we get invaluable knowledge of Japan's greatest statesman; his love of peace and hatred of war; his love of righteousness and hatred of injustice; his patience with the most incapable and exasperating of living rulers; his optimism in the possibility of reforming a nation that has fallen to the very lowest limits of national life. No living statesman has a more hopeless task than that of saving Korea. And Professor Ladd gives us a picture

¹THE COMING STRUGGLE IN EASTERN ASIA. By B. L. Putnam Weale. New York: The Macmillan Company. \$3.50.

of the conditions in which the Resident General, Prince Ito, is bravely and hopefully and sympathetically attempting the work of saving morally, as well as politically, the ignorant and degraded millions of Korea. If he succeeds he will be the savior of the nation and will deserve to rank as one of the greatest moral forces in the East.

It has long been evident to the careful observer that the splendid successes of the missionaries in Korea afford a possible opportunity for the breaking out of fearful evils on a gigantic scale. Suppose those tens of thousands of easily excited and morally weak Korean Christians should be tempted to combine and raise the perilous cry of "Korea for the Koreans." Foreign missionaries would be utterly helpless to prevent the worst forms of anarchy. Christianity would be discredited not only in Korea, but markedly thruout the entire East. "If the number of recent converts in Korea furnishes just cause for hope and rejoicing, the

character of these converts and of their environment gives also cause for foreboding." It is this possible peril that makes us thankful that, not the absolutely incompetent and corrupt ex-Emperor, but the resourceful and patient Prince Ito is there, making with his firm hand of reform an environment in which Christian missions may have solid success. Because Professor Ladd clearly shows the vital relation of mission work to its environment (and he is the only writer so far as we know who has done this needed work with such ability), he has done a most valuable and timely ser-

vice to the growing science of missions. This well written book of 477 pages, if condensed into one sentence, would be, in the author's own words:

"In fine, the Japanese protectorate under the present Resident General, and the foreign Christian missionaries, with their native converts, command the two sources of power and influence which must unitedly work for the uplift of the Korean nation."

The story of the replacement of Russia by Japan is told in two large volumes

by Mr. McCormick,³ who was the Associated Press representative with the Russian army from Port Arthur to Mukden. His account of the unpreparedness and confusion of the first days at Port Arthur is confirmed by the exposures of the Stoessel court-martial. Mr. Weale's surmises as to the probable outcome of battle for which both armies were waiting when peace was declared are flatly contradicted by Mr. McCormick's observations in the Russian lines. He says the Russian soldiers regarded the terms of the Portsmouth

B. L. PUTNAM WEALE.
Author of "The Coming Struggle in Eastern Asia."

treaty as their greatest victory over the Japanese, for they had lost confidence in their officers and in themselves. Drunkenness, gambling and licentiousness were their chief interests and occupation even on the battlefield. Insubordination, disloyalty and contention were general, and both men and officers surrendered voluntarily by thousands to secure the shelter and comforts of Japanese prisons. Mr. McCormick is as enthusiastic as Professor Ladd in his

³THE TRAGEDY OF RUSSIA IN CENTRAL ASIA. By Frederick McCormick. New York: The Outing Publishing Company. \$6.00.

praise of Marquis Ito's administration of Korea.

The Mother of California. By Arthur Walbridge North. New York: Paul Elder & Co. \$2.00.

The voyage of the fleet is having one good result at least; it is teaching us all geography from the kindergartner up. We now take a personal interest in Magdalena Bay, and realize for the first time how unfortunate it is that one of the best of the few harbors on the Pacific Coast should not be in our possession. Mr.

sioners were so fuddled with mescal that they could not tell latitude from longitude? Mr. North believes that it is not too late to recover the lost ground; that Mexico might be induced to sell the territory that is an expense to her, but would be valuable to us. Only 29,500 people scattered over 38,000,000 acres of land! The only things lacking, it seems, are water and good society. Mr. North's style is suited to his subject matter, mostly arid, but blossoming at times into semi-tropical rhetoric. But the book is timely and useful, for it gives the history

MAGDALENA BAY, WHERE OUR FLEET IS NOW STATIONED.
From North's "The Mother of California."

North himself cannot explain exactly why we lost Lower California and were even cut off from the Gulf by the Treaty of Guadalupe Hidalgo. In 1847 the American flag was raised over La Paz, the capital, by army and navy officers, and a proclamation issued that our occupation was permanent. President Polk was emphatic in his declaration that Upper and Lower California should "under no circumstances be restored to Mexico," and that the right of passage across the Isthmus of Tehuantepec must be retained. If he had had his way our fleet would now be engaged in target practice on our own territory, we should be getting the revenues of the Tehuantepec railroad, instead of paying out for the Panama Canal, and we should be able to use the waters of the Colorado River as we please for irrigation. Can there be any truth in the tale told by old Mexicans that the heads of our commis-

of Lower California from the time of Cortez to the present and a description of its resources and characteristics based on personal observation.

Children's Books and Reading. By Montrose J. Moses. New York: Mitchel Kennerly. \$1.50.

"A genuine child's book is as little like a book for grown people cut down as the child himself is like a little old man," and so we must have "children's books" suited to their capacity and awakening their interest. Some critics have so revolted from the style of "juvenile classic" cut down, "Froissart cut into spoon-meat," that they advocate the plan of giving the children adult literature without change, expurgation or expunction. Others believe in the "child's own book," with all its jingles and rimes and absurd cartoons and crude wood-cuts. Mr. Moses,

in his new book *Children's Books and Reading*, takes the wise middle-ground and advocates the best, and only the best of both. Children have appropriated five of the world's classics not originally written for them: "The Arabian Nights," "Pilgrim's Progress," "Robinson Crusoe," "Gulliver's Travels," and "Baron Munchausen." All myth and folklore has become theirs by right of their avid imaginations. Ruskin advises turning a young girl loose in a library and letting her browse there at her own sweet will. Mr. Moses's advice is much the same—but he would have the library well selected, and he gives good advice as to the choice of books written distinctively for children. He devotes several chapters to the history of juvenile literature from the "Babes' Book," published in 1475, to the latest illustrated edition of "Peter Pan." The work is a guide as well as a treatise, and essentially helpful and practical, containing, as it does, over sixty pages of book lists, approved by experts who are lovers of children as well as bibliophiles, in the better sense of "book lovers." In THE INDEPENDENT'S Book Numbers Mr. Moses publishes a survey of the juvenile literature of each year, and those of our readers who have found these lists useful will be glad to know of this volume covering the whole field. It is especially valuable to librarians, with whose needs the author is familiar, for he is in demand as a lecturer on this subject before library schools and conventions.

The History of Music. A Handbook and Guide for Students. By Waldo Selden Pratt. New York: G. Schirmer. \$3.00.

The History of Music to the Death of Schubert. By John K. Paine. Boston: Ginn & Co. \$2.75.

Professor Pratt's "handbook" of musical history is the outgrowth of a fragmentary syllabus used in his classes, and he is careful to explain that it is meant to be distinctly a book of reference for students rather than a literary or critical survey of a few salient aspects of the subject, or a specialist's report of original research. Yet, by the painstaking care with which he has selected his material, and the clear, succinct, straightforward method of its presentation, without waste of words, his book is an important contribution to the literature of

music, and it makes interesting reading for layman and musical student alike. Finding the obvious utilities of music-history in a general broadening of thought about musical art, in disclosing dominant lines of progress and effort, in exhibiting the personality and genius of creative artists and leaders, in providing rational grounds for appreciation, criticism and practical procedure, and in showing how musical life has been interlocked with literature and the other fine arts and with the advance of social life in general, the author approaches his task in the right spirit, taking up the history of music as one department of the general history of human culture, more particularly of the history of the fine arts as special embodiments and instruments of that culture. With large knowledge and scholarly grasp he gleans from this extensive field the more important of ascertainable facts regarding musical efforts, ranging from the childish attempts of the savage to the monumental achievements of the greatest civilized artists, and presents those facts as correlated features of a development that has been governed by large principles or tendencies. In its field and for its purpose we know of no other work in English that is comparable in value to Professor Pratt's book. A good set of indexes adds materially to the working value of the volume. Dr. Paine's *History* is a text-book for college use rather than a reference work, and a text-book of such high excellence, as far as it goes, so thoroly sane, careful and judicious in spirit, as to cause keen regret that the late professor of music in Harvard University did not live to complete the work of revising his lectures for publication. Tho it ends abruptly with the death of Schubert, the book is worthy of a place in every music library.

The Mother of the Man. By Eden Phillpotts. New York: Dodd, Mead & Co. \$1.50.

Since Mr. Barrie's tender memoir of his mother we have had no figure to place beside "Margaret Ogilvie" until this latest romance of Eden Phillpotts, *The Mother of the Man*, gives us in Avis Pomeroy the most human, the most appealing, the wisest and the most lovable of mothers in recent fiction. We can easily fancy the Scotch mother and

the Dartmoor mother having a cosy "tell" together on the eternal subject of the "man" who is also a son. It is a theme of which the right sort of mother never wearies. Not only Avis, but the other characters, are strongly individualized. Jill Bolt, self-indulgent, evil and coarse, is as well drawn and as much of an artistic triumph in her way as the better woman is in her nobler way. Samuel Bolt is a delight, and so are several of the minor characters. We confess to little sympathy with the sulky hero, Ives Pomeroy, but his mother understood him and believed in the finer possibilities of his unformed nature, with the divine faith of mothers, until we at last begin to see her son thru her partial eyes and to discern an inchoate nobility in his rough strength. As always in Phillpotts's novels, the landscapes are limned with loving artistry and the rustics of Dartmoor are delightful to know and hear. Their sober wisdom racily smacks of the soil and is endlessly entertaining. Eden Phillpotts has written his strongest book, so far, in *The Mother of the Man*, with a ripeness and restrained power rarely excelled.

Life and Public Services of William Pitt Fessenden. By his son, Francis Fessenden. Two vols. Boston: Houghton, Mifflin & Co. \$5.00.

A good life of a strong, unimaginative man, who early in youth took to the ladder leading toward fame, climbed high at the bar, and in State and national political affairs, and saw as far along the national horizon as is given to the essentially legal mind to see. Born in Maine, under distinctly Puritan conditions, he was blessed with a father who loved mankind, and perhaps had too much confidence in them. On one occasion, at any rate, having as leader of the bar in his native State successfully defended a man charged with counterfeiting, he told his client that the fee was thirty dollars, and the client promptly paid him in counterfeit money. Under such a father, who, as might be supposed, was one of the earliest and purest-blooded abolitionists, the son received a training which ripened him for college at the early age of eleven. A year later he entered Bowdoin, and was graduated before he was seventeen. He took seriously to the study and prac-

tice of the law, and, in the actual number of law cases handled by him, was, at thirty-one, a step higher on the ladder than his father. In politics, meanwhile, he was slowly approaching the old gentleman's standard, but never quite put his foot on the abolitionist's landing. It was mainly along the line of the law that he rose, and with perhaps more pure intellect to his credit than was possessed by any but a few lawyers. At forty-seven he was in the United States Senate, put there by a coalition of Whigs, whom he loved, and Anti-Slavery Democrats, on whose platform he had one foot. On the morning after the election the Democratic journals put on mourning, and well they might, for this combination platform eventually supported the Republican party. In a very short time he was at the head of the Senate Committee of Finance; then for a time Secretary of the Treasury, ending his days, however, as a Senator, being one of the seven who refused to find either constitutional or political grounds for the conviction of Andrew Johnson, tho all other Senators of the Republican majority found both sorts, while every man of the Democratic minority found neither. Thus he stood exactly where the purely intellectual legal mind naturally placed him, untrammelled by that emotional and imaginative faculty which advanced Lincoln some steps higher on the ladder of fame. He was slow in finding out that Lincoln, with constitutional law in his head and humanity in his heart, was by virtue of both possessions a natural leader of men. The difference between the two men is now well established in history and thereby is illustrated the effective force of a constructive imagination tempered by the judicial faculty.

Launcelot and Guenevere: A Poem in Dramas. By Richard Hovey. I. The Quest of Merlin: A Masque. II. The Marriage of Guenevere: A Tragedy. III. The Birth of Galahad: A Romantic Drama. IV. Taliesen: A Masque. V. The Holy Grail and Other Fragments. New York: Duffield & Co. \$1.25 each.

The publication of all that remains of the late Richard Hovey's projected Arthurian cycle is likely to interest friends of poetry as well as admirers of the poet. Even in its melancholy incompleteness the

plan appears a stupendous one. It comprises three parts, each composed of a masque, a tragedy, and a play, of which only four pieces were ever finished. In addition to these Mr. Hovey has collected a volume of fragments, which were to have found their places in the succeeding numbers of the series, and has supplied a commentary and an outline of the entire design. No one can read these isolated dramas or even these disconnected passages without being impressed by the writer's poetic faculty and promise. They reveal a scope and power of which his earlier subjects afforded only a hint. But at the same time it is equally impossible to study the conception of the work as a whole without grave misgivings. If nothing else, it is altogether too complicated. Not only is the machinery exceedingly intricate, with its multiplication of members and functions, "philosophic, æsthetic and ethical"; but the poet, too, seems to have in mind a social philosophy even more involved, which he intended to apply to the puzzling problems of marriage in its double relation to the individual and society. Whether for this reason or not, the dramatic interest even of the completed plays is not very great. Indeed, it is questionable whether the character of the Arthurian legend is in itself essentially dramatic. But at all events, it is as difficult not to feel that in this instance the poet was on a false scent as to suppress the regret that he should never have had the opportunity to ripen the gifts of which these volumes, defective as they are, still furnish indisputable evidence.

The Literature of Roguery. By F. W. Chandler. Boston: Houghton, Mifflin & Co. 2 vols. \$3.00 net.

Professor Chandler's *Literature of Roguery* is pretty good bibliography. To call it anything else would be misnomer. As a *catalogue raisonné*, as an annotated inventory of all such English writings, literary and non-literary, ancient and modern—pamphlets, tracts, jest-books, prison reports, plays, novels, essays in sociology and economics—as deal with the subject of rascality, it has not its like. Enough if a book contains a rogue among its characters, it is admitted to Professor Chandler's gallery, dated, an-

alyzed and docketed. But to the title of literary history as written nowadays his volumes have no just claim, not so much because they do not restrict themselves exclusively to literature—that is a small matter—but because they do not satisfactorily account for the phenomena. Figuring in a series which pretends to deal with the "Types of English Literature," they fail to institute or discriminate a distinct type; rather, they tend to confuse a number of types by a system of classification based on an inessential characteristic, the mere presence of a rascal, which is common to literature almost universally. Nor on the other hand does Professor Chandler succeed in tracing a consistent evolution from the earlier members of his catalog to the later, or even in explaining how the one might have influenced the other. On the whole, then, his book must be considered mainly as a collection of materials never before gathered into one place, and, as such, a useful, indeed, an indispensable, preliminary to further work in this field.

Mexico and Her People of Today. By Nevin O. Winter. Boston: L. C. Page & Co. Pp. vii, 407. \$3.00

Mr. Winter has done very well in the attempt to combine a tourists' book of description, a history of Mexico and its people, and a compendium of information upon the material resources of the country and their development to date. The book is weakest in its historical portions. For prehistoric Mexico and Spanish conquest, Mr. Winter, despite his remark that Prescott's writings will not stand in the light of more recent investigation, has yet followed Prescott considerably. His reading of nineteenth century history in Mexico has not been sufficient to give him more than a confused equipment of dates, facts and events, without a clear comprehension of underlying issues, especially the religio-ecclesiastical question. The sections dealing with mines and mining were apparently gleaned from carelessly prepared articles in periodicals, and are not up to the general average of accuracy of the book. The traveler and reader of "boom" literature on Mexico, not the foreign resident grounded in experience, speaks in this sentence (p. 190): "Today I do not be-

lieve that any country is more free from graft in high places than our Southern neighbors." It is in the chapters on social customs and conditions, as a tolerant and observant tourist, that Mr. Winter excels. The following remark may be commended to all travelers and writers on Mexico or Spanish America in general:

P. 203.—It is a question whether the Anglo-Saxon and the Teuton can give these people more than mere mechanical contrivances. Home does not necessarily consist in an open fire, drawn curtains and frequent visits of curious neighbors. Here homes are found where privacy is respected, family affection is strong, and there is respect for elders, love for parents, and kindly relations between masters and servants. Such a country is not uncivilized and barbarous.

North Italian Painters of the Renaissance.

By Bernhard Berenson. New York: G. P. Putnam's Sons. \$1.50 net.

Mr. Berenson's new book is in itself a notable contribution to the literature of art, but it is even more noteworthy as the concluding result of nearly twenty years of work—a labor of love among the pictorial treasures which Italy has bequeathed to the world—and as the completing volume of a series of four dealing in sane and sound and courageous fashion with the whole field of Renaissance painting in Italy. Some sixteen years ago the first of the series, devoted to the Venetians, showed that the young American student who had gone to Italy fresh from Harvard could use the critical method of Signor Morelli to good purpose, and yet had eyes and a mind of his own—and knew how to employ them. Followed in turn illuminating essays on the work of the Florentine and the Central Italian Renaissance painters, and now the tale is told with the inclusion of the North Italians. In these four volumes, besides cataloging and indexing both by artists and places the pictures of the principal Italian painters, Mr. Berenson has worked out, in a delightful style and a temper no less happy, his own critical creed; has given us perhaps the best appraisal that has appeared in English of Renaissance painting, the most equable and equitable appreciation of the whole output of the great Italian schools; has provided the best of antidotes for Ruskin's intoxicating rhapsodies; and

has brought to his readers a new realization of what modern art owes to Italy.

The Dance of Love. By Dion Clayton Calthrop. New York: Henry Holt & Co. \$1.50.

The Dance of Love is another "Quest of the Golden Girl," only in this case the search lasts thru years and draws the hero, Pipin, into many strange adventures in Middle Age France and England.

"Date: The dawn of intellect, of long brocaded gowns, short coats, parti-colored hose, long hair, wide sleeves, blunt shoes; of full dresses, elaborate coiffure; of brilliant women." That it was during the "dawn of intellect" does not seem to have helped the hero much in his long quest for the "girl with the key to his life hung on a chain around her neck." For he is, as men often are, blind to the fairest because she happens to be the nearest maiden, and wanders far afield looking for some other, more interesting because a stranger. The table of contents reads like a list of favorite girls' names. The first chapter is entitled "Alice," the second "Yolande," and so on down the page until we have the names of a dozen women, all of whom prove interesting if not always edifying companions. John Bonamico, a vagrant philosopher whom Pipin meets by the way, is a delightful rogue, who rescues the knight-errant from several very tight places, for among the women he meets there is a dove, a "dove-snake," and a snake simply. The last named lady nearly ends the quest and Pipin with it, but that would have spoiled the pretty story.

The Maid of Honor. By Richard S. Holmes. New York: Fleming H. Revell Co. \$1.50.

The Maid of Honor is not a historical romance of courts and queens, as the name would seem to prefigure, but a story of love and religion such as only clergymen write, beginning with a wedding at which the heroine is maid of honor and the preacher hero the best man, and ending with another wedding thirty-five years later. The love story is negligible, but the sketch of the Presbyterian elder, who is an incomparable fly-fisher, a lawyer, a theologian and a "vera releegious" man, bears internal evidence of having been drawn from life.

The First Secretary. By Demetra and Kenneth Brown. New York: B. W. Dodge & Co. \$1.50.

A novelist who chooses Constantinople for his field risks comparison with Pierre Loti, whose "Disenchanted" last year told of the dear little shadowy gray ladies who dwell in the memory like a mournful strain of music. *The First Secretary* is also a story of Turkish women, but there the resemblance ends. In some mysterious way Loti gets the hot, blue haze and the black cypresses of Turkey into his pages, and his people have an Orientalism of the heart deeper than that of costume or of speech. This is missing in the lively story of the American secretary and his various adventures toward securing the loveliest of Turkish girls for his wife. We get a most decided impression that courtship in Turkey is difficult, and elopement is well-nigh impossible, but when did an energetic young American enthusiastically in love acknowledge an impossibility?

The Boys of the Old Glee Club. By James Whitcomb Riley. Indianapolis: The Bobbs-Merrill Co.

Should not this be noted as the first attempt to bring the phonograph into the range of poetry? But, then, Riley can do things that nobody else dares attempt:

"You folks rickollect, I know—
'Tain't so very long ago—
Th' Old Glee Club—was got up here
'Bout the first time Grant tuk the cheer
Fer President four year—and then
Riz—and tuk the thing again."

The illustrations by Will Vawter really "belong"; they tell the story parallel to the poem.

Proportional Representation. By John R. Commons. New York: The Macmillan Company. \$1.25.

Foreign observers sometimes express amused surprise at the frequency with which Americans tinker at their electoral machinery. Good men, they tell us, will make a bad system work well, while bad men will bungle the best system. But, taking conditions as they find them, one dominant condition being the inertia of the voters, American reformers find it necessary to be tireless in their efforts to adjust the party machinery so as to make the will of the people easily effective. Professor Commons, with his usual

painstaking accuracy and scientific thoroughness, presents the case for one mechanical improvement which is not yet widely discussed. Proportional representation is theoretically impregnable. If only reason ruled, proportional representation would be adopted in short order. Oregon's House of Representatives is now composed of fifty-nine Republicans and one Democrat; but if every organized political party was represented in proportion to the number of its voters at the last election, there would be about thirty-three Republican, twenty Democrat, four Socialist and three Prohibition members. But unluckily, laziness and inertia rule. Reason runs a bad third. Voters find the system for making representation proportional too mathematical to excite their enthusiasm. So long as the candidate with most votes in his own district gets the place, the average man is satisfied. He does not care greatly that the sum of the minority parties left unrepresented is considerable. Next time, perhaps, they will get the advantage of the unfairness, and that pleases his ineradicable instinct for gambling. Professor Commons devotes some of the chapters added in this, the new edition of a book first published in 1896, to the Initiative and Referendum. Confidence in the integrity and ability of legislators has been worn to a shadow. But the people still trust themselves. Therefore the demand is gathering volume that 5 per cent. of the voters or thereabouts may, by petition, compel the submission to the whole electorate of any measure past by the Legislature before the measure becomes law, and also the consideration by the Legislature of any measure proposed by the petitioners and the submission of the measure to the voters if rejected by the Legislature. The optional Referendum and Initiative have been adopted in South Dakota, Nebraska, Missouri and Oregon. The compulsory Referendum is exercised in many States with respect to State Constitutions and constitutional amendments; local option on liquor selling; municipal and town vote on borrowing money, purchasing or erecting water works, gas or electric light plants, or constructing large public improvements. This reform is gaining favor rapidly.

The Animal Mind. By Margaret Floy Washburn, Ph. D. Professor of Psychology in Vassar College. New York: The Macmillan Co. \$1.60.

A book seldom appears at such an opportune time as has Professor Washburn's book just published, for there is much discussion in current periodicals of the subject of the reasoning powers of animals. Most of the articles on the subject show a great ignorance not only of the subject but of the proper method of attacking the problem. To mention only one point: the average writer makes no distinction between *mind* and *reason*, and thinks that if an animal possesses mind it must also have the power of reason. The author begins with a chapter on the difficulties and methods of animal psychology. The fundamental difficulty comes from the fact that the mind of each being "forms a region inaccessible to all save its possessor." We can never know any mind but our own. This is a difficulty in human psychology, and, of course, a still greater difficulty in animal psychology, for the animal has no language in which to give us an account of its experience. All our knowledge of the animal mind must be inference from its behavior. And it is in making this inference that even the trained psychologist makes his greatest mistakes. The first method employed in the study of the animal mind was the "anecdotal" method. It was entirely unreliable, for it gave us only sentimental accounts of the doings of favorite pets, or reports of the actions of wild animals—stories in which fact, fable and inference are found hopelessly confused. A better method is that of experiment, in which an animal's actions are subjected to definite conditions and control, and the type of consciousness possessed by the animal is inferred from its behavior. This method becomes the ideal one when applied to the study of an animal which has been known and observed from its birth. In the second chapter the author discusses the two criteria of mind—the behavior of the animal and its nervous structure and the evidence relating to the mind of the simplest animals, the amebæ. Then follows a description of the mental life of animals up to the vertebrates. The book closes with a bibliography of 476 titles.

The Enlightenment of Olivia. By L. B. Walford. New York: Longmans, Green & Co. \$1.50.

The title of this book refers to the repentance and general excellence of a young married woman when she is awakened to a realization of the admirable qualities of her prosaic husband. Unfortunately, this happy experience is delayed until after she has fallen in love with a Kongaro scientist during the former's absence on his annual vacation. It is a great pity that writers of fiction refuse to distinguish between married women and single ones when it comes to signing up a plot. Then such "enlightenments" would not occur so often in books on life. And such books are not moral because they end morally. The damage is in the proposition involved and dramatized. They gradually change the moral consciousness of those who read them to a merely natural unmoral consciousness. However, this said, the book deserves attention for the skill with which the author portrays the "great scientific man," who is as devoid of delicacy as a person of the very lowest grade in sensibility, an interpretation singularly justified by innumerable instances in real life.

Literary Notes

....One of the best examples of modern book-making is the *Stratford Town Shakespeare*, in ten volumes, which also has a sentimental interest because the work on it was entirely done in the poet's birthplace. It is sold in this country by Duffield & Co., New York, at \$50.

....Translating works on chemistry into German is certainly like carrying coals to Newcastle, so we can appreciate the unusual compliment to American scholarship when we find the text-book of organic chemistry written by Prof. W. A. Noyes of the University of Illinois, and published by Henry Holt & Co., appearing in Leipzig under the title of *Kurzes Lehrbuch der organischen Chemie*, with a commendatory preface by Prof. Wilhelm Ostwald.

....We have received many inquiries from our subscribers in regard to Horace Fletcher's writings mentioned by Frances Maude Bjorkman in an article published in THE INDEPENDENT for March 19th. His best known and most important book is *The A B-Z of Our Own Nutrition* (Stokes), which contains some startling contradictions of usually accepted theories. We will be glad to order a copy for any of our subscribers on receipt of \$1.12.

....A thoughtful and stimulating little vol-

time is Miss Johanna Pirscher's *Growth Without End*, a recent issue of the "What is Worth While Series" of Messrs. Thomas Y. Crowell & Co. Miss Pirscher believes that "the broad and active idealism radiating from American centres of thought" is the "greatest leavening power in modern civilization," and that its interpretation to many minds will resolve much modern doubt. Other recent issues of the same interesting series are *The Battle of Life* and *The Good Old Way*, by Dr. Van Dyke; *The Spiritual Care of a Child*, by Anna Robertson Brown Lindsay; *The Heart of Good Health*, by Annie Panson Call, and *Glimpses of the Heavenly Life*, by Rev. Dr. J. R. Miller (30 cents each).

...The long struggle over the use of the word "Webster" as the title of a dictionary has been settled by the United States Circuit Court of Appeals, in the case of Ogilvie vs. Merriam. The court decides that the name "Webster," being no longer protected by copyright, can be used by any publisher, but it finds that George W. Ogilvie, in the style and title of his dictionary and wording of his advertising, had imitated the Webster's Dictionary published by the G. & C. Merriam Company, Springfield, and that such an attempt to deceive the public was an unfair form of competition. The Merriam Company has won another point in the contest by the decision of the Supreme Court of the United States that Ogilvie had no right to reproduce the British edition of the school Webster, even from an imported copy from which the notice of the American copyright was omitted.

...The recent *Commentary on Matthew*, by the Rev. Willoughby C. Allen, of Exeter College, Oxford, which is one of the best of the International Critical Commentaries thus far issued, and certainly the best commentary on the first Gospel in English, contains a very enlightening study of the documentary sources by means of which the Book of Matthew was composed. The priority of Mark is established beyond a doubt, and the development of the tradition between the first and second evangelists is made very clear. Mr. Allen pronounces in favor of the credibility of the Matthaean narrative of the birth of Jesus. He does not seem altogether convinced that Matthew and Luke both used a common source besides Mark, but he admits that both employed documents which at least agreed closely, and that there is evidence also of Logia, peculiar to Matthew. The commentary is published by Scribners.

Pebbles

IN THE VERNACULAR.

THE girl had been three weeks in the employ of an artistic family, but her time had been by no means wasted. Her mistress was giving her instructions as to the dinner.

"Don't forget the potatoes," enjoined the lady.

"No, ma'am," was the reply. "Will you have them in their jackets or in the nodd?"—*Punch*.

LEAP YEAR PROPOSAL.

Maud, in stunning costume and carrying a cane, swung up the steps of the house where John lived. A maid opened the door.

"Step into the dining room, ma'am, John will be down directly," said the maid.

Maud waited. At last a step was heard on the stairs, and then a lovely vision stood framed in the doorway. It was John. His face was smooth shaven. His dark hair was combed from the left side and a small tuft stuck up coquettishly at the back. His blue eyes sparkled, rivaling the diamond which gleamed from the center of his necktie. His red lips, slightly parted, showed his white, straight teeth.

Maud's heart was thumping madly as she advanced to meet him. John, on the contrary, was perfectly calm.

They sat down. Maud could not keep her eyes from the vision of loveliness before her. Oh, if she could but win him for her own! How she would work and slave to make him happy! How sweet to think of going home to him after the day's toil!

They talked of many things, of Mozart's sonatas, of Beethoven's music, of philosophical subjects, of anything and everything but what was nearest their hearts.

But Maud was a determined woman. She had come to call that evening with her mind made up to ask John for his hand.

It came to John without warning except by that fine intuition by which a man knows when a woman loves him. Maud seized his hand and at the same time fell on her knees.

"John, I have loved you so long. Will you be my husband?" she said.

John cast down his eyes. But he did not withdraw his hand. Maud felt encouraged by this. She dared to hope that he loved her. For a moment silence reigned thru the half darkened room. Then John said:

"Oh, Maud, this is so sudden."

He had called her by her first name!

"Oh, be mine," cried Maud, gaining possession of his other hand. Still he did not withdraw his meat hooks.

Then over them flowed that deep, solemn quiet which comes only when two souls meet which have been attuned to harmony in the eternal workshops of love. That heavenly symphony which only two such souls can hear was wafted to them thru the room.

(Soft pedal.)

No word was needed to tell Maud that John had surrendered to her; that he had resigned his life happiness into her hands; that he trusted her implicitly and that he returned her love entirely.

When she took a reluctant leave two hours later (or was it two centuries?) she had gained his consent and he had promised to name the day.

And Maud's heart was singing as she stopped at the corner drug store for a glass of chocolate ice cream soda. And while she drank it John sat in his boudoir gazing happily at a ring which sparkled on the third finger of his left hand. On his face was an expression of ineffable joy.—*The Ladies' Home Journal*.

The Independent

Entered at New York Post Office as Second Class Matter.

Publisher, Clarence W. Bowen.

Owner, The Estate of Henry C. Bowen,
130 Fulton Street, New York.

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The President's Recommendations

SOME profess to see in the President's latest message a "surrender" to the forces which he has been opposing. We can find no evidence of it. Congress thus far has done little or nothing beyond consideration of the appropriation bills. There has been a great deal of talk, but most of it has been of a political character. Almost any paragraph in a supply bill has served as a text for campaign speeches. Mr. Roosevelt reminds the legislators of recommendations made repeatedly in previous messages. He asks that action be taken upon these recommendations, "one way or the other," and says there is "ample time."

There should be a model law for the prohibition or regulation of child labor in the District of Columbia. All laws for the government of the District are made by Congress, but among the statutes now existing there is none on this subject. Probably it is not feasible to regulate child labor in the States by Federal legislation, but a model law for the capital

would tend to affect legislation elsewhere. There has been inexcusable delay in perfecting and passing an employers' liability bill on the lines suggested by the recent decision of the Supreme Court. The proposed modifications of court practice with respect to injunctions in labor disputes are reasonable and just. They are approved by the leading presidential candidates in both the great parties. But there has been no indication that Congress was inclined to take them up for consideration.

Mr. Roosevelt has repeatedly urged that railroad companies should be empowered to make traffic agreements among themselves under the direction and with the approval of the Commission. In his messages and in the Commission's reports there are both testimony and argument in favor of granting such power by statute. If the Commission, however, is to pass upon the issuance of all new railway securities, it must first, we should say, make a physical valuation of the property. For the expense of such a valuation an appropriation of \$3,000,000 is sought. The President does not speak of this. Congress is not inclined to grant the money, and probably still needs to be convinced that there ought to be such a valuation. Legislation for the establishment of postal savings banks could easily be prepared and brought to a vote, but we fear no action will be taken at this session. The President's recommendations as to the collection of material to be used in revising the tariff are by no means revolutionary. If the Ways and Means Committee desires to promote revision, it will naturally apply to Government agents and officers of the departments for information.

The most important parts of the message are those which relate to the Sherman Anti-Trust law. As he has said before, the President desires that this statute shall be so modified that it will not make unlawful all combinations and contracts in restraint of trade, whether reasonable or unreasonable, beneficial or harmful. As is well known, the courts have been bound by the sweeping prohibition of the law, a strict and searching

enforcement of which would profoundly disturb existing business relations which are not injurious to the public.

Shall the courts have power to decide whether a combination agreement is beneficial or harmful, whether the restraint is reasonable or unreasonable? Or shall the decision rest, at least so far as prosecution by the Government is concerned, with an executive officer? Mr. Foraker has introduced a very short bill which removes the main objection to the present law merely by the insertion of a single word. This bill provides that neither the Sherman act nor the Interstate Commerce law, nor any other existing law touching upon combinations shall be held to prohibit any contract, agreement or combination that is not in "unreasonable" restraint of trade.

By such legislation the courts would be empowered to decide, and would be freed from the rigid bonds of the Sherman act. Mr. Roosevelt—and the long bill introduced by Mr. Hepburn—would give the power, at least so far as legal proceedings against a combination by the Government are concerned, to an executive officer, the Commissioner of Corporations. In a complicated manner, he attempts to avoid the sweeping prohibition of the statute and at the same time to establish a Federal licensing system. We prefer the Foraker method of modifying the effect of the statute, but do not say that the licensing of interstate corporations should be disapproved. The proposed relation of licensing or registry to prosecution would place enormous power in the hands of an executive officer, and it is not clear that the method would always be just in its operation.

The concessions to labor which are involved in this project of legislation have been overestimated in public discussion. It is true that unions could not be prosecuted on the ground that they are unlawful combinations in restraint of trade, but prosecutions for conspiracy to boycott, as in the Danbury hatters' case, would not be barred, and the right of employers to discharge employees for any cause is expressly recognized.

Anarchists

THERE are anarchists of various sorts. There are those who are anarchists without knowing it, anarchists on occasion, like those that are troubling Governor Willson, of Kentucky, and those that seize prisoners from sheriffs and hang them. Doubtless they think themselves, as they are reported occasionally in the local papers to be, "our best citizens"; but anarchists they are, rebels against organized law and government.

But there is some hope for them that they may learn wisdom and be converted. There is little hope for the other sort, whose lawlessness is not an occasional outbreak, but is their avowed philosophical principle. They do not believe in law or anything it represents. They are its eternal foes. What hope is there of them?

Such were the men who, in this city, tried last Saturday to throw a bomb so as to kill some twenty policemen, but with fatal results only to themselves. For such the immediate duty of society, which must protect itself, is to suppress them; to crush them. Our laws properly deport them, if not citizens; and, if citizens, they must be watched and guarded against, as one would guard against the dangerously insane, even to the extent of restraint, when they threaten life. The President has done right in denying the use of the mails to an anarchist sheet in Paterson a few days ago.

This does not mean that society has no other duties to prevent the growth and spread of such noxious doctrines and dangerous teachings. This last outbreak attacking policemen was connected with a demonstration of unemployed workingmen called by Socialists. They wished to hold a meeting in a park and permission was refused. Many determined to meet nevertheless, in spite of the law. But of that crowd doubtless thousands were suffering from lack of work. Doubtless the crowd included many who had work, and many who are vicious or drunken, or do not wish to do any steady work. A time like this, when so many are unemployed, and naturally feel that society does not properly provide for them, is provocative or violence and edu-

cative of lawlessness and anarchy. Society must have some duties to perform in such conditions, so as to provide for those who, thru no fault of their own, are unable to provide for themselves.

We take this to be a truism when thus plainly enunciated. When thru sickness or death a man is unable to support himself and his family, and there is no one else to do it, society recognizes its duty. It provides hospitals and some form of poor relief. The essence of the condition is the inability of the wage earner to provide for his own, inability thru no fault of his own. But in such a case of business depression as we now see, when tens of thousands of willing workers are thrown out of work and nobody will pay for their work, the condition of inability is precisely the same, and the duty of society, which has itself created the conditions, is the same, to provide for those in need. This lack and suffering exists in cities, not in the country. It has to do with factories, not with farms. It is the business of wise city fathers or of State legislatures so to arrange public improvements, whether in the city or in the country, that they shall be able, in times of depression, to give work which will at least save workers from starvation. That will test the reality of the suffering, and those who can manage in other ways to live thru the period of idleness, and are too proud to take the lower wages and the hard work, will be eliminated from the problem.

Of course, there is a duty back of all this for statesmen, that of preventing the recurrence of these hard times. The financiers tell us that our financial system is accountable for the regular return of hard times. Congress is now struggling with the problem, and a more important one can hardly be before them. A merely temporary remedy is not sufficient. We need the most careful study for radical reform, something probably much beyond what the Aldrich bill supplies.

But hard times with lack of work is not the sole source of the anarchistic spirit. It is a philosophy of rebellion. It is not constructive, like particularism or socialism, but destructive, subversive of society, and so society is its foe, and must fight it the moment it rises above a

verbal theory into practical application. Therefore law, therefore police. Every criminal act is essentially anarchistic, for it resists law; but anarchism makes resistance to law a philosophy and a virtue.

The Pressure of Population

At the exhibition of the congestion of urban population now being held in this city one of the most striking of the graphical illustrations is a large table map of Greater New York, in which the inhabitants are represented by fine shot. In the slums on the East Side these are piled up to the height of several inches, representing as dense a population as exists anywhere on the globe, more than a thousand persons to the acre. Other sections contained only a few scattering shot, 100,000 acres within the city limits with an average population of less than four to the acre, while all around the city stretches the open country, looking comparatively depopulated.

In one important respect this exhibit is misleading. It looks like a relief map, and one gets the impression that the population would flow from the densely to the thinly settled regions, unless forcibly prevented, just as water seeks its level. The blocks, over fifty of them, in each of which three or four thousand persons are packed, are in this model represented by tall pasteboard pens to keep the shot from running off on the empty table round about.

But with real people the opposite is true. The pressure of population is not from the city but toward it. The lines of force run from the thinly to the densely peopled areas. The people themselves constitute the attractive force, so the larger the city the faster it tends to grow. At the present rate of increase New York may have a population of 7,000,000 by 1920. Consequently it is useless to attempt to relieve the congested district by rapid transit projects or by assisted emigration. New railroads and trolley lines simply bring more people into the city. Settling families from the city on farming colonies helps individuals to a better life, but does not drain the slums, for more come in to take their places. The only way to prevent overcrowding is by arbitrary laws such as the new tenement

house regulations in regard to the height of buildings, area of the block covered, the number of windows and style of plumbing.

Congestion is a disease of the mind. People want to live close together. That does not necessarily mean that they prefer to sleep ten in a room, or that they like disease and dirt, or that they had rather live without sunshine and fresh air, but they are obviously more willing to get along with these inconveniences than to live in the country. They had rather be congested than lonely.

For, while the cities have been growing with unprecedented rapidity, the country round about them has in places actually lost in population. Whenever we go into the country we find old houses untenanted and dropping into decay, and school buildings once filled with children now containing a mere handful. There are some 50,000 unemployed men in New York City. There are some 2,000 abandoned farms in New York State.

The men who first settled on these farms had to walk or drive ox teams hundreds of miles. They had to fight Indians and wolves and bears. They had to clear the land of trees and pull the stumps. They had to pick up the stones and build their walls with them. Yet in spite of their privations and hardships they lived happy and healthy lives and founded churches, schools and colleges.

The early settlers in Kansas and Nebraska had to live in houses cut from the sod. There were no shade trees and no fruit. The drought and grasshoppers destroyed their crops year after year. They saw no one outside the family for weeks at a time. If they had anything more to eat than corn bread and potatoes and a bit of bacon they thought themselves lucky. Yet we do not pity these pioneers of the plains. We admire them.

Never in the history of the country was it so easy to get land to live on as it is today, notwithstanding that the public domain is practically pre-empted. A man can get to any part of the United States easier and cheaper and quicker now than the New Englanders could get to New York two hundred years ago, or the New Yorkers could get to

Kansas fifty years ago. Nowhere does the man who wants to get a living from the soil have to submit to the dangers and difficulties of the pioneers of that region. If the people of the slums had the desire and were possessed of the same initiative and energy as our forefathers, they could obtain for themselves an independent foothold on the soil. There is plenty of land practically to be had for the asking, for rental on shares, even in our oldest States. In many parts of the South good arable farms cannot be rented for enough to pay the absurdly low taxes. In last week's INDEPENDENT Mr. Nelson told how he had been offering cleared and fenced farms, with house, horse and cow, free of charge for a year, and has had only two takers. And in South and Central America anybody who is willing to live on it can get what land he wants—land that is so fertile that it makes people lazy.

There is a growing demand that the Government provide work for the unemployed, at least in times of business depression. Even if it is conceded that it is the duty of the Government to give every man an opportunity to earn his living it does not imply that the applicant for such employment has the right to dictate the kind of work that shall be provided or where it shall be done. On the contrary, the Government would certainly have the right to send such labor where it is most needed, which is in the country, not in the city. Self-supporting labor colonies, largely agricultural, such as are successfully run in Europe, afford the needed relief to the unemployed with less disturbance to industrial conditions than public works in the city, which would simply increase the strength of the urban magnet.

Our Legations Abroad

SOMEBODY has blundered in letting it leak out to the public that the Emperor of Germany had expressed a certain dissatisfaction over the appointment of Mr. Hill to take the place of Mr. Tower as Ambassador to Germany. There is no reason for believing that it was Emperor William who leaked; indeed, it is more likely to have been some one related to

the American Embassy. The indiscretion is a great annoyance to the Department of State at Washington, and equally to the German Government and the Kaiser. There may have been a misapprehension of what Emperor William said, and what he said may have been perfectly proper or may not; but it should have been kept from the public. We would not have this affair used to create any ill will toward him, for there is, thus far, no reason to blame him, and if he likes to speak or write letters, as in the late case of his letter to Lord Tweedmouth, the purpose is good, and his freedom of speech errs, if at all, on the side of frankness and good will. This leaking may possibly lose Mr. Hill a most desirable appointment, for it might not be pleasant for him to go to Berlin, even altho the Emperor now declares he would be a *persona grata*.

But the general impression is, that the Emperor William would have preferred an American Ambassador who, like Mr. Tower, would be able to entertain "brilliantly," or, at least, that Mr. Tower thought so. That puts a more serious phase on the matter. Because Congress allows but a moderate salary, it has come to be a custom to appoint to first class posts only millionaires like Charlemagne Tower and Whitelaw Reid, who can afford to spend four or five times their salary. This may shut out the best men from the best posts. There is no question that Mr. Hill is a very accomplished scholar, with much experience in diplomacy, just the sort of man who ought to represent the country, very likely a better man for the official duties than Mr. Tower; but he has not Mr. Tower's money. He could not rent so fine a house—the United States does not provide an Embassy building—and he could not afford such elaborate and costly functions. So he is not quite as acceptable a representative. Naturally the Kaiser and his *entourage* like shows and entertainments, but this is not what we send Ambassadors for.

And yet stinginess does not pay in the old-fashioned diplomacy. It was over the wine, when men and women grew confidential, that secrets were wormed out and plans and agreements were made. This has been the argument for the large

salaries which the principal European governments pay to their Ambassadors. Because these Ambassadors make a social display it seems as if ours ought to hold their own with them. We feel humiliated if our great nation is represented with no more display and distinction than Persia or Paraguay. We must stand up even with the Frenchman or the Englishman. We cannot help feeling so, and in a measure this is right, and we are convinced that our Ambassadors and Ministers abroad should be much better housed and provided for at national expense.

But the reason of old style diplomacy, with its falsehoods and deceptions and deep designs, is passing away, and straightforward, honest, "shirt-sleeve" diplomacy is taking its place. This is the kind of diplomacy which we need to cultivate. All that this requires of a diplomat can be accomplished, we suppose, on present salaries, but with no grandeur. And we do not doubt that the man of the Hill type, with only the legal salary, could do the diplomatic business with quite as much intelligence and diligence as have the representatives chosen for their wealth. Indeed, there have been cases in which our representative has seemed more concerned with his social success than with the business of state. We need statesmen, not rich social leaders abroad.

We suppose that on a salary of five or ten thousand dollars a year an Ambassador could board with his family in a second or third class hotel or *pension* in London, or Paris, or Berlin, or St. Petersburg, and could hire a cheap office on a side street, and entertain nobody, and show no courtesies to Americans abroad, and yet negotiate treaties and perform all the needed clerky duties. But a man must live according to his station. It is so in the most democratic society. A lawyer must wear better clothes than a mason. His business, his position, require it. Our Congress should pay salaries sufficient that a man need not be conspicuous for niggardliness. It is a wrong to the country if Congress provides so small a salary that a man of the highest qualification cannot go, and that a second rate man has to be taken because he is rich and is willing to spend his money for the distinction that comes with the place.

Useless Learning

WE are told that the dead languages are doubly dead (tho Greek is the current language of a living nation) and that to study them is a waste of time and labor. This raises the question what are the studies which give no practical and individual profit to the student who passes beyond the three R's?

For every one it pays to read and write and cipher and to know a little geography. All that is learned in the lower grades of school before one is twelve years old. What are the studies beyond that which are not bound to be "dead" to the learner?

How about algebra, and we may add geometry and all the mathematics beyond it? Not one student in a hundred will ever have the least necessity of using his algebra, or even his higher arithmetic. What intelligent man, who has gone thru college or high school, can do a simple problem in cube root, or can remember anything about Strum's Theorem? These studies, like any other, will be of profit to the future teachers of them, and to the few surveyors and engineers who have to keep a table of logarithms at hand. But the ordinary cultivated professional or business man has absolutely no use for his higher mathematics, less use than for his Latin.

Next, astronomy. That is a pure science, and none nobler. But it is of no practical use for money-making, except to the man who either teaches it or uses a sextant at sea. The problems of astronomy are utterly without interest to the practical man. What difference does it make to him what is the parallax of a star, whether the stars are drifting and whither; what are variable stars, or what stars are made of? To know these things will add to no man's bread and butter, and to study them is dead learning.

Then chemistry and electricity—for let us take the most practical of the physical sciences. These tell us how many elements there are, and how selenium differs from sulfur; that diamond is the same thing as coal; what are the mysteries of reagents, and how to handle test-tubes; how radium is related to Mendeleëff's law; whether elements can be resolved into lesser elements, and these again *ad*

infinitum; what are electrons, and how negative differs from positive electricity, and how one current can be transformed into another. These are practical matters for a teacher or a professional man, but not for the ordinary educated citizen. He forgets nearly all of them that he has learned at school and college, just as he forgets his Greek. He does not make money or profit out of them. He does not need them to use his telephone or to send a message by telegraph. The most ignorant servant can do all that. The cook practices chemistry with no knowledge of the science. It is of money value to the chemist or engineer, just as the study of law belongs to the lawyer.

The fact is that nearly all that an intelligent, cultivated man learns and wants to know has no appreciable relation to his dollars and cents. Its value is occasional and indirect. But he "wants to know"; and he knows that if he has forgotten he can recover his knowledge or go where he can be told. He has simply a wider outlook and a larger breadth of life. His knowledge is not dead, even when it is sleeping.

The defenders of Latin and Greek have no business to admit that these studies are at all more "dead" for practical purposes than the advanced study of biology or chemistry or astronomy. They are not. It is easy to show that they furnish quite as much daily value in life, at least for the man of ordinary cultivation. Of course the chemist needs chemistry, and the physicist physics, but the man who uses our composite language, and the world's literature, finds use for his Latin and Greek.

The Reader's Conscience

THE reader's conscience is the most elastic conscience in the world. He may exercise it scrupulously for others, but for himself it is the noble serpent that encourages him to read everything and know the worst. The man who objects to his wife's reading a scandalous book will be sure to read it himself. A mother forbids her daughter to read a story which she finds absorbingly interesting. Now and then we find the reverse, to be sure, in some old deacon who cleaves to his Bible and church papers, but, as

a rule, good people are morbidly interested in the literature of the worldly mind. There is never a disgraceful trial in the courts based upon murder and outraged sex relations that is not advertised as reported in the Sunday morning papers by many popular ministers from their pulpits. The best people read of life at its worst with most interest as interpreted by a sensational press. Persons so fastidiously opposed to coming in actual contact with degraded humanity that they avoid the drudgery of charity by giving their alms thru charitable organizations, will read with avidity items of monstrous news concerning this same class. Women who would not witness an indecent play will pore over it in a book with a sort of diabolical acquisitiveness, nor are they ashamed to admit that they have read it, altho they would not confess to having seen it.

Now, conscience at best is a curious misguided artificial faculty that has not yet been naturalized in any of us. It is a sort of moral hair-pin, highly ornamental in the good and very painful in the wicked. We are not born with it, being too innocent at the time to need one; but we develop it along with our first transgressions. It is the educational effects of being obliged to live outside the garden of Eden. But why should the conscience lie down and sleep profoundly in the best people the moment they cease to do good, and begin to read about doing bad? This is especially noticeable in readers of fiction. There is the reviewer, for example, who is forced to keep his moral faculties alert, and conscientiously stultifies his sense of decency for the sake of the public. Yet nothing could be more diverting to Satan than the quandary of an honest reviewer facing a "bad book." He knows the thing should not be mentioned at all. Also he knows it is exactly the kind of book the innocent but weak public hungers and thirsts after. For, mark you, it is not the bad people who read the bad books most; it is the innocent young people and the respectable law-abiding folk who enjoy a state of social and civic righteousness so much that they weary of it, not personally, but in mind and imagination, and

they crave some of the other thing by proxy, done up in the novelist's romantic pill papers. Men and women are curiously unhappy creatures. They are not content with being good. They have the everlasting Eve-craving to know the rest. And so the reviewer yields the point and soothes his conscience by writing a "scathing review" and shifting the responsibility.

And there is the average reader, who buys his story, not because it is good or bad, but because it is popular. With him a wicked book is like a contagion. He "takes it" when he is exposed to it, as he would any other disease. And he is the man in the aggregate who determines so foolishly, as a rule, whether or not it shall be rated among the "best sellers." If the average reader had any powers of mental assimilation he would have been ruined long ago by popular novels. Fortunately, he has little imagination and no dramatic instincts for adding a shine or two to his own humdrum existence. His virtues are founded upon an invincible stupidity which no novelist can destroy. And we cannot be too thankful, for if the average reader ever begins to "take in" what he reads, decent society may as well give up the ghost. No system of morality could survive a dramatic test in real life that was inspired by such novelists.

But of all conscienceless readers the heroine-reader has the least. She is the same semi-idle young woman who falls in love with the cello at the opera, and she will do it even if he has a huge body and thin frog legs, because she cannot distinguish between the creature and the divine sounds he makes with his bow. This lack of discrimination is her leading characteristic. But she has instincts that are never deceived. She is a great reader and much affected, but never benefited, by what she reads. She has what her friends call the "sympathetic temperament"; and she may belong to any circle of society herself, but she insists that the heroes and heroines of the novels she reads shall belong to "high society," no matter how bad they are. She it is who finds books like "Three Weeks" and reports them to the average reader. But she would never have noticed that story if the demimonde in it had not been a

royal personage. And she reads Mrs. Wharton's novels, not for the preachment they contain, but for the vice they expose in ladies who are admirably gowned, and in men who do not wear trousers, delicately speaking, but who are always referred to by Mrs. Wharton as having "well clad legs." She prefers a heroine who is thus described in one of our latest novels: "That she was extremely beautiful any one could see for himself—patrician to her dainty finger tips, and clever—oh, yes, very, extremely so!" She cannot bear what she calls a "painful book," that is, one which dramatizes principles at the expense of emotion. And she should be called the heroine-reader because she requires the artificial heroine stimulus of fiction to complete her own innocuous personality. She is always acting subconsciously in poor imitation of some romantic character. And it is astonishing what a large class of women she represents—feeble, impeccable creatures who gently lead the world astray. They have no consciences at all, only a little wailing, novel-eaten, blue-eyed instinct for serving themselves and preserving themselves in the softest imagination to be found in books or out of them. They cannot bear reality, because they are more perfectly artificial than the most incredible heroine in fiction.

Vacation Pictures and Stories

What was your most novel and interesting vacation? Where did you spend it? Did you take any snapshots there? R. S. V. P. We have already received a great many answers to the request we made March 12th in the editorial on "Undiscovered America," to send us pictures of new places and stories of new things to do for our Vacation Number, but we have not half enough of them yet. Do not wait till the last few days before the limit, May 1st, to print your photographs, because it may be cloudy all that week. For each picture we use you will get a free copy of THE INDEPENDENT for a year, and for every story of unconventional vacation experiences of about 400 words you will get \$4 worth of THE INDEPENDENT. If some friend of yours starts to tell you what a good time he had last vacation,

shut him off by telling him to write it down and send it to us.

Governor Willson's Letter

We publish this week an extraordinary letter from Governor Willson, of Kentucky, in which he sets his position right as to the murderous raids that have of late done so much damage in that State. He does not tell us what he has done to fight raiders and rioters with constabulary or military, but he indicates that something important has been done or will be done. The most extraordinary part of his letter is that in which he describes these marauders:

"This organization is most dangerous. It is a secret oathbound organization, where only a small group know each other, and different groups do not know who are in the other one, and the head of the organization has the power of life and death over the members, and it has spread like wildfire. There are thousands of members of this concern."

If this is true, and so much is known, then "the head of the organization" who "has the power of life and death over the members" ought to be discovered and convicted and punished. If the head center of the Molly McGuires could be smoked out by detectives from abroad, this can be done in Kentucky. It is a horrible condition of things, and the evil may spread. We have had the same evil in Ku Klux and Whitecap times and in the Miners' Brotherhood, and it is a curse to the community. We are glad that we have the promise of something drastic and effective, and we wait the performance.

The abatement of city Bill-Boards noises and the suppression of obstructive signs, especially those that in heavy windstorms endanger the lives of pedestrians, is tallied by a determined opposition to the defacement of our valleys and hillsides with glaring billboards. These are mostly owned by a class of adventurers in patent medicines, altho the Mohawk and Hudson river and other valleys have not a few ugly presentations of the advantages of dry goods stores. This nuisance began with the painting of country fences and barns, but it has be-

come monstrous from obstructing the view of beautiful meadows and defacing the finest landscapes of the country. The scenery around Niagara Falls well illustrates this barbarous encroachment on public rights. It is proposed to boycott these affairs, or to tax them out of existence. The *Craftsman* professes a liking for the boycott remedy—never to trade with merchants who insist on this objectionable method of advertising their wares. San Francisco sees money in it. One of its provisions is that a bill-board shall not be erected more than eight feet in height and ten feet in length, and that a board of this sort shall be taxed three dollars and twenty cents. At that rate the city will take in about fifteen thousand dollars a year. Mayor Fisk, of Plainfield, N. J., says that bill-boards are a menace to public safety and to good morals. He thinks that especially the billing of the front enclosures of buildings in course of erection should be stopped. Judge Welch, of California, insists that a glaring bill-board, set opposite a man's house, in a country town devoted to homes, is just as offensive as the maintenance of a pigsty. Judge Curtis adds that a man has no more right to flaunt a vulgar display on a bill-board than he would have to burn sulfur at the corners of the streets. Tacoma has an improvement club which is handling the question with as much humor as resolution. Having no law at hand, it is very effectively trying ridicule. We cannot see that the owner of a lot, either in the suburbs or out in the open country, has a right to annoy the public in order to secure a petty gain. The cold-blooded advertiser must be made to feel that when he becomes a nuisance he is advertising nothing but his selfishness. We agree with the American Civic Association that the annoyance is inexcusable and should be abated.

The General Education Board's Policy

The statements coming from an apparently trustworthy source to the effect that the General Education Board had decided that they would limit their aid, in Wisconsin, for example, to a single college or university within a radius of a hundred miles, recognizing others as only junior

colleges, not going beyond sophomore year, is pronounced baseless and untrue by Dr. Wallace Buttrick, secretary of the board. The statement as made designated the University of Wisconsin, Beloit College, and Laurence University as the three recognized, which would rule out so excellent an institution as Ripon College. We regret that we gave currency to the report, and one which did a real wrong to a college for which we have so high a regard as for Ripon. The board has formulated no fixed policy. They are "opportunists." Their aim, we are authoritatively informed, is to make their point of departure "things as they are," and from that point of departure to do their best to aid the friends of higher education in promoting comprehensive systems of colleges in the several States of the Union.

American Giants

The amusing document published in the *New York Sun*, in which the Chinese Yu Wo, of Hong Kong, contracted to build a sedan chair "to carry the American giant, the Honorable William H. Taft," up the hill to the British Residency, reminds us of another big chair in American political history. The chair which was honored with bearing Mr. Taft was warranted not to "disintegrate" under the "heroic size" and weight of the distinguished visitor. Its body was to be of "eventful width," and the cross-bars by which it was carried on the shoulders of coolies was to be reinforced with metal, and the shafts were of double diameter. It was in the early fifties that the other big chair was provided for Myron Lawrence, President of the Massachusetts Senate. He was the biggest man in Massachusetts, very tall, and weighed over five hundred pounds, and he came from Belchertown, territorially the biggest town in the State. Charles Sumner had just been elected United States Senator by the Coalition of the Free-soilers and Democrats, after continuous balloting for three months. These were hot days politically, and when Sumner was finally elected with not one vote to spare, taking the place of the Whig, Robert C. Winthrop, who had been appointed by the Governor to fill the vacancy, the anti-slavery men were jubilant and ex-
 prest

their joy in the words "Now is the Winthrop of our discontent made glorious Sumner." Anson Burlingame, afterward Minister to China, was elected to the Massachusetts Senate in 1852. It was he who accepted the challenge to fight a duel with Brooks, of South Carolina, who had nearly killed Sumner in his seat in the Senate; he chose rifles as weapons, and Brooks backed out. At the end of the session of the Massachusetts Senate, according to an accepted custom, the members presented a hat to the presiding officer, in this case Myron Lawrence, and it was the duty of the youngest member to make the presentation speech. This duty fell on Anson Burlingame, then only thirty-two years old, but already noted for his eloquence and versatility. The President's chair, he told the delighted Senate, had many times been ably and worthily filled, but never so completely filled as by the present occupant.

A Bad Marksman

Congressman Heflin, who shot two men from the window of a car in Washington the other day, represents an Alabama district, and his most distinguished constituent is Dr. Booker T. Washington, and his own chief act of distinction previously had been to urge the enactment of a rule excluding Dr. Washington and other negroes from street cars in the District patronized by whites. A drunken and disorderly negro was in the car in which he was riding, and instead of calling in the conductor or a policeman to eject him, he undertook himself to do the job. The negro, after being ejected, he says, cursed him and put his hand in the direction of his hip pocket, whereupon the Congressman pulled out a pistol—he had special privilege to carry one—and shot twice. He says he aimed down at the negro's feet, but the first shot hit an inoffensive white man stepping off with his wife, and the second shot hit the negro in the head, inflicting what may be a mortal wound. He was arrested and put under bonds to appear for trial, but he seems to think he did perfectly right. We might say that it is not considered, among civilized people, a proper thing to shoot a drunken fool who insults you: and, further, that to put one's hand in one's pocket is not really an offense which

justifies shooting; altho we remember that not so very long ago a distinguished editor of South Carolina, walking unarmed in the street of its capital, was shot dead by a Tillman for that indiscretion. But this we will say, that the permission to carry a pistol was granted to Mr. Heflin on the assurance that he knew how to handle his weapon; but his utterly poor aim shows that the permission should be revoked. He needs to be taught by the law that such carelessness in the use of firearms is criminal. And we are further impressed by the fact here illustrated that drunken and rowdy men of whatever color are looking for trouble whenever they go abroad. They have no place in public conveyances, and should be ejected by the conductors.

Professor DuBois's Advice

The negroes of the more pronounced and radical wing held a large meeting in this city last week, full of enthusiasm and passion, in which it was resolved that never would they forgive the cruel act of President Roosevelt or his representative and chosen candidate, Secretary Taft, for the dismissal, without honor, of the negro soldiers at Brownsville. Such indignant heat is easy to understand, even if not justified by full intelligence. A telegram, received and read with shouts of approval, from Prof. W. E. Burghardt DuBois calls, however, for some notice. It was as follows:

"Regret absence. If Taft beats Foraker and Hughes, negroes must vote for Bryan. Avowed enemy better than false friends."

What logic or sense is there in that? In the first place an avowed enemy is not better than a false friend in any moral or political question. The man of good principles and bad character is safer for the community than he who flouts good principles as well as practices. Hypocrisy is the homage which vice pays to virtue, and it is better to have those in Church or nation who conceal and deny their evil than those who glory in it. But this is not the case here. There is no evidence that Secretary Taft has ever been a false friend to the negroes. The Brownsville dismissal was not his act, but that of the President, and so far as the public knows he did not approve it;

at least he delayed its execution. These negroes are attacking him not at all because of his action, but out of hostility to Mr. Roosevelt. It is amazing that they should vent their anger on Mr. Taft, who has done more to oppose the color caste and who has more helped the aspirations of colored people than any other American since Abraham Lincoln's time. To be sure they are not negroes, but Filipinos, nearly ten millions of them, but that shows his principles, and negroes ought to be very grateful to the man who has insisted that brown men in the Philippines should have the suffrage and be treated with all courtesy and equality in social as well as political relations. We greatly respect Professor DuBois, but the heart of the black man should sympathize with the heart of the brown.

Last Saturday morning, in response to the lurid advertisements of a self-confessed stock "speculator," 700,000 shares of Youkon were unloaded on the curb. "The brokers and their friends completely choked Broad street." "The crowd was record-breaking—nearly as big as that one that hooted down the Suffragettes a month ago in the same place." "The police let the buyers and sellers fight it out without interference." In the afternoon the unemployed of this city tried to hold a mass meeting in Madison Square to discuss their conditions. "The police clubbed the crowd." "Men and women were beaten and knocked down," etc., etc. The police, however, were enforcing the law. The "speculators" had a permanent permit from the municipality to use the open thoroughfare; the unemployed could not get the use of a park even for an afternoon. Some people still wonder why the spirit of discontent exists.

We regret to be compelled to record the death of President Charles Cuthbert Hall, of Union Theological Seminary. His fatal sickness was the result of his visit to India that he might present Christianity in its sweeter and more generous attitude to the people of that land. In that way he may be added to the thousands of martyrs of whom the world is not worthy. He counts not with the theologians of the Church, but with its prac-

tical, constructive, wise statesmen, who join its faith with the culture of the world, and who have the vision to see the heart of good in systems that have been encrusted with evil. His place can with difficulty be filled.

A lady who has been "a reader of THE INDEPENDENT from its first number," asks a question of President G. Stanley Hall as to dead languages:

A certain student of Syracuse, a high school graduate who had completed his freshman year in Syracuse University, went to Amherst at the beginning of his sophomore year, taking up Italian, I think as an extra study. This was in September. At the Christmas holidays he came home, and for recreation on the train he bought Dante's "Inferno." "And did you bring your Italian Dictionary also?" asked his mother. "Oh, no! I didn't need any dictionary—Italian is only modernized Latin. I have not had to use a dictionary much in my study of it." Is Latin so very "dead" after all?

There is something new in a bill that has past the lower house of the New Jersey Legislature, appointing a commission of men and women to investigate the causes of dependency and crime and report suggestions for remedial legislation. We suppose the commission would consider such points as mandatory instead of permissive night schools for immigrants, the results of bad housing, and bad places of resort in cities, including saloons and low theaters. There is room for investigation.

The act of the Russian youth, Selig Silverstein, who attempted to kill the police in this city, is matched by the more successful effort of a Korean zealot in San Francisco to kill the Hon. D. W. Stevens, a most worthy American, who had long acted as adviser for the Japanese and Koreans. Mr. Stevens's tenderness and pity for the poor misguided youth was a touching exhibition of a true Christian spirit.

"See how they run!" The Assemblymen at Albany did not dare to vote for the retention of the gambling privileges at the race tracks. They tumbled over each other in their haste to vote Governor Hughes's measure. It is a great victory for him and for decency, or will be when the State Senate follows.

The Lincoln Trust Company

ALEXANDER S. WEBB, JR., has been elected president of the Lincoln Trust Company, and will take office on April 15th. Frank Tilford accepted the presidency in June last, following the resignation of President Wilson, with the understanding that he should serve only until a suitable successor to Mr. Wilson could be found. He now retires to give his entire attention to the business of Park & Tilford,

but retains his interest, and is still a director. Mr. Webb, a son of General Alexander S. Webb (who was for many years president of the College of the City of New York), is a man of thoro training and much experience in banking. For eleven years he was with the Lincoln National Bank. Thereafter for three years he was secretary of the Metropolitan Trust Company. Resigning that office, he became secretary of the New York Security and Trust Company. Upon the merger of this institution with the Continental into the present New York Trust Company he became third vice-president of the latter and afterward vice-president, which office he now holds. The Lincoln's new first vice-president, Abram M. Hyatt, was for many years with the United States Trust Company, was afterward secretary and first vice-president of the New York Security and Trust, and for the last six months has been managing director of the Lincoln. All of the Lincoln's present directors

will remain. Since the beginning of the panic only one has resigned, and this action was due to his serious illness.

In the early days of the panic the Lincoln Trust Company paid out \$17,000,000, thus reducing its deposits from \$23,000,000 to \$6,000,000. It has now paid back all of the \$5,000,000 advanced for its accommodation by the associated trust companies; and its directors have subscribed \$500,000 of additional capital, making the total \$1,500,000. Mr.

Webb so appreciated the loyalty of the directors during the time of stress that he conditioned his acceptance of the presidency upon the consent of every one of them to remain in the board.

The Aldrich Bill

AFTER discussing the Aldrich currency bill for nearly two months, the Senate past it on the 27th by a vote of 42 to 16. Three Democrats—Johnston, Owen and Teller—voted

with the majority, and five Republicans—Borah, Bourne, Brown, Heyburn and La Follette—were found in opposition. The most important amendment made since the beginning of the debate was the withdrawal by Mr. Aldrich, some days ago, of the provision including railroad bonds in the list of securities available as a basis for the proposed emergency notes. This was due to the opposition of Republican Senators from the West. On the last day other amendments were accepted. Two of these were offered by Mr. La Fol-

ALEXANDER S. WEBB, JR.

lette, but the acceptance of them did not prevent him from voting against the completed bill. The first forbids a bank to invest in the securities of a corporation any of the officers or directors of which are also officers or directors of the bank. The second provides a penalty for the making of false reports as to notes in circulation. An amendment accepted from Mr. Johnston requires banks outside of reserve cities to keep in their vaults four-fifths of their 15 per cent. reserve. One-third of the four-fifths may be in such securities as are accepted for emergency issues. Mr. Nelson's proposition for the creation of a guarantee fund of \$20,000,000 was lost, 11 to 49. Mr. Bryan will observe that only three Democrats voted for it.

The bill as past permits an issue of \$500,000,000 of emergency notes upon the security of approved bonds of States, counties or cities that are ten years old, have not defaulted in ten years and whose debts do not exceed 10 per cent. of the value of their taxable property. Porto Rican and Philippine bonds are included. The tax on such notes is to be $\frac{1}{2}$ of 1 per cent. per month for the first four months and $\frac{3}{4}$ of 1 per cent. per month thereafter. One of the late amendments requires banks to pay at least 1 per cent. interest annually on deposits of Government money. The bill was designed to provide for issues in emergencies. It undertakes no fundamental reform of our currency system. There is need of such reform. Mr. Aldrich virtually promised that his influence and that of his committee would be exerted to procure at this session legislation for the creation of a commission to consider the whole question.

Investigation by a competent commission should be made. In the House, the Fowler bill, which proposes to revolutionize the present system, and which has good features, has been reported, but it cannot be past at this session. There should be past, however, a bill providing for emergency issues in time of need. In our judgment, the Aldrich bill is by no means an ideal measure for this purpose. On the 17th Mr. Aldrich said in the Senate:

"I know of no bank or banking man in favor of this bill. The fact is, that the banks thruout the country are against it."

But if it be true that all our banks and bankers are against the bill, this should not necessarily commend it to good legislators and the public. We believe that the bill proposed by the Bankers' Association is a much better one than the one past in the Senate; also, that it would be better to meet emergency demands by utilizing Clearing House Association certificates as a basis for emergency issues.

✱

....The value of our exports to Hawaii, the Philippines and Porto Rico increased from \$7,571,134 in 1897 to \$51,883,329 in 1907. Imports from these islands rose in the same decade from \$21,607,117 to \$67,087,579.

....Bids amounting to \$18,000,000 were received a few days ago in response to an offer of \$2,000,000 of 4 per cent. Baltimore city stock. The successful bids ranged from 101.051 to 105.

....An official report from Washington shows that the wheat yield of the world in 1907 was 3,103,922,000 bushels, or less by 329,088,000 bushels than that of 1906, and 207,000,000 less than the yield in 1905. Our crop was 634,087,000 bushels. In 1906 we harvested 101,000,000 more. Canada's crop shows a decline of 35,000,000 bushels.

....With the payment of \$250,000 by the receiver of the National Bank of North America, on the 28th, the last remaining loan certificates issued by the New York Clearing House Association on account of the panic were retired. The total issue was \$100,000,000. Since January 28th, however, the only certificates outstanding have been those against four insolvent banks. On that date these certificates amounted to \$5,520,000.

....William B. Ridgely, Comptroller of the Currency, has resigned. He will be elected president of the National Bank of Commerce, in Kansas City (now undergoing reorganization), which will soon make a new start with \$2,000,000 of capital and \$200,000 of surplus. His successor at Washington will probably be Lawrence O. Murray, now Assistant Secretary of Commerce and Labor. Mr. Murray is a native of New York, and is forty-four years old.

Preventable Fire Losses

THE annual fire waste runs into appalling figures when the totals are even approximated. The *Journal of Commerce* figures it to have been \$215,071,250 in 1907. It was in all probability much more. The worst of it is that nearly the whole of this tremendous loss is preventable. Gross carelessness or inattention to known danger is responsible for seventy-five per cent. of the fire loss, while ignorance and a small percentage of criminal intent very largely cause the remaining twenty-five per cent. We have increased efficiency in our fire departments, better waterworks, improved fire alarm systems, scientific examination of large risks by inspection bureaus, improved building codes, better methods and materials, and still the annual fire loss mounts up higher and higher. The cost of fire protection has been figured at a dollar and a quarter a year for each man, woman and child of population. And yet a smoker will throw his burning cigar stump carelessly away, and if it falls into a heap of inflammable rubbish to smolder and finally burst into flame that shall do hundreds, if not thousands, of dollars worth of damage, he goes cheerfully on his way, nor thinks, nor cares about the possible harm he may have done. Parents still allow their children to play with matches in spite of the known danger of their so doing. We smilingly assume the hazard of loss by fire hundreds of times at home and abroad, blindly trusting in that providence which, according to tradition, watches over fools and drunken men. A very small study of the causes of fires must, it would seem, cause every one to realize the constant danger that is ever present because of the devouring element that is so good a servant, but so hard a master, and inspire the use of more precaution than has heretofore prevailed. One or two good fire buckets vigorously used might have counteracted the conflagration which so destructively

began in Chicago in 1871, thru the agency of the cow and the lamp, but the preventable fire burned itself out in the end. Fire comes at the very moment when there is least preparedness. The insurance policy generally expires just before it takes place, or it may be that the town's fire engines are in a neighboring town participating in the annual firemen's parade. Sprinkled risks are held in high esteem by insurance companies, but it has been demonstrated more than once that the most elaborate sprinkler system is no good without the water being turned on. Householders and business men ought especially to have the fear of fire constantly before them, and by being constantly on guard themselves and by inspiring co-operation in this direction by every one many fires that now take place would easily be found to be preventable ones.

Sport as an Accident Hazard

SPORT has its casualties and its fatalities not much less than war. The *Chronicle* notes the fact that 242 persons were killed and 4,258 were injured during the past year while engaged in various sports and celebrations. Football killed 21 and severely injured 70; baseball was somewhat less dangerous, since only 18 deaths and 36 injuries arose because of it. A mortality of one arose because of the roller skate. Three persons were injured from the same cause. Golf killed three, the discus one, polo one and vaulting one. The merry-go-round injured 12; electric swings, 8; toboggans, 16, and the scenic railways made a record of three killed and 45 injured. During the period previously named 77 persons were killed and 4,033 were injured by fireworks, toy pistols, giant crackers, etc., of whom 3,865 were victims of the hazards of July the Fourth, to which a warning reference was made in this department of THE INDEPENDENT of June 20th last.

The Independent

VOL. LXIV NEW YORK, THURSDAY, APRIL 9, 1908

No. 3097

Survey of the World

Mr. Fairbanks and Tariff Revision

It had been foreseen, of course, that the Indiana Republican convention (held on the 1st) would instruct the State's delegates to vote for the nomination of Vice-President Fairbanks, but it had not been expected that both Mr. Fairbanks and the convention would call for revision of the tariff at a special session immediately following the election in November next. The platform speaks of revision as follows:

"Protection was never a matter of schedules, and, while reaffirming the time-honored doctrine that there shall always be discrimination in duties that will fully protect the wage earner in the United States, we have never desired a higher rate than would accomplish that purpose, and have always contemplated revision from time to time as the ever-changing conditions might make wise. We believe that revision would be now beneficial, and to minimize the harmful disturbance that tariff changes necessarily produce, we insist that revision be speedily done. We therefore favor the calling of an extra session early in November, 1908, to make such revision, and recommend that Congress take immediate steps to secure the proper data by experts."

The platform also insists upon maximum and minimum rates. It is understood that the passages relating to the tariff were written by Mr. Fairbanks. A letter on this subject, received from him by Representative Overstreet, the chairman, was read at the convention. In this letter he referred to the suggestion that revision should be undertaken "at a special session to be convened immediately after the inauguration of the next President," and continued as follows:

"We should not close our eyes to the fact that there will be a determined effort by the opposition to control the next House of Representatives. If it should succeed, a Republican

Senate and a Democratic House would be charged with the tremendously important subject of revision. The two branches of Congress would stand for diametrically opposite theories; the one for a protective and the other for a revenue tariff. It is manifest in such an event that the contest would be protracted and the ultimate result a compromise.

"Even if it were certain that the Republican party would retain control of both branches of Congress, as we believe it will, with an assurance that revision would be effected after the 4th of March, strictly according to the principles of protection, uncertainty and hesitancy would prevail, nevertheless, until the new schedules were enacted into law.

"Revision made immediately following the coming election has this advantage, and it is a distinct advantage, over revision after the incoming of the new Administration—it will reduce the period of disturbance some four months. This is a considerable gain at any time, but it is especially important now.

"Business conditions admonish us to reduce the factors of doubt and uncertainty, so far as possible, and to bring the forces of the business world as speedily as practicable to a condition of certainty and repose. This is the part of wise and patriotic statesmanship. It is good politics, and it is good business also."

"Unreservedly and enthusiastically" the platform indorses the administration of Mr. Roosevelt, promising continued support for "his policies," and for additional legislation needed for a "complete regulation of railroad corporations and other combinations of capital." It favors arbitration for international controversies and labor disputes, calls for a national Bureau of Mines, supports the pending mail subsidy bill, opposes contributions to campaign funds from corporations, demands that Congress use all its powers to end child labor thruout the nation, and sets forth at length the qualifications of Mr. Fairbanks for the Presidential nomination. Congressman James E. Watson was nominated for Governor.—It is assert-

ed in Washington dispatches to Chicago newspapers that before the Indiana convention Mr. Roosevelt had decided to call a special session for November next, and to issue the call before the national election.—Reports from Massachusetts say that more than half of the delegates to the approaching Republican State convention desire the nomination of Mr. Taft. It is predicted that he will have more than half of the State's delegates to the national convention.—Representatives of Governor Johnson, of Minnesota, have established headquarters in Chicago, and the movement for his nomination by the Democratic convention begins to attract attention. A circular letter in his interest and clearly hostile to Mr. Bryan was addressed last week to thousands of Democrats. It is signed by F. R. Lynch, treasurer of the Minnesota Democratic Committee. Pointing to the defeats of the last twelve years, this letter says that "under the old conditions" defeat this year will be certain, and it urges Democrats "not to acquiesce supinely to any nomination by which defeat will be guaranteed."—Mr. Bryan, speaking to an audience of 15,000 at Kansas City on the 30th ult., sharply attacked Mr. Taft. "If the President," he said, "had picked out La Follette, a real reformer, and if the Republican party had rallied to his support, it could have compelled the support of reform Republicans." But Mr. Taft, he continued, had no record as a reformer. He would not exterminate trusts, but would regulate them, and there was no proof that he was in favor of reducing railway rates. Mr. Bryan also found Mr. Taft hostile to reforms relating to labor and imperialism.

Populists' National Convention

At the national convention of the Populists, held in St. Louis on the 2d, there were hisses and jeers whenever Mr. Bryan's name was mentioned. The Nebraska delegates, who had been instructed to vote for him, urged that the convention be adjourned to some date following the conventions of both the great parties. Having failed in this, they withdrew. The convention nominated Thomas E. Watson, of Georgia, for President, and Samuel Williams,

of Indiana, for Vice-President. James H. Ferris, of Illinois, chairman of the national committee, argued in his opening address for government ownership of public utilities and for loans of public money to farmers, manufacturers and miners. The temporary chairman, Jacob S. Coxey, of Ohio, spoke in favor of issues of non-interest bearing bonds for the acquisition of public utilities. George R. Honnecker, of New Jersey, permanent chairman, having said that the time was opportune for a revolution, added that "it only needed the genius of a Robespierre and the eloquence of a Danton to set the country in a blaze." The platform calls for government ownership of railroads, telephone and telegraph lines, government regulation of Trusts and monopolies, taxation of monopoly privileges, the maintenance and extension of farmers' organizations, the issue of money by the Government without the intervention of banks, the initiative and referendum, direct voting for all public officers, the recall, proportionate representation, postal savings banks, a parcels post, the abolition of gambling in futures, an employers' liability law, a general eight-hour day, and public improvements to supply work for the unemployed in time of depression. It opposes government by injunction, child labor, convict labor, and the annulment of State laws by inferior Federal courts. Press dispatches say it also calls for "the passage of a law prohibiting courts from assuming jurisdiction involving the constitutionality of any law enacted by Congress and approved by the President."

Race-Track Betting in New York

It is expected that the bills embodying the earnest recommendations of Governor Hughes for the prohibition of gambling at the race-tracks in the State of New York will become laws before the end of this week. There are two of them. One repeals an existing law which permits gambling, or betting, within race-track inclosures; the other amends the penal code so as to make such gambling punishable by imprisonment. On the 26th ult., the first of these bills was past in the Assembly by a vote of 126 to 9, one Republican voting with eight Democrats in the nega-

tive. The second was also past, the vote being 126 to 7. Amendments designed to defer the prohibition until December 1st or September 1st, in order that this year's racing season might not be affected, were rejected by majorities nearly as large. Opponents of the measures had hoped to be successful in the Senate. The bills were taken up there on the 1st, and after an acrimonious debate were advanced to a third reading, after an amendment deferring the prohibition until September 1st had been rejected by a vote of 23 to 26. Seventeen Democrats and six Republicans voted for this amendment, while two Democrats were counted with twenty-four Republicans against it. The opponents of the bills were led in the Senate by Senators Grady, of New York, and McCarren, of Brooklyn. It has been ordered that the final vote shall be taken on the 8th, and it is expected that there will be at least twenty-eight votes in the affirmative, as two Senators who voted with the opposition on the 1st have since announced their purpose to support the reform. Until the 1st the issue in the Senate was in doubt. On that day two Senators who had intended to oppose the bills were induced by pressure from their constituents to change their purpose. With them the opposition would have had a majority for the amendment and, probably, against the bills. Speeches made on the 26th ult. in the lower branch showed plainly that several Assemblymen who voted for the bills really desired to oppose them and had been restrained from doing so only by the pressure of public opinion in their districts.

Labor Questions About 250,000 men employed in the bituminous coal mines quit work on the 31st ult., pending a renewal of the wage agreement. As there is no controversy concerning the rate of wages, and differences with respect to other subjects are slight, it is expected that a settlement will soon be reached.—Wages at the cotton mills of New England have been affected by a substantially universal reduction of 10 per cent. At Fall River and some other places, however, agreements are in force which will not expire until late in May. Wages

paid to 60,000 persons were reduced on the 30th ult., and 60,000 more were affected by orders taking effect on the 6th inst. The reduction was due to the depressed condition of the cotton goods market.—Reports from seventeen representative railroad companies show that the number of their employees is less by 18 per cent. than it was in June last. It is estimated that since October 1st the number employed on all the railroads of the country has been reduced by 345,000. As a result of mediation under the Erdmann law, the Southern Railroad Company has deferred its proposed reduction of wages until July 1st. It is reported that the Canadian Pacific has abrogated its agreement (concerning hours and wages) with the unions represented in its shops, and that these unions will appeal to the Government's Board of Conciliation.—At the request of the Governor of Alaska, troops were sent to the Treadwell mine, near Juneau, last week. It was asserted that 800 strikers had obtained a large quantity of dynamite and were threatening to destroy the mining company's property. No disorder has been reported since the arrival of the troops. It appears that peace had been preserved by a committee of the strikers.—Mr. Roosevelt desired to appoint John Mitchell, the retiring president of the United Mine Workers, a commissioner to inquire as to labor conditions on the Panama Canal, but Mr. Mitchell has declined the place, feeling that he should rest for a time and restore his health. He has been selected by the President to be one of the five special guests at the approaching conference of Governors, relating to a conservation of national resources. The other guests will be ex-President Grover Cleveland, William J. Bryan, James J. Hill and Andrew Carnegie.

Railroad Topics Preparations have been made by the railroad companies having lines in Illinois and Missouri to attack in the courts the new passenger rate laws of those States. The companies expect that the Supreme Court, following its recent decision concerning the similar statutes of North Carolina and Minnesota, will pronounce these laws unconstitutional.

Under that decision, the new rate laws of Alabama must be rejected. On the 27th ult., they were pronounced unconstitutional by Judge Thomas G. Jones, of the Federal District Court, in a decision agreeing with that of the Supreme Court in the North Carolina case. It appears that this decision was in type before that of the Supreme Court was announced.—It is expected that the exaction of penalties under the commodity clause of the Hepburn act will be suspended until January 1st, 1910, in order that a decision as to the constitutionality of the clause may be reached in a test suit. A joint resolution for such suspension will be reported favorably in the Senate and is approved by the Commission.—Chairman Knapp, of the Commission, writes to the Senate Committee on Interstate Commerce that the physical valuation of railroad property required in Senator La Follette's bill could probably be completed in three years at a cost of about \$3,000,000. The commission asks for \$500,000 this year to be used in employing expert accountants. Two or three weeks ago the Senator was complaining of the committee's failure to take action upon his bill. It is now said that the bill will soon be reported favorably, and the prediction is made that the Senate will pass it.—In the suit of the State of Illinois against the Illinois Central, the complaint, recently amended, now alleges that the company owes the State \$15,000,000. Under its charter the company is required to pay the State 7 per cent. of its gross earnings. The State alleges that by fraudulent statements the company has avoided the payment of \$15,000,000 which was justly due.

Various Notes

In San Francisco, new indictments have been found against Abraham Ruef, Patrick Calhoun and Tirey L. Ford. These were drawn to meet objections raised against the original indictments by the defendants in the street railway bribery cases. The acquittal of the proprietor and the editor of the *Bulletin*, who were sued for criminal libel by William S. Tevis, is an interesting incident in the history of the bribery prosecutions. The paper's charges related to

alleged preparations for selling a water supply to the city at a very high price, and it was asserted that the negotiations were interrupted by the exposure of the Supervisors' dishonesty in other cases. During the trial two of the old Supervisors testified in support of the newspaper, and almost the entire confession of Ruef to the prosecutors was repeated on the witness stand by Detective Burns.—A favorable report upon the postal savings bank bill has been made in the Senate by unanimous vote of the committee. The bill provides that the rate of interest shall be 2 per cent., that no account shall exceed \$1,000, and that interest shall not be paid on any deposit in excess of \$500.—On the 2d the Senate ratified the pending treaty (from the Hague Peace Conference) for the settlement of international disputes by arbitration, but appended to it a resolution providing that each agreement to arbitrate under the terms of the treaty must be submitted to the Senate for approval before the beginning of arbitration proceedings.

Campbell-Bannerman Resigns

The resignation of Sir Henry Campbell-Bannerman as Prime Minister was tendered to the King and accepted by him April 5th. His health has been so poor for months that he has been unable to perform the duties of his office, and of late his death from heart disease and dropsy has been daily expected. He is the oldest member of the House of Commons, born September 7th, 1836, and has represented the Stirling District continuously since 1868. He assumed the additional name Bannerman under the will of his uncle, and was knighted as G. C. B. in 1895. He has filled many administrative positions in the Government, having been Financial Secretary to War Office, 1871-74, 1880-82; Secretary to Admiralty, 1882-84; Chief Secretary for Ireland, 1884-5; Secretary of State for War, 1886, 1892-95. He has been all his life a consistent and progressive Liberal, and since February, 1899, has been the leader of the party. It is largely owing to his tact, determination and the confidence which he inspires that the party was held to-

HERBERT HENRY ASQUITH,
Who is expected to become Prime Minister.

gether during the long period when it was out of power, and that its somewhat discordant and very independent factions were brought together and united upon a radical political program which was finally indorsed by the people by an overwhelming majority. In December, 1905, Sir Henry was called by the King to form a new Cabinet. During his recent disability the leadership of the party devolved upon Rt. Hon. Herbert Henry Asquith, Chancellor of the Exchequer, who has shown great ability in the preparation of the series of political measures now being carried thru the House of Commons. It is universally expected that he will be Sir Henry's successor, but in order to be appointed to that position he will be obliged to go to Biarritz, where the King is staying. The validity of any action taken by Parliament in the meantime, when there is no Prime Minister and the King is out of the country, is questioned. The constitution of the new Cabinet is, of course, not definitely known, but it is expected that David Lloyd-George, now president of the Board of Trade, who has gained a great

reputation by the peaceful settlement of the great railroad strike, will succeed Mr. Asquith as Chancellor of the Exchequer, and Winston Spencer Churchill, Under-Secretary for the Colonies, will take the place of the Earl of Elgin as Colonial Secretary. Mr. Asquith was born September 12th, 1852, and has been in Parliament as member from East Fife since 1886.

The Home Rule Question

The Irish party in the House of Commons have reason to be greatly encouraged, for, altho they have lost in Sir Henry Campbell-Bannerman the most devoted and powerful advocate of their cause, they have secured for the first time in history from the House of Commons a vote in favor of the principle of home rule by a majority of two to one. Gladstone's bill in 1886 was rejected by a majority of 30. His bill in 1893 was carried by a majority of never beyond 40, and on certain amendments descended to 5 or 6. The Irish question was brought up for discussion the first time by Mr. Kettel, of East Tyrone, in moving the following resolution:

"That the cost of administration in Ireland is excessive, is unduly burdensome to the people of that country, and is steadily increasing; that the expenditure is not subject to Irish control and is not allocated or administered in such a way as to promote efficiency in government or national well-being; that, so far from alleviating the injury inflicted on Ireland by over-taxation, this waste of her resources on certain services tends rather to aggravate it; and that this condition of affairs constitutes an intolerable grievance and demands the immediate attention of Parliament."

In support of this he quoted the figures of the Finance Relations Committee of 1894 that the taxes per head of the population in England had been reduced by 11 per cent. from 1819 to that date, while in Ireland they had been increased 170 per cent. Since 1894 extravagance in Irish administration had become worse. The cost of the Home Government had increased by \$10,000,000 and the population had fallen by 192,000. Ireland's actual contribution to imperial services was nearly \$15,000,000, and for that heavy burden the Irish people had no return. The agencies for the aid of the people were too well staffed and too well paid, while agencies such as education

SIR HENRY CAMPBELL-BANNERMAN.
Who has resigned the position of Prime Minister.

and agriculture, which had for their purpose the building up of the mental and material prosperity of the country, were poorly supported. Mr. Augustine Burrell, Chief Secretary for Ireland, expressed his sympathy with the home rule part of the resolution. He agreed that too little money was spent on education and too much on police, but under the circumstances, so long as he was responsible for order in Ireland, he did not think it possible to reduce the expenditure on police. He denied that there was any corruption in connection with Irish affairs. He did not wish to ignore the moral lesson to be drawn from the fact that after 100 years of union it was necessary to maintain in Ireland a police force—a force which might be called by another name—which costs per head of the population 6s. 7d.

"I fully recognize that the present mode of administration in Ireland, in the language of

the resolution, is little calculated to minister to the well-being of the Irish people. It is an ignominious form of government, ignominious to the Irish themselves, and to a very large degree to the Chief Secretary who has to carry on this work. The sooner it is brought to an end the better; the sooner the establishment of Ireland can be made responsible for itself and self-supporting, the better for all concerned."

—The Irish University bill introduced by Mr. Birrell a few days later, created two new universities for Ireland, Dublin and Belfast. Queen's College, at Belfast, will constitute the new university there, and the other institution may be called the University of Ireland or St. Patrick's University, and will comprise three colleges, the two already at Cork and Galway, and a new college to be founded at Dublin. The present annual Exchequer grant of \$182,500 for higher education will be increased to \$400,000 and divided between the two universities. In addition to this \$750,000 will be granted to

Dublin and \$300,000 to Belfast for buildings. The universities are to be governed by senates, whose members will be partly elected by the colleges and partly appointed by the Crown. The senate will have power to appoint and dismiss professors. No religious test is to be applied to professors, students or graduates, and no public money is to be spent for theological or religious teaching. The head of Dublin University is to be a Roman Catholic layman. Mr. Balfour, leader of the Opposition, expressed his approval of the scheme in general, and the bill past its first reading by a vote of 307 to 24.—In order to force the party in power to commit itself on the question of Home Rule Mr. John Redmond moved the following resolution:

"That the present system of government in Ireland is in opposition to the will of the Irish people and gives them no voice in the management of their own affairs; that the system is inefficient, extravagant and costly; that it does not enjoy the confidence of a large section of

the population; that it is productive of universal discontent and unrest and is incapable of satisfactorily promoting the material and intellectual progress of the people; that the reform of the Irish government is a matter vital to the interest of Ireland and calculated to greatly promote the well-being of the people of Great Britain."

Mr. Birrell declared his emphatic approval of the principle and said "the Liberal Party is a Home Rule Party. There is no doubt about that." Mr. Balfour said that there was no practical advantage in the resolution; it only put the Government in an embarrassing position. In behalf of the Unionists he has asked the Government to state what they meant by their ambiguous statements. Mr. Asquith, on arising, said that never in his life had he felt less embarrassed by a question. For over twenty years he himself and his colleagues had steadily and consistently advocated self-government for Ireland's purely local affairs. He held that opinion now as strongly as ever. He could not, however, support Mr. Redmond's motion in its present form, because he found in it no explicit recognition of imperial supremacy, and, further, because no Parliament would be justified in embarking in such a task unless the matter first had been submitted to the electorate. It would be a gross and inexcusable violation of their promises, he said, to do so in the lifetime of the present Parliament, and as far as the present Parliament was concerned it had exhausted its powers in regard to the problem of Irish government in the Irish Councils bill last year. Mr. Redmond's motion, amended by the addition of the words "subject to the supreme authority of the Imperial Parliament," was adopted by a vote of 313 to 157.

The Portuguese Elections

The election for representatives to the Cortes last Sunday was a critical event, because it was the first since the overthrow of the Franco dictatorship and the assassination of the King and Crown Prince and because of the active part taken by the Republicans in the campaign. All the monarchist parties united against them, and the Government, according to Portuguese custom, manipulated the elections in their favor. The two old parties, which, until

their overthrow by Franco, had kept control of affairs thru a system of pre-arranged rotation in office, and they were determined to regain their former dominance. It had been supposed that Franco by the fatal outcome of his policy and his consequent flight and exile had been eliminated as a factor in Portuguese politics, but his adherents have shown so much power that the other monarchist parties have been compelled to come to terms with them. The complete results of the election are not yet known, but it appears that this monarchist coalition has won. Out of 146 seats the Monarchists have certainly 99. But the Republicans have gained ground. In the old Cortes they had only two representatives; in the new they will have at least 20. There were many riots during the election, and in some parts of Lisbon the troops were called out and fired upon the mob, killing and wounding many persons.

Riots in Rome The stone masons and bricklayers who were following the hearse at the anarchistic funeral of one of their comrades attempted an anti-clerical demonstration against the Austrian Embassy to the Vatican and so came into conflict with the police. The police were attacked with stones and were likely to be overpowered when they fired on the mob, killing three and wounding fifteen, four of them mortally. This excited violent resentment on the part of the radicals, and a general strike was ordered. The streets were so disorderly that most of the tourists left the city. The authorities warned J. P. Morgan not to leave his hotel. Only one of the cardinals ventured to go to St. Peter's for the Lenten sermon, at which Pope Pius was present. The anti-clerical Mayor of Rome, Ernest Nathan, ordered the flag over the capitol to be placed at half-mast as a sign of mourning for the victims of the police. Their funeral was attended by a procession of many thousand strikers bearing red and black flags. The leaders had promised that there should be no violence, so the large number of troops stationed on the streets and squares were not needed. After the funeral the strike was called off.

William Howard Taft

BY CHARLES HOPKINS CLARK

[This is the fifth article in our series of "Presidential Possibilities." We have already printed estimates of Governor Hughes by President Schurman, Vice-President Fairbanks by ex-Secretary Foster, Senator Knox by Representative Burke, and Senator La Follette by his law partner, Mr. Roe. Others will shortly follow. Mr. Clark, like Secretary Taft, is one of Yale's most loyal sons. He is editor of the *Hartford Courant*, the leading Connecticut daily. —EDITOR.]

THIS country has produced no other public man with such a record of continuous industry and of things done as already stands to the credit of William Howard Taft. He is only fifty years old, in the full strength of a vigorous constitution, with the best years and apparently the greatest work of his life before him, and yet already he has given twenty-seven years to active public service—at the bar, to represent State or national authority; on the bench, State and Federal, as administrative and executive officer; as Provincial Governor, as member of the Cabinet, and as diplomat, meeting in brave and masterly manner the new problems that our progressive times are presenting at home and abroad, busy always, and, as the saying is, always making good. He has earned and won the confidence not only of the people of his own country from ocean to ocean, but of the many in other countries whom he has met officially and done business with according to the square deal and in his own sincere and tactful way. He stands today a national figure, the finest type of the public-spirited American.

He was born in Cincinnati, September 15th, 1857, son of Judge Alphonso Taft and Louise M. Torrey Taft, the former a native of Townshend, Vt., and the latter of Boston, Mass. Coming of this sturdy New England stock, broadened by the liberalizing conditions of life in the expanding West, he grew up under circumstances peculiarly favorable to the development of sterling character and useful citizenship, and has made the most of his fine opportunities.

Alphonso Taft, the father, son of Peter Rawson and Sylvia (Howard) Taft, was a Vermont farmer boy, working summers and teaching school winters, until he was able to enter Yale College, where he was graduated with honor

in the class of 1833, classmate, among others, of Prof. J. D. Dana, the eminent geologist; Prof. George E. Day, of the Yale Theological School, and General William H. Russell, head of the well-known military school in New Haven, and the founder of the famous Yale society known as Skull and Bones, in which Taft was associated with him. He taught school in Ellington, Conn., for a while, and then was a tutor at Yale for two years, during which he attended the law school, being admitted to the bar in 1838. In 1839 he went to Cincinnati, then a city of 45,000 inhabitants, and he grew up with it, a potent factor in its growth and prosperity, actively interested in its material and educational welfare, and saw it develop into a great and populous commercial center with over 300,000 people. He was Judge of the Superior Court, 1865-1872, twice elected to that high office, the second time unanimously and without an opponent. In 1876 President Grant selected him for his Secretary of War, and three months later made him Attorney-General, and he retained the latter position through Grant's Presidency. In April, 1882, he was appointed Minister to Austria by President Arthur, and in 1884 was transferred to St. Petersburg, where he remained until August, 1885. At that city he suffered a very serious illness, from the effects of which he died at San Diego, Cal., in May, 1891. In 1841 Judge Taft married Fannie Phelps, of Townshend, Vt., who died in 1852. They had two sons, Charles Phelps Taft, now of Cincinnati, and Peter Rawson Taft, who died in 1889. In 1854 he married again. His second wife was Louise M. Torrey, of Millbury, Mass., who died at Millbury a few months ago. Their children were William Howard Taft, Henry W. Taft, a lawyer of New York, Horace D. Taft, headmaster of Taft's School at

Watertown, Conn, and Fannie Louise, who is the wife of Dr. William A. Edwards, of Los Angeles, Cal. Alphonso Taft was one of the distinguished men of his day and generation, and commanded the admiration of all who knew

graduates. He was a Republican from the time the party was organized, and was a member of the national convention that nominated John C. Frémont for the Presidency in 1856.

William Howard Taft attended the

SECRETARY AND MRS. TAFT.

his high personal character and professional ability. Yale gave him the honorary degree of Doctor of Laws in 1867, and from 1872 to 1882 he was a member of the Yale Corporation, elected by the

public schools of Cincinnati, and was graduated from the Woodward High School there in 1874. At Yale he was one of the leaders, socially and in scholarship, an all-round good fellow, active

in the sports of the day, but never neglecting his studies, and he was graduated in 1878, second in the class of 121 members. Among these were Judge John Proctor Clarke, Justice of the Supreme Court of New York; Judge Howard C. Hollister, of Cincinnati; Hon. Henry Martyn Hoyt, who is now Solicitor-General of the United States; Tudor Jenks, of New York, the author; Clarence H. Kelsey, president of the Title Guarantee and Trust Company of New York; Edward B. Whitney, of New York; Alfred L. Ripley, of Boston, one of the Yale Corporation, and the late John Addison Porter, of Hartford. The names of fifteen members of the class of 1878 appear in the last issue of *Who's Who in America*. In the "seventies" there was a lot of politics in the college life. Young Taft was elected Class Orator, and some criticism of the election followed. At once he declined the honor and refused to take a title that anybody questioned. The class met his manly act and attitude by at once re-electing him by a vote that nobody could or wanted to question. In college with all his associates he was always "Bill" Taft, and "Bill" Taft he is today to a very wide circle of friends. He has one of those peculiar and lovable natures that are met only too seldom, with which nicknames and dignity are not inconsistent. I recall two such instances in our life in Connecticut. The late Joseph R. Hawley, major-general in war, Governor, Congressman and Senator in peace, was always "Joe" Hawley all over the country, and Rev. Joseph H. Twichell, of Hartford, trustee of Yale, one of the most widely known and universally respected clergymen of the United States, is "Joe" Twichell wherever he has a friend—and their name is legion. So "Bill" Taft is lovable and approachable at the same time that he possesses an innate dignity that commands respect.

Young Taft was graduated at the law school of the Cincinnati College in 1880, dividing the first prize, and was admitted to the bar in May of that year. He went to work at once as a law reporter on his brother's paper, the *Cincinnati Times*, but Murat Halsted offered him better pay on the *Cincinnati Commercial*, and he accepted the ad-

vance. The next year, however, he was appointed Assistant Prosecuting Attorney, and since that time he has been almost continuously occupied in the public service, as will appear from these data:

January, 1881.—Assistant Public Prosecutor.
March, 1882.—Resigned and became U. S. Internal Revenue Collector. (Resigned March, 1883.)

January, 1885.—Assistant County Solicitor.
March, 1887.—Resigned and appointed Judge of the Superior Court.

April, 1888.—Elected to the same position.

February, 1890.—Resigned and became Solicitor-General of the United States.

March, 1892.—Resigned and became Judge of the United States Court for the Sixth Judicial Circuit.

March, 1900.—Resigned and became President of the Philippine Commission.

July 4, 1901.—Inaugurated first Civil Governor of the Philippines.

December, 1901.—Visited the United States by order of the Secretary of War.

July, 1902.—Conferred with Pope Leo XIII and committee of cardinals at Rome and made a satisfactory settlement as to the friars' lands in the Philippines.

December, 1903.—Left the Philippines to become

February, 1904.—Secretary of War.

November, 1904.—Visited Panama.

July-September, 1905.—Visited the Philippines with a party of Senators and Congressmen.

September, 1906.—Visited Cuba and acted a while as Provisional Governor, re-establishing peace in the Island.

March-April, 1907.—Visited Panama, Cuba and Porto Rico.

Autumn of 1907.—Opened the Congress in Manila, returning *via* the Siberian Railway.

This record of dates and duties suggests how broad and educative a course the man has taken in the school of widely varied experience. He was reporter long enough to acquire knowledge of and sympathy with newspaper work and workers. He has served as attorney for individual clients, as the representative of local, State and national authority, and as a judge on the bench, where his duty was not to contend but to decide between contesting parties and to construe and determine the law. Questions of the highest importance have come before him in the line of his work and he has always decided them with such wisdom and knowledge of the principles of law that he has been sustained by the higher courts when appeals have been taken. As Solicitor-General of the United States it fell to him to construe and enforce the Sherman anti-trust act, and it

was his duty, too, to defend at law the action of Speaker Reed in compelling a count of the members who were present in the House but refused to vote, and his success in this instance established the new legislative procedure. He pertinently asked why the Sergeant-at-Arms should be authorized to compel the attendance of members if they could render that compulsory attendance futile by maintaining silence. Perhaps his most notable success was in the famous Bering Sea fisheries case, which he won for the United States over Joseph H. Choate and other eminent counsel representing Great Britain. It is regarded as one of the great suits in the history of the American bar.

On the bench he decided many important questions, not a few of which proved leading cases and established the law in such matters. Among these his decisions in cases growing out of the relation of employer and employee, "labor cases" so called, have been oftenest referred to, not only because of their importance to society, but also because of the attempt in some quarters to create a prejudice against him on account of them. No one can retain any such prejudice who reads the able article by Dr. Frederick N. Judson, of St. Louis, published in the *Review of Reviews* for August, 1907. This points out that a judge does not make law, but declares and applies its principles, and it explains several of the Taft decisions oftenest referred to. In the Superior Court in Cincinnati in 1890 he sustained the decision of a lower court, which, in the case of Moore Brothers vs. the Bricklayers' Union, had awarded damages against the union for a secondary boycott; that is, for boycotting a firm with whom there was no quarrel because it sold goods to the employer with whom there was a dispute. This became a leading case on the law of boycott, and by reason of it the secondary boycott—one undertaken against a stranger to a pending dispute—has practically been abandoned, as it should be. At the same time the Judge stated plainly that labor unions had their rights and privileges within which they could not be disturbed by the law. Later, in 1894, when he was on the Federal bench, his decision in the Phelan contempt case, while it punished the

leader who, in face of an injunction, called out employees of an unoffending road which was being conducted by the United States Courts thru a receiver, nevertheless laid down so clearly the principles of the law relating to disputes between railroads and the men working for them that at a later period Dr. Judson, as counsel for the Brotherhood of Railroad Trainmen and Firemen in their strike against the Wabash Railroad, succeeded thru that decision in having an injunction against them dissolved. The railroad then settled the controversy. What helped the employer in one instance helped the employee in another. No better test of fairness could be asked. And a careful study of Mr. Taft's judicial acts will not only remove any prejudice that may exist, but, more than that, will excite admiration for the sanity and fairness of his decisions.

Leaving the bench, for which his tastes and training peculiarly fitted him, Judge Taft, in 1900, took up the larger work which has made him known all over the world. The highest ambition of any lawyer must be to acquire a position on the bench of the Supreme Court of the United States, and twice Judge Taft felt compelled to decline this coveted honor because his high sense of duty convinced him that he could not leave the work on which he was engaged. It was in that spirit of personal sacrifice that he accepted the presidency of the Philippine Commission and entered with his customary and inevitable enthusiasm upon the task of adjusting matters in that remote end of the earth which had so unexpectedly fallen into our hands. A whole book might be written on what he has accomplished there, a little of which I saw for myself while over there in 1905. Here were seven or eight million people on a thousand islands afflicted with a veritable confusion of tongues such than a single island would have several languages and tribes that could not talk with each other, suffering, like so many who live under tropical conditions, from a natural lack of ambition, raided by their own lawless ladores, and plundered for centuries by cruel and unscrupulous Spaniards. They were conscious of government only as that power which robbed and punished. These people were

to be pacified and, so far as might be, unified and led into a capacity for self-government. The progress already made is wonderful. More Filipinos today speak English than any other language. There is greater social order all thru the islands today than ever before in their long and uneasy history. Ladronism has practically disappeared; there is no warring of tribes, no oppression by the authorities, but, on the contrary justice and fair play are scrupulously observed. Schools have been established by the thousands, and these and the trade schools are crowded with eager scholars. Local self-government has been maintained for some time and now the first national congress is in session. It is doubtful if any other part of the world has moved forward as rapidly in the past decade as the Philippines. But they had a long way to go and have only just begun going. To turn them adrift now would be as unkind as it would be cowardly.

Among the difficult questions that the Philippine problem presented was that of the relation of our Government to the Roman Catholic Church, some of whose orders had very valuable lands there. But for the Roman Catholic influence which went over with Magellan the entire archipelago would have become Mohammedan thru the influence of the Moors, or Moros, who still occupy the southern islands, and were at that time moving northward. As it is, the Filipinos alone among Asiatic people look toward Europe and America and Christianity, instead of toward Asia and Africa and Buddhism or Mohammedanism. Thus

what we call Christian civilization finds an easier introduction among them. Judge Taft was able to negotiate at Rome a purchase of the friars' lands that was fair to his own country and satisfactory to that Church, which has more than once seen its possessions confiscated without any attempt at indemnification. This wise and tactful arrangement has been an important factor in the readjustment of Filipino affairs. The outlook in the Philippines is better than any one

familiar with conditions there in 1898 would have dared to hope for at this time. Reasonable consideration of the tariff by Congress, not so as to affect our own protected industries, but simply to re-establish the sugar and tobacco trades over there, is all that is needed for their material prosperity.

Secretary Taft has been four times in Manila, and has made the journey around the world by various routes, including the Suez Canal and the Trans-Siberian Railway. In the course of his travels and his official duties he has met

Pope Leo XIII, the Emperor and Empress of Japan and Cabinet Ministers and leading men of that country, the Czar of Russia and other eminent Russians, President Palma of Cuba, and President Amador of Panama. The cordiality of his reception on several occasions by Japanese authorities has been peculiarly marked, due no doubt to regard for him not only as our representative, but as an esteemed individual, "*persona grata*" wherever he goes. All whom he meets are quick to recognize the charm of his winning personality—unaffected, natural, sincere, and for those very reasons impressive. It is doubtful if any other pub-

SECRETARY TAFT WHEN A SENIOR AT YALE
IN '78.

lic man of this country has seen so many foreign "principalities and powers" and directly acquired such a world knowledge as has come to Secretary Taft in the ceaseless activities of his career.

He holds the honorary degree of LL.D. from Yale University, 1893, University of Pennsylvania, 1902, Harvard University and Miami University, 1905. He was at thirty-six the youngest man whom Yale had ever thus honored. In 1896 he was elected a trustee of Yale, and still holds that office, attending as regularly as the New Haven members every meeting of the Corporation. In 1896 he delivered the Dodge course of lectures at Yale on the "Responsibilities of Citizenship," which have been published by Charles Scribner's Sons. These lectures reveal his wholesome views of the opportunities and duties of young Americans and the part they should play in affairs:

"The young man most to be congratulated is he who has been given an education as thoro and as useful as he himself wishes to make it, and then under the spur of necessity enters upon a life of work without the temptation to lack of effort and idleness, or dilettanteism, or to pure pleasure, which a competence creates."

The young man should "learn where the polling place is in his own ward," and find out where the primaries are to be held, select his party, and be there, be a mixer and know the people.

"In many respects the college graduate has as much to learn from the workingman and business man who have not enjoyed a college education as they have to learn from him."

If a man goes into public life and wishes to exercise an influence for good, he must be slow to break his party ties.

"As this is a party government, as measures are controlled by the party decision, the real progress must be made along party lines, and if a man separates from his party he loses altogether any influence he may exert in determining those policies. I do not at all advocate that a man should adhere to party against high principle and conviction, but this life is all a series of compromises by which, little by little and step by step, progress towards better things is made. All the good in the world cannot be attained at one breath."

This is the philosophy which has enabled Secretary Taft to retain his strength as a party man and leader, at the same time that he has always stood for the elevation of practical politics and held the confidence of those less patient and optimistic than himself. His various speeches, which the limitations of this

article forbid me to quote, have made clear to all who have heard or read them the poise and justice of his broad views of our complicated social system, his belief in the fundamental right of property, his jealous regard for individual liberty, and his concern for the welfare and progress of his fellowmen in the common struggle for a fuller enjoyment of life and its opportunities.

In 1886 Secretary Taft was married to Helen Herron, daughter of Hon. John W. Herron, of Cincinnati, United States District-Attorney and member of the Ohio State Senate. They have three children—Robert Alphonso, now a student at Yale, born September 8th, 1889; Helen Herron, born August 1st, 1891, and Charles Phelps, 2d, born September 20, 1897. The Secretary is a Unitarian, as his people were before him. He is the president of the American Red Cross and interested in many other good works.

Secretary Taft has a peculiarly attractive personality. The best boy, says the late Senator Hoar in his delightful autobiography, has something manly about him, and the best man has something of the boy in him. Taft was a manly boy, and as a man he has a certain and very charming boyish side, as others of our great men have had. He is warm-hearted, approachable, frank, and blessed with the saving grace of an abundant humor, and at the same time he has always the strength and courage of his sound convictions and his alert and healthy conscience; and his yea is yea and his nay, nay. He is as strong as he is gentle. His reputation is simply spotless. In all the agitation of a heated campaign for the greatest office in the world, no one has ventured to intimate a doubt of the absolute honesty of this man who has been before the public for a quarter of a century. Nor can anyone successfully dispute the simple proposition that in the whole history of the United States no one was ever named for the Presidency who was so fitted by nature, by training and by experience for the duties, dignities and responsibilities of that unique position. He is splendidly grounded in law and of a judicial cast of mind, a constructive statesman, a successful diplomat and a whole-souled, patriotic, broad-gauge, enthusiastic American. He is no experiment; the country knows him,

A Missing Factor in the Peace Movement

BY SAMUEL T. DUTTON

[The author of the following article is the Professor of School Administration in the Teachers' College at Columbia University and one of the foremost workers in the Peace ranks of America. He is secretary of the New York Peace Society, a member of the Council of the Berne Peace Bureau and was chairman of the Executive Committee of the National Arbitration and Peace Congress held in this city last spring, and no one deserves more credit than he for making that Congress the greatest unofficial gathering ever held in the United States.—EDITOR.]

THERE are two aspects of the task of securing international fraternity which deserve attention. First, the world seems to be held fast in the tradition and habit of war. The civilized world has outgrown the garment, yet cannot seem to cast it aside. The fact so patent to the unprejudiced mind, that right and justice are not determined by fighting but by courts or law which are universally invoked in the settlement of difficulties between individuals, is not yet adopted by the nations. The glamor of war is still the prevailing note in Europe. It is practically impossible to get out of sight of soldiers. Not small bodies of men acting as police, but whole regiments and divisions are seen quartered in towns and cities. There is a sort of splendor attending their movements which fascinates the common mind. What matter if young men are withdrawn from productive labor on the farms and in the shops; they belong to the army of defense. They wear the same uniform which their fathers and grandfathers wore while fighting for the fatherland. In some vicarious way they are the direct representatives of the gay cavaliers and sturdy warriors who have tramped across the pages of history from time immemorial. They are accepted and taken for granted as are the statues of grand dukes in public squares or the castles and palaces of the sovereigns, numerous and costly, which are to be seen for a mark each, but which are seldom if ever inhabited by their owners. The servants of the State and the public, no matter how pacific, how commonplace or menial the labor they perform, are arrayed in military garb. The Swiss guards in the

Vatican are not more resplendant than the flunkies who open the doors at some of the State buildings or even at the theater or the opera.

In the galleries of art, the larger the canvas the more sure it is to portray a battle in which an army of heroes is seen charging upon an equally gorgeous and gallant foe. Every schoolroom in monarchical Europe displays not only the sovereign in military dress, but has some one or more historical pictures which are almost sure to be battle scenes. History itself is a story of the reigning house and its military success. Literature, both poetry and fiction, are highly spiced by the aid of chivalric and warlike scenes. The children of Europe are born and bred to see and admire soldiers, to hear about war, to sing its glories, to memorize its triumphs, to march to its music, to wear its uniforms, and to believe in the invincibility of the national arms. Neither in America nor Europe have children been taught that militarism is out of date and is a decadent factor in civilization. Neither have the clergy preached this doctrine to any large extent. During wars so recent that they seem to have occurred only yesterday, pastors have prayed the Almighty for a victorious issue, with little consideration of the question whether the cause were just or whether the war could not have been averted. All these and many other things are apparent to any one who tries to face the problem of abolishing war. The thing is racial and climatic. It is like the white plague, the cure of which has not yet been discovered, and which can only be eradicated by the most heroic and painstaking measures. People laugh

at the peacemakers much as they would at a nest of ants trying to remove a granite boulder. To many it means a huge joke to attempt to pacify the world. War seems a divinely appointed means of disciplining and refining the nations. Some people like to refer to the Bible as tho it sanctioned fighting. They are willing to hope that when the millenium comes there may be peace. This is the sentiment and the current opinion which prevails.

On the other hand the world is at peace, and it would seem to be well nigh impossible for the great nations of the earth to think of war with each other, in view of the high degree of social organization which now exists. Bankers, capitalists, manufacturers and men of commerce desire peace and demand it for the sake of their business interests, which are widely and intricately extended. It is a well known fact that several nations are restrained from warlike tendencies today because of the financial burdens which they carry and the difficulty they would have in borrowing either at home or abroad.

Again, much progress has been made in establishing treaties between the great Powers. Even those that have been hostile are forming alliances, as, for example, Russia and England, Japan and Russia and even Germany and France, whose enmity has long been fierce and inveterate, are speaking more softly, and the efforts of the peace-loving Emperor William to plant the seeds of friendship and good will seem likely to meet with success. There are even hints in the public press that soldiering as a profession may soon be out of vogue. The leaders of the peace movement are increasingly active. Books and journals devoted to its propaganda are being multiplied, and it would seem as tho the banner of conciliation would soon float wherever the sun shines.

There is an increasing responsiveness to great moral principles and the social and economic changes which gradually are compelling the world to be more fraternal. In the past, peace societies and workers for peace have trusted too much to the propagation of sentiment and too little to the authority and influence of practical facts. There has been too little of good organization and method, and

too little recognition of the real difficulties to be overcome. Not enough has been made of the self-evident truth that governments, even those less democratic than ours, are measurably controlled by public opinion. On a great moral issue like the abolition of war, the mind and conscience of the people must be aroused. All classes of men must be induced to take a stand for methods of justice. No systematic attempt has yet been made to induce bankers, men of industry, judges and leaders in education and the Church to do this. Probably the labor organizations of the United States are more keenly alive on the subject of international peace than any other class of citizens, and the recent socialistic congress at Stuttgart showed that in Europe the labor party may prove to be a powerful deterrent to rulers who, in speaking of international matters, invariably use the phrase "my government." It is evident that the energy of peace leaders is unwisely directed, for at the recent congress in Munich much was said against war but very little about methods of educating the people to the new internationalism. There was a conspicuous absence of journalists, clergymen, teachers, university professors and captains of industry. This fact, in the opinion of the writer, suggests the work for the immediate future, viz.: to enlist the active and enthusiastic endeavors of clergymen, editors and educators, to make sure that young and old are conscious of the claims of human brotherhood, and to persuade all people that the territorial limits of the nation are artificial when viewed in the light of the solidarity of the race and the high destiny of mankind. In other words, the world point of view is to be the rallying cry until all questions like immigration, tariff, copyright, and the postal service are treated in the light of that illuminating idea. How small and mean we ought to feel when visiting the Old World, if we manage our affairs in absolute selfishness, without reference to our larger citizenship in the world at large. The practical question arises, How can this work be organized? who is to direct it and see that it is made effective? My own belief is that peace societies have a work of their own in their own neighborhood, but that they

cannot do the larger work required. A national organization in each country, representative and strong, composed of men and women of all faiths and vocational interests, would seem to be the most competent agency. This body should be selected with the greatest care, and, as far as possible, its members should be nominated, at least, by great organizations, such as boards of trade, universities, learned societies, religious, philanthropic and educational organizations. This would insure the services of leaders of thought in the several sections, and would make the central body highly representative. The president and two or more vice presidents should be avowed champions of the cause of arbitration, and should be able to devote considerable time and energy to the work in hand. There should be a small executive committee, say from five to eight persons. The secretary and possibly the chairman of this committee should devote their whole time to the work and should be paid salaries commensurate with their ability and experience. Such a national council for arbitration and peace would work somewhat independently of all other associations, but would seek to be in close alliance with them. It would put itself in touch with European bodies of workers, and would with them seek the best possible utilization of all available forces.

The great dominating purpose of such a body should be educational. It should definitely and systematically seek to reach educators and teachers, the clergy, journalists, men of affairs, and wage earners. It should send out agents who are practical, sane men and women, who not only know how to talk to an audience but to address themselves to busy men who will listen if what is said is sane and practicable. They should be equipped with every known fact regarding the interrelation of peoples and nations. They should not appeal so much to prejudice and sentimentality as to practical sense and good judgment. Religious and educational bodies in all the States should be induced to adopt internationalism as a regular feature of every program. The recent meeting of the American Social Science Association, which devoted its

whole program of three days to this subject, shows how many sided it is. This proposed national council would naturally initiate national peace congresses, and would become a clearing house for all propositions looking to new forms of propaganda. It would more properly than any other body administer gifts of money and legacies in such a way as to inspire confidence and to accomplish the greatest good.

Whatever is done in America becomes potential in Europe, where things are more static and less responsive to agitation, and where a powerful example is needed. A practical program of education, practically and efficiently carried out, would take away the suspicion felt by some that pacifists regard themselves as members of a cult with peculiar and exclusive tendencies. There would soon be so many groups of practical people committed to the cause that peace leaders would find themselves keeping step with a vast army of serious and practical people.

At the Sixteenth International Peace Conference, held in Munich in September last, the writer introduced the following resolution which was past by the Conference in the form of a recommendation, as follows:

"The Congress expresses the wish that in each country a national council may be organized, composed of men and women representing various departments of human activity, which shall undertake peace propaganda with a view of influencing (1) journalists, (2) the clergy, (3) teachers, (4) business men, acting independently but in close co-operation with existing organizations."

If such organization could be formed in every country under the general direction and leadership of the Berne Bureau, it would be possible in a very short time to greatly enlarge and broaden the list of those earnestly committed to universal arbitration. Under such an arrangement the International Peace Conference should be held on alternate years, thus permitting national congresses to be held every other year. These national congresses should be able to send large and representative delegations to the International Peace Conferences, and thus their influence and power would be greatly increased.

NEW YORK CITY.

Chess in Three Dimensions

BY WOLF VON KOCKEL

DR. MAAK, of Hamburg, Germany, has discovered something new in the field of chess which will interest to a considerable degree all lovers of this "game of games," and also attract attention among mathematicians. It is a new method of two-handed chess, but not a meaningless deviation like four-handed chess, invented at about the same time. It is rather a logical development of the possibilities of the chess-board. It has been called cubic chess, or chess of three dimensions, because the inventor holds that, chess being a game of movement, the pieces must be as free as possible in all their moves.

Dr. Maak writes me:

"The game of chess resembles war, and consequently calls for strategy. As during a campaign the combatants are free to use the three dimensions of space, so if chess is to be played logically, the players must be permitted to do the same and not be confined to but two dimensions, as is the case with the ordinary chess-boards. At present, in case of war, the belligerents use balloons and submarines, and consequently can strike from above and below; that is, they utilize the whole of space. It occurred to me that this same advantage should be afforded chess players, and hence the *raison d'être* of my cubic chess. Until now, chess could be played only on a board, that is, on a plane surface limited by two dimensions; but henceforth it can be played on a cube surface and the players will have at their disposal three dimensions."

Let me now explain a little more in detail just what this cubic chess is. The ordinary chess-board is composed of eight times eight, or 64, squares. But Dr. Maak's chess-cube is composed of $8 \times 8 \times 8$ or 512 cubes. But as it would be impossible to play inside a cube, the 448 remaining faces of the cubes are represented by seven other transparent chess-boards, placed one above the other, as is seen in the illustration which accompanies this article. These eight boards are so arranged that there is

enough space between them for the easy moving of the chessmen. As in ordinary chess, the squares are designated by letters and numbers, and the different boards are distinguished by the first eight letters of the Greek alphabet. Each board is also painted a different color.

The chessmen in cubic chess are the same as in ordinary chess. But in the former system each player has eight more pawns, in order to be better able to protect his men from attack coming from above or below. These "assistant pawns" are placed on $\beta a1$ to $\beta h1$ for one player, and on $\beta a8$ to $\beta h8$ for the other player.

Now, a cube has three mathematical or stereometric elements, that is, six planes, twelve edges and eight corners, and it is these elements which influence the moves of the pieces in cubic chess. The castle may move in the three perpendicular axes of space, and can therefore move in six different directions, for it passes thru the planes of the cube. The bishop moves thru the edges of the cube and can consequently go in twelve direc-

tions. The knight has but eight, because he moves thru the corners. The queen may choose from among twenty-six moves, for she can go thru planes, edges and corners, and as far as she likes, besides. The same is true of the king, except, as in board-chess, he may take but one step at a time. The pawns move thru the planes and thru the edges, and in all directions. Castling cannot be used in cubic-chess, for the king can always move upward. Nor is there the double move of the pawns, since all the chessmen can move from the very start on.

The rules of the game are not very explicit, this new system not being sufficiently developed. At the beginning of every game players should, therefore,

THE CUBIC CHESS BOARD.

come to an understanding about the rules which they are going to observe.

Cubic chess was introduced to the public at the last chess tournament at Karlsbad, where the learned demonstrations of Dr. Maak attracted much attention both from those taking part in the play and from those simply looking on. Dr. Maak remarked on that occasion:

"I claim that my invention has transformed the unexplainable and absolutely conventional rules of board-chess into necessarily mathematical and logical rules, because the moves of

the pieces have become functions of the mathematical *elements* of the chess cubes, that is, of the 512 cubic fields. I am convinced that this cubic chess is the old Indian primitive chess, out of which grew, later, board-chess."

I may add in closing that instruction in cubic chess can be obtained by addressing the inventor, Dr. Maak, 23 Mask Strasse, Hamburg, Germany, where can also be obtained patented folding cubic chess-boards, like the one shown in the accompanying illustration.

BERLIN, GERMANY.

The Land Question

BY LUCIUS F. C. GARVIN

[The question asked in the following pertinent letter from the ex-Governor of Rhode Island is considered in our editorial pages.—EDITOR.]

TWO statements contained in THE INDEPENDENT of March 26th invite comment.

The first is contained in an editorial entitled "Insurance Against Unemployment," contained in your issue of March 19th, and is as follows:

"So long as land was abundant within a short walk of every town, and within a few miles of every city, and a thrifty man could pay for a small farm in a few years by the fruits of his own labor, it was pretty safe to assume that an unemployed man was either idle or improvident. But the day of such conditions is gone by."

The other quotation is from the article of March 26th by Mr. N. O. Nelson, in which he says:

"I will take Mr. Cocksure Single Taxer into the large portions of every State in the Union and show him farms for sale at about the proper value of the improvements. I will show him farms abandoned by the owners, and not rentable at any price. I will show him farms rented at a price that will no more than

maintain and replace the improvements and pay taxes."

Both of these statements are true; and does not the editorial fully explain the condition set forth by Mr. Nelson?

What very many people desire, and what Mr. Nelson's thriftless neighbors need, is not land without selling price and with its improvements taxed, such as he describes, but valuable land near towns and cities.

The error in the editorial lies in attributing the scarcity of valuable land to the advance of civilization rather than to its true cause, the unwise laws which promote speculation in land. The taking of the annual value of the land, known as ground rent, for public purposes in lieu of all other taxes, would open up natural opportunities, so that the conditions you picture of colonial times would be restored unaccompanied by the hardship of frontier life. Is not this so?

LONSDALE, R. I.

THE CANALS OF MARS.

From drawings made in the field at Alianza, Chile, by Mrs. Todd.

Our Ruddy Neighbor Planet

BY MABEL LOOMIS TODD

[The most fascinating astronomical problem of the day is the question whether the planet Mars has human inhabitants capable of making great irrigation works. Prof. Percival Lowell, who has devoted years to this research, says the canals are artificial. Prof. David Todd, who conducted the Amherst College expedition last summer in Chile, agrees with him. Yet the question is not settled, for a book by Alfred Russell Wallace, just published, will show the evidence on the other side. Mrs. Todd, herself the daughter of an astronomer, accompanied her husband, and is fully competent to tell the argument and the story.—EDITOR.]

ALL last summer Mars was a conspicuous object in the southern sky, holding his steady way among lesser lights in a glowing splendor which attracted attention from the most casual.

But for astronomical purposes the great red planet never rose high enough for best observation in our own country. So taking the Amherst College 18-inch refracting telescope Professor Todd wended his way southward and continually south, until Mars, in his majestic march across the sky, should pass nearly overhead, leaving far below and behind most of those earthly atmospheric tremors which form the astronomer's chief foe.

Most desirable was some position south of the Equator, at a considerable elevation above the sea, and in a region sufficiently dry to preclude cloudiness and water-vapor. All these conditions seemed to be met in Chile, in a high table-land, or pampa, part of the famous desert of Tarapacá, whence come enormous supplies of nitrate, but with never so much

as a blade of grass or a solitary cactus to break its solemn desolation.

And here the telescope found unprecedented home, mounted in the open, on the concrete tennis court of *oficina* Alianza. Rains never come, and windstorms rarely. A cloth to protect the lenses from dust took the place of all the complicated machinery of dome and roofs in less hospitable climates.

And night after night of limpid clearness saw the great mechanism trained upon Mars superbly aloft, a camera, especially constructed by Gaertner, of Chicago, recording, while the crystalline hours rolled along, polar caps, dark areas and "canals," as the mysterious planet once more stated his problems against the velvet darkness of the Southern sky.

Most fascinating of neighbors, Mars, in his journey about the sun, obligingly returns thus every two years to a position of approximate nearness to us of the earth watching to interpret his conundrum. Next beyond us in the brotherhood of our planetary system, his pathway circles the sun in 687 days, while we,

making our orbital pilgrimage in 365 days, frequently overtake and pass him, tho at varying distances, on the same side of the sun. Over sixty million miles away at his farthest "opposition," as these near positions are called, Mars may be at best but 34,500,000, and this approach, altho practically an incomprehensible distance, makes all the difference between seeing and studying his suggestive surface satisfactorily, and getting only tantalizing glimpses of significant markings almost too far away to visualize or photograph.

But once in fifteen years does Mars come to this nearest place. All subsequent regular approaches, each two years, are gradually farther from us. During 1907, while not as absolutely close as possible to our ruddy neighbor, we were only four million miles more than that desirable proximity—a mere step in cosmic space.

Best of all, in 1909 an opportunity will once more recur for detailed study of a planet so full of puzzling problems that the wisest astronomers may well be more or less at a loss when attempting to solve them.

And yet certain solutions seem singularly simple, in a sense, if we will but accept their apparently obvious meaning. It was if possible to throw more light, by means of photography, on the interpretation of the Martian markings, that the Lowell Expedition to the Andes was last summer undertaken. And this, not because Mars was to be absent from more familiar firmaments. On the contrary, as already suggested, he was very much in evidence from many home verandas; and the summer was of more than usual astronomic interest, even to the uninitiated, because of his insistent occupation of the Southern sky.

But here, too, much low-lying terrestrial atmosphere spread its unsteady medium between waiting telescopes, anxious eyes, sensitive plates—and the tantalizing features almost revealed on the planet's disc. While no nearer us in South America, it rode high in the heavens, escaping, soon after rising, from the lower stratum of air, and allowing a pure, steady, high altitude atmosphere as the medium thru which to observe its splendid surface. And curious and impressive

enough it was. My first look thru the great telescope was, to me, an epoch-making experience, so different was its effect from that of even the most perfect night at home. Clear, calm, steady, unvexed by the familiar tremors of a sea-level air, the brilliant disc held its unperturbed court in the field of view, while every feature seemed drawn in silhouette by a master-hand. White polar caps, irregular dark areas, reddish-yellow desert and strange labyrinth of crossing and re-crossing lines, all were there in unmistakable reality. In that one amazing first glance was instant verification of all that had been claimed thru weary years by the few astronomers who saw more than the rest—even to the doubling of one canal, and the dark spots at points where several lines crossed. It was overwhelming revelation.

And here, with the somber brown plain spreading hundreds of undulating miles north and south, brooded to the east by solemn, snow-covered peaks of the Andes, and filled with the very silence of space itself, the telescope was at work night after night in the open, steadily following the stately planetary march and making its indisputable record of snow-cap and continent, oasis and canal.

For they are unquestionably there. On several occasions persons came to the telescope who had never before looked thru a large one, had never seen a map of Mars, nor knew what might be observed. Their exclamations and descriptions of what they discerned, as moment by moment they saw new features, were, to say the least, illuminating. All were intelligent and well educated, but with no technical knowledge of astronomy; and there was considerable difference in the strength and accuracy of their eyesight—tho upon certain well-defined features all were united, and quite invariably picked out the various points of especial interest after a very few minutes of careful gazing.

Altho winter in Chile, it was summer on Mars, and its southern pole was tilted toward us at such a happy angle that all the changing phenomena of decreasing white-caps and growing canals were outspread to our study, not only on the exact nights of opposition and nearest point, in July, but almost equally well for several

weeks. And nightly, even hourly, photographs multiplied, until nearly ten thousand separate images of Mars were made during the weeks of our stay at Alianza, every plate showing canals, and a few some of the mysteriously doubled canals of unknown purpose.

When Schiaparelli first announced his discovery of these canals, in 1877, his news was met with prompt incredulity. Real discoveries are apt to be, and for nine years he practically had the canals to himself. Undaunted, he added another improbable tale, in 1879—that of seeing several of the lines (*Canali*) in duplicate

tion; and later Professor Lowell, at his own observatory at Flagstaff, in Arizona, not only saw all the earlier observer's markings, but added to the elaborate network, as clearly revealed in the steady air of Arizona.

And now few astronomers question the reality of the dark lines. Undoubtedly they exist; only the interpretation varies, as different minds regard their possibilities.

One exceedingly significant fact remains. During the Martian winter no lines are in evidence. When spring begins to melt the polar cap, as white and

THE TELESCOPE.

—that is doubled, or parallel, which cast a still deeper mist of unlikelihood over his reliability as an observer.

But as the years went on other eyes, perhaps reluctantly, verified his discoveries. His maps of the planet began to be regarded as possibly something more than the result of a wandering imagina-

gleaming thru our telescopes as veritable terrestrial snow or ice, then the whole complicated system leaps forth as it were from hiding, some of the lines appearing double, and the whole singularly distinct as the whiteness daily shrinks.

Lines of vegetation of seasonal variation, the intelligent amateur would ex-

claim on hearing the fact or seeing the planet for himself; and truly that seems a simple enough interpretation. For we know that Mars has seasons much like our own, only longer, and night and day practically the same; that few or no clouds of his own making ever hide his salient features from our waiting telescopes, and that his atmosphere is extremely attenuated. If no clouds, then no rain, and without rain deserts must follow, like the very plain of Tarapacá, our base of observation last June and July; and if all or the chief moisture possible to the planet is contained in those yearly melting ice-caps, a system of irrigating channels to conduct it to warmer latitudes, where vegetation could best be coaxed on a planet well along toward cosmic old age, would be a normal solution of appearances. Not that the actual water-channels could themselves be seen from our great distance, but their wide borders of vegetable growth might easily be apparent on the reddish ochre tint of the general Martian surface.

But a great system of irrigation presupposes the presence of intelligent life, and its recognition of the fact that water is growing less with the centuries, and must be conserved to the utmost for purposes of preserving life.

Certainly there should be nothing abhorrent in the thought of possible intelligence existing on another planet. It can hardly be that the whole universe, illimitable, endless to the most powerful telescope, showing incomprehensible vistas still beyond when tested by the photographic sensitive plate, can exist solely for the delectation of the few inhabitants of one inconsiderable, tiniest whirling speck of them all. That would be making of ourselves a moral center of the universe no less ridiculous than the old Ptolemaic idea, which placed us at the physical center, and revolved the whole system of the stars around our inconspicuous axis.

As the spectroscope shows that the constitution of suns and stars, thousands of light-years distant is identically the same as that of our own central sun, is it unreasonable to infer that physical and biologic conditions on planets they may control, no less than on one at least of

our own system, may show similar correspondence to earth?

Why try to confine the scope of that unimaginable force which called suns and universes into being to the production of intelligent life on one only of the smallest and least important planets in that vast brotherhood of orderly worlds? The finite cannot limit the infinite. No foot-rule can measure the Milky Way.

Mars, indeed, presents "a marked inhospitality of environment" to life exactly patterned after that we know the best. But in the high Andes, at elevations of 14,000 feet and over, where to us of sea-level the conditions were little short of distressing, we found villages of happy and contented Indians, red-cheeked and healthy, accustomed thru generations as a necessity of existence to the very surroundings so impossible to more earth-bound lungs. And more than this, removing them to low levels has been found equivalent to a sentence of death. The same is true of the llamas, those mountain beasts of burden which find their life in the rare, cold air of the heights. Neither is it difficult for the young engineers from England and the States, who are engaged in the arduous occupations of high-altitude mining, to accustom themselves to conditions there prevailing. Is it more difficult to think that life on some other planet may accustom itself to its own environment of whatever sort?

In the ooze of Paleozoic ages lurked the germ of life as we know it today, evolving thru eons the type best fitted to combat unfriendly surroundings and to develop along the line of noblest accord with the medium at hand. The splendid persistence of the life principle, regnant thruout the universe, cannot be confined to one infinitesimal grain of sand which happens to be the only one we have personally experienced. If there are dead worlds and burned out suns still pursuing their purposeless way among the hosts of heaven, there are also certainly indefinite numbers in the heyday of noon, at the height of a glorious virility to which our own is but fragmentary illustration.

Astronomers, accustomed to announce as true only that which may be proved by mathematical demonstration, may be

shy of admitting their belief in human inhabitants on Mars or any other heavenly body, but they can tell us such definite facts as are certainly known, upon which an intelligent laity is perhaps as well fitted to deduce reasonably imaginative theories as the professional mind itself.

In the silence of the pampa, arched by an unfamiliar firmament, all great things seemed possible; and thru the big telescope the regular, startling lines on Mars looked singularly artificial.

And now, when Mars, still passing redly along his appointed way, but more distant from us with each sparkling hour, gleams from our spring sky, it makes the whole wide universe—cold, dark, infinitely removed—seem a more homelike creation, more livable for tiny, earthly humanity, that there may be some life approximately like that we know, even, perhaps, nearest of all on our ruddy neighbor planet.

AMHERST, MASS.

Religious Overlapping

BY ALBERT J. KENNEDY

[The following article is an investigation into the waste, inefficiency and religious pauperism accompanying unwise denominational competition and should be of interest to every religious denomination in the United States. The author is a resident of South End House, Boston. We shall be glad to receive letters, which we may print, from our readers telling us of parallel conditions in other towns.—EDITOR.]

THERE is a growing belief among the Christian people of this country that the time is ripe for a greater working unity between the English speaking Evangelical denominations. Among the facts which enforce this view there is none stronger than the evident overlapping, waste and consequent extravagance that has distinguished the distribution of some of the mission funds subscribed for the advancement of religious life in the West. This article concerns itself with the investigation of mission methods as seen in a single town in Minnesota. The figures used have been drawn at first hand from Church records, and have been verified by appeal to the books of the denominations involved. The state of affairs in the town studied is not an unusual one, and it is paralleled in a number of nearby places.

The writer assumes that religion is made for man, and that value in religion is measured by the ability of a faith to satisfy the wants of its adherents. A church may be viewed as an organization of persons who are willing to expend a portion of their income in the satisfaction of their "spiritual" wants.

The common test of institutional value is self-sustaining power, and a church ought to aim to be self-supporting. No one, of course, denies an individual or a society of individuals the right to maintain or subsidize churches in the same way as certain men have maintained an orchestra or an art gallery or any other ideal interest. But as a rule mission funds are solicited thru an appeal to the worshiper's sympathy for the need of communities where church influence and privilege are lacking. The appeal is for funds to support "religion" rather than to spread a particular form of belief. Funds so subscribed are supposed to be used with economy, sagacity and foresight; for the purpose of furthering the general religious and moral life of the community in which they are to be expended. A mission society using its funds to provide bounties for churches of its own shade of faith, merely fostering and keeping alive weak and sickly institutions that ought to die, is misusing its powers and perverting moneys to uses which its subscribers never intended.

Mission aid is justified in places where there is no church, or where there is no

Protestant or English-speaking church. In such a community it may well happen that a bounty is wholly justified from the view of religious need and ultimate social utility. Aid is further justified (for a limited time) in the case of a small and rapidly growing church; justified as one would give food to a child, for purposes of legitimate growth. Institutional infancy is a period of life, however, that should not last overlong, else it degenerates into institutional helplessness. In instances of this class mission societies too often fail on the side of liberality, and the growing church is stunted by insufficient aid. It is always bad policy to send a church to an ecclesiastical soup kitchen when it should be treated to a series of square meals. Mission aid is admissible in instances where a church is planted in a very rapidly growing community where it is evident that the needs of the near future will be large. It often happens that one denomination does pioneer work in a place of this kind, and is justified in its expenditure; but later on another pig-headed and foolish rival furnishes a useless church, the competition of which keeps both bodies starved. Aid is sometimes justified as a means of staving off a crisis, and as such is good business.

But the form of expenditure that is *thoroly unjustified* is that in which several half-defunct churches are coddled (out of mission funds) into just enough life to be kept on the denominational roster. The conditions which we shall find in the town of X, in Minnesota, make plain the effects of such an expenditure upon town and church.

X is a small Western "city" of 1,347 inhabitants. Eight different denominations and seven church buildings tell their own story. Two of these buildings are unused, and another is opened but two or three times a year. Of the four surviving churches two are Lutheran; the two English-speaking Evangelical churches are kept alive by constant aid from their respective mission societies. Each organization is vainly hoping for the other's death, and both are resolved to stick it out to the bitter end. Should mission aid be withdrawn one of them must inevitably fail. At times there has

been talk of consolidation, but the influence of a few of the radical sectarians combined with that of the mission secretaries, has kept the congregations struggling along in their separate buildings. This paper will attempt to show the religious history of the town so far as it can be shown by figures, and the lessons to be drawn from it.

X is located some miles west of Minneapolis in the great Minnesota River Valley and was founded about 1872.

It was not a "boom" community and has grown slowly and normally as the country settled and became prosperous. The location is far from being an ideal one for a town site, as the valley is largely waste land, and there is little opportunity for farming until the prairie is reached. In consequence, situation space about the village which would normally possess high value is used only for grazing purposes, and there is the further disadvantage of a long drive for the country people in their trips to and from the place.

The population of the community is largely of Scandinavian birth or descent, with a fair sprinkling of American stock from points east of the Mississippi. The Scandinavian element is an important one in our consideration, because of its loyalty to its Lutheran faith. The following scheme gives the population at five-year periods and the percentage of foreigners:

| Year. | Population. | Source. | Percentage of foreigners. |
|-----------|-------------|--------------|----------------------------|
| 1871..... | 200 | Town Record | |
| 1875..... | 450 | Town Record | |
| 1880..... | 700 | Town Record | 40% U. S. Census |
| 1885..... | 900 | Town Record | |
| 1890..... | 1,050 | Town Record | 45% U. S. Census |
| 1895..... | 1,189 | State Census | |
| 1900..... | 1,214 | U. S. Census | 30-55% b. Foreign Parents. |
| 1905..... | 1,347 | State Census | 65% b. of Foreign Parents. |

This table makes it evident (1) that there has been a constantly increasing proportion of foreigners combined with only a normal increase in population; and (2) that there have never been grounds for large denominational hopes that would justify the expenditure of mission funds as a future investment. Thus in the State Census of 1905 from a population of 1,347, 875 are of foreign birth or descent, and but 475 are of American descent. The figures for 1880 give the same number of Americans, 420; the

number of persons of strictly American descent has not increased in over twenty-five years.

The next table concerns itself with a record of the church buildings. Before proceeding to this table it ought to be noted: (a) Studies in church attendance show that only 15 to 50 per cent. of a population can be classed as church attendants. (b) Taking five as a normal family, the number of possible English-speaking Evangelical churchgoers in X is about 285; admitting that 50 per cent. of them attend church regularly we have 142 constant attendants. (This figure is above the real attendance.) (c) Again using our average family we get ninety-five heads of households, forty-five of which we will admit as subscribers for church support. (d) A church which raises \$1,500 a year for all purposes is, perhaps, on a normal and possible basis; such a church needs fifty subscribers at an average subscription of \$30 (which is again higher than the average for small towns). *A priori*—the town is capable of supporting one live, self-respecting religious organization for its American population. Let us look at the table, and see what we find in actuality:

I.—FOREIGN-SPEAKING AND NON-EVANGELICAL GROUP.

| Church. Edifice. | Erected. | Value. | Paid in Town. | Mission Aid. | Seats. | Seating Capacity of Churches Operated, 1906. |
|---------------------|--------------|---------|---------------|--------------|--------|--|
| Old Lutheran ... | 1882 | \$3,600 | \$3,600 | | 300 | 300 |
| New Lutheran ... | 1893 | 3,000 | 3,000 | | 225 | 225 |
| Catholic .. | 1880 | 1,500 | 1,500 | | 150 | Unused |
| Scientist .. | Bld'g rented | | | | 50 | 50 |

II.—ENGLISH-SPEAKING EVANGELICAL GROUP.

| | | | | | | |
|--------------------|---------|---------|---------|-------|-----|--------|
| Methodist . | 1872(?) | \$3,200 | \$2,900 | \$250 | 175 | Unused |
| Congregational ... | 1874 | 5,500 | 4,300 | 1,200 | 200 | Burned |
| Congregational ... | 1889 | 4,800 | 3,400 | 1,400 | 400 | 400 |
| Baptist ... | 1878 | 2,500 | 1,900 | 600 | 150 | 150 |
| Episcopal . | 1889 | 2,700 | 2,700 | | 100 | Unused |

Here are church buildings to the value of \$21,300 (of which \$3,450 was subscribed by mission bodies). Of this amount \$7,400 lies absolutely idle and worthless.

Three of these churches, the Methodist, Congregationalist and Baptist, were erected before 1880, at which time the American population was only 420 persons.

The total seating capacity of the religious buildings is 1,550, or far more than the total population, men, women and children. The seating capacity of the churches in the second group is 825, nearly double the American population; the seating capacity of the two remaining churches of this group is 550, or four times the average possible audiences.

Let us now turn to the internal history of the churches and see to what extent our *a priori* statement of religious probability was justified. The religious bodies are divided into two groups; the first group consisting of two Norwegian Lutheran churches (which minister to the Scandanavian portion of the community) together with the Catholic and Scientist churches. The members of these last two bodies encroach upon our group of English-speaking population, but hardly enough to make an appreciable difference in the figures. The second group comprises the four English-speaking Protestant churches. The figures include: (a) Membership; (b) that part of the minister's salary subscribed by the church; (c) salary subscribed by the mission associations.

GROUP I.

THE OLD LUTHERAN CHURCH.

| The year. | Members. | Pastor's Salary. | Church Subscribers. | Mission Aid. | Ministers. Years of Service. |
|-----------|----------|------------------|---------------------|--------------|---------------------------------|
| 1876..... | 100+ | \$1,000 | \$400 | Serves | 6 |
| 1882..... | | \$1,000 | \$400 | two | 1 |
| 1893..... | | \$1,000 | \$400 | other | |
| 1894..... | | \$1,000 | \$400 | churches | 12 |
| 1906..... | 200+ | \$1,000 | \$400 | | |

THE NEW LUTHERAN CHURCH.

| | | | | | |
|-----------|-----|--------|--------|----------|---|
| 1893..... | 140 | \$600+ | \$300 | Other | 4 |
| 1897..... | ... | \$600+ | \$300+ | Chs. and | 4 |
| 1901..... | ... | \$600+ | \$300+ | Fees. | — |

Catholic—An occasional Mass.

Scientist—Very small congregations of from half a dozen to ten or fifteen. Service carried on by members.

Concerning this group little need be said. The Lutheran churches have adequate membership and are self-supporting; the ministers are not paid over-well, but they do serve terms of gratifying length, and on the whole the churches show signs of reasonable prosperity. Concerning the two last bodies in this group there is no need or possibility of comment.

We pass to Group II:

| CONGREGATIONAL CHURCH. | | | METHODIST CHURCH. | | | BAPTIST CHURCH. | | | EPISCOPAL CHURCH. | | | TOTALS. | | |
|------------------------|--|----------------------------|-------------------|--|----------------------------|-----------------|--|----------------------------|-------------------|------------------------------|--------------------------------|-------------|----------------------------------|----------------------------------|
| Membership. | Amount of salary subscribed by Church. | Amount by Mission Society. | Membership. | Amount of salary subscribed by Church. | Amount by Mission Society. | Membership. | Amount of salary subscribed by Church. | Amount by Mission Society. | Membership. | Salary subscribed by Church. | Subscribed by Mission Society. | Membership. | Salaries subscribed by Churches. | Subscribed by Mission Societies. |
| 1871.. .. | | \$500.00 | Church organized. | | | | | | | | | 11 | | |
| 1872.. 11 | | 550.00 | 16 | \$520 | \$150 | | | | | | | 39 | | \$625 |

| 1903.. 40 | 650 | 250.00 | 37 | closed, | | 37 | 450 | Services | | | | 82 | 1,115 | 240 |
| 1904.. 45 | 665 | 240.00 | | 1903. | | | | semi-monthly | | | | | | |
| | | | | | \$3,700 | 37 | 800 | | | | | 83 | 1,000 | 200 |
| 1905.. 46 | 700 | 200.00 | | | | 37 | | 100 | | | | 83 | 1,000 | 300 |
| 1906.. 45 | 648 | 200.00 | | | | | | | | | | | | |
| | | \$10,504.00 | | | | | | \$3,100 | | | \$850 | | | \$18,154 |

The amount granted by the Mission Society has not been verified from the books of the society and is too low.

*In this year the dead and dropped were removed from the Baptist record book. All of these membership statistics are inflated.

These figures make anything but gratifying reading. Summarized by Churches:

| | Congregational. | Methodist. | Baptist. | Episcopal. |
|--|-----------------|------------|----------|------------|
| Total mission aid..... | \$10,504 | \$3,700 | \$3,100 | \$850 |
| Average yearly mission aid | 292 | 115 | 104 | 105 |
| Average salary of minister | 800 + | 700 | 600 + | 50 |
| Average church subscription for salary..... | 600 | 550 | 447 | 383 |
| Average length of ministers' stay in years.. | 3.- | 1.+ | 2.5 | 2.+ |

Summarized for the Town.

| | |
|---|----------|
| Total mission funds used in town..... | \$17,962 |
| Average mission aid per year (since town was founded) | 534 |
| Town's average subscription for religious service | 1,500 |
| Average membership | 133 |

The figures are too plain to require any

comment, and show a state of institutional pauperism that is revolting to a normal moral conscience. It is utterly incomprehensible how any town with a sense of corporate decency could be satisfied to permit the religious people of the United States to subscribe \$18,000 for its religious life when it was abundantly capable of paying for its own wants. Every one of these pauper churches has taken alms practically thruout its existence; not one of them. (the Baptist church excepted, for a short time) has ever felt the thrill of self-respect that would come from paying its own bills. Each church has accepted the sacrifice of ministers willing to live on an insufficient salary (the average stipend is \$650, and no one of these

churches owns a parsonage). Reading over the figures with a person long familiar with local conditions—"The year — must have been a lean one for such a minister." "Yes," was the reply. "I remember that man; he used to go past our house every summer evening on his way to the lower dam, where he caught bull-heads. That was about the only meat he had those days—he and his four children. He literally 'sought his meat from God.'" One might think of such a man as an inspired servant of the Most High, as a hero, did one know nothing of the conditions under which he worked. Aware of them, the action is rather foolish than heroic; largely an exhibition of poor taste on the part of the man himself and his ecclesiastical superiors.

Such a condition as that outlined above brings religion into discredit in the community; causes many to scoff at the Church; takes the heart out of zealous lay workers; and makes it difficult for a minister of religion to hold up his head.

It would be easy to attempt the disagreeable task of fixing responsibility, which task is not within the scope of this paper. But there are several applications writ so large that even he who runs must read. Greater care ought to be exercised in founding churches. There has been a great deal of what might be called "Frenzied Denominationalism" in the West. The writer has been told of one missionary secretary who boasted before his denominational convention that while he had never disobeyed the rule of his Church which makes it necessary to have three persons to constitute a local church, he had organized many a church with one lay person, himself and God. (It is unnecessary to add that this denomination is notorious for the number of its dead churches.) There is just enough truth in such a method of putting things to make it dangerous—it has the faults of all partial statements. The evils outlined above will never be changed until we have missionary secretaries who will look over a field as a business man sizes up a location for an enterprise; and applies the same business acumen and judgment to the problem. The secretary should know the resources of the immediate neighborhood; the number of the population and the manner of its growth; the dominant national-

ity; the religious preferences and stability; the probable movement in all lines in the future.

Beyond this there is needed some scheme for interdenominational union work—a central bureau on the plan of our city "Associated Charities." This bureau should investigate new fields, and be strictly non-partisan in every way. Then the representatives of the denominations could decide which body should enter the field. It would sometimes happen that a majority of the persons in a town would prefer a certain faith—it would be easy in that case to let the favored denomination have full scope. In cases where there was no preference, or where the field was evenly divided, some scheme of distribution could be devised that would be equally fair to all. As need arose and growth justified new denominations could be added. This would do away with religious overlapping, produce stronger and better churches, and by its increased efficiency and economy give infinitely greater scope to mission activity. Further, it would weed out a number of the poorly paid and often even more poorly equipped mission pastors and enable the societies to maintain their missionaries, so long as it was necessary, rather like men than beggars.

An even more pressing need is for a union of missionary societies for the purpose of immediately weeding out dead churches. Where the evident misjudgment of the past has overworked a field, the sanity of the present should do what it can to remedy the fault. In this case useless churches should be withdrawn, and the field left to the body or bodies best fitted to survive. It comes to just that in the long run; such an action simply anticipates the progress of normal evolution. The writer understands that there is a working agreement of this kind between the Congregational and the Presbyterian denominations in Wisconsin; and that the scheme has worked there to the advantage of both societies.

Certain it is that one of the next great religious advances must be toward the unification of religious work for the purpose of eliminating waste, and if this study but plays some small part in making clear the need for such unification, it will have accomplished its work.

Men We Are Watching

BY A WASHINGTON JOURNALIST

Winthrop Murray Crane

WINTHROP MURRAY CRANE, of Massachusetts, is out-Aldriching Aldrich in the Senate. There will be no revolutionary battling or involuntary dust, for Barkis is willin'. Aldrich doesn't show it, but he creeps onward toward seventy. Crane only tips the calendar at five and forty. The work is already under way. The Senate is learning to kneel to its coming leader, the little God of Silence. Aldrich speaks, sometimes; Crane, never. Crane is still new, but when he has served his quarter century, like Aldrich, the report will be the same. He would fall in a dead faint if some one with authority told him to make a speech. Crane can talk. He talks more than Aldrich. He is talking all the while, but he only talks to one Senator at a time. He is always on the floor while the Senate is in session, but he is so seldom in his own seat that one forgets which it is. You never think of looking there for Crane. He is always gliding about, often over on the Democratic side, always talking with some one—who is always glad to have him stop and talk; for he is the most universally liked of all the Senators.

Silence is not the only Aldrich secret of success in which Crane goes him better. Crane is the very acme of all the attractive qualities which have helped Aldrich to hold the loyalty of his following. Crane is *facile princeps* in many of the Aldrich strong points. He is a keen, shrewd auditor of human instincts and inclinations, a champion in diagnosis and description. You wouldn't think it, to see him, any more than you would think it of Aldrich. He is a small man and so slender that there is hardly anything to him; but he has a fine head, well built for the unusual mental machinery it contains. He has a bulging forehead, capped with long, brown hair—not as thick as it used to be over the crown. He has large, wide-open eyes that are always smiling and always have more or less a look of surprised innocence. He has

lips under a timid brown mustache which could hardly be anything but cordial, and cheeks which will flush with modest diffidence if praise or publicity is sprung on him. His hand involuntarily comes half way to meet you.

Your first impression is that that is all there is to Murray Crane. But when you come to analyze those first impressions you find that strongest of them all was a sense of confidence and a conviction of fair consideration which would have impelled you to tell him all he cared to know and as much more as you could work in. That feeling grows the better you know him. It has conquered the Senate. It was the same at his big paper mills and among his neighbors at Dalton. They all called him Murray, and came to him with everything. It was the same all over Massachusetts when they forced him to become Lieutenant-Governor and then Governor. He moved

W. M. CRANE,
U. S. Senator from Massachusetts.

quietly about till he knew everybody and everybody loved him and trusted him. Twice he might have had a Cabinet office but he declined. There was not the right stuff in it for his voracious habit of silent activity. The Senate was better.

There are no affectations or pretensions about Crane. He is a real man, an instinctive friend and inherent leader, an absolutely indefatigable worker. He needs no rest. He finds it and recreation for his tireless energy in his style of do-

CHAMP CLARK, M. C.

ing things. He is the coming power of the Senate.

The one thing, at present, which Senator Crane has not, but ought to have—and probably will have—is the chairmanship of the National Republican Committee. The requirements of that position were made for him and he for them.

Senator Sutherland, of Utah

Another Senator whose silence has been golden for the country is George Sutherland, of Utah. He was State Senator in the first Utah Legislature, and served his time in the National House of

SENATOR GEORGE SUTHERLAND.

Representatives during the Fifty-seventh Congress. Then he declined re-election, preferring the rigor of his lucrative law practice; but they sent him back to Washington to represent the State in the Senate. This is only his third session, and except in occasional interpolations and interrogations Sutherland has only occupied the floor two or three times—just enough to assure watching ones that his place is among the clearest, keenest and most logical thinkers and speakers of the Senate. Until recently it has been the unwritten custom for new Senators to be chiefly heard at roll-call, but Sutherland is among the instinctively silent ones. He is one of those who only speak, in public or private, when they have something worth hearing to say; but before he had been in the Senate through his first year Sutherland fell upon a task equal to his indomitable energy and exceptional legal ability, and in two years of Herculean industry he has accomplished more for the country than many of the chatterers can claim for a full term.

He was appointed on the first special

committee to revise the discordant jumble of United States criminal laws and prepare a penal code. He was the only Senator reappointed on the committee with the advent of the present Congress, and it is chiefly due to Senator Sutherland's indefatigable efforts and remarkable legal acumen that the colossal bill which past the Senate the other day gives this nation, for the first time, a coherent, consistent and scientific penal code. The work which he has performed is wholly beyond the average comprehension, but it is a monument which will endure for ages, in better justice and more rational results. It was materially more difficult than compiling a new code, for it entailed revising, reconstructing and systematizing the entire mass of criminal law which had been collecting since the birth of the nation.

It was a stupendous task, for which virtue must be pretty much its own reward; but it was fortunate for the country that one of Senator Sutherland's legal ability and conscientious abnegation to duty, irrespective of notoriety, was at hand to shoulder the burden.

The Senator comes naturally by his qualities. He is a Scotchman, born in England, educated in America, toughened thru making his way to the top out West. He is slender and grave, with black hair and full black beard close-cut. Between the two are keen, quick, earnest eyes of dark Scotch gray. In the truest, broadest sense of the abused term Senator Sutherland is a gentleman. He is forty-six, but you must trust the calendar for that. He does not indorse it in appearance and when away from the somber hallucinations of the Senate he is more inclined to be boy than man. He is easily approachable and as cordial as any man under the toga should be. In his still clinging Scotch inclinations he can tell as good a story and keep a circle about him convulsed as easily as many who do not know so much about law. He is a graceful writer, a pungent and vigorous speaker and one of the thoroly honest and patriotic men who make the Senate what it is.

The fact that Sutherland represents Utah and that, with Senators Knox, Beveridge, Hopkins, Foraker and others, he delivered a ringing speech against the

right of the Senate to expel Smoot, his colleague, a year ago, has led to some misconception and thoroly unjust opprobrium. Senator Sutherland has no affinity or alliance with Mormonism. His position was like that of the rest, purely legal and constitutional, and like the rest he is frankly outspoken today against the desirability of longer continuing under one representative the two high offices of church and State. He believes that his colleague owes it to the Senators who defended his right to retain his seat, and to the country at large, to surrender his position in the church or decline to run again for the Senate at the approaching election.

Now that the gigantic penal code is off his hands we shall not be amiss to keep a watchful eye on Senator Sutherland. It is a necessity of his nature to be accomplishing something worthy of his steel.

Hon. Champ Clark, M. C.

Representative Champ Clark held the floor in the House the other day for an hour and a half with an epigrammatic gem of oratory which was so thoroly appreciated that it brought about him, at the close, an ovation which the House of Representatives even considers most exceptional. As Clark is a Democrat, he naturally raked the present administration fore and aft with hot shot, and for peroration ran up the flag of victory for his party at the coming election. It was one of his best efforts and one of the best speeches of the session. But it would be a great mistake to suppose that only now has the Hon. Champ Clark, of Missouri, slipped in among the watched ones. Few have been better watched—or better repaid the watchers—since goodness knows when. Clark has been a star of one constellation or another since boyhood, when he was a hired hand on a farm and clerk in a grocery store.

He was born in Kentucky, on the day when Webster delivered his famous Seventeenth of March oration, fifty-eight years ago. It did not take him long to get under way, for he was teaching school before he was fifteen. He graduated from Bethany College, West Virginia, and was president of Huntington College when he was twenty-three. Then he studied law, graduated at the

bar, was editor of *The Press*, in Louisiana, Mo., was city attorney, prosecuting attorney for Pike County, given an LL.D. by his home college, served in the State Legislature and married, before he came to represent the State in the National House of Representatives, where he is now serving his seventh term. He is ranking Democratic member of the omnipotent Committee on Ways and Means, and the acknowledged successor to Speaker Cannon, if there should ever chance to be a Democratic House. Even Dalzell admitted it, in a delightful flash of oratory on the floor a day or two after Clark's great speech; and he added that if Providence had any such dire dispensation in store as a Democratic House, he, for one, would be very glad to see Champ Clark, of Missouri, in the chair.

While Dalzell was saying it, Champ Clark was part of as pretty a picture as is often seen on the floor of the House. His little daughter, Genevieve, thirteen years old, had slipped in, tripped down the center aisle to her father's seat, quietly appropriated his knee and sat there intently listening with one arm around his neck. When Dalzell's tongue was sharp the little arm tightened. When it turned a compliment the muscles relaxed and many who were watching could see the little fingers pat gently on papa's big, broad shoulder.

Considering this strenuously with-sharpening upcoming, it is not surprising that Champ Clark is one of the brilliant biters of the House. He is a large man, broad, powerful and permeated with self-reliant dignity; as graceful and free of motion as he is of speech. He has a fact of the old-time statesman mold,

smooth shaven, crowned with light brown hair. He has earnest, penetrating eyes of New England blue. His voice is seductive. It is strong and clear and goes everywhere when he is on the floor, but it softens to something exceptionally agreeable and captivating in private conversation. The eyes are not the only New England indications about Champ Clark. While lunching with him in the House restaurant we each ordered pumpkin pie. On each plate was a piece of cheese. As Mr. Clark began upon his pie he remarked: "They say that when a man eats pumpkin pie it is a strong indication of New England origin." Lifting a piece of cheese to his mouth he added: "And when he eats cheese with it it is a sure thing."

Champ Clark is unquestionably one of the leading orators in Congress, and he has lately been gaining a great reputation on the Chautauqua platform. He has written more or less all his life, and, attractively as he speaks, he writes better. To a keen literary instinct he adds an inimitable grace, which idealizes even history, his favorite subject, making it thoroly Clarkesque. He was associate editor of Reed's "Modern Eloquence."

A leading member of the House said to me the other day: "If Champ Clark would only quit being a Democrat he would be a daisy." He admits having made some few mistakes in the course of his life. When he was grocer's boy he filled on order for onions which brought the housewife in rage to the store because, after they were well cooked, they turned out to be tulip bulbs. Possibly his choice of politics was another blunder; who knows?

Song

BY ROBERT LOVEMAN

HELIOTROPE and mignonette,
Violet and rose,
Madrigal and canzonet,
Every bloom that blows;
All the happy birds there be,
Singing thru the air,
Whisper, O my love, of thee,
Sweet and fond and fair.

Every star upon the sky,
Bubbling, beaming bright,
Kindles at thy sparkling eye,
'Tis their fount of light;
Every beauty-breathing gem,
On the land or sea,
I'd crush into a diadem
Fit for crowning thee.

DALTON, GA.

Reforms in Macedonia

BY P. N. DESCALOFF

[Mr. Descaloff is the popular editor of the most popular Bulgarian daily, *Vecherna Foshita*. As a journalist and a worker for the cause of Macedonia, he has had audiences with the highest officials controlling the Macedonian interests; has visited every city and town in Macedonia and knows personally the revolutionary and the reform leaders; has been a member of the Bulgarian National Assembly, and, besides his numberless articles in Bulgarian, he has written many in German and French languages, with both of which he is acquainted, altho this is his first article in English. He is the author of the brochure, "Deux An des Reformes en Macedoine," which appeared two years ago in Geneva, signed by an "Ex-diplomat." Having learned of the wholesale exodus of Macedonian Bulgarians to America, he recently made a flying trip to this country, in order to learn personally their condition, especially of the unemployed. His coming was anxiously awaited by the Bulgarians here, and it is hoped some definite measures for betterment will follow his visit.—EDITOR.]

"A KINGDOM in which there is no liberty and justice is doomed to die." This is an old and true saying. Turkey, however, in which exists neither the one nor the other, lives even today, and holds in submission, among others, a country in the southeastern end of Europe, depriving its Christian population of every human right and terrorizing their lives every day.

I refer to Macedonia, a land whose natural beauties and riches are captivating; the country of Alexander the Great, and the first in which St. Paul introduced Christianity in Europe and founded the first European Christian community. It was at Salonika. Up to a few years ago was preserved in the Mosque St. George—once a heathen temple, then a Christian church and now a Turkish mosque—the stone from which it is believed St. Paul preached his first sermons among the Thessalonians, and from where, after founding the first Christian church therein, he went to Corinth, Greece. Those who read Paul's Epistles to the Thessalonians will see how highly he praised them at that time.

Today, however, at Salonika, which may be called the capital of Macedonia, it is Mohammedanism that rules. The Turks, who five centuries ago conquered the whole of the Balkan Peninsula, have since been gradually driven back, until today they own only the southeastern corner of Europe, known as Macedonia, the surroundings of the city of Adrianople, Albania, Epirus, and a part of Thessaly.

If of all these Turkish possessions Macedonia attracts most public and diplomatic attention, and not only disturbs the peace of European Turkey, but threatens to destroy it, it is due chiefly to the following reasons:

The majority of the Christian population in Macedonia is admitted to be Bulgarian. In the conclusion of the last Russo-Turkish war, in 1887, at San Stefano, near Constantinople, Bulgaria was made free and independent in her entirety, viz., Bulgaria along the banks of the Danube, Southern Bulgaria or Thrace, and Macedonia. The sun of liberty, however, but a little while shone over Macedonia. Soon after that the European Powers called a Congress at Berlin, which Congress tore the just freed Bulgaria to pieces, and, among other things, left the unfortunate Macedonians again in the paws of the Turk. There was, however, this little consolation, that, according to Article XXIII of the Berlin treaty, Turkey had to submit to some reforms in that province. All those, however, who know Turkey, know that she is not in a position for reforms. All the efforts made in that direction for a century have amounted to nothing, and the same results have so far followed every attempt to carry out Article XXIII of the Berlin treaty.

Meanwhile Macedonia, surrounded by newly born independent states, could not hold herself within Chinese walls against the life of freedom. The people of that country, who saw even for a moment the rays of liberty, could not again submit to the state of slavery under which they had

already groaned five hundred years. The Bulgarian element in Macedonia, stern and energetic, seeing some of their countrymen free and independent, began from the very first day of their new slavery to yearn for deliverance. On the other hand, the schools which were opened in every city and village began to turn out hundreds of young people every year who gave themselves to the removal of the old ideas and practices and laying the foundation of a life which might lead their country to deliverance from the burden and degradation of slavery.

The apostles of freedom began thus soon to find followers. The revolutionary movement in Macedonia started, in fact, in the very first years after the province again fell under the dominion of the Turk. The earlier activities, however, were mostly local, and directed chiefly to educating the people and crystallizing the forces into a general organization for a united action.

Judging by results, the most noted revolutionary uprising in Macedonia was that of 1903. It shook the foundation of Turkish rule in Macedonia, and showed that Macedonian Bulgarians, even by their heroic fights for freedom, proved themselves sufficiently fitted to enjoy the same kind of liberty which other free nations enjoy. Turkey, in order to crush the uprising, had to fight a whole year, had to bring 200,000 soldiers from Asia Minor, and, with her cannons, had to destroy more than one hundred Bulgarian villages. A conflict between Bulgaria and Turkey then became imminent, but the European Powers stepped in and interfered.

In order to pacify the country, Russia and Austria then took the initiative of proposing to the Sultan a plan of reforms which they had prepared at Murschtag, in October, 1903, and which was approved by the other Powers. This reform plan, while not satisfactory, influenced the revolutionary leaders to cease fighting, in order to prevent their being charged with interfering with European reform work. The main provisions in that reform plan were such pertaining to the reorganization of the gendarmerie, the finance and the judiciary in Macedonia. According to these reform provisions the Christian population was to be

given a good share in the government of the province and the brigandage of the Turkish rule was to be subdued. Has this been accomplished? By no means, at least so far. At the head of the Reform Commission was appointed a Turk, which in itself was a heavy blow to the proposed work. The civil agents, representing Austria and Russia on that commission, and the European officers who came to reorganize the gendarmerie, remained with no executive power whatever, and their position up to the present time has been only laughable. In substance, they are nothing else than mere spectators to what happens in Macedonia, without exerting any influence whatever in the government. In order to realize how powerless these civil agents are, who are supposed to play a controlling part in introducing the Murschtag reforms, it is sufficient to quote this one illustration: Toward the end of the year 1904, in the vilayets of Salonika and Monastir, the churches and the schools of a hundred and fifty Bulgarian villages were closed by the Turkish authorities, because they had refused to recognize the Greek Patriarch of Constantinople. For a whole year those villagers were kept without places of worship and their children unbaptized and unschooled. The civil agents wanted to remove this unjust measure, and in several sessions with the Turkish Inspector of the Reforms stood for the opening of these churches and schools. All their efforts, however, remained fruitless! Then the civil agents, who had promised to those villagers that they would procure some justice for them, in order to save their prestige, asked the Turkish Government to allow the opening of the churches at least during the Christmas holidays. But here again they failed! Neither could they render any help to the Bulgarian Bishop of Strumitsa, who for ten years has been pleading for a permit to build a Bulgarian church in that town, and still cannot get it from the Turkish authorities. The whole matter with the said civil agents is that they have no executive power, and, therefore, are wholly unable to accomplish anything in reform work.

Much similar is also the position of the European police officers, headed by the

Italian general, Di Giorgis, who was accepted by Turkey after he consented to wear a Turkish fez on his head. All the sincere efforts on the part of those officers to reorganize the gendarmerie have brought very insignificant results for the country. The Macedonian gendarmes even today are illiterate Turks, mostly young soldiers from Asia Minor, altho the Murschtag reforms say that they should be picked out from among the native population.

The Financial Commission, which sits at Salonika, is not showing any practical activities yet.

The judiciary provisions of the Murschtag reform plan have also been a dead letter for the past four years. Within the last few months, however, there has been much emphatic talk about introducing the judiciary reforms in Macedonia. Russia and Austria made some diplomatic overtures to Turkey regarding this matter about a year ago, and since then the European diplomatic agents at Constantinople have been holding sessions, deliberating over the details of the judiciary reforms to be submitted to Turkey. The exact text of these reforms is not as yet known, but under the influence of England, which, since the beginning of the reform work, has stood for broader and more substantial improvements in Macedonia, it appears as tho the proposed judiciary measures would be more serious and effective than any of the previous ones. This seems evident also by the fact that Turkey is more stubborn in her opposition than she was before. About two months ago the Sultan sent his Minister of Commerce and Agriculture to ask the governments of Rome and Vienna not to insist upon introducing the judiciary reforms, because Turkey is introducing them herself. The mission of the Turkish Minister was fruitless, but the opposition of Turkey did not stop. On the contrary, the Sultan stands very firm against the acceptance of these measures, and this may finally compel the European Powers

interested in the matter to make some naval demonstrations, in order to force upon Turkey these reforms.

Such a demonstration, of course, was made once before, in order to compel Turkey to accept the financial reforms in Macedonia. It was not a success, however, because the European Powers, who agreed to join the blockade, had no understanding among themselves as to what further measures to take in case Turkey refused to accept their propositions. Turkey knew this and she profited by it to the extent of accepting the Finance Commission, but not the financial reforms.

Will Europe be compelled to make another naval demonstration, in order to compel Turkey to accept the judiciary reforms? This depends entirely upon Europe herself. It is a fact that Turkey will never agree to introduce any kind of reforms in Macedonia. Her politics, so far, have always been directed toward upsetting the reform measures, and she has always succeeded in either weakening them or going around them. But if the European Powers can agree among themselves, their efforts will more easily be crowned with success. Only then can they break the Turkish obstinacy. If Europe decides upon another blockade, but without provisions of making it effective, then we shall have a repetition of the European efforts for financial reform. We shall have a judiciary commission, but not judiciary reforms, and this will be the last blow to the Murschtag reform plan. After that we can expect nothing else but the renewal of the revolutionary activities, which quieted four years ago, partly to give a chance to Europe to try her hand and partly because the leaders felt a weakening after their heroic fights. Time and the deceived hopes will bring out new forces and energies and the next revolution will be greater and more determined. It will not cease until the sun of freedom and human rights begins to shine upon that so unfortunate country.

NEW YORK CITY.

The Syllabus of Loisy *

WHEN, in 1864, Pius IX promulgated his syllabus, he not only named it as such, but to every proposition added a string of expletives which brought home to the public—in some measure, at least—the alleged evil of the condemned proposition, *e. g.*, “heretical,” “erroneous,” “offensive to pious ears,” etc.

When, in 1906, Pius X issued a syllabus of errors, he gave it no such title and also omitted to add the ecclesiastical terminology, expressing the many shades of error or heresy. And now, with the opening of 1908, comes the great French scholar, Loisy, with a fresh syllabus which combines the two others. In fact, we may credit Loisy with two syllabi. In his first, like Pius IX, Loisy gives each proposition and then adds its errors. Again, with Pius X, he gives a whole syllabus with but few notes or comments.

In his first the learned Frenchman repeats one by one the sixty-five propositions of Pius X. To every one he adds the authorities whence the Roman heresy hunters may have drawn it. The first point that is clear is that the syllabus has nothing from any book published since 1904; hence the rumor of a new syllabus, so constant during the whole pontificate of the present Pope and the closing years of Leo XIII, is now known to have been a fact.

The next point is that not a single one of the sixty-five propositions of the syllabus of Pius X correctly cites the author whom it condemns. To prove this, Loisy gives the exact text of the author under the ban, just after the proposition supposed to be taken from his writings. In every case the quotations are inexact. There are, however, a few propositions whose sources are unknown to Loisy. Of the sixty-five, upward of fifty seem to be deduced from his own works; in every instance wrongly. It is the old story, so often exposed by Lea in his

immortal “History of the Inquisition.” Those Romans read into Loisy their own imaginations. Not that the learned Frenchman has not given them matter enough to condemn, but for some strange reason or other they have twisted his writings in such a way as to put themselves at his mercy. Probably the truth is they got beyond their depth.

In his second syllabus, as we venture to term it, Loisy takes the sixty-five propositions of that of Pius X and gives their contradictory—that is, he gives the Catholic doctrine as the Roman inquisitors, to be logical, must hold it. A few examples:

“The assent to the faith rests upon some congeries of probabilities.”

Proposition XXV of Loisy reads:

“The assent of faith rests upon some other thing than a congeries of probabilities.”

Again, Proposition XXXV of Pius X reads:

“The Christ was not always conscious of his Messianic dignity.”

Proposition XXXV of Loisy is:

“The Christ was always conscious of his Messianic dignity.”

Then Loisy adds, tartly:

“A gratuitous assertion, if it has any meaning.”

The second part of his brochure is a criticism of the last encyclical. It may be summed up in one sentence: Modernism as a system exists only in the imagination of the writers of the encyclical. The Modernism of Pius X has a parallel in the Americanism of Leo XIII. Just as the latter had no existence beyond the gray matter of Mazella, Brandi and their coterie, so the former is the nightmare of Billot, Langoyne, Marrani and Benigni.

For the first time the great French scholar complains of his cruel treatment during the past fifteen years. In a summing address to the Pope he grants his right to correct him and all others in error, but denies any right to the Pope of insulting or abusing people.

At the same time with *Les Simples Reflexions* appears the author's *Les Synoptiques*. This, the Benjamin of Loisyism, is a profound but radical work.

*SIMPLE REFLEXIONS SUR LE DECRET DU SAINT-OFFICE LAMENTABILI SANE EXITU ET SUR L'ENCYCLIQUE PASCENDI DOMINICI GREGIS and LES SYNOPTIQUES. By Alfred Loisy. Both published by the author. Ceffonds pres-Montier-en-Der (Haute-Marne), France.

Its conclusions may be summed up in a few paragraphs:

Jesus was born at Nazareth, the son of Joseph and Mary. Besides him, they had four more sons—James, Joseph, Simon and Jude—and at least two daughters, whose names have not come down to us. Joseph was a worker in wood, a carpenter, joiner, wheelwright, and Jesus followed at first the parental trade. Probably it was John the Baptist who first stirred up the vocation of Jesus. A religious wave passed over Judea whose prophet, John, preached repentance and baptism for the forgiveness of sins, as a preparation for the great judgment and the coming of God's kingdom. This work Jesus took up, and preached but a short while, perhaps one season. At the Passover he went up to Jerusalem and also preached repentance and the advent of the heavenly kingdom. This led to His arrest and crucifixion.

Peter was the focus around whom gathered the faithful disciples. The eleven met at Capernaum and accepted Peter's supposed vision of Jesus by the Lake of Tiberias. They were of the same mental type as their neighbors, who demanded if Jesus was Elias or some prophet risen again. The belief in a personal resurrection and ascension was an easy step. Peter seems the first who took on this belief.

In conclusion, it is evident that the positions of *Les Synoptiques* are very much against current faith. But let us bear in mind that Loisy has elaborated an apology for and a development of current traditional views in his "The Church and the Gospel." Hence he claims that he can call himself a priest and a Catholic. But the engulfing waters of the Tiber have swallowed up Loisyism. "*Roma locuta, causa finita?*" Hardly, for no longer does Rome control biblical or historical studies, altho the Abbe Loisy has been excommunicated.

Old Wives for New

If the virtuous, high-minded reader purchases this novel,* believing from the title that it is one of Mr. Phillips's romantic philippics, directed this time against the divorce evil, he will be disap-

pointed. It is a philippic to be sure, but directed against society in general with everybody's morals left out. The prolog contains the courtship of the leading man and woman in the story, and it is as brief as two young, vigorous, unmoral creatures can make it. The next chapter opens some eighteen years later when the wife has become dowdy and fat, while the husband has gained in strength of mind and body. By this time neither loves the other, so they obtain new partners without disgrace or even embarrassment. The author is obviously determined to make his romance realistic at any cost. One of its most striking scenes is based upon an alleged discreditable incident in the life of one of our prominent men, which has long been rumored about the city but has been kept out of the papers.

Senator Beveridge thinks that David Graham Phillips "is the master American novelist of the day." If so the leading characteristics of the master American novelist are sadly discreditable to his fellow Americans. No other writer portrays with such harsh candor not only our evils and the evils of our institutions, but the greater potentiality of evil that is possible to develop. He shows that remorseless power of analysis which no frailty or temptation or secret motive can escape. Apparently the one thing inconceivable to him is goodness, definite, unflinching, deliberate goodness. The keynote of his mind is hatred of hypocrisy, but nothing can be more frightful to contemplate with understanding than Mr. Phillips's own sincerity. Besides, when all is said, hypocrisy is itself the last frail tribute of human weakness to virtue. Being incapable of the real thing, it pays integrity the compliment of counterfeiting it, which is not so bad as the ferocious honesty advocated by Mr. Phillips. It is better for a man to be something of a hypocrite than to act out and out according to all the evil that is in him. And when it comes to the actual test of living, doubtless Mr. Phillips knows this himself.

In making so much of the purely physical attractions and repulsions between unhappily mated characters Mr. Phillips offends the instinct for decency of the sounder millions of Americans. The fidelity to those "old wives" no longer in the first blush of girlish attractiveness has

*OLD WIVES FOR NEW. By David Graham Phillips. New York: D. Appleton & Co. \$1.50.

been a most lovable characteristic of the majority of husbands, and their firm conviction that the matronly figure is prettier than the earlier marks the finer man. If Mr. Phillips has any lack of sympathy with his hero, promptly falling in love with the well-groomed dressmaker in the absence of his wife, whose chief sin is that she is losing her waist-line, he has cleverly concealed it. In fact, he seems to hate poor, stout Sophy more viciously than does her husband or than the facts warrant. Two grown-up children are not allowed to complicate the situation, and a son's natural and chivalrous championship of his mother is cleverly made ridiculous; the moral to wives is: "Don't slump; don't get fat; walk ten miles a day and eat less, or you will lose the little affection your husband ever had for you!" The moral for husbands, the most careful scrutiny has failed to find in the book. We offer it here. Loyalty is a nobler pleasure than license, and its rewards are finer. Love grows best in the sunlight and pure air, but it needs cultivation and droops under neglect. The best way is to change "old wives" not "for," but *into* "new ones," by inner fidelity and outer courtesy and a lover's observance. Then the older face will be sweet with fadeless affection. The crime is not in securing a divorce, but in desiring one; not in seeking legal freedom, but in the rebellion against moral restraint; not in defiance to law, but in the impatient disregard of that inner impulse to an honorable keeping of a man's promise to himself to be faithful and loving to his young wife, who will inevitably grow old some day, as will her successors if he so far forgets his vows as to take them on and off with lightning change dexterity. If Mr. Phillips has respect for the higher loyalty and honor of the "man who sweareth to his own hurt and changeth not," he has managed to convey a wrong impression.

The Old Room. By Carl Ewald. New York: Charles Scribner's Sons. \$1.25.

Discriminating readers have not lost the impression made by Carl Ewald's exquisite book of two years ago, "My Little Boy." *The Old Room*, by the same author, is an allegory of marriage and parenthood that goes deep into the heart

of those tenderest and most tremendous of human relations. It might be the simple story of two lives incompletely mated and hence unhappy thru lack of complete sympathy. It is much more than that. It is also the tragedy of the ineffectual man, like Amiel, "hypnotized by the Universe" into a barren inactivity, his will paralyzed by his too keen sense of the hopelessness of effort. In times of transition the weak are sacrificed, as in a famine the children die first, then the mothers and lastly the strong men. Sometimes violent changes provoke savage reprisals. The laborer wrecks the machines that are to enfranchise labor and multiply man's efficiency. The nobility in any modern state is an anachronism, except as its members are trained to be servants of the state. Its finest members feel their futility with hopeless poignancy, and either waste themselves in frantic distractions or sink into fruitless despair. And so Ewald's story may mean the passing of the old nobility, with its honorable prestige, its family traditions of *noblesse oblige* and its ancient customs and observances which made an occupation for its members, preventing them from feeling inutile. Feverish activity in the pursuit of pleasure is a stimulant with deadly reactions for parents and children alike; and hopeless despondency degenerates into a lazy failure to make anything whatever out of life. Cordt's son is like a man trying to breathe in a closed room whose air has been thoroly exhausted, if not vitiated, by the crowd of ancestors who have breathed it before him, and he is not the man of action who will burst out somehow—anyhow—into the free air. His lethargy of spirit has the inevitableness which is the essence of tragedy. The Greeks named it "fate," the calm East "Karma," the Calvinist "predestination" and the scientist "heredity." *The Old Room*, however, means more than this recognition of warring social and political elements. There is an orphanage of the soul worse than his whose father and mother are estranged; an alienation deeper than that of husband and wife when they have ceased to speak the same language or think the same thoughts; it is when the spirit of man wanders alone on its fearful way thru the

universe seeking a father and finding empty space; calling aloud and hearing no answer; yearning for love and cold at heart because of no tender response. The loss of faith in God and in the essential wholesomeness of this scheme of things, the doubt of the goodness of life or its desirability, is the only real tragedy. As an intimate study of the intangible sympathies and divergencies of married life *The Old Room* stands alone. The drifting apart in spirit is so much more common than any coarser unfaithfulness, and it is so much more fatal to affection, that this searching allegory probes deeper than all the "divorce novels" ever written. The little volume is as full of suggestive symbolism as an Ibsen play, and its simple but illusive language will be as variously interpreted by different readers.

Anarchism. By Paul Eltzbacher. Translated by Steven T. Byington. New York: Benj. R. Tucker. \$1.50.

Now that there is so much talk about anarchy and efforts are being made to put it down by the suppression of its periodicals and the deportation of its advocates, there is or there ought to be a disposition on the part of the public to find out what anarchism means. It is not an easy thing, for the name is used to cover the most divergent theories and actions. The anarchist may be one who tries to love everybody equally and trust all implicitly, or one who is possessed of the spirit of hatred and revenge; he may forbear to take the life of a lamb or he may murder a magistrate chosen of the people. Dr. Eltzbacher, after a most conscientious examination of the writings of leading anarchists, comes to the conclusion that the only common element is that implied in the name, that is, the negation of the State. In this book there is a ludicrous contrast between the subject matter and the method. The author has constructed after the Germanic manner a rigid system of artificial definitions, into which he endeavors to force the vague, impassioned and idiosyncratic utterances of the anarchists. But the volume is nevertheless a useful one because of its impartial presentation in their own words of the views of the seven most prominent anarchistic think-

ers of the world, Godkin, Proudhon, Stirner, Bakunin, Kropotkin, Tucker and Tolstoy. The writings are quoted in almost as many different languages and some of them to be found only in out-of-print books and evanescent periodicals. Every public library should have for completeness' sake some representative of this school of thought, and this small volume presents it in its most authoritative and least objectionable form. It comes to us from Mr. Tucker's bookshop wrapped in flaming red paper, with a sticker giving his own definition: "Anarchism is the denial of force against any peaceable individual."

Altars to Mammon. By Elizabeth Neff. New York: Frederick A. Stokes & Co. \$1.50.

The title of this novel has reference to the church that might have been built had the young pastor accepted the gift of \$30,000 from the man who had made his fortune by cheating another man out of his invention. The pastor is fresh from a theological seminary, and the scene of the story is a sordid little town where the pull is toward the open saloons away from the churches. He is the hero, and in him we recognize the favorite young clergyman of fiction. He flunks when it comes to leading the revival and discovers that he is a heretic. Now whether the fact that the hero, after resigning his pastorate, becomes a plain, honest business man and marries the unscrupulous millionaire's daughter (whose money he had refused for the church building) is also typical of our times, we leave the reader to infer. The story is written after the manner of E. P. Roe, and should have a wide circulation among those who admire the commonplace, even in heresies. It is realistic in situations, literal in details, and indicates that the author has good principles, excellent convictions, shrewd insight, everything except genius.

Pillow Lace. A Practical Handbook. By Elizabeth Mincoff and Margaret S. Marriage. New York: E. P. Dutton & Co. \$5.00.

Altho there has been in England a revival of interest in pillow lace, books on the subject have only taken note of lace from the collector's standpoint. This

practical handbook is designed to instruct, interest and direct the lace worker, to provide suitable patterns, to teach the veriest beginner the various processes by which pillow lace is made, and especially to provide a series of patterns, passing from the simplest to the very complex. Besides the frontispiece, a fine print of Netscher's "Lace Maker," there are forty illustrations of laces and of processes of work and fifty patterns. The book has practical interest for those who wish to teach art industries to women who need to become self-supporting. The explanations and directions are short, well illustrated by diagrams, and the examples are carefully graduated. One can readily believe the statement made in the preface that a beginner who borrowed some chapters of the manuscript while the book was in process of writing "with a little supervision learnt to make Russian lace from them in less than a week."

Literary Notes

....An attractive wall chart showing in five colors the ingredients of all common foods is published by Whitcomb & Barrows, Boston, at \$1.00.

....Interest in patristic views concerning the Christian ministry is not so great as in the days of Lightfoot. However, we note in *The Historic Church*, by J. C. V. Durell, B.D., a Cambridge scholar, a painstaking treatise on the conception of the Christian Church and its ministry as betokened in the writings of Clement of Rome, Ignatius, Polycarp, Irenaeus and Hippolytus, and in the Didache, Shepherd of Hermas, and other monuments of Christian literature down to the close of the second century. (Macmillan. \$1.50.)

....*Men of America* is a biographical dictionary of contemporaries edited by J. W. Leonard and published by L. R. Hamersley & Co., New York. It is similar in purpose and scope to "Who's Who in America," but the sketches are mostly longer, and there are fewer of them. The names selected for mention in the two works are curiously different. The preface is very misleading; it implies, for one thing, that the volume contains nine or ten thousand names, but there are really only about 6,500. The absurd exclusion of all women, however prominent, seriously impairs the value of the work. The volume is unnecessarily bulky and heavy. (\$10.)

....We have often received letters asking for a good annual encyclopedia, and have been compelled to say that there was none published in America. We are therefore glad to be able to announce that Dodd, Mead & Co. are to resume the publication of their *Inter-*

national Year Book with a volume devoted to the events of 1907 and covering in part the period since 1902, when the last volume was issued. These Year Books were well written and reliable and served a very useful purpose in supplementing encyclopedias and keeping up to date one's knowledge of what is being done in the world in science, art, literature, commerce and politics. A discount of 25 per cent. on the price of \$5 for the cloth edition is allowed on subscriptions received before April 25th.

Pebbles

THERE is little hope for the young lady who consents to be called "Puss."—*Atchison Globe*.

THEN out spake Chance Day boldly,
His words were full of hate:
"To every trust that ships by rail
Let there be some rebate;
And how can men do better
Than, facing maddened mobs,
Uphold the rich law-breaker
Who cheats and wrecks and robs?"

"Let not the rabid ravings
Of them that think it best
To stop the ones who plunder
Be spoken of in jest!
Why should they all unbidden
Come butting in the game?
Down with the hateful meddlers
And cover them with shame!"

"Up, then, oh, malefactors,
And also birds of prey;
Why quake while I am ready
To keep the foe at bay?
I'll bite them and I'll scratch them
And all the world shall see
With what unyielding valor
The bridge is kept by me."

—*Chicago Record-Herald*.

LOOK BEFORE YOU LEAP.

HARRY had two important things to do. He had to have a nice bunch of flowers to give his girl when she arrived at 10:50, and he also needed a small feather duster with which to remove numerous tender molecules of earth which adorned his pictures, furniture, etc., before she came, so down town he went on the jump. His purchases were soon made and both wrapped in tissue paper, because, you know, it had always been a whim of Harry's to have tissue paper on all his purchases. Once back in his room he found that he only had seven minutes to get to the station, so throwing both packages on the bed, he hastily changed his collar, grabbed up one of them without stopping to find out what was in it, rushed downstairs, hailed a carriage, and arrived at the station just as the train pulled in. Dashing out upon the platform, he spied her in the faroffness, and after reaching her and going through the usual handclasps, etc., he handed her a tissue paper package. She felt of it curiously for a second, opened it—and found the bunch of flowers.

Moral—Accidents are not always bound to happen.—*Yale Record*.

The Independent

Entered at New York Post Office as Second Class Matter.

Publisher, Clarence W. Bowen.

Owner, The Estate of Henry C. Bowen,
130 Fulton Street, New York.

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Religiosity and Religion

RELIGIOSITY takes many forms; religion has but one spirit. Religiosity has to do only with forms, religion with spirit.

It is nothing but religiosity, not at all religion, whose doings and misdoings are described in an article in THE INDEPENDENT of this week entitled "Religious Overlapping." It is a sad, a shocking, story that is told, not simply of the waste of money and effort, but of self-sacrificing activity as well. Such a story it is wise to tell and well to read; for this is no isolated case, but represents thousands of cases in which strifes and factions in the Church have divided the Christian body in small and large towns. The advantage of such a truthful story, plainly told, is that it will lead others, who never suspected the greatness of the evil, to study it and correct it in their own localities. Let our readers go over that article carefully, add up the losses, and then, if they will, if they care to set wrong right, let them look at home, and let them tell us what they find and what they will do. Mr. Kennedy has chosen a good subject for study; it is big

enough for a thesis for a doctorate of philosophy, more important than many that are taken.

St. Paul went to Athens and looked about, as our contributor has done in his travels. Paul told the Athenians that he discovered that they were a very god-worshipping people; they worshiped many gods and godkins; for that is what the Greek word means. We worship but one God, but we worship by way of many sects and schisms. Worse than the old Greeks, we do not worship harmoniously, but our sects, and we who belong to them, are rivals with each other, working to hinder instead of to help the one great cause which we are supposed to love. Our religiosity has got the better of our religion. We are contending for the shell, not the substance, of our religion.

In the case described the people of so-called Evangelical Protestant churches, if they had been willing to work together, could have raised \$2,000 for the salary of their minister, for they did raise as much. But they scattered it so that outside people, represented by missionary societies, had to help them to the amount of over \$600 a year, a total of \$18,154 in twenty-six years. That money was all wasted; worse than wasted, for it was spent to keep up divisions and to weaken the religious force of the community. It was spent for religiosity, for adjuncts, or disjuncts, of religion, not for religion itself.

What shall we do about it? Shall we cease to give money to our home missionary societies? Not at all, for it is a condition that confronts us; but the theory confronts us also. While the condition lasts, while people do not see the evil and have not yet corrected it, we have to help the hopeful discordant factions, for the sake of the religion that is threatened to strangulation by the conflict; for religion survives, altho under heavy burdens. But the theory also confronts us everywhere. It belongs to the town that suffers. In every such town it is the business of the people to study the meaning of our Lord's last prayer for the unity of his disciples and Paul's rebuke to the Corinthians in the third chapter of his first letter to them. Then let them make their own experiment

of the blessed sacrifice of their sectarian pride, forget the conceit of their vain denominational history, and see if they cannot unite on Christ.

But the duty of initiative does not rest on them, but on the benevolent societies which are supposed to be managed by far-seeing men, and whose business it is to suggest, if not direct, such unions. Why should not these boards of various names agree that they will help the rival factions in no town in which the people, if they would only unite, are abundantly able to support their own religious institutions? That would leave money for legitimate Church extension at home and abroad. We are glad to know that to a certain extent this is being done. In some States, with the "*Dirigo*" State of Maine to set the example, a federation of churches is gradually solving the problem, uniting or eliminating, and greatly aiding the common cause. In some of the Western States two previously rival home mission boards have agreed to fight no more, but to parcel the territory so that one shall not interfere with the other, at least in opening new work.

The spirit of union is spreading. Its most notable evidence is in the establishment of the Federal Council of the Churches of Christ in America, which will hold in Philadelphia next December the first of its quadrennial sessions. It represents in its membership pretty much all the Protestant Churches. Its business is to make evident to its members and to the world the unity of Christendom. It will have various ways to bring a common force to bear for moral and spiritual ends on the nation; but one of its principal aims ought to be to prevent this wasteful and destructive overlapping of rival churches. Such an illustration as we give this week indicates a chief field for its effort.

The Senate and Venezuela

THE Venezuelan controversy has been referred to the Senate with the suggestion that authority be given to President Roosevelt to forbid the importation of asphalt and coffee from Venezuela until President Castro is brought to terms. The Senate is not likely to accept the suggestion, as if put into operation it

would increase the cost of asphalt in this country and be prejudicial to the interests of our coffee traders, who have already advanced money on the Venezuelan coffee crop, and who consequently would have difficulty in recovering their advances. The suggestion was evidently made at the request and in the interest of the New York and Bermudez Company, which was dispossessed in 1904 of its asphalt property in Venezuela, and which would be pleased to have excluded from the United States the asphalt the present directors of the property are exporting to our markets from the Bermudez lake. The present directors are said to be Castro, Barber and Carner, Castro being the diplomatic director, Carner the digging director, and Barber the distributing director.

As far as the merits of the case are concerned, it would seem that the New York and Bermudez Company, having aided the Matos revolution in 1902, was deprived of its property. The procedure seemed high-handed and illegal, and the United States forthwith protested against it. Finally in 1905 our Minister to Venezuela induced President Castro, President Roosevelt and Mr. Hay to agree to submit to arbitration the claims of all nations against Venezuela, and Mr. Hay notified the Venezuelan Government, thru Mr. Bowen, that a protocol covering all the said claims would be sent to Caracas without delay. Mr. Hay, however, fell ill. During his absence from his desk, a protocol drawn up by the lawyers of the New York and Bermudez Company was sent to Caracas by Mr. Loomis, who was Acting Secretary of State, and it covered only the asphalt case, and was couched in such insulting terms that Castro understood at once that it was intended to anger him and break up the whole scheme of arbitration. He was astounded that a great arbitration plan formally approved of by President Roosevelt and Mr. Hay should be put aside flippantly and without any apology by Mr. Loomis, and he sent Señor Paul to Washington to discover what the situation was in our State Department.

In the meantime, Mr. Hay recovered and sent his so-called ultimatum to Venezuela, but was almost immediately taken

ill again, and went to Europe. Before Castro had time to answer the ultimatum Señor Paul cabled from Washington that Castro's answer would be either ignored or replied to in conciliatory terms, and that the controversy would then be allowed to drop. The rumor then spread thru Caracas that Castro had information which gave him a hold on Mr. Loomis. That rumor was duly reported to Washington by the American Minister, who the next day was offered a promotion. He declined it. He was, however, soon recalled, and was replaced by Mr. Russell, a personal friend of Mr. Loomis's. From that date to this no progress has been made in getting Castro to settle American claims. He remains indifferent to all arguments and incredulous whenever threats are made. He seems to believe that he has sufficient influence in our country to prevent any steps from being taken that will compel him to yield. In view of all the circumstances there is only one practical way of bringing him to terms, and that is to blockade his ports. Threats and prohibitive duties he would laugh at. Actual war would be foolish and unnecessary. He will yield when he sees that he must, but he will never believe that he must yield until at least we blockade his ports. Pacific blockades are not very costly, and they have always proved to be remarkably effective. If, therefore, the Administration is sincere in its expressed desire to obtain justice from Castro, we may expect sooner or later to hear that our ships are blockading his ports; but we suspect that, with the Calhoun report in hand, even altho there has been plenty of time to tone it down, the Senate will find some way to let the matter drop out of sight.

The Jewish Rest-Day

A BILL proposed by a Jewish committee is before the Legislature of this State providing that those who for religious reasons observe Saturday as a rest-day may be allowed to do public work on Sunday. Naturally we should be inclined to grant this liberty, altho it might make much confusion and give rise to not a little evasion. But we observe that Mr. Isaac N. Seligman, of the Jewish banking firm of that name, and a man

of great distinction among Hebrews, has published a letter to the Jewish committee objecting to the bill, and saying that its enactment will accentuate the difference between Jews and other citizens. He thinks that in this land of liberty it is the part of wisdom to conform as far as may be to the prevailing usages of the people. He thinks it better that those who cannot consistently rest on Sunday should not encourage, by special legislation, the plying of labor and trade, with open shops, on the usual rest-day of the people, as this must direct undue attention to their exclusiveness and un-American tendencies.

There is much in that contention; and it does not contradict the Fourth Commandment, which only requires rest on the seventh day, but does not say when the seven days shall begin. If the first settlers of this continent had come by the Pacific instead of by the Atlantic the days of the week would not be what they are now. A Russian rabbi on the East Side who sails around the world from west to east would gain a day, and his seventh day would be our Sunday. Let them send an orthodox deputation to do it, and then follow their instruction. Or, instead of applying to Albany, apply to a congress of rabbis, and let them enact that for Jews Monday shall be the first day of the week, instead of the Gentile and pagan Sunday. That can be done. We are only suggesting relief for those who cling to the absolute letter of the command as against its spirit and meaning, which is simply that one day in seven shall be the rest-day. The Reform Jews do not need any relief; they do not believe that God has a special regard for one seventh day over any other.

It is curious to consider what the strict notion that God prefers Saturday to Sunday implies. It is based on the assumption that the reason given for the command in Exodus is more correct than that given in Deuteronomy. In Exodus we are told that the reason is that God created the world in six days and rested on the seventh; but in Deuteronomy a different reason is given, that the Hebrews toiled as servants in Egypt, and God delivered them with a strong hand; "therefore the Lord thy God commanded thee to keep the Sabbath day." Assum-

ing the Exodus reason to be the correct one, the modern Jewish argument for Saturday implies that God was somewhere about the Garden of Eden when He created the world, beginning it on the first day, which we now call Sunday, and ending it on Friday and resting on Saturday; and, further, that from that time to this, before and after the Flood, men have never lost their reckoning of the succession of the days of the week. Thus if Noah had neglected to keep tally in the ark, or the Jews when slaves in Egypt, it might well happen that the days have got mixt, and what the Jews hold as the seventh day may really be the Christian first or the Moslem sixth.

Then, further, on the strict Exodus theory the seventh day when God rested has actually been changed by twelve hours, for we are on the other side of the world, and our day laps over that length of time, so that here, or in San Francisco, the Jews' seventh day is nearly half of it in what was profane time in Eden; so that Jews now are not strictly observing God's seventh day, but that day in part, and in part some other day. Or that theory allows another assumption, namely, that as the religious day went around the earth from east to west in one direction from Eden, and also from west to east in the other direction until the days reached the Pacific Ocean, in one direction it shoved the Sabbath along for hours, and in the other it pushed it backward, but in both cases taking the liberty to change the identical twenty-four hours for something else.

All this is nonsense, but strict interpretation is nonsense. "*Summa lex, summa injuria.*" The kernel of the law is all we want; the shuck of it is bitter and to be thrown away. Further, the world was not made in six real days; and the Lord did not rest on any one day of the week; and the reason in Exodus does not give the origin of the Commandment; and all the old Commandment required of the Jews and all that the true reason of it requires of us is to rest on a seventh day, and we may appoint it as we please, remembering that our calendar of the week is utterly arbitrary, and any one may begin it for himself when he chooses, and give any name he chooses to the days.

But for the convenience of the people we put a general consent into law, setting apart for rest the day we call Sunday, which is a seventh day.

Again the Land Question

EX-GOVERNOR GARVIN, of Rhode Island, commenting upon our editorial of March 26th, entitled "Insurance Against Unemployment," intimates that we have been in error "in attributing the scarcity of valuable land to the advance of civilization rather than to its true cause, the unwise laws which promote speculation in land." Mr. Garvin thinks that if the ground rent or annual value of the land were taken for public purposes in lieu of all other taxes, natural opportunities would be opened and the conditions of colonial times would be restored, unaccompanied by the hardships of frontier life.

Mr. Garvin's propositions and inquiries in substance amount to the questions: Is not the philosophy of the single tax a complete and unassailable explanation of all economic conditions, good, bad and indifferent, yesterday, today and forever? And would not the single tax in operation turn all the earth into a Garden of Eden, sans the reptile, and give all the sons of Adam and Eve a chance to try life over again?

Well, to be frank, we don't think it is, and we don't think it would. To be still more frank, we don't think that Mr. Garvin would find it easy to demonstrate that the scarcity of valuable land is caused by unwise laws which promote speculation rather than by the advance of civilization. Why should anybody speculate in land, whether the laws be wise or unwise, unless advancing civilization is making land more valuable? Neither laws nor speculation can create something out of nothing. Speculative values, whether in land or wheat or cotton, are merely anticipated values, and the speculator realizes on his investment only if the advance of civilization fulfills his anticipations.

Mr. Henry George understood economic problems and the part that they play in social evolution a good deal better than most of his disciples did or do.

The single tax philosophy differs in more than one important particular from the body of doctrine set forth in "Progress and Poverty." It is a better program of shibboleths for practical propaganda because it is simplified to the last degree by leaving out most of the inconvenient complexities which have a way of cropping up in real life. Precisely for that reason it is far less scientific than the doctrine contained in "Progress and Poverty." Mr. George understood as well as anybody that the cause of land values is not speculation, but civilization, and that speculation is the cause only of a certain distribution of land values among private owners after civilization has created them.

We agree with Mr. George, as with Herbert Spencer and John Stuart Mill, who in a measure anticipated him, that we could have a better distribution of property in land values than exists now. We should like to see the public increase its ownership and take to itself an increasing proportion of unearned increment. We think that it ought to do this for two reasons: First, because these values, as a matter of fact, *are* created by civilization in its complex totality, and not by efforts of private owners, which can be singled out and imputed to them; secondly, because the private ownership of such strips or tracts of land as are held under franchise by street railway and steam railway corporations, or in fee by oil companies, iron and steel companies, and electric power generating and transporting companies, gives to corporations a monopolistic control and dictatorial power over industry, which ought to be enjoyed and exercised only by the sovereign people.

The single tax, actually levied and collected, in lieu of all other taxes, could no more restore colonial conditions in the neighborhood of great cities and large towns where workingmen are congregated than it could restore the pre-Darwinian scheme of creation. The utilization of the earth under modern conditions involves the problems of transportation and marketing, which are problems of capital and interest quite as much as problems of land and rent. It is right here that the socialist scores over the single taxer.

Our Investment at Jamestown

CONGRESS appropriated about \$2,765,000 for the Jamestown Exposition, probably ten times as much as the Exposition Company itself contributed. Of this amount possibly a million could be regarded as legitimate expenditure for showing the people what the various departments of the National Government are doing for their welfare, altho these exhibits would have been seen by more persons at less expense if they had been placed in any one of twenty cities, instead of on this "historic" site where nothing of any importance was ever known to have happened. Another million dollars was ostensibly "loaned" to the Exposition Company, but, instead of taking a mortgage on the real property to secure it, the Government took a lien on the hypothetical profits of the enterprise, 40 per cent. of the gate receipts. Now the Treasury officials report that the United States will get out of its million less than \$140,000. According to this the number of paid admissions to the fair must have averaged less than 1,500 a day. Last June, when we ventured to estimate the attendance at "perhaps less than 3,000," we were accused of "knocking" the Exposition. It appears instead that we owe our readers an apology for a gross exaggeration of its popularity.

The most remarkable thing about the Jamestown Exposition was the fact that the money contributed by the State and National governments was not expended in the way to make the best possible showing during the brief period that the Exposition was to be open, but for the permanent improvement of this hitherto barren waste. The drive along the waterfront for a mile and a half was lined with handsome residences looking like a new real estate suburb to one of our booming cities, except that the buildings in this case were more substantially constructed. When the visitor inquired the reason for this unprecedented form of exposition architecture, he was given his choice of three, equally unauthenticated, theories. One was that the grounds were to be made a new town or Norfolk extended to include them, to the advantage of the owners of the land between, the State buildings being sold as residences. In

support of this attention was called to the expenditure of a large amount of money in the construction of a boulevard and bridges connecting the city and grounds, for which there was no apparent need, since the trolleys and boats were not overburdened.

The second theory was that the grounds and buildings were to be made into a permanent resort and bathing beach, for which the place and its improvements were obviously well adapted. The third theory was that the President wanted to get a naval training station established at Hampton Roads, and was taking advantage of the desire of Congress to help along the Exposition to get the place fitted up for that purpose. If the visitor expressed his incredulity of this theory he was asked the difficult question, Why otherwise should the Government expend \$400,000 for the construction of two long piers of solid masonry extending from the Exposition grounds out into the waters of Hampton Roads and \$65,000 for dredging out the basin between them when these would have been of very little value to the Exposition even if they had been constructed before it was half over? And why should an expensive plant of briquet machines, gas producers and coal testers on a commercial scale have been installed on permanent foundations for a three months' show?

It is now reported from Washington that the outstanding debts of the Exposition Company due individuals amount to about \$750,000, and that by paying this the Government can secure the grounds and buildings for a naval training station. Now this may be a bargain, altho there do not seem to be any other bidders anxious to get the property at the price. It may be that the Navy Department needs a training station at this point. But it seems hardly fair that we should have to pay twice for the same thing. Among the improvements which are offered to us for this \$750,000 are the buildings and piers that we built a few months ago at a cost of \$1,155,000. This reminds us of a church fair where a woman donates a cake she has baked and her husband buys it back at auction, because she whispers to him that it will cost less than to make another

for home consumption. If we buy in this property at the price proposed we will have invested in the Jamestown proposition over \$3,500,000, and will have to show for our money only the crude materials for a naval station.

Publicity for Campaign Funds

AMONG the malodorous transactions brought to light last year in New York during an official investigation of the Metropolitan Street Railway Company and its numerous subsidiary corporations was the purchase of the franchise of the Wall Street and Cortlandt Street Ferries Railroad Company by the combination. The latter company had neither a road nor any other property except the franchise. This was worth little or nothing, and has never been utilized, except in this transaction. Anthony N. Brady sold it to the monopoly corporation for \$250,000. But he received \$965,607, with the understanding that he should at once pay back the excess, or nearly all of it, in checks to five persons and a firm of brokers. The five persons (who promptly received the money) were William C. Whitney, Thomas F. Ryan, William L. Elkins, P. A. B. Widener and Thomas Dolan, known as the "traction magnates" who controlled the street railway combination. Each of the five checks was for \$191,123.44. This was in May, 1902. The money thus distributed came to Brady from the treasury of the Metropolitan Securities Company, which was then at the apex of the street railway combination's pyramid of corporations.

No satisfactory explanation was made. The street railway company's books had been destroyed. Mr. Whitney, financial manager of the combination, was dead. Dolan said that in January, 1900, he had loaned Whitney \$100,000, at the latter's request, and that the check for \$191,123.44 was payment, with interest. Widener accounted for his check in the same way. To some it seemed remarkable that, on the same date, Whitney should have borrowed from himself \$100,000, to be repaid on the same terms. It was suggested that some one ought to be indicted. The railway company had paid out nearly \$1,000,000 for a franchise worth at most only a few thou-

sands, and more than two-thirds of the money had thus been distributed thru the agency of Brady. District-Attorney Jerome was censured by the press for inactivity. Owing to complaints of this kind, a special grand jury quite recently began to make inquiry.

Among those who testified before this grand jury were Thomas F. Ryan and certain officers of the railway company. Last week the daily papers asserted that in the testimony it had been explained that the \$500,000 was a contribution to the Republican fund for the campaign of 1900. Mr. Whitney, it was said, suggested that such a contribution should be made in behalf of the company. Each of the five persons, it was asserted, advanced \$100,000, which was placed in his hands. The checks were drawn to the order of a firm of brokers in Philadelphia, and this firm past them on to Whitney. There was no opportunity, the report continued, to make repayment until Brady's franchise was bought, and then the sums advanced were paid back by the company, with interest. In some of the papers this explanation was ascribed to Mr. Ryan. He declines to say anything about the matter. The report is in no sense official, for the grand jury is still in session and has made no presentment. The Philadelphia brokers say the story is untrue. Cornelius N. Bliss, who was treasurer of the Republican campaign fund, remarks that it is absurd. He had no knowledge of such a contribution.

We find it impossible to believe this tale. Neither Mr. Whitney nor Mr. Ryan was an admirer of Mr. Bryan. But both were prominent Democrats. The first had been a member of President Cleveland's Cabinet. The second has been credited with the exertion of great influence for the nomination of Judge Parker. It is incredible that they should have been engaged in contributing \$500,000 to the Republican campaign fund. So great a contribution would have "broken the record." Moreover, the money was advanced and used in the third week of January, 1900, several months before the national nominations were made!

If such an explanation has been offered by witnesses before the grand jury, it

cannot be accepted by thoughtful and reasonable men. We do not think any one, having in mind the decision in the Perkins case, has sought to avoid indictment by asking the jury to believe such a story. Probably neither a jury nor the public will ever ascertain for what uses this money was required and how it was expended. It may be that Mr. Whitney was the only man in this group of five who knew. He is dead. There were "political" demands upon the company, but these were associated with local pressure and had no relation to national campaigns. Recent investigation has shown that some of the financial operations of those who controlled and had made the combination were of such a character that assaults by predatory politicians must have been invited, and more than \$500,000 may have been required to appease them.

But many of our people will always believe that the money really was paid into the Republican campaign fund; and by them the collectors and custodians of that fund will be censured for accepting this great sum from the treasury of a public service corporation in New York.

This could not be if full publicity for campaign contributions and expenditures had been required by law in 1900. Unfortunately, even now there is no such law. This incident emphasizes the need of one. Bills for such a statute have long been before Congress. In the House, the Democratic minority is clearly committed to the support of such measures. By means of its great majorities in both the Senate and the House, the Republican party can easily pass such bills if it desires to do so. Another national campaign is at hand, but the dominant party appears unwilling to move in support of this reform. It declines to be admonished by such incidents as the disagreeable disclosures of Mr. Harriman's controversy with the President, one year ago, concerning the large contributions the former was asked to procure, and did procure, in New York. The President himself does not find it expedient to ask in his messages for the needed legislation.

Congress should pass, at the present session, a bill requiring complete publicity for national campaign funds. Corporations should be forbidden to contrib-

ute. Before the adjournment, there should be a new law compelling prompt publication of the names of contributors, with the amounts given, and of sworn statements setting forth in detail all expenditures.

We need to add no fulsome **Mr. Taft** words of praise to the measured and admirable article in which Mr. Clark has set forth the services Mr. Taft has rendered to the country. It is a rich country, rich in men, that can offer so many suitable candidates for its Presidency; and it is a worthy country in which not one candidate appeals to the people whose character and record do not appeal to the highest moral convictions of humanity. No reckless Marius and Sylla, no loose Alcibiades can please our people. Every candidate could stand with Aristides the Just. Policies may divide the citizens, but they are one in their valuation of character. There is no evidence of that moral decay which has appeared when nations have fallen. We offer no present choice of one candidate over another, but we have the right to say that for wide experience and proved wisdom, as well as for stainless character and high ideals for the country, no candidate can surpass Mr. Taft. Some other may prove more available, and some other might prove to be an equally wise President, but the nation will be fortunate if Mr. Taft is nominated and elected. He has wisdom and prudence and weight enough to be his own man, to guide his Cabinet, to avoid hasty decisions, to give good counsel to Congress, and strongly and wisely to conduct our foreign and our still more important colonial relations.

A Larger Army Authorities in the War Department are urging that our army be so organized or increased that it would be possible immediately on occasion to put 250,000 trained soldiers into the field. To ask that our regular army be increased from 65,000, or a possible 100,000 men, to 250,000 would be useless, and accordingly it is proposed to make up the remainder with militia. We have always had militia, and regiments of militia

were summoned and came at the opening of the Civil War. There is no serious objection to having a State militia—we have it now, for there are young men who love to play soldier, and middle-aged men who love to play officer and wear sash and sword. Before the Civil War “trainings” were popular occasions, but have now fortunately gone much out of fashion with the growth of the peace spirit. Yet if some men like to play soldier they ought to play it well, and get the soldier’s discipline, and be ready to go to war if a war should arise. So we see no great objection to the plan, which adds nothing to the regular army. As an argument for a larger available army it is asserted that Germany could suddenly drop an army of 100,000 men on New York before we could muster 20,000 trained men in the same place. Possibly; and a huge meteor might drop out of the sky upon New York and wipe it out.

An Ambassadors on a Bicycle

The Hill case becomes daily more mysterious. We have the assurance of the German Government that the Kaiser never made any objection to the appointment of Dr. Hill as our Ambassador at Berlin. And if he did not, who did and why did he? We learn from the cablegrams that if the Kaiser had objected, as he did not, it would have been on the ground that the Hills would live in a flat and that Mrs. Hill has been known to ride a bicycle and to do her own marketing. That such a plebeian personage should even be near the Court of Berlin was shocking to the Kaiser or some one else. Now, to us, on the contrary, these alleged habits of the better half of our embassy prove that she is eminently fitted for her important post. The majority of the women she represents do their own marketing and, if they live in cities, they live in flats. If they do not ride bicycles now it is because they regard it as an old-fashioned custom. It requires unusual intelligence and skill to carry a bag of eggs and a package of butter home from market on a bicycle. Probably many of our ambassadors would fall down on that test if the President should put them to it, as he did the office generals to the hard trotting ordeal.

We hope the Hills will stick to the good old American customs in Germany and establish a social settlement of democracy as an example to Europe. The adage "When you are in Rome do as the Romans do," does not apply to diplomatic representatives. They are not living in a foreign land, they are at home. Their house is by international law a part of the territory of the United States. They are not subject to arrest even if they violate the laws of the country. They have no reason, therefore, to conform to its customs. On the contrary it is their business to be typical American citizens. Some of the papers are discussing the absurd question, Can a man who is not a multi-millionaire represent the United States in Europe. The real question is, Can a man who *is* a multi-millionaire represent the United States in Europe? In what sense can a man like Mr. Charlemagne Tower, who spends twice the salary of the President in living expenses and entertainments, be regarded as a representative of the majority of American citizens? Have we today any more efficient and popular representative abroad than the man we had in Paris 130 years ago? He appeared at the most artificial and luxurious Court of Europe, and instead of trying to outdo his rivals by ostentation and extravagance he set them an example of simple living, plain dressing and straight talking, and straightway it became fashionable to have clothes *à la Franklin*. Since then American prestige has fallen in Europe, so we cannot reasonably expect to see Mrs. Hohenzollern marketing on a bicycle, but still we hope that will not be because Mrs. Hill abandons her habits out of a mistaken deference to Prussian prejudices.

When a thousand people
Is It Fair? have paid \$2 apiece to hear a distinguished woman lecture why should she wear a large black picture hat which conceals her from the gallery, carry a muff hung over one arm and an opera bag on the other, so she can make no gestures, read the whole of her lecture word by word from a manuscript in her hand, hold her head down as if she talked to her feet, and begin each sentence in a high pitched voice and

end it in so low and muffled a tone that those a few seats from the front cannot hear what she says—why? Yet that is exactly what Mrs. Humphry Ward did last Friday at the Hudson Theater in New York. Her uncle, Matthew Arnold, after his first lecture in America, took private lessons in elocution before continuing his tour. Would Mrs. Ward think it honest if her publisher should charge \$1.50 for an edition of "The Testing of Diana Mallory" printed on poor paper, with broken type and pale ink, so as to be unreadable? We appreciate Mrs. Ward's charitable purpose in giving lectures for the playground fund, but she should have more charity for her auditors.

Dr. Barbosa's Speech at The Hague

It is only proper for us to print the following letter from the Brazilian Ambassador at Washington:

You will recollect that you kindly sent me some time ago the issue of January 9th, 1908, of THE INDEPENDENT containing the speech delivered on the 9th of October, 1907, by the Brazilian first delegate, Senator Ruy Barbosa, at The Hague Conference. While duly appreciating the high tribute paid by you to our eminent Representative, I did not recognize his manner, nor the diplomatic reserve, in a very large passage of the speech, which seemed to me an interpolation. I therefore referred the matter to Sr. Ruy Barbosa, and he telegraphs to me that there is not in that whole passage a single word of his own, as the official text of the Minutes of the Conference would show to you.

I trust you will see the manner of redressing the mistake thru which the commentary of another person was made part of Senator Ruy Barbosa's speech.

The passage referred to goes from the first words of the paragraph beginning *No one denies*, in the first column on page 80, to the words *belonged to the smallest States* in the second column of page 81.

JOAQUIM NABUCO.

This letter was a surprise to us. The speech of Dr. Barbosa, made October 9th, 1907, we had translated from the French of Mr. Stead's daily paper issued during the Hague Conference, the *Courrier de la Conférence*, October 10th, 11th, 12th, as it was printed in sections. We took that portion that is now repudiated from the issue of October 10th, where it had an introduction which seemed evidently to imply that the remainder was

part of Dr. Barbosa's speech. In the issue of the Spanish paper *La Semana*, of this city, in its issue of October 30th, two months before our publication, this incriminated portion was printed as Dr. Barbosa's speech, and copies were sent to him, so that we were not alone in supposing it to be his. We greatly regret the error, and offer an apology to Dr. Barbosa.

The Parlor Socialists

As the artist scorns the philistine, as the self-made man hates the professor, and as the Marxian despises the bourgeoisie, so just now everybody seems to be "knocking" the parlor socialists. There is something to be said, however, for the young men and women of wealth and education who forsake all else and heed the bitter cry of the toilers. Up to within a few years ago the socialist was generally held in the popular mind to be an unkempt, wild-eyed, imported street-corner orator who ranted against his exploiting superiors in un-Boston English. At last, however, socialism is becoming understood. It is not classed any more with anarchy and free love. It is even getting "respectable," using the word in its good sense. The people have long been ready to forgive the unemployed masses for adopting it, but they still do not know what to make of the sons of the rich who give up their racing stables and the heiresses who forego foreign nobleman so as to work shoulder to shoulder in the movement from below. These brave young crusaders are as incomprehensible to the man in the street as is an educated and property-owning negro to a Georgia colonel. The chief objection to the parlor socialists seems to be that they have not divided up their inherited wealth with the poor. The answer to this is that the socialists do not believe in charity. They prefer "justice," whatever they may mean by that. It is conceivable that a church member might feel impelled to sell all he has and give it to the poor. That might be good Christianity, but it would be bad socialism. There are other objections to the parlor socialists, but most of them simmer down to the fear that thru them the socialist movement may be led into greater influence, and that is disconcert-

ing to those who believe in the religion of "Things as They Are." We do not believe that within the lifetime of any of our subscribers the co-operative ownership of the means of production and distribution will be a live political issue in the United States, as is expected under the socialistic régime. But practical progress will be along socialistic lines, and a socialism which draws its support from all classes is safer and better than a socialism of the proletariat, by the proletariat, for the proletariat.

Overwise Critics

Not a few wise farmers, mostly of the city type, have written us jeering letters about that picture of "Harvest Time," by Raphael Lewisohn, in our issue of March 26th. That picture was all right; it is not left-handed at all, as it looked to them. It is not an American grass sithe that the reaper is wielding, but a European sithe for grain. What our critics took for the blade in the air is simply the wooden support that rests against the left arm, and the blade is in the grain. The thing is explained in a letter from Mr. J. K. Noyes, of Binghamton, N. Y.:

We have an old man in our employ who has done all kinds of farm work, to whom I showed this picture today. His comment was "Oh, that's no blade, that's a steadying stick," and he described it, saying that in his younger days, some thirty or forty years ago, he had seen several of these used in connection with a reaping sithe where he was brought up, in Bucks County, Pennsylvania. The "stick" is fastened to the upper left-hand end of the handle so as to rest against the left arm, while the blade is in the grain at the lower right-hand end, as we all thought it should be; so probably the artist knew what he was doing after all, in spite of the queer look of the picture. The man mentioned said he had seen a woman using one of these peculiar sithes.

So Mr. Lewisohn was right, after all; only he painted his picture in Europe, and his American patrons don't know a steel blade from a steadying stick.

"Men Versus Women"

A correspondent presents with admirable clearness the objection which doubtless others have raised against an article by Ida Husted Harper in our last issue:

My objection is not due to any prejudice against the cause advocated. I object to the

distortion of things. I am a married man, and in our home there is no *versus*. The purse is a family treasury, access to which is no freer to the one than to the other. Our house is a society without a president and yet not without good order. I mention this not that I think ours a model home, but rather because it is so much like the many homes I have been familiar with in different communities of five States. The kind with a *versus* on the idol-stand is exactly the exception. While I am in sympathy with universal suffrage—not as a condescension, but as a simple right—yet I am persuaded that the real emancipation of men and women is marriage, not that all married women (or men) are free; but that the vast majority of them know and appreciate a freedom so large that they cannot snatch enthusiasm sufficient to seek for more freedom or for another sort.

My objection, therefore, which amounts, frankly, to a revulsion, shared by others of your readers, as I have reason to know, is due to a protest against an exaggerated sex consciousness. When it cries for equality it over-emphasizes difference. It damages what it seeks to remedy. The lesson we need to learn is, not that since man is one, woman is one also; but that woman is half and man is half and both together are one. And this lesson will never be learned by one sex setting itself against the other.

I share with the rest of normal humankind a natural aversion to the freakish, whether it come in the form of a physical *misgeburt*, as the Germans call it—or in abnormal ideas. I can tolerate an opinion that differs radically from my own with perfectly sweet temper if the opposing thought presents credentials of normality; and this, too, with reference to the most important questions of life. But a distorted idea is no more beautiful than a deformed body.

Here is light on a question of college order and morals. Students in the New York University thought a freshman too assertive. He had attended a gymnastic contest when the impudent sophomores had told him not to. So they seized him and gave him a ducking, and told him he must leave college. The father says he will bring legal action against the offenders. Of course the college officers must take their own action, but it is more important to have it understood that the civil law applies to the offenses of students.

It will be most unfortunate if the Hill episode does not set Congress to considering the matter of the proper provision for our diplomatic representatives abroad. The European nations own houses in Washington and in the several European capitals for their legations.

We have not one in Europe, altho we have in Peking, Tokyo and Constantinople. A bill had once been favorably reported to the House of Representatives making appropriations for legation buildings in all the European capitals, but it did not come up for action. A plausible report is that Mr. Hill had arranged to engage a flat for his residence in Berlin, and that the Emperor did not think it comported with his dignity to visit an apartment house. Our representatives ought to be housed in a way befitting the rank of the country, and we hope Congress will provide therefor.

The other day the wife of a New Yorker whose husband bears a distinguished financial name made application for divorce. A justice of the Supreme Court of the State heard the complaint, and signed an order appointing a referee to hear testimony and report findings. The hearing will be in secret. The husband must appear by counsel, but he need challenge no witness and make no contest. It may have all been fixt up between the lawyers of the two parties before the action was begun and its conclusion agreed upon. This suggests again the desirability that collusion be prevented by having an officer appointed whose duty it shall be to make defense for the State whenever the parties are in collusion.

Mr. Carnegie makes his gifts with not a little wisdom. He adds five million dollars to the ten-million Foundation for retiring allowances for college professors. This makes provision for teachers in State institutions, who were excluded under the original gift as well as teachers in denominational colleges. It is a noble gift, and most usefully applied.

The new Oklahoma law which provides that banks shall insure their depositors against loss seems to work well. The State banks have taken out insurance certificates, and not a few of the national banks, and it is believed that all will soon do so.

Have you sent us that Vacation article of yours and the photographs yet?

The Limitations of Fraternal Orders

COMMISSIONER of Insurance E. E. Rittenhouse, of Colorado, has done good service in calling attention to the urgent need of establishing a standard of fraternal insurance rates. It is high time that some action should be taken whereby a minimum rate, providing for adequate reserves based on actual mortality experiences, should be established. Assessment companies have sprung up, flourished for a season while the membership was youthful, but with the natural increase in mortality rates, due to the advancing age of members, have found the so called "pocket reserves" both a delusion and a snare. Some of these assessment organizations have tried to save themselves from certain destruction by advancing rates, but again and again have they mistaken the margin of safety, because insurance is based on the law of averages, and they have ignored this law. Fraternal insurance is delightful in theory, but dreamful in practice, being of the substance that dreams are made of. Because of our overconfidence, insurance concerns of the fraternal order have been allowed to exist too long. Supervision, that is so healthful, has been lacking, and many wrecks have in consequence strewed the banks of insurance streams. Optimistic fraternal managers are only just beginning to realize something of the problems that confront them. Commissioner Rittenhouse well says:

"It is nothing short of a crime to permit fraternal insurance orders to go on without laying by a proper reserve, based on the well known laws of mortality. It is the most unjust discrimination to protect the holders of old-line life insurance policies by requiring proper reserves to be placed behind them and to have the holders of fraternal death certificates unprotected by such reserves."

The Royal Arcanum is perhaps the most recent, certainly it is a most pertinent, example of the inadequacy of fraternal rates. The Court of Honor, an Illinois fraternal, is about to rerate its business. It had to. The Ancient Order of United Workmen of Missouri is

likewise to change its rates, not to mention other cases. A surplus is the only salvation of the fraternal. The old line companies have found their surpluses a veritable anchor to windward, and in times of stress, in times of epidemics, there stands the surplus like the rock of Gibraltar that it is. The buying of life insurance is something of an art, and "pocket reserves" are not always to be relied upon—at least not as certainly as a bank account subject to check on demand. The fraternal orders are indeed facing a crisis. The Armstrong investigation turned the limelight upon the general subject of insurance, and there is now a general trend toward insurance legislation. Some of the resultant legislation has fallen short of the purposes for which it was devised, but legislation is righteously bound to force fraternal to adopt adequate rates sooner or later. There has been too many cases of sad disappointment and woful want due to assessment insurance that sounded cheap to the ears of those who did not know, but which in actual practice turned out to be highly extravagant when the cost was finally counted. Fraternal assessment insurance as it has been is a broken reed. It fails at the most critical moment. The funeral and it go hand in hand. If you are thinking of insuring, at least talk the matter over with some one who can explain the difference between old line insurance with its cash reserves and the fraternal brand with its deceptive "pocket reserve."

THE automobile is now firmly established as a large contributor to fatalities. According to statistics compiled by The New York Life Insurance Company this engine of destruction killed or injured 1,568 persons last year. A daily paper that contains no mention of some kind of an accident due to an automobile would be a novelty. Those who love horse driving know the haughty arrogance of most of the drivers of these modern machines, out of which many preventable accidents arise.

Respite for the Coal Roads

AN important provision of the new Hepburn Railroad Rate law is that which was designed to compel railroad companies to withdraw from the business of mining and selling coal. It forbids any railroad company, after May 1, 1908, to carry across a State line "any article or commodity (other than timber and the manufactured products thereof) manufactured, mined or produced by it or under its authority, or which it may own in whole or in part, or in which it may have any interest, direct or indirect, except such articles or commodities as may be necessary and intended for its use in the conduct of its business as a common carrier." Because property and securities to the value of not less than a billion of dollars were affected, the problem was one of a very serious character. Compliance with the law appeared to be prevented by difficulties practically insurmountable, or which could be overcome only at the cost of great loss and a widespread disturbance of business.

It is now probable that the railroads will gain a respite of nearly two years. A joint resolution was introduced in the Senate by Mr. Elkins, on the 31st ult., suspending until May 1, 1910, the exaction of the prescribed penalties. This resolution the Committee on Interstate Commerce has since decided to report favorably, but with an amendment making the date January 1st, 1910, and so reducing the additional time from two years to twenty months. As the resolution is approved by the Interstate Commerce Commission it will probably be past in both the Senate and the House. The main purpose of it is to give time for getting from the Supreme Court, in a test suit, a decision as to the constitutionality of this part of the Hepburn act. The "commodity clause," as it is called, will continue to be in force, and civil suits against the companies by complaining producers are not prohibited.

The evils which suggested the enactment of this clause were real and great. If the proposed extension be granted, the Government, pending the court's decision,

should strive to prevent, by such supervision and investigation as the law permits, the unjust discrimination at which the clause was aimed. If this be done, the suspension will probably be for the public good, because rigid enforcement of the clause, beginning with May 1st next, would cause profound disturbance and greatly retard the country's recovery from the recent panic.

....Seven of the banking reform bills suggested by Mr. Williams, the New York Superintendent of Banks, have been past by the Legislature at Albany and sent to the Governor.

....In the Legislature of Nova Scotia there has been past by unanimous vote a resolution asking the Dominion Government to acquire all the railroad lines in the Province and add them to the Intercolonial system as branches.

....Gradual recovery from panic conditions is indicated by a decrease in the number of idle freight cars from 342,828 on February 5th to 319,264 on February 19th, 313,373 on March 4th, and 296,035 on March 18th.

....National banknotes in circulation on April 1st amounted to \$696,407,355, against \$603,987,114 on October 1st, 1907, and \$597,212,063 one year ago. Nearly all of the increase was made in November and December, to supply the panic demand for currency.

....The Lincoln National Bank of New York, of which ex-Postmaster-General Thomas L. James is president and Charles Elliot Warren cashier, and whose capital is \$1,000,000 and surplus and undivided profits \$1,177,610.92, now has deposits of \$18,269,768.11. Its total resources, as shown by the recently published statement, are \$21,659,541.07. Marcellus Hartley Dodge, the grandson of the late Marcellus Hartley, has recently been elected a director. The other directors are Thomas L. James, Matthew C. D. Borden, Charles C. Clarke, E. V. W. Rossiter, James Stillman, Joseph P. Grace, William G. Rockefeller, W. K. Vanderbilt, Jr., and Eben E. Olcott.

VOL. LXIV NEW YORK, THURSDAY, APRIL 16, 1908

No. 3098

Survey of the World

The Political Campaign

At the beginning of the present week the managers of Secretary Taft's canvass asserted that 241 delegates who would vote for him had already been chosen. A more conservative and impartial estimate made the number about 200. One prominent journal publishes tables giving the Secretary 423 on the first ballot, and found that Mr. Bryan could rely with certainty upon only 592. About 250 more are needed to make the two-thirds required for a nomination in the Democratic convention. There were signs of a movement in behalf of Judge Gray, whose friends opened headquarters in Washington. A conference in his interest was held by fifty prominent Democrats from Pennsylvania, Delaware, New Jersey and Maryland. They predicted that the votes of these four States, at least, would be cast for the judge on the first ballot.—The opposition of negro voters to the nomination of either Secretary Taft or President Roosevelt was repeatedly shown. A conference attended by negroes from thirty-seven States was held in Philadelphia. The presiding officer, ex-Congressman White, of North Carolina, remarked in his opening speech that he "would sooner vote for an avowed enemy like Ben Tillman" than "for a hypocritical friend" who had stabbed him in the back. The resolutions adopted say:

"We herewith solemnly and with great earnestness declare our conviction to be that neither Theodore Roosevelt nor William H. Taft, if nominated for the office of President by the Republican delegates at the convention in Chicago, can or will receive the support of the negro voters of the United States."

They also ask for the nomination of Foraker or Knox. At the Virginia Re-

publican convention, negroes were virtually excluded. It is now reported that they will send to Chicago contesting delegates from every district in the State. Addressing the Baltimore conference of the African Methodist Episcopal Church, on the 11th, Senator Foraker spoke of this action in Virginia, and said that if the national Republican party should prove to be a Lily White organization there would soon be new parties in the field. In the House, at Washington, last week, there was read a letter from Walter S. Thomas, chairman of the Ohio Afro-American League, denying the assertion of Mr. Bannon, of that State, that the negroes there could not be induced to vote the Democratic ticket. He said:

"I am absolutely convinced of this fact, that should Secretary Taft be nominated at Chicago, the colored voters of Ohio and of the whole United States, 95 per cent. of them at least, would cast their votes for the straight Democratic ticket for President or remain away from the polls, thus making the election of a Democratic President absolutely certain."

—At the Republican convention in Massachusetts, on the 10th, it was agreed by Senators Crane and Lodge that the delegates at large should not be instructed. In the platform adopted is the following statement:

"A resolution declaring that the preference of the convention was for Mr. Taft for President was submitted to your committee. Upon consideration we have unanimously agreed that it is unwise to include a resolution in favor of any particular candidate in the platform. A number of the committee are favorable to Mr. Taft's candidacy and we all recognize that a majority of the delegates to the convention desire his nomination. It is, however, very uncertain whether a resolution of preference would be carried, and its presen-

tation would certainly lead to a contest, which would be injurious to the welfare of the party. For these reasons and because of their earnest desire for a harmonious convention the minority members of the committee join with the majority in their decision not to present a resolution of preference."

It is well known that a majority of the delegates from Massachusetts will vote at Chicago for Secretary Taft.—New York's Republican convention was held on the 11th. The four delegates at large were directed in the platform to use all honorable means to bring about the nomination of Governor Hughes. An attempt by some of the Governor's friends to secure in committee more emphatic instructions was lost by a vote of 10 to 24. The prevailing comment of the daily press is that the convention, while supporting the Governor's candidacy without expression of dissent, was not enthusiastic in his interest. The applause in commendation of Mr. Roosevelt was noticeably hearty. It is known that at least four of the district delegates will vote for some other candidate, and it may be that the Governor will lose 14 out of the State's entire delegation of 78. One of the delegates from the Albany district, William Barnes, Jr., attacks the Governor in a published statement, asserting that he has not been faithful to his party. Mr. Barnes is the local political leader whose influence is said to have moved Senator Grattan to oppose the Governor's race-track bills.

Race-Track Betting in New York

After the passage of the bills against public race-track betting by a vote of 126 to 9 in the New York Assembly it was expected that a majority in the Senate would vote for them. This result appeared to be indicated by the Senate's action on the 1st, when an amendment deferring the prohibition until September 1st was rejected by a vote of 23 to 26. But when the bills were taken up on the 8th for final action they were defeated by a vote of 25 to 25. All the members of the Senate were present, and all voted. One seat has been made vacant by the death of Senator Franchot. In the affirmative there were 23 Republicans and 2 Democrats; against the bills 8 Republicans and 17 Democrats were counted. There has been much talk about an

alleged use of money by race-track interests. An ingenious but unsuccessful attempt was made to prevent the attendance of Senator Fancher, a supporter of the bills. Two of the Republican Senators, Grattan and Wilcox, who voted in the negative, have been very severely criticised. Only a few days earlier, Grattan (representing the Albany district) had promised publicly in the Senate to vote for the bills. He yielded, however, to the arguments of William Barnes, Jr., who is called the Republican boss of Albany, and who has opposed Governor Hughes and his reforms. The Ministers' Association, of Albany, has adopted resolutions expressing sharp disapproval of the course taken by both Barnes and Grattan. Senator Wilcox, of Auburn, was moved by the influence of his wife, who is fond of sports and enjoys the races. Since the vote in the Senate, she has permitted her views to be published. The Senator's action was disapproved at a large meeting in Auburn on the 12th, under the auspices of the Church Federation of Men's Clubs, and held in the building of the First Methodist Church, of which he is a member and a trustee. After the Senate's action, Governor Hughes said:

"It is impossible to believe that the people will permit the plain mandate of the Constitution to be ignored. The contest has not ended. It has only begun. It will continue until the will of the people has been obeyed."

On the 10th he issued a call for a special election, to be held on May 12th, in the district not now represented. The late Senator Franchot was a Republican, and he supported the bills. Some of the Governor's friends fear, however, that the district (in the vicinity of Niagara Falls) will now elect a Democrat. Moreover, there may be legal complications, because the district was made by an apportionment which has since been pronounced unconstitutional. The Legislature has decided to adjourn on the 23d, and the Governor will probably call it back to the capital for an extra session. He has sent to the Legislature a message, again urging the passage of the race-track bills. These can be taken up once more in the Senate, owing to the vote of the Lieutenant-Governor to break a tie on a motion designed to bury them, but there is thus far no sign that the record would be

changed. Speaking at Watertown on the 10th the Governor evidently had in mind Grattan and Barnes when he said:

"I believe in party organization, but not in the dictation of petty satraps. What a sorry time it is when a man can bully a Senator of this State into voting against his conscience! Let it be made possible that no man who has taken the oath of office must feel that he is the servitor of some man and must do his bidding."

Negroes' Rights on Railways President Roosevelt made public on the 8th a letter sent by him on the 2d to the Attorney-General, suggesting proceedings by injunction to compel certain railroads in the South to give to negro passengers accommodations as good as those furnished for the use of whites. Having directed attention to the Commission's report concerning its order of June 27th, 1907, he said:

"It appears that the Nashville, Chattanooga & St. Louis Railway Company has not complied with the order of the Commission to furnish the same facilities to colored passengers paying first class fare that are furnished to white passengers paying first class fare. From time to time various complaints have been made to me by reputable colored people to the effect that the accommodations furnished to colored persons on certain railways are filthy and inadequate compared to the same accommodations furnished to white passengers paying the same fare. The Commission has taken what is unquestionably the right ground: That where separate accommodations are provided for white and colored passengers, the accommodations for colored passengers shall be as good as those furnished to white passengers for the same money. In other words, while there is nothing in the law which forbids separate accommodations, these accommodations must be equal. This principle of equality of accommodations is set out explicitly in various State laws. For instance, the code of the State of Alabama provides that there shall be 'equal, but separate, accommodations for the white and colored races, by providing two or more passenger cars for each passenger trains, or by dividing the passenger cars by partitions.' The action of the Commission has simply been to insist that the accommodations be equal in convenience and comfort for the same money, wherever the separation is made. In this particular case where the railway has neglected to comply with the order of the Commission, it is important that compliance with this order be immediately obtained. I suggest that you proceed to enforce the order by injunction proceedings, unless in your judgment some other course is preferable."

Officers of the company named deny that they have failed to provide the equal accommodations required. It is recalled

that in February several bishops of the African Methodist Episcopal Church filed with the Commission a complaint to the effect that the Seaboard Air Line, the Southern Railway, the Central of Georgia, and the Pullman companies were discriminating against negroes in passenger accommodations. Copies of the complaint having been served on these companies, they filed denials in reply and asked for specifications. This matter is still pending.

For Legislation Against Anarchists The President recently directed the Postmaster-General to exclude from the mails *La Question Sociale*, an anarchist paper published in Paterson, N. J. He also asked Attorney-General Bonaparte for an opinion as to the existing laws concerning such publications. On the 9th he sent to Congress the Attorney-General's reply, with the following message:

"I herewith submit a letter from the Department of Justice which explains itself. Under this opinion I hold that existing statutes give the President the power to prohibit the Postmaster General from being used as an instrument in the commission of crime; that is, to prohibit the use of the mails for the advocacy of murder, arson and treason; and I shall act upon such construction. Unquestionably, however, there should be further legislation by Congress in this matter. When compared with the suppression of anarchy, every other question sinks into insignificance. The anarchist is the enemy of humanity, the enemy of all mankind, and his is a deeper degree of criminality than any other. No immigrant is allowed to come to our shores if he is an anarchist, and no paper published here or abroad should be permitted circulation in this country if it propagates anarchistic opinions."

In the accompanying opinion, Mr. Bonaparte says that an article in the Paterson paper, advocating the use of dynamite for the killing of policemen and soldiers, is a "seditious libel," and that the publication of it is "undoubtedly a crime at common law." But the Federal courts have no jurisdiction, because there is no Federal statute making such publication an offense against the United States. Chief-Justice Fuller and Justice Field are cited as authority for the assertion that Congress has full power to make such publication a criminal offense. The Postmaster-General, however, is justified

in excluding from the mails "any issue of any periodical, otherwise entitled to the privilege of second-class mail matter, which contains any article constituting seditious libel, and counseling such crimes as murder, arson, riot and treason." While neither the Government nor its officers can be held legally or morally responsible for the transportation of sealed letters, they have a legal right to inspect printed matter intended for general circulation, and cannot escape responsibility for the consequences "if they knowingly transport matter which becomes, and which they must know might reasonably be expected to become, a cause of crime."—Dispatches from Washington say it is not expected that Congress will take action for additional legislation on the subject.—It was reported on the 7th that Emma Goldman had been detained at Noyes, Minn., on the international boundary, while returning to this country from Canada. This was not true, however, and she arrived at Minneapolis on the following day. By direction of the Canadian Government she had been escorted to the boundary by the Winnipeg police.

Railroad Cases The Union Pacific Railroad Company, E. H. Harriman and the other defendants in the suit of the Government for a dissolution of what is known as the Harriman railway system or combination have filed in the court at Salt Lake City their answers, which are in substance a general denial of the charges.—To the resolution deferring for twenty months the exaction of penalties under the commodity clause of the new Railroad Rate law there will be added, at the Attorney-General's suggestion, a proviso authorizing him to institute civil suits for the enforcement of the law. The commodity clause is the one which was designed to prevent railroad companies from owning coal mines.—In New York, on the 7th, the Great Northern Railroad Company was found guilty of paying rebates on sugar shipments, and was fined \$5,000. Two days later, in Minneapolis, the same company pleaded guilty in a similar case and was fined \$3,000. In Michigan, the Stearns Salt and Lumber Company has

been fined \$20,000 for accepting rebates from the Pere Marquette Railroad Company.—Before the California Railroad Commission, last week, the assistant freight traffic manager of the Atchison road admitted that his company in June last paid the Associated Oil Company \$38,000 in rebates on interstate shipments of oil.

Mr. Herbert Asquith
Asquith's Cabinet kissed the hand of the King at Biarritz and received the appointment of Prime Minister. His Cabinet is chiefly composed of the same men who served under Sir Henry Campbell-Bannerman, with the following changes: Herbert H. Asquith, Prime Minister and First Lord of the Treasury; David Lloyd-George, Chancellor of the Exchequer; Lord Tweedmouth, President of the Council; Earl of Crewe, Secretary of State for the Colonies; Reginald M'Kenna, First Lord of the Admiralty; Winston Spencer Churchill, President of the Board of Trade; Walter Runciman, President of the Board of Education. John Morley retains his position of Secretary of State for India, but will be made a peer, as his duties in the House of Lords will put less strain on his delicate health. Sir Henry H. Fowler, Chancellor of the Duchy of Lancaster, will also be made a viscount. The position of Under Secretary of the Colonies, vacated by Winston Churchill, will be filled by Col. J. E. Seely, member of Parliament for the Abercromby division of Liverpool, a close friend of Mr. Churchill, and, like him, a former Conservative. Mr. Runciman, who enters the Cabinet simultaneously with Mr. Churchill, has twice contested the district of Oldham against him when Mr. Churchill was a Conservative, and defeated him in one case. Lord Tweedmouth, perhaps on account of his connection with the Kaiser's letter, has been relieved of the position of First Lord of the Admiralty, his place being taken by the former President of the Board of Education. Mr. Lloyd-George, as the President of the Board of Trade, achieved a great reputation chiefly on account of his adroit management of labor problems. The Earl of Elgin retires

from the Cabinet, and is replaced by the Earl of Crewe. Four by-elections will have to be held. Three of the districts will undoubtedly return without question their former representatives, Mr. John Morley, Walter Runciman and Sir Henry Fowler, but Mr. Churchill, who comes from the northwest division of Manchester, a precinct originally Conservative, may have some difficulty in securing his re-election. He will meet his former opponent, W. Joynson-Hicks, Conservative, who polled 4,398 votes to Mr. Churchill's 5,639 at the last election.

The Open Door in Manchuria

The United States has recently come into conflict with both the Powers which are endeavoring to establish themselves in Manchuria; with Japan on account of an attack by Japanese on the consulate at Mukden, and with Russia because of the refusal of our consul at Harbin to recognize the political authority of the Russian railroad. The details of the Mukden fracas are not clear. It appears that the Japanese postman became involved in an altercation with the Chinese watchman of the consulate, who had refused him admittance. The American Consul-General, W. D. Straight, separated the combatants, but later the postman returned with three other Japanese, who forced their way into the bedroom of the consul and attacked him brutally. The consulate servants, with the aid of the Chinese police, seized the ruffians, and Mr. Straight had them taken in a cart to the Japanese consulate, where he lodged a complaint of the violation of the consular building. The Japanese Consul-General, Mr. Kato, replied by a curt letter, to the effect that the matter would be investigated, since the story told by the Japanese contradicted that of Mr. Straight. Tho the incident in itself is apparently insignificant, yet it assumes importance because of the general resentment felt by both Chinese and foreigners over the unwillingness of the Japanese officials to control or punish the numerous Japanese of disorderly character now thronging Manchuria. Legally the sovereignty of China in Manchuria remains unimpaired by the Portsmouth treaty and other conventions with Russia

and Japan; really both these Powers are continually striving, apparently in concert, to combine governmental functions with the management of the railroads under their control. In Harbin and Chailar, the Russian railroad centers of Manchuria, municipal governments have been established that are practically departments of the railroad administration. The Harbin municipal council is composed of seven members, three appointed and three elected, with a president nominated by the railroad company, thus securing a Russian majority. The foreign and Chinese residents were asked to sign a paper agreeing to pay the taxes and to obey the ordinances of this council. The American consul at Harbin, F. D. Fisher, refused to sign it and the German consul took similar ground. The French consul accepted the Russian administration. In February the Russian director of the railroad issued two edicts of a characteristically Russian tone; one imposes severe penalties for any criticism of the railroad administration either in the papers or in public meetings, the other requires all persons engaging in any kind of business on the railroad zone to procure licenses from the director of the road on payment of a fee and to submit to the regulation of their affairs in all their details by the Russian police under severe penalties of fine and imprisonment for failure to comply. Russia claims that the right to exercise such extraterritorial jurisdiction over the lands leased for the railroad route and towns is conferred on the Chinese Eastern Railroad Company by the terms of the contract of 1896 between the Chinese Government and the Russo-Chinese Bank, which financed the enterprise. In upholding the rights of the Chinese in Manchuria, Consul Fisher is doubtless acting under the direct authority of our State Department, which is steadfastly following the open-door policy inaugurated by Secretary Root. The question has been made a matter of diplomatic discussion between the Russian and American Governments, both at Washington and St. Petersburg. The Japanese manifest intense anxiety lest the stand taken by the United States in Northern Manchuria against the Russians should interfere with their projects in the south, altho they profess that they

have special privileges in addition to those derived from their being the successors of Russians in the original lease. The terms of the convention negotiated at Peking between China and Japan in regard to the Japanese control of the railroads have not been authoritatively made public, so the outside world cannot decide the justice of the appeals that are made to it by both sides in the frequent clashes of authority that occur in Southern Manchuria over railroad extension, postal arrangements, land questions and police power. The Chinese side of the question is fortunately in competent hands. The Viceroy of the three Manchurian provinces, Hsu Shih-chang, is a man of ability, and what he lacks in youthful vigor and foreign training is supplied by Tang Shao-yi, who was educated in Columbia University, and is now Governor of Feng-tien, of which Mukden is the capital. While in the Foreign Office at Peking he negotiated the Tibetan treaty with Great Britain and the railroad treaties with Japan. A new factor to the controversy is contributed by the petition of the Mongolian princes to the Chinese Government for the construction of a railroad between Kalgan, 125 miles northwest of Peking, and Kiakha, on the Trans-Siberian Railroad, east of Lake Baikal. That would give a short line thru the Gobi desert to Peking and the Gulf of Pe-chi-li, and obviously interfere with the profits of Russian and Japanese lines in Manchuria, so it would not be allowed even if it were a practical project from a financial point of view.

Foreign Notes In Portugal the two old "rotary" parties have, as formerly, divided the majority in the Cortes almost equally between themselves. The combined Opposition is larger than before, but the Republican representation is smaller than was at first reported. The constitution of the new Cortes will be as follows: Regenerators, 62; Progressists, 59; Independents, 17; Nationalists, 2; Republicans, 5; Francoists, 3; Dissident Progressists, 7. Four of the five Republicans were elected from Lisbon. Rioting has been frequent, notwithstanding the determined efforts of Premier Ferreira to

maintain order. The customary procession of Palm Sunday was omitted on account of the attacks made on the clergy when they appear in public. The capital is under martial law; cavalry patrol the streets and artillery is mounted in the squares. Over six hundred arrests have been made. Two members of the municipal guard in civilian dress met two plain clothes detectives near the palace, when each party fired upon the other, killing one man and seriously wounding another. —Count Andreas Potocki, Governor of the Austrian-Polish province of Galicia, was assassinated April 12th by a Ruthenian student, who had obtained an audience under the pretext of asking for appointment as a teacher. He fired three shots with a revolver at the Governor and then gave himself up to the police, declaring that he did it to put a stop to the oppression of the Ruthenians by the Government. The brother of the assassin, learning of his intention, committed suicide before the murder. —Baron d'Estournelles de Constant, by means of an able speech in the French Senate, secured important concessions from the Government in favor of the Church. The funds which have been given for masses for the dead will not be confiscated by the Government, as was proposed, but will go to the support of aged priests who will carry out the intent of the donors. The employers in the Paris building trades, who have formed a strong organization to resist the demands of labor, have declared a lockout against the masons, throwing 50,000 of them out of employment, and will follow it up by a lockout of the other building trades, involving 200,000 men, if their terms are not complied with. These terms give them 20 per cent. increase over the wages that prevailed in 1906, giving the masons 19 cents an hour and stone decorators 26 cents, with a working day of ten hours during eight months in the year, nine hours in November and February, eight hours in December and January. The labor unions demand 5 per cent. more wages than those offered, a nine-hour day with eight hours in the three winter months, and the exclusion of non-union men. Many of the unions have seceded from the Labor Exchange in order to come to terms with the employers.

Mozart's Grave

BY ALFRED AUSTIN

POET LAUREATE OF ENGLAND

WHERE lies Mozart? Tradition shows
A likely spot: so much, no more:
No words of his own time disclose
Where crossed he to the Further Shore,
Tho later ages roused to shame
On tardy tomb have carved his name.

The sexton asked, "What may this be?"
"A kapelmeister." "Hand it in:
This common grave to all is free,
And for one more is room within.
It fills the fosse. Now tread it down,
With pauper, lunatic and clown."

Yet had he wizarded with sound
Electors, cardinals and kings,
While there welled forth from source profound
The flow of silvery-sounding springs,
Music of tenderness and mirth,
One with his very soul at birth.

And they? Where are they now? The bust,
The elaborately carven tomb,
Whose scrolls begrimed by age and dust,
None care to stoop and scan for whom,
Are all remaining to express
Their monumental nothingness.

Miter, and coronet, and crown,
Gaze into space that heed them not,
Unmeaning pomp of dead renown,
Medley of monarchs long forgot,
Who from the nation's ghastly strife
Won immortality—for life.

Once, on Nile's bank an artist raised
A temple at the King's command,
And on it name august emblazed.
But when a flood submerged the land
The name was washed away, and lo!
The artist's was inscribed below.

Thus vanish ostentatious lives;
But thru all time, beloved Mozart,
Your magic memory survives,
Part of the universal heart:
In joy a sympathetic strain,
In sorrow soother of our pain.

The potentates on whom men gaze,
When once their rule has reached its goal,
Die into darkness with their days;
But monarchs of the mind and soul
With light unfailing and unspent
Illuminate Fame's firmament.

SWINFORD OLD MANOR, ASHFORD, KENT, ENGLAND.

The Constitutional Position of Property in America

BY ARTHUR TWINING HADLEY, LL.D.

[The following article, with some slight modifications, was originally delivered as a lecture at Berlin University, where President Hadley, of Yale, has just delivered a course of lectures under the Theodore Roosevelt lectureship, founded by James Speyer, of this city.—
EDITOR.]

EUROPEAN observers who study either the specific industrial questions which have come before the American people for their solution, or the general relation between the industrial activity of the Government and that of private individuals, are surprised at a certain weakness of public action in all these matters. Our legislatures are often ready to pass drastic measures of regulation; they are rarely willing to pursue a consistent and carefully developed policy for the attainment of an industrial end. The people often declaim against the extent of the powers of private capital; they are seldom willing to put that capital under the direct management of the government itself. The man who talks loudest of the abuses of private railroad management shrinks from the alternative of putting railroads into the direct control and ownership of the State.

The fact is, that private property in the United States, in spite of all the dangers of unintelligent legislation, is constitutionally in a stronger position, as against the Government and the Government authority, than is the case in any country of Europe. However much public feeling may at times move in the direction of socialistic measures, there is no nation which by its constitution is so far removed from socialism or from a socialistic order. This is partly because the governmental means provided for the control or limitation of private property are weaker in America than elsewhere, but chiefly because the rights of private property are more formally established in the Constitution itself.

This may seem a startling proposition; but I think a very brief glance at the known facts of history will be sufficient to support and sustain it. For property in the modern sense was a comparatively

recent development in the public law of European communities. In the United States, on the contrary, property in the modern sense represents the basis on which the whole social order was established and built up.

Down to about the thirteenth century the system of land tenure in every country of Europe was a feudal one. It was based upon military service. A man held a larger or smaller amount of land on account of his larger or smaller amount of fighting efficiency. There were many rival claimants for the land. The majority of those who wanted to cultivate the soil were unable to protect themselves against the dangers of war. In the absence of an efficient protector or overlord no amount of industry was effective and no large accumulation of capital was possible. The services of the military chief were indispensable as a basis for the toil of the laborer or the forethought of the capitalist. It was the military chief, therefore, who enjoyed not only the largest measure of respect, but the strongest position under the law. As the conditions of public security grew better these things changed. From the fourteenth century to the nineteenth Europe has witnessed the gradual substitution of industrial tenures for military tenures, the gradual development of a system of property law intended to encourage the activities of the laborers and the capitalists, rather than to reward the services of the successful military chieftain. But down to the end of the eighteenth century this new sort of private property represented a superadded element rather than an integral basis of the constitution of society. And even the developments of the last hundred years in constitutional law and industrial activity have not been able to obliterate a certain sense of newness

when we contrast the position of the aristocracy of wealth with that of the aristocracy of military rank.

In the American colonies, on the other hand, where the public law of the United States first took its rise, conditions were wholly different. People wanted no military chieftain to protect them, no overlord to rule them. Each man was familiar with the use of a gun—how familiar, the overwhelming losses of the British troops in the Revolutionary War, when brought face to face with untrained farmers, testify very clearly—and was ready to take his share in protecting the community against the attacks of the Indians or their French leaders. There was plenty of land for all—plenty of opportunity for the exercise of labor and the use of capital. That man did the most for society who worked hardest and saved most. Under such circumstances the laws were so framed and interpreted as to give the maximum stimulus to labor and the maximum rights to capital. There was no military aristocracy which stood in the way. Governors were at times sent over from England who tried their best to assert Crown rights for themselves and their subordinates. But the net effect of the activity of these governors was probably to weaken rather than to strengthen the claims of feudal authority, because they made themselves so unpopular that they united the spirit of the colonists in their resistance to all such claims and pretensions.

At the time, therefore, when the United States separated from England, respect for industrial property right was a fundamental principle in the law and public opinion of the land. It was natural enough that this should be so at a period when every man either held property or hoped to do so. The strange thing is that this principle should have survived with so little change down to the present day. But there were certain circumstances connected with the adoption of the Constitution of the United States which provided for the perpetuation of this state of things—which made it difficult for public opinion in another and later age, when property holding was less widely distributed, to alter the legal conditions of the earlier period.

During the War of the Revolution,

from 1775 to 1782, and in the years immediately thereafter, the American Union had been a league of independent States, and a very loose one. They had formed an organization for mutual protection in carrying on the war. But this organization, even while the war lasted, was very weak indeed. The imminence of a common danger, which threatened to involve all, and the personality of a few leaders, of whom George Washington was the most conspicuous, were the only things that enabled the different colonies to act together. When independence was conceded by England in 1782, and the restraints of common danger were removed, the hopeless weakness of the central government became obvious. From 1783 to 1789 the United States had no means of securing concert of action at home or respect and consideration abroad. Clear-headed men felt the absolute necessity of centralization. The Constitution of 1788 was the result of a set of contracts, agreements, and compromises between two pretty evenly balanced parties—a States rights party, which wished to limit the powers of the Federal Government, and a national party, which was anxious to set some practical control on the autonomy of the State government.

The delegates to the convention of 1787 were concerned with questions of constitutional law in the narrower sense. They were not thinking of the legal position of private property. But it so happened that in making mutual limitations upon the powers of the Federal and the State government they unwittingly incorporated into the Constitution itself certain very extraordinary immunities to the property holders as a body.

It was in the first place provided that there should be no taking of private property without due process of law. The States Rights men feared that the Federal Government might, under the stress of military necessity, pursue an arbitrary policy of confiscation. The Federalists, or national party, feared that under the influence of sectional jealousy one or more of the States might pursue the same policy. This constitutional provision prevented the legislature or executive, either of the nation or of the individual States from taking property

without judicial inquiry as to the necessity, and without making full compensation even in case the result of such inquiry was favorable to the government. No man foresaw the subsequent effect of this provision in preventing a majority of voters, acting in the legislature or thru the executive, from disturbing existing arrangements with regard to railroad building or factory operation until the railroad stockholders or factory owners had had the opportunity to have their case tried in the courts.

There was another equally important clause in the Constitution providing that no State should pass a law impairing the obligation of contracts. In this case also a provision which was at first intended to prevent sectional strife and to protect the people of one locality against arbitrary legislation in another became a means of strengthening vested rights as a whole against the possibility of legislative or executive interference. Nor was the direct effect of these two clauses in preventing specific acts on the part of the legislature the most important result of their existence. They were a powerful means of establishing the American courts in that position of supremacy which they enjoy under the Constitution. For whenever an act of the legislature or the executive violated, or even seemed to violate, one of these clauses, it came before the courts for review. If the Federal courts said that the act of a legislature violated one of these provisions it was blocked—rendered powerless by a dictum of the judges. I do not mean that these two clauses in the Constitution were the chief source of judicial power. That power has been due primarily to the traditional respect for the judicial office existing in the United States, which has rendered it almost impossible for any but men of learning and character to aspire to it; and, secondarily, to the very great ability that certain of the early American judges—notably Marshall, Story and Kent—showed in expounding the law in such manner as to command universal approval. But if these provisions did not lie at the foundation of the positive authority of the judges, they were unquestionably a most powerful instrument in practically limiting the authority of legislatures, and to that extent in

strengthening the rights of the property holders.

The rights of individual owners against legislative interference were thus most fully protected. But how was it when property was in the hands of corporations?

Here also the power of control by the Government was weakened and the rights and immunities of the property holders correspondingly strengthened by two events, whose effect upon the modern industrial situation may be fairly characterized as fortuitous. One of these was the decision in the celebrated Dartmouth College case in 1819; the other was the passage of the Fourteenth Amendment to the Constitution of the United States in 1868.

I call their effect fortuitous, because neither the judges who decided the Dartmouth College case nor the legislators who past the Fourteenth Amendment had any idea how these things would affect the modern industrial situation. The Dartmouth College case dealt with an educational institution, not with an industrial enterprise. The Fourteenth Amendment was framed to protect the negroes from oppression by the whites, not to protect corporations from oppression by the legislature. It is doubtful whether a single one of the members of Congress who voted for it had any idea that it would touch the question of corporate regulation at all. Yet the two together have had the effect of placing the modern industrial corporation in an almost impregnable constitutional position.

In 1816 the New Hampshire Legislature attempted to take away the charter rights of Dartmouth College. Daniel Webster was employed by the college in its defense, and his reasoning so impressed the court that they committed themselves to the position that a charter was a contract; that a State, having induced people to invest money by certain privileges and immunities, could not at will modify those privileges and immunities thus granted. Whether the court would have taken so broad a position if the matter had come before it thirty or forty years later, when the abuses of ill-judged industrial charters had become more fully manifest, is not sure; but, having once taken this position and main-

tained it in a series of decisions, the court could not well recede from it. Inasmuch as many of the corporate charters granted by State legislation had an unlimited period to run, the theory that these instruments were contracts binding the State for all time had a very important bearing in limiting the field within which a legislature could regulate the activity of such a body, or an executive interfere with it.

Again, by the Fourteenth Amendment to the Constitution of the United States every State was forbidden to interfere with the civil rights of any person or to treat different persons in an unequal way. This amendment to the Constitution, past just after the close of the Civil War, was intended to prevent the Southern States readmitted, or on the point of being readmitted, to the Union from abridging the rights of the negro members of the commonwealth. A number of years elapsed before the effect of this amendment upon the constitutional position of railroad and industrial corporations seems to have been fully realized. But in 1882 the Southern Pacific Railroad Company, having been, as it conceived, unfairly taxed by the assessors of a certain county in California, took the position that a law of the State of California taxing the property of a corporation at a different rate from that under which similar property of an individual would be taxed was in effect a violation of the Fourteenth Amendment to the Constitution, because a corporation was a person and therefore entitled to equal treatment. This view, after careful consideration, was upheld by the Federal courts. A corporation, therefore, under the law of the United States, is entitled to the same immunities as any other person; and, since the charter creating it is a contract, whose obligation cannot be impaired by the one-sided act of the legislature, its constitutional position as a property holder is much stronger than anywhere in Europe.

Under these circumstances, it is evident that large powers and privileges have been constitutionally delegated to private property in general and to corporate property in particular. I do not mean that property owners, and specifically the owners of corporate property, have more *practical* freedom from

interference in the United States than they do in some other countries, notably in England. Probably they do not have as much. But their theoretical position—the sum of the conditions which affect their standing for the long future and not for the immediate present—is far stronger in the United States. The general status of the property owner under the law cannot be changed by the action of the legislature or the executive, or the people of a State voting at the polls, or all three put together. It cannot be changed without either a consensus of opinion among the judges, which should lead them to retrace their old views, or an amendment of the Constitution of the United States by the slow and cumbersome machinery provided for that purpose, or, last—and I hope most improbable—a revolution.

When it is said, as it commonly is, that the fundamental division of powers in the modern State is into legislative, executive and judicial, the student of American institutions may fairly note an exception. The fundamental division of powers in the Constitution of the United States is between voters on the one hand and property owners on the other. The forces of democracy on one side, divided between the executive and the legislature, are set over against the forces of property on the other side, with the judiciary as arbiter between them; the Constitution itself not only forbidding the legislature and executive to trench upon the rights of property, but compelling the judiciary to define and uphold those rights in a manner provided by the Constitution itself.

This theory of American politics has not often been stated. But it has been universally acted upon. One reason why it has not been more frequently stated is that it has been acted upon so universally that no American of earlier generations ever thought it necessary to state it. It has had the most fundamental and far-reaching effects upon the policy of the country. To mention but one thing among many, it has allowed the experiment of universal suffrage to be tried under conditions essentially different from those which led to its ruin in Athens or in Rome. The voter was omnipotent—within a limited area. He

could make what laws he pleased, as long as those laws did not trench upon property right. He could elect what officers he pleased, as long as those officers did not try to do certain duties confided by the Constitution to the property holders. Democracy was complete as far as it went, but constitutionally it was bound to stop short of *social* democracy. I will not go so far as to say that this set of

limitations on the political power of the majority in favor of the political power of the property owner has been a necessary element in the success of universal suffrage in the United States. I will say unhesitatingly that it has been a decisive factor in determining the political character of the nation and the actual development of its industries and institutions.

NEW HAVEN, CONN.

The Shadow Over England's Public Life

BY JUSTIN McCARTHY

[Since this article was mailed from London, Sir Henry Campbell-Bannerman has resigned and Mr. Asquith has become the Prime Minister, as Mr. McCarthy expected.—EDITOR]

THE political crisis which is now absorbing the attention of Parliament and people in these countries is, so far as I can remember, without any precedent in our modern days. There is a profound conviction everywhere that we are on the eve of some portentous event which threatens a disturbance to all ministerial projects and arrangements and to throw all political parties, for some time at least, into a state of confusion.

To begin with, the condition of the Prime Minister's health is such as to cause the most genuine and widespread alarm. The newspapers, no matter what may be the political party whose sentiment they represent, seem all inspired by kindly anxiety to make as little as possible of the threatened peril to the Prime Minister's life, and to find something encouraging in each successive bulletin issued by the medical authorities, and even these bulletins themselves sound as if they were endeavoring to mitigate as much as could be done the significance of the symptoms which they have to describe. So far as I can ascertain, however, from any who are in touch with the opinions of those most likely to be well informed, there does not seem any probability that Sir Henry Campbell-Bannerman will be able to resume his

position as actual Prime Minister. Even if he should survive the physical troubles which now threaten his life, it is not believed that he will be able to carry on the work which must be done by the leader of a ministry. His condition of health is such that any sudden excitement or the strain of any overtaking parliamentary crisis might bring his life to a close at any moment.

Now, the Liberal Government has at present a time before it fraught with the utmost trial and labor and strain, even if there were within itself no danger threatening sudden interruption to its work. The Liberal Government came into office with a tremendous majority to sustain it. But as I have told my American readers already, there has been something like a political and social reaction setting in since that time, and new parties have been formed in the House—the present Labor party, among others—which threaten in one way or another to interfere with what is called the solidarity of the Liberal ranks. The Government has undertaken to carry thru the House this session two of the most important and the most fiercely contested measures that could be undertaken by any ministry—the measure to reform and reconstruct the whole of the regulations dealing with the sale of intoxicating liquors, and the

measure which the House of Lords rejected last year for the reorganization of the educational system. This latter measure involves a new struggle with the House of Lords which Sir Henry Campbell-Bannerman and his colleagues have pledged themselves to carry on to the bitter end, even tho it should involve an appeal to the country on behalf of the House of Commons against the House of Lords—the representative assembly against the hereditary chamber. The measure for reconstructing the licensing system is already under discussion in the House of Commons, and is creating much difference of opinion even among the Liberals in Parliament and the Liberals thruout the constituencies. It is, indeed, a most sincere and stringent measure, its purpose is truly philanthropic, and if mere legislation could actually abolish intemperance in alcoholic liquids it might well be worth any risk in the effort to pass it into law. But it proposes to deal with the property of the publicans

after an autocratic fashion which might have seemed moderate enough in your State of Maine at one time, but which seems now to many here who are the sincere advocates of temperance somewhat too sweeping in its proposals for dealing with the property of the liquor sellers. Just at the moment when the Liberal Government was on the eve of this great struggle came the breakdown in the health of Sir Henry Campbell-Bannerman and the almost absolute certainty that he cannot continue to hold his position as actual leader of the Government.

It seems now a matter of certainty that Mr. Asquith is to succeed to the vacant place. Now, Mr. Asquith is undoubtedly a man of great and varied talents, and of talents which seem to prove themselves more and more as new and greater demands are made upon their exercise. He is one of the most brilliant advocates at the bar and one of the most effective debaters in the House of Commons, and when he was made Chancellor of the Exchequer in the Lib-

eral Government he at once proved himself, even to the surprise of many who knew him well, a very master of finance. He is also very popular among all who know him and a distinct figure in London's social life.

But now come the difficulty and the doubt. The Liberal Ministry and even the Liberal Cabinet may be said to be made up of two different Liberal parties. There are the advanced Radicals, to which belong such men as Sir Henry Campbell-Bannerman, Mr. John Morley, Mr. Gladstone and others,

and then there are those whom I may describe perhaps as the nominal Liberals, the Liberals who are not advanced, but, on the contrary, very backward so far as our present views of Liberalism are concerned, and who incline, as regards many important questions, to principles not much in advance of present-day Conservatism. These are the men who are commonly understood to be much under the influence of Lord Rosebery, and Lord Rosebery, as my American readers well know, has long withdrawn absolutely from his position as a Liberal leader. Now, Mr. Asquith is certainly

EMPEROR WILLIAM.

From photograph taken while on his recent visit to England.

not an advanced Radical in any sense, and is, indeed, conspicuous as one of those whom I may describe, for want of a better phrase, by the name of Conservative-Liberals. The Government has to rely very much on the support of the Irish Home Rule party, and the Home Rule party is now once again thoroly united, and with numbers which must count for much on critical divisions, and

servatives, and thus at some sudden emergency enable the Conservative Opposition to bring the Liberal majority down so low as to threaten the Government with coming defeat. Nor is it by any means certain that the Labor party might not, on some such occasion, give its support to the Opposition if the Liberal Government should seem to have really turned away from Radical principles.

All these possibilities or probabilities add new depression and distress to the sincere grief which all advanced Liberals must feel at the critical condition of the present Prime Minister's health. Sir Henry Campbell-Bannerman has proved himself in every sense a great Prime Minister, and has risen higher and higher with every difficulty that confronted him since he became the leader of his party. He is admired and esteemed even by his most determined political opponents. His thoro sincerity, his genuine statesmanship, his genial wit and humor, his persuasive skill as a debater and his sweet manners have won the sympathy and the admiration of all who know him, and his withdrawal from his position as leader must be regarded as a national calamity, even if it did not bring with it, as I fear it must do, much peril to all true Liberal interests.

The public attention has been diverted for a brief space from those grave and depressing considerations to a subject of an almost comic character. I refer to the sensation created by the extraordinary discovery which the *Times* professed to have made—the discovery of a conspiracy between the German Emperor and Lord Tweedmouth, the First Lord of the British Admiralty. The *Times* startled and bewildered its readers one morning by the announcement that the German Emperor had written an important and secret letter to Lord Tweedmouth about the increase going on in the British navy, which the Emperor regarded as a threat to Germany and against which Germany must at once prepare a measure of resistance or retaliation, and that Lord Tweedmouth had written a secret reply to his imperial friend, the practical effect of which was to betray some of the secrets of Britain's naval departments.

Most of us, the moment we heard of

W. P. FRITH.

there is the absolute certainty that the Home Rule question will soon have to be dealt with by the House of Commons. In that House, too, there are several Conservative members who have made up their minds to the fact that the principle of Home Rule for Ireland will have to be recognized, and that a national parliament will have to be given to the sister island which has for so long a period been treated as a suppress step-sister. If, therefore, the Irish Nationalists should become convinced that the Government under the expected Prime Minister is not really inclined to stand by the Home Rule principle, it may be taken for granted that they will on many questions give their support to the Con-

this article, were naturally reminded of an earlier event in the history of the *Times*, when that journal published one morning the audacious and obvious forgeries of Pigott as genuine letters written by Charles Stewart Parnell. In the later instance it came out immediately that the Emperor, who is a personal friend of Lord Tweedmouth, had written to that nobleman on the subject of the impression erroneously entertained thru a great part of Europe as to the purpose of Germany in strengthening her navy, and that Lord Tweedmouth had written a genial and appropriate reply, expressing a hope that such unmeaning suspicions and alarms might soon be brought to an end by the honorable and peaceful policy of Germany and England alike. Lord Tweedmouth showed the letter at once to Sir Edward Grey, the Foreign Secretary, but he showed it to him merely as an interesting private letter, and Sir Edward had seen in it no hint whatever of any furtive or sinister or treacherous purpose.

The German Emperor, as I have already said, is a personal friend of Lord Tweedmouth, and they have had many conversations in Berlin on all manner of international questions. The whole scheme of the *Times* burst up in a moment. It was repudiated, ridiculed and condemned on both sides in the House of Commons and alike in the House of Lords, and no serious word, so far as I know, was ever raised in its defense. The comment of one public man was: "This is worse than ever for the *Times*. The Pigott forgeries only made it odious; this new exploit makes it odious and also ridiculous."

Lord Tweedmouth, I should say, is a man of the highest honor and character. While in the House of Commons he held office more than once in Gladstone's Government, and was for a time chief whip of the Liberals, and I well remember how popular and esteemed he was on both sides of the House, and even among the Irish Nationalist party, of which I was then and had been for long before a member. He was endowed with remarkable tact, discretion and coolness of judgment, and a devoted lover of his country, and I can no more imagine him concerned in some ignoble arrangements

with a foreign potentate than I can imagine Sir Henry Campbell-Bannerman himself or Mr. Arthur Balfour entering into such a transaction.

The *Times*, in fact, ought to have gone one better in its discovery, and represented the German Emperor and Lord Tweedmouth pacing up and down and transacting their arrangement in the center of the great Berlin thorofare, Unter den Linden.

The London public—at least the book reading public—has suddenly been called away from political controversies to read and discuss a volume which has quite lately appeared, is called "Leaves from

LORD TWEEDMOUTH.

a Life," bears no author's name, and is published by Messrs. Nash & Co. The work displays as its motto the Shakespearean injunction, "Nothing extenuate nor set down aught in malice." I feel compelled to offer as my opinion that the authoress—for she proclaims herself an authoress—has not always acted in accordance with this judicious recommendation, but she has assuredly brought

out one of the most lively and amusing books which we have seen in this country for many a long day. "Leaves from a Life" is a vivacious description of artistic life, and, indeed, of social life generally in London during the latter part of the nineteenth century. She does indeed very often seem to set down things in malice, but then it may not really be her malice—it may only be her fun; she does sometimes extenuate, but the attempt at extenuation astonishes and puzzles her readers even more than the setting down in malice. Her mere style is not good; it, has, indeed, frequent and sometimes even grammatical errors, but all the time she is evidently only thinking of what she wants to make us understand and not much about the manner in which she makes us understand it. She has her strong likings and dislikings, but it is only fair to her to say that she seems to boil over much more often with likings than with dislikings. There is much eager discussion in London as to the name of the authoress. She tells us herself that she is one of the daughters of a great popular painter, and she gives us also to understand that he is now a very old man, and indeed her own living memory goes back to events and persons which make it certain that her living parent must have left middle age a very long way behind. To my mind it seems

that there is not much actual mystery left as to the name of the authoress of "Leaves from a Life." I take it that she is the daughter of William Powell Frith, the famous painter.

"All my life long I have loved rivers and poets who sang of rivers." I can most truly adopt the saying of my famous countryman, and certainly no river ever was more sung of than the Rhine, which is the subject of the latest "Color Book" issued by Messrs. Chatto & Windus. "The Rhine: Its Valley and Its History," is the full title of this volume, the letter press of which is by Mr. J. H. Mackinder and the illustrations by Mrs. James Jardine. The Rhine is perhaps the most beautiful river in Europe, and its scenery is wonderfully varied, from the flat landscapes of Holland to the famous Lorelei and Drachenfels and the enchanting scenery of Heidelberg. Most beautiful also is Lake Konstanz, and the pictures of it illustrating the chapter called "The Swabian Rhine" are among the loveliest in the book. Most charming, also, are those of the towns—Mainz, Oppenheim, Kreutznach, Treves and many others. Also the view of the Rheinfells, Heidelberg and Bonn—but if I were to name all the pictures in this volume which have delighted me I should much exceed my space.

LONDON, ENGLAND.

Bermuda

BY HERBERT WOLCOTT BOWEN

BERMUDA, thou dost seem to be
A Venus rising from the sea,
With peerless power in every part
To charm the mind and thrill the heart.

If Nature could her thoughts convey
In human speech she'd surely say,
The beauty that to thee is given
Combines the best of earth and heaven.

ST. GEORGE, BERMUDA.

Vacation by Motor Car

BY GEORGE ETHELBERT WALSH

NOT every one can afford the luxury of owning a motor car, but few are so restricted in their vacation expenses that they cannot make arrangements to go touring for a few weeks instead of spending the same amount of time at a summer hotel or boarding house, where the physical rest and mental change are somewhat doubtful in quantity and quality. A good touring car can be hired today by the week or month for not much more than one would pay for carfare to some distant vacation point—say, from \$25 a week to \$75 per month, a good average rental. Such a car is capable of carrying six or seven, but it is better to limit the vacation party to two or three, reserving the extra seats for baggage and “stretching out” space.

Anything but cramped, crowded space for a vacation tour! It is pleasure and recreation that one is seeking, and not time and space annihilation. The object is not to get to any particular point in a given time, but to make every mile a pleasure, loitering here where the country is inviting, camping there where conditions for a few days of rest are ideal, and scurrying along in another region where nature has not been kind to the scenery.

With the touring car in commission, the next essential is a sleeping tent and hammocks or folding beds. For an investment of \$15, such equipments can be secured for two persons, and they can be rolled up and tucked away in the back part of the car so that they will be little

in the way. Simple cooking utensils, such as one would use for camping in a tent, should be added to the permanent equipment of the traveling camp. Warm blankets, a change of clothing, and a storage box for simple culinary articles, will complete the outfit.

The touring car is in reality a moving camp. One can ride thru almost any part of the country and explore new regions. In the heat of the day or at night the camp can be pitched at some suitable place. Today it is pitched in some grassy field or meadow, where the flowers spread around their bloom in abundance; tomorrow it is in some woods or grove where the cool wind lulls one to sleep and idleness; and the next day the rest is taken by some lake or stream where fishing can be enjoyed to the heart's content. One is independent of town and cities and all the rush and turmoil of strenuous business life. With a supply of gasoline to last for a run of two or three days it is possible to break away from all civilization and spend a

long period in complete retirement. With sufficient dry groceries carried for such a trip, one can then depend upon the fresh fish caught in the streams or upon the products of the lonely farmhouses for the little delicacies of diet.

The ice chest which goes with most touring cars is a very convenient arrangement for keeping articles of a perishable nature in good condition. Drinking water can be carried in sufficient quantities to make one independent of any doubtful stream or spring by the wayside. Indeed, the drinking water supply is always one of the serious problems that vacationists have to face. It hardly pays to drink from contaminated sources of water supply and find, when too late, that all the benefits of the vacation are neutralized by an attack of typhoid. When sure of your water it is better to stock up an adequate supply and not run any risk.

If one enjoys camping, what better method of enjoying it than in a movable camp? Suppose a heavy downpour of

THE MILL BY THE WAYSIDE.

A HALT FOR REFRESHMENTS.

rain floods your camp? There is the touring car, with its waterproof sides and tops. If drawn together properly, one can sleep inside comfortably while the rain is forming great puddles outside, or, in an emergency, the car can travel on to some farmhouse or country hotel, where lodgings can be had for the night. There are many hot, dusty days when it is pleasanter to rest in the cool shade of the trees than to go motoring. Then the movable camp becomes a resting place where all the cares and worries of life are banished. No matter whether moving swiftly across country or camping by the wayside, the life is all out of doors, and that is the main end in view. A vacation in hot, stuffy rooms is not a restful experience. Even tho the rooms are occupied only at night, the experience is not desirable and the hygienic results somewhat doubtful.

In a two weeks' vacation in a touring car one can cover only a few hundred miles or travel six or seven hundred. It all depends upon the pleasure of the motorists.

The selection of a good route for traveling is the final point for preparation. A cut and dried itinerary is not desirable. In a general way a route must be selected and some attention paid to the roads. One can't plow thru woods that have no trails or across meadows filled with quagmires, but on the other hand no one takes a vacation of this nature with the idea of following well-traveled roads. His object is to get away from the railway line, away from the trolleys, and if possible, away from the dusty highway. In some simple, rustic wagon trail or on some back lane which leads to nowhere, he is most apt to pick up those little ideal spots where the spirit is soothed into restful harmony with nature. What if the lane or trail leads to nowhere, and sooner or later you must return on the same track? There is the joy of exploring, of finding out for yourself what no guide book attempts to explain.

From almost any town or city the roads lead off in all directions to the country beyond, and any one of these

will do for the beginning of the trip. Then when the city is left behind and the country ahead beckons, the journey should be made from day to day as the spirit dictates. Let the preparation for each day's itinerary suffice. The care for the morrow should be left for the new dawn. It is a heart-free, care-free trip that one is planning.

Last summer two men took such a trip, covering in three weeks five hundred miles. They made side trips into every imaginable out-of-the-way place. They

realize some of the independence and resourcefulness of the primitive man.

But an appendix should be added to all this; a list of "don'ts" which may save some imitator from unpleasant experiences.

Don't forget that a car running every day needs oil and gasoline—and plenty of each.

Don't take a grumbler along for a companion; better take a deaf and dumb friend than a fault-finder.

Don't forget an extra allowance for

REPAIRS!!

discovered sections of the country never explored by the summer tourist; they fished in old brooks and hidden ponds which reminded them of their boyhood days, and sojourned with rustics whose simple life let in a flood of new light upon their souls. They returned to the city strong, healthy and brown, and their total expenditures were a trifle less than a hundred dollars. That was a cheap trip to them in many ways. It took them into the open air for a good part of a month, taught them how to cook and shift for themselves, and made them

paying fines, but, better yet, don't forget the speed laws.

Don't leave your dirty, soiled suit behind, for that may come in handy when exploring the dusty road under the car for a loose nut or bolt.

Don't overload your car with unnecessary equipments; a few simple things are better than a Saratoga trunk of useless stuff.

Don't subscribe for a daily paper or leave your telephone address behind to friends; you might miss connections in your flight across country.

NEW YORK CITY.

When the Prince of Wales Came to New York

BY EDWARD N. TAILER

[Mr. Tailer, of Washington Square, is a well known New Yorker connected with the Suffern, Livingston, Bogert, and other well known families. He was one of the Patriarchs—an organization that gave the Patriarch balls for many years. He has kept an exhaustive diary all his life of social events in New York, from which the following article has been taken, and which, like the diary of Phillip Hone, will prove invaluable to all interested in the history of this city, for Mr. Tailer, mingling in the social life of the city, has met the most prominent people from all over the world. He is a member of the Union Club, the Union League, the Tuxedo, the Merchants, the St. Nicholas and New England Societies and the Chamber of Commerce, a trustee of the Greenwich Savings Bank, one of the directors of the German-American Bank and a trustee of the Northern Dispensary of the City of New York. This article is of especial timeliness now, as the present Prince of Wales is expected to be in Quebec in July to attend the tercentenary of the landing there of Champlain, and it is possible that he may be persuaded to come to New York, as his father did in 1860.—EDITOR]

IT is unquestioned that, during the tour of the Prince of Wales on the Western Continent, nowhere has he been welcomed with greater cordiality and with such outbursts of popular enthusiasm, nowhere viewed more interesting sights and brilliant spectacles than in our imperial metropolis. The magnificent reception on Thursday, upon his arrival at the Battery, the interesting visits to various places, and the glittering diamond ball on Friday, together with the incidents, and the splendid torchlight procession of the firemen on Saturday evening, October 14th, 1860, have all impressed the Prince and his suite in the most favorable manner, and every member of the royal party has individually expressed his intense delight at the brilliant greeting which they met with in New York.

On Friday, at 10 o'clock in the morn-

ing, the Prince, or "Baron Renfrew," as he is called in the present trip, accompanied by Lord Lyon, the Duke of Newcastle, Earl St. German, General Bruce and all the members of the royal suite,

escorted by Major-General Sandford, of New York, proceeded to the New York University, then located at the head of Washington Square, to which the royal party had been invited by Chancellor Ferris. It happened that my father-in-law, Mr. Thomas Suffern, was one of the trustees of the university, and this gave me a desirable *entrée* to the proceedings.

The chapel of the university was thronged to its utmost capacity. A galaxy of beautiful ladies entered the edifice at an early hour, and the desire

to see the young Baron was increased by the labor which they had voluntarily devoted to that object. The galleries and the choir section were almost exclusively

EDWARD N. TAILER.

occupied by women, all brilliantly dressed. The continuous flutter of fans, richly mounted and of various colors, enlivened the scene.

Dodworth's band was located in the southern extremity of the chapel and discoursed a series of operatic and national airs, to the expressed delight of the fair

PRINCE OF WALES WHEN IN AMERICA.
From a negative by Brady in Frederick Hill Meserve Collection.

and fashionable throng, who took advantage of the intermissions between the orchestral selections to indulge in a vari-

ety of speculations on the appearance which the young Baron would present and the opinion which he would probably express of what he saw.

In the midst of all this conversation the Prince, with his suite, arrived at the principal entrance of the university, where an immense throng of ladies and gentlemen had assembled. The hall and stairs leading to the chapel were occupied by students, habited in their college gowns, who formed a spacious passage for the entrance of the young Baron and the gentlemen of his suite. Leading the procession was Dr. Ferris, in his robes of office as chancellor of the university. He formally received the Baron and his suite, leading them to the chapel. Presently the cry was raised:

"He's coming!"

The sensation which the announcement created was visible in the variety of efforts which were made to seize favorable locations from which to see the show. Many of the ladies seemed happy in having even standing room near the platform, and the smiles which were constantly visible indicated the contentment which even their uncomfortable positions had created.

Following the exercises, the Prince was introduced to the members of the faculty, who occupied seats immediately in front of the platform and who acknowledged the compliment. Upon entering the women's library the Baron was received by Miss Powell, who, accompanied by ladies gayly attired and wearing floral wreaths, addressed him as follows:

"We are happy to welcome to a woman's library the noble son of a royal lady whom the women of America regard with pride as an honor to all womanhood."

The Prince bowed in acknowledgment, and, observing Goupil's engraving of the Queen on the wall, smiled as if pleased with the lifelike picture of his mother.

He then left the university with his suite and others and visited the Astor Library. He was there received by the librarian, Dr. Cogswell, who escorted the royal party thru the building. His Royal Highness then visited the Cooper Institute, where he was received by Peter Cooper, Esq., and a host of officers of the institute, who showed him the various departments, with which he appeared

to be much pleased. He was then driven to the Free Academy (now the College of the City of New York), where Dr. Webster and others of the faculty showed the distinguished visitor and his suite over the building.

The day's entertainment was concluded with a drive thru Central Park, where it was designed that the Baron should plant some trees as a memorial of his visit to New York. The party alighted near the center of the main road to the Ramble, where ground had been prepared. Baron Renfrew was received by Commissioners Blatchford, Russell, Fields and Andrew H. Green. Major-General Sandford presented Baron Renfrew to Mr. Blatchford, who made the following remarks:

"Lord Renfrew, the Commissioners of the Central Park, to whom the State of New York has intrusted the construction of this great pleasure ground for the people, have requested me to ask you to do them a favor to plant here two trees, one an English oak and the other an American elm. They trust these trees will long flourish and remain a lasting memorial of your visit to this city and park."

The trees, both young, lay near by, ready to be planted. With the assistance of a park laborer the Baron planted first the American elm and then the English oak, covering the roots of each with several shovelfuls of dirt, while the vast crowd cheered him to the echo. Commissioner Green then presented Lord Renfrew and the Duke of Newcastle with maps of Central Park, which were courteously received and examined minutely.

The royal party then drove around the park and observed with apparent pleasure the beautiful scenery, the drive ending at the house of Mayor Fernando Wood, on the Bloomingdale road, where a bountiful and unexceptionable collation had been prepared. Officers Blanford and Dutcher, of the Mayor's squad, were in charge of the house. On the lawn, at the rear of the dining parlor, Dodworth's band of twenty-five pieces had been stationed. Long before the arrival of Baron Renfrew the invited guests had begun to assemble.

Among these were: The Most Rev. Archbishop Hughes, the Right Rev. Alonzo Potter (Protestant Episcopal Bishop of New York), the Rev. Father Cummings, ex-President Fillmore, William B. Astor, John Jacob Astor, Augus-

tus Schell, Governor Hamilton Fish and lady, Judge Roosevelt and lady, Colonel Burnham, Colonel Mayo, Mr. Pell (of the firm of Duncan, Pell & Co.); Madame Le Vert, George A. Burnham, Judge Pierrepont, Charles O'Connor and lady, George Law and lady, Moses Taylor, George Bancroft (the historian), J. de Peyster Ogden, General Sandford, Colonels May, Ireland and Allen, George W. Burnham, James Gordon Bennett and James Gordon Bennett, Jr., Bradford Johnson, Dr. Bedford and lady, Mr. Hodgson, F. P. James, William Nelson, Mr. Myles, W. P. Hilliard, Silas B. Dutcher, James T. Beckman and ladies, Andrew H. Green and Thomas Suffern. General Scott sent a note apologizing for his inability to be present.

The Baron was received at the main entrance of the edifice by Mayor Wood, who led him to the dining parlor. Miss Wood, the fair daughter of the Mayor, a young lady of sixteen summers, took the arm of the Duke of Newcastle and joined the procession, followed by the Baron's suite. The guests were assembled in the front parlor, where they were introduced to Lord Renfrew, while the rest of the royal party, numbering about a hundred persons, were partaking of the collation on the lawn.

"God Save the Queen" and "Rule, Britannia" were among the airs discoursed by the band. After the luncheon and on the way down to the Fifth Avenue Hotel, the Baron finished the day by a visit to the Deaf and Dumb Institute, where he was received by R. B. Winthrop, Esq., the president.

In the evening the grand ball in the Baron's honor took place in the Academy of Music, in Fourteenth street.

One of the most striking features of the entertainment was the table provided for the Prince and suite, at which were seated at one time the Prince of Wales, the Duke of Newcastle, Earl St. Germain, General Bruce, ex-Governor King, Gen. Winfield S. Scott, Peter Cooper and ex-President Fillmore.

The Prince of Wales made his *entrée* promptly at 10 p. m., equipped as the committee had kindly directed, in full evening dress, with all the noblemen and gentlemen of his suite. The stately Mrs. Morgan, in a cloud of crepe, studded

with diamonds, was at her post to open the ball, as became the queen regnant of the Empire State, with the young heir of England.

Never had the opera house presented a spectacle so sumptuous and so exquisite as at the moment of the Prince's entrance upon the stage to the persuasive

Buren, daughter-in-law of the ex-President; Miss Augusta Jay, Miss Kernochan, Miss Butler, Mrs. M. B. Field and Mrs. Edward Cooper. The Prince left the Academy at the end of the sixteenth dance. and it was 5 a. m. when he reached his hotel and retired to rest. He slept till nearly 10 a. m., and rose quite

THE AMERICAN, OR BARNUM'S, MUSEUM BEFORE 1850 AT THE CORNER OF BROADWAY AND ANN STREET. (FROM AN OLD PRINT.)

St. Paul's Chapel is opposite and Trinity spire is seen in the distance.

strain of "God Save the Queen." I was within a few feet of the Prince when the platform gave way over the seats of the orchestra. A momentary thrill ran thru the crowd, and a panic might have ensued, with most appalling consequences, had not the few gentlemen in the vicinity of the Prince, including ex-Governor Hamilton Fish and the Duke of Newcastle, come forward to assure the house that there was no danger. Carpenters came on the scene and repaired the damage shortly afterward.

I saw the Prince dance with the following ladies: Mrs. Governor Morgan, Miss Mason, Mrs. Gould Hoyt, second daughter of General Scott; Miss Helen Russell, Miss Jennie Field, Miss Fish, daughter of ex-Governor Fish; Mrs. August Belmont, Mrs. Colonel Van

refreshed. All the morning an eager crowd was assembled around the Fifth Avenue Hotel, hoping to obtain a glimpse of his Royal Highness whenever he should leave his apartment.

The day was exceedingly fine, the principal streets were alive with carriages. It was after 12 o'clock, noon, when the Prince's suite left the hotel. They drove down Fifth avenue to visit Brady's National Photographic Gallery, which I think was then situated at the corner of Broadway and Ninth street. Mr. Brady was sent for by the Prince on Friday morning, when it was intimated to him that his Royal Highness would be glad to visit his new gallery, if matters could be so arranged as to render the visit a private one. The doors of the establishment were inexorably

closed against all comers during the larger part of the day, and even the most intimate friends of the proprietor were denied admittance. After remaining a short time in the gallery, inspecting with curious interest the portraits of the statesmen, literary and other celebrities of this country, pointing out to the members of his suite such of them as he had been familiar with by reputation, he was taken to the operating room, where singly and with different members of his suite, he gave the artist a number of sittings. Before leaving, the royal party

visited Barnum's Museum, then on the corner of Ann street and Broadway. Two days before an invitation had been extended by the "Prince of Showmen" to the Prince of Wales and his illustrious companions to inspect the curiosities of the museum. A large number of spectators were present in the museum, altho it was not even suspected by the people that the Prince would be there. Mr. Barnum himself had left the city in the morning on business; Mr. Greenwood, the manager, when he heard that the Prince was coming, caused the program

inscribed their names on the Visitors' Book, October 12th, 1860.

Albert Edward, Lyons, Newcastle, St. Germans, Robert Bruce, C. Teesdale Hinchinbrooke, Charles G. L. Eliot, Hugh W. Ackland, G. F. Inibner.

The royal party drove down Broadway, amid the cheers of the crowd, and

to be commenced half an hour before the usual time, so as to clear the floor of a portion of the crowd, in order that the Prince might have a better opportunity to walk around and examine the curiosities. When he had gone all over the museum he remarked that he supposed he had seen all the principal curiosities,

VIEW OF BROADWAY LOOKING NORTH FROM THE SITE OF BARNUM'S MUSEUM, CORNER OF ANN STREET.

Army Barracks on right, where Post Office now stands. Astor House on left.

and then in the same breath he asked where was Mr. Barnum. The reader must decide for himself whether the Prince intended to class Barnum among the curiosities, and whether he considered him the greatest he expected to find in the museum. Mr. Greenwood, however, told him that the illustrious showman had gone to Bridgeport on business, not expecting the visit of the Prince so soon. The visit to the museum was brief but interesting, and when leaving, the royal party indicated that they had been highly pleased with their visit. After some refreshments at the Fifth Avenue Hotel, the royal party went to call upon Gen. Winfield Scott, at his residence in Twelfth street, near Fifth avenue. The veteran warrior received the Prince and suite in a most cordial manner. His Royal Highness was glad to meet again the accomplished commander-in-chief of the United States army, in whom he had

taken the deepest interest. The visit was not protracted. It was a pleasant social call of a strictly private character. The royal party next proceeded to Ball, Black & Co.'s jewelry store, on Broadway, corner of Prince street. Five o'clock the Prince arrived. Mr. Ball received them and conducted them thru the entire establishment. The Prince was escorted to the second floor, in order to avoid annoyance from the crowd below. Then the shutters were closed, and the whole building was illuminated while he was making the tour of the establishment. Mr. Ball called the attention of the Prince and the Duke of Newcastle to a beautiful silver prize goblet, which was manufactured for the Robin Hood Riflemen, of Nottingham, England, and of which the Duke is Lord Lieutenant. The Prince expressed himself highly delighted with everything he had seen, and admired particularly the magnificent silver set recent-

ly presented to Colonel Dungee by the members of the Seventh Regiment. During the whole time that he was in the establishment the noise outside remained undiminished. The people became clamorous to see him, and before leaving he appeared on the balcony and bowed to the multitude. They cheered him in the most enthusiastic manner when he came out. He soon retired, however, and presently the royal party re-entered the carriages away from the store, followed by a tremendous crowd of people.

An interesting incident occurred in the presentation of the Prince to Capt. Frederick Lehnbusch, who, in 1789, served under his Royal Highness the Duke of York in Holland. In 1803 the veteran captain, who is now ninety years of age, went to Hanover as one of the body-guard of his Royal Highness the Duke of Cambridge. In 1809 he served under the Duke of Wellington in the Penin-

sular War, and also took part in other important engagements, retiring in 1815 on half pay. For the last twelve years he has resided in this country. The Prince was interested when assured, in answer to inquiries, that the captain was really ninety-five years old, and the introduction was pleasing to both parties. The captain, when he died in 1865, attended divine worship at Ascension Church, Fifth avenue and Tenth street, New York. During the evening the Prince reviewed from the balcony of the Fifth Avenue Hotel the magnificent torchlight procession of the firemen, which in every particular proved a splendid success, treating our citizens to one of the finest spectacles ever witnessed in New York, while at the same time affording the distinguished guest of the nation an opportunity of inspecting, under the most favorable circumstances, one of our peculiar American institutions,

GEN. WINFIELD SCOTT AND STAFF.

From left (1) Hamilton Schuyler, (2) George M. Cullum, (3) E. D. Townsend, (4) General Scott, (5) Henry Van Rensselaer, (6) Charles J. Wright.

From negative by Brady in Frederick Hill Meserve Collection.

as useful and conservative as its reputation is universal. We mean, of course, the then volunteer, unpaid, heroic defenders of our lives and property, the New York Fire Department. The display, perfect as it was in every particular, must have impressed the Prince and his noble suite with the profound conviction of the greatness of a nation which can produce so splendid a force of stout, athletic and well-behaved men, self devoted to the interests of the public without earning any remuneration, except that which true men ever experience in the performance of good actions. All day long preparations on the part of firemen were observable thruout the city, and night brought with it a scene of excitement and splendor which has seldom been seen in this progressive and restless portion of the globe. The weather providentially was not Prince of Walesish—that is, it did not pour down in torrents of rain just at the time when a clear sky and dry streets were most devoutly to be prayed for. The day was bright and bracing and the evening was still better, the stars shining out brilliantly and the sky being as cloudless as the clearest day

of midsummer. The people were naturally under such circumstances out in thousands, and the scenes presented in the streets were altogether of a most animated character. Of the procession itself it is impossible to give anything like an idea of the reality. From the standpoint occupied by the writer, the spectacle formed by the miles of torches, engines and firemen passing rapidly in review, the brilliant calcium lights flooding in every direction, and the magnificent display of rockets, Roman candles and blue lights, illuminating the heavens with all the colors of the rainbow, was in the highest degree grand and imposing. A feature of the evening, an exhibition worthy of remark, was the non-occurrence of any serious accident which might have a tendency to spoil the favorable effects intended by the committee. For a wonder, nobody was hurt and no fights recorded. The affair was well managed in every respect, and reflects the greatest credit on Chief Engineer Decker and the firemen. True to Mr. Decker's promise, the procession was over and all the engines safely housed before midnight.

NEW YORK CITY.

Venice

BY IVAN SWIFT

It has been mine to know, in younger days,
That Love, in fullness, finds no utterance;
No mortal word can serve, much less enhance,
A perfect thing. The wondrous Nippon vase
Desponds my tongue; the while, to ruder clays
Of dull unpromising, the Muses dance
And wake with hearts of wild exuberance!
So Fancy weaves on umber warp her praise.

No song of mine confirms that I have seen
San Marco's opal dome and wept before
The Campanilè's fall. I have not sung
Cà d'Oro's symphony, nor light serene
That never was on other's seas, Maggior
Venezia! To me thy bells have rung!

Revolutionists in Russia

BY CATHERINE BRESHKOVSKY

[When Madame Breshkovsky was in America she promised to write a sketch of her life, which has been spent in trying to help her countrymen. She began even as a child, when she stood by her father as he administered "justice" to the peasants, begging him to give them wider opportunities. As a young married woman she established schools for the peasants, teaching industries as well as some knowledge of books. For this she was thrown into prison and held two years in solitary confinement and afterward exiled to Siberia for twenty years. As soon as her time there expired she went back to Russia and renewed her work for the education and enlightenment of the peasants. She has again been arrested and now lies in the fortress of Peter and Paul, cut off from all the world and suffering the terrible rigors of Russian imprisonment. Her life has been a noble one. She is a magnificent specimen of womanhood—gentle, strong, loving and lovable, with a fine mind and an absolutely self-sacrificing and courageous spirit. It is pathetic to read her apostrophe to the martyrs of Russia and to remember that this moment she, too, sits in prison, one of the hundred thousand men and women who today crowd Russian prisons because they have dared to dream of freedom and education for Russia. The following article was sent to America before her arrest and is in all probability her last word for American readers, for there is little hope that Russia will dare to let this great woman have her liberty again, unless some moral pressure from outside can shame the Czar into leniency toward this heroic woman who has grown old and gray in serving her people.—EDITOR.]

I TOO have been young. That is to say, I have been simple and ignorant. I too, in my desire to serve my people, once believed in the possibility of doing so peaceably and lawfully, even in the conditions that were weighing my country down—the reign of despotism, autocracy and bureaucracy. Youth, confident and enthusiastic, believes that there is nothing in the world so strong as the desire to take part in the progress of the civilization and happiness of its people. Youth is always sure that it can prove by its activity, its zeal and its success the great value, the great profit of its endeavors, a profit whose benefits will reach not only those for whom they are immediately designed, but which, little by little, will transform the life of the world, making it sweeter, cleaner and more reasonable.

The inclination to work for the good of his neighbor, to improve human relations, to make life happier and to have justice the foundation of society, is a characteristic of the Slavic race, a race which is more constructive than destructive. That is why, in all ages, you will find the Russian people seeking for truth and for social laws which will make a worthy life possible for all, without exception.

The Russian peasants have sought this truth in the lives of the saints and in new religious combinations, or by retiring

into the forests and the deserts. There, surrounded by nature, grave and silent, they have listened for the sound of the divine voice.

Better educated people sought this same justice—that is to say, some means by which human life might be made more supportable for all—by sounding the depths of science, by studying the social laws, and applying their knowledge to the conditions of actual life. I was born in one of these better educated families; rather, in one of the most enlightened families of the time. I past my childhood and my youth among intelligent people, who accepted the best ideas of that day. Outside my own experience, thanks to my active and investigating turn of mind, I have known many other young men and women who began their careers as peaceful workers for the moral and intellectual betterment of their people, who later became revolutionists, that is, enemies of the Russian Government, that brutal, grossly selfish power which threw obstacles in the way of all their efforts to help on a higher civilization. How many thousands of books it would take to tell the hundredth part of the ruined attempts, of the crushed lives, of the families broken up and desolated, only because of their honest desire and attempt to give to the Russian people, the ignorant peasants, some knowledge of their own country, its history, its

social and economic questions, that these people might read books about other religions, about different political organizations, about natural history and about

publications of Russian revolutionists on the other. The police kept lists of their victims in order not to lose sight of them, that they might persecute them till

*Madame, Je suis contente
de vous connaître, d'autant plus
que je suis sûre de ce que votre
amitié est inébranlable*

Catherine Breche

16 Mars 05.

the rights of the people—the petty little rights which the laws of the Tsar did accord to them. Posterity would find it hard to believe the terrible tale of persecution but for the archives of the Russian police on the one side and the secret

death; the revolutionists inscribed the names of their confrères to transmit them to posterity, to hold them as gages, as proof of the divine capacity of man to forget himself for the great and beautiful ideal of universal happiness.

Yes, we still have with us your names, brave boys and girls! famous men and women! We have them written in our books; we have them engraven on our hearts; we shall have them traced on the porticos of our temples of liberty, as immortals whose noble deeds were worthy of imitation in every land and in every time!

Having before my eyes these beautiful galleries of noble characters, of brilliant minds, tender hearts and unyielding will, I should count myself happy could I make the world outside Russia, which has little idea of what is going on there, know what happens to the man who cares for his own rights and for the rights of his neighbor! Oh, that I could show to the eyes of the world even a little of the devotion, the courage, in the soul of our race, and all that that

soul has had to endure, to suffer, in order to bring about the day when the Russian nation shall cry aloud with one voice, "I want no more tyranny! I am able henceforth to manage myself, my life and my affairs!"

Oh, if I could make the dead live again! If I could deliver those who languish in fortresses and prisons; those who are pining away in exile in the snow and ice and cold of Siberia; if I could smooth out the faces covered with premature wrinkles; if I could renew the courage of hearts broken by the tortures of persecution, and make them march in triumphant procession, a celestial vision, before people who cared for them—ah, that would be for me supreme felicity, for me who have known these brave souls and who honor them as the glory of my country!

The Auction of the Corinth Canal

BY GARDNER RICHARDSON

IN connection with the recent sale at auction of the Corinth Canal, it is interesting to look into the history of this undertaking, which, in proportion to the wealth of Greece, was as disastrous an adventure as the French operations in Panama. There are many points of similarity in the two enterprises, except for the totally different scale on which they appear. While the early Spaniards were discussing the feasibility of cutting thru the Isthmus of Panama, the Venetians were similarly measuring the difficulties at Corinth. It is reported that Periander in 600 B. C. first proposed to pierce the isthmus between the Ægean and the Corinthian gulfs, but his engineers affirmed that one gulf was higher than the other, and the priests assured him that the anger of the two oceans at being mingled would result in the downfall of Corinth. This possible catastrophe prevented the fruition of his plans. As a substitute the Diolkos was built, a flat stone road over which small boats were carried on wooden rollers. The cargo was unloaded and sent across in carts.

Julius Cæsar and Caligula also considered the construction of a waterway, but it was not until the time of Nero that the first actual attempt was made. At the Isthmian Games Nero entered the chariot race and was declared victor by the judges. Crowns in great profusion were placed upon his brow. In token of his gratitude he decreed that a canal be built, and with a golden spade he made the beginning. The difficulties proved far greater than were expected. When bed-rock was reached the work came practically to a standstill. The only substitute for modern blasting was the ancient system of driving heavy stakes of dry wood into the crevices of the rock, and then by wetting the timber cause the hills to spring asunder. These impossible efforts were continued in a desultory manner until Nero's death, when the work was abandoned.

President Capodistria, in the early days of Greek independence, again agitated the idea, but no definite action was taken. After the accession of King George, a law was past in 1869 authorizing the construction of the canal.

Work was started in 1882, and it was at this time that popular enthusiasm ran highest. The building of this waterway would bring the commerce of the world at the feet of Athens, it was declared, and would open a new era in the history of Greece that would rival her ancient position of supremacy. The work started energetically, but when the loose surface earth had been removed, a flintlike rock was encountered, of a different charac-

heads of those who had undertaken the work, and mobs of disappointed stockholders rioted in the streets of Athens, demanding the return of their savings.

After a period of discussion and disagreement, it seemed as if the completion of the canal would be indefinitely postponed. At this juncture Mr. Syngros, a wealthy Greek merchant and philanthropist, prompted by patriotism, organized the new canal company, and thru

THE EXCAVATIONS OF THE AMERICAN SCHOOL AT OLD CORINTH.
Acro-Corinth in the background.

ter from that discovered in the test borings. A large proportion of the 15,000,000 cubic yards of material taken out was solid granite. The strata were full of faults and irregularities. It was found that the expensive French machines designed to remove earth and gravel were useless. Steam drills were not in use, and the rock yielded to hand drilling with greatest reluctance. After \$10,000,000 had been spent, with the most difficult parts still uncompleted, the company failed. Popular anger raged about the

the National Bank of Greece and the Cretan Industrial Bank secured the necessary funds. Operations again began in 1890, and the work was so energetically carried on that in July, 1893, Queen Olga of Greece formally opened the canal by cutting a ribbon with a golden pair of scissors. The royal yacht and the Greek fleet past thru in review amid great jubilation.

Eleven years had elapsed since the excavation had first been started, and \$14,000,000 had been spent on the project.

THE CORINTH CANAL,

Showing geological formation. Gulf of Corinth in the distance.

The canal was from the first a great disappointment. It was found after the canal was cut that the wash of the vessels disintegrated the rock, causing heavy land slips that blocked the canal for months at a time. To prevent this the whole waterline of the canal had to be lined with masonry, for which 436,000 cubic yards of stone had to be quarried. The width at the bottom of the cut was only 68 feet, so that vessels of moderate size almost filled the canal, and had to push a huge volume of water, like a tidal wave, along in front of them. When there was an adverse current, the opposition and suction made the ships very unmanageable, frequent disastrous collisions with the walls of the canal resulting. This made all the larger ships prefer the circuitous route around Cape Matapan, which is only 130 miles longer and perhaps of ten hours' greater sailing time. The tolls were heavy, and the expense did not seem to be worth the small saving in time.

The canal company continuously lost money and patronage, until only a few local boats from Athens to Patras used the route. It was decided to sell the canal at auction, and in May, 1907, it was awarded to the National Bank of Greece. The details of the auction have never been made public, but it is supposed that the property was acquired for

a nominal sum, and that the Bank of Greece was the only bidder. It is stated on authority that no interest was ever paid on the 23,000,000 francs raised by Mr. Syngros to finish the canal. Improvements have been started by the new management in the way of enlarging the harbors and widening the canal. When these changes are made the Austrian Lloyd state that they will use the canal regularly. The German-Mediterranean-Levant Line, which, in conjunction with the Norddeutscher Lloyd, has established weekly trips between Marseilles and Genoa, and Constantinople, Odessa and Batum, already uses the canal in both directions. In 1903, 3,130 vessels past thru the canal, and in 1906, 3,053. The tolls collected in 1906 amounted to \$66,301.

In construction, the canal has no locks and is geometrically straight. At one point the cutting is 287 feet, almost as deep as the Culebra cut at Panama. A railroad bridge crosses the canal at a height of 122 feet, and is but 262 feet long from end to end. As the canal is 68 feet wide at the waterline an idea of the precipitous walls can be obtained from these figures. As a passenger on a railroad train crosses this lofty bridge the canal stretches out beneath him like the Grand Cañon of the Colorado. The air is so clear and the colors so intense that it makes a remarkably vivid picture.

RAILROAD BRIDGE

Spanning Corinth Canal. Albanian peasant in the foreground.

The harbor on the Corinthian side is formed by two arms running from each side of the isthmus and terminating in a line with the two sides of the channel, so that vessels entering are ready to steer ahead.

The isthmian harbor is formed of but a single arm, which closes the channel entirely toward the mainland and requires the setting of a new course, both on entering and leaving the canal. It is here that a number of vessels have run aground or come in collision with

each other. The new company promises to remedy this defect.

It is interesting to note that Ferdinand de Lesseps visited the site in July, 1869, and walked over the line of the canal, making careful calculations and estimates with a view to undertaking the project himself. It is possible that the early ill-starred fortune of Panama and Corinth will be forgotten in a glorious future, and that with the name of De Lesseps will be associated three successful canals—Corinth, Panama and Suez.

NEW YORK CITY.

Three Visits to Mr. Roosevelt

BY ANDRE TARDIEU

[M. Tardieu, who was recently in this country lecturing at Harvard under the auspices of the Cercle Français, has contributed to *Le Temps*, of which he is the foreign editor, a series of articles entitled "La Politique des Etats Unis," based upon his conversations with President Roosevelt, Secretary Taft, Secretary Metcalf, Senator Lodge, Baron Takihira, Mr. Vanderlip, Archbishop Ireland, and other prominent men. We herewith translate his report of his account of three visits to the President. In our issue of February 13th we published an article by M. Tardieu on American Foreign Politics.—EDITOR.]

IN Europe, when we talk of American politics, the first name we speak is that of President Roosevelt. To the power which belongs to him as chief of state and head of the Government by the terms of a Constitution which has maintained the executive power without restricting parliamentary control Mr. Roosevelt adds the value of his personality. On every occasion he brings forward his ideas, his authority and even his sentiments. He loves conflict. He believes in the beneficial effects that come from it. He does not fear responsibility or attacks. He sees in both the natural consequences of a power freely conferred and loyally exercised.

However incompletely Europe knows America, Europe is right in holding Mr. Roosevelt the most "representative" of American statesmen, and America is like Europe. The traveler who lands in New York cannot doubt that the President occupies in the minds of his compatriots as large a place as he does in our estimation. The furious assaults of which he is the object on the part of certain persons in Wall Street and Fifth Avenue are sufficient to prove this. These attacks,

which are beyond all measure in form and spirit, are, for those who from afar have learned thoroly to esteem the political principles of Mr. Roosevelt, an additional reason for desiring to become acquainted with the man who provoked them.

I had during my sojourn in Washington the honor of being received several times by Mr. Roosevelt and of talking with him. As the President freely expressed the convictions which animated him, I have obtained from these meetings a stronger and more complete impression than can be derived from those rapid conversations that are called in English "interviews," as tho to warn the public against their superficial character. Mr. Roosevelt does not submit to these hasty interrogatories, which put official personages in the position of pupils questioned by a teacher. He has, however, very willingly authorized me to relate what should be repeated of our conversations.

My first visit to the White House took place the day after my arrival. Our Ambassador, M. Jusserand, is not merely for the President a representative of a

friendly power, he is a friend whose recommendation is the promise of a cordial reception for a newcomer. Mr. Roosevelt received us—the Ambassador and me—in one of those rooms which form the right wing of his residence, known as the Executive Office; a prompt and simple reception, the President coming with extended hand to meet the visitors even in the hall, and beginning pleasantly an informal conversation. What struck me at once was the impression of youthful vigor which Mr. Roosevelt gives. He is younger than his portraits and younger than his age. He is not far from fifty years; he does not appear more than forty years. His countenance is frank and bold; his vigorous neck is left free by the slope of the low collar. His eyes are perpetually moving behind his spectacles or eyeglasses. The features are singularly animated and expressive. No affectation, not a suspicion of pose or of fastidiousness. The President spoke French, excusing himself, quite unnecessarily, for speaking it badly.

"I speak it," he said, "like a Tourainian." Tourainian or not, his French expressed what he wished to say, and with force and color. Mr. Roosevelt questioned me upon my visit, talking of common friends; Mr. James Ford Rhodes, the eminent historian, and Prof. Barrett Wendell, who of all Americans has best understood and judged our country, and then, by some turn in the conversation, we came to talk of Taine. Mr. Roosevelt seemed not to like him altogether, criticised his prejudices, spoke of the Revolution. He invited me to luncheon with him the next day, warning me with a smile that I should meet at his table an archbishop and two bishops; "for," he added, "here in the United States there is no religious question. I am a Calvinist, but I detest as much anti-religious tyranny as I do religious tyranny." This idea of a free church in a free state is one to which he is most attached. I observed that he often resorted to it.

On the next day, at half past one, I was at the White House. Of the guests, Mgr. Ireland, Archbishop of St. Paul, one of the warmest friends that France has in America; Mgr. O'Gorman, Bishop of Sioux Falls, and the Protestant Bish-

op of Boston, had already arrived; then later, the President of the University of California, the Minister of France and Madame Jusserand. An officer of the Navy, aide-de-camp of the President, received the guests and introduced them. When every one had assembled Mr. and Mrs. Roosevelt entered the room and extended to each one a word of welcome. All then passed into the dining-room. There were sixteen of us. The President spoke first to his neighbors, and then he addressed me across the table and took up his former conversation.

M. ANDRE TARDIEU.

He called my attention to the presence of the two Catholic bishops and the Protestant bishop.

"The United States," he said, "is liberal, but not anti-clerical. In my Cabinet there is a Catholic and a Jew, the others are Protestants, and we all agree perfectly."

This affirmation of liberalism, which I often heard in all circles in the United States, was the only allusion to international affairs. The thought of the President, following a familiar line, returned to what had been for some months the great business of his life and he said to me:

"You know the crusade which I am conducting and the attacks that it has brought upon me?"

In order to respond affirmatively I had only to recall my memories of New York.

"If I am fighting against plutocracy it is because I am the enemy of Socialism, of Anarchism. Plutocracy is the worst of *régimes* for the people. There is only one as detestable, that is demagoguery. Money rule or mob rule, it does not matter which. Plutocracy is the best ally of Socialism and Anarchism. I am in my way a conservative, and that is the reason why I attack plutocratic abuses."

Mr. Roosevelt does not eat. He talks. He talks with expressive gesticulations. He talks with his head, with his arms, with his shoulders, throwing his whole force into what he says. I noted especially a chopping gesture of the hand, guillotining the neck of a possible objection of the opponent. And yet another, the two hands parallel, as tho to cut a canal for his argument to go to the interlocutor.

"I know," he continued, "that the Wall Street people denounce me like a Judas Iscariot, but it is precisely because I speak the truth to Americans that I think I am a good patriot, and then, besides" (here the laugh of the President burst forth joyously and his head rested upon his right shoulder, as tho he were taking aim), "I am not a sentimentalist. Let them attack me. I will defend myself in appealing to the spirit of justice of the country. I will return the blows."

These words were aglow with the joy of conflict.

But Mr. Roosevelt, whose energy is far from anything like extravagance, did not allow himself to be carried away by his feeling, and he returned to what is—all his words prove it—the guiding idea of his internal politics, to prove that in fighting the abuses of the plutocracy he is doing the work of social conservation.

"What do I say to workingmen? I tell them that I am favorable to them, that I have done and will do for them anything that is in my power. But for progress, for any reforms to be possible, there is one condition essential, order. And the first duty of the head of a government is to insure it. If order is disturbed there is no longer any thought of

reforms. If in a strike there is fear of disorder, I send troops, even more than are necessary, so they may know that the soldiers will be in force. This is the best way in the interests of the workingman, for it prevents disorder. Order and reforms. No reforms without order."

The President continued: "As for the plutocrats, the people who wish to make of us a Tyre or a Carthage, they are promoters of anarchy. If they were let alone they would bring the country to anarchy. That is why I fight them."

In the more general conversation which ensued the President again found occasion to define his idea. For him there are two dangers, Plutus and Demos. His ideal is a sort of conjunction of the moderate men in both great parties; of all good men, he said with insistence. And he added, at the close of the meal, that his work was not one of mere politics, but of political morality.

These are his last words: "The dishonesty of a few rich men paves the way for the violence of the poor. It cannot be said that I am the enemy of wealth or the enemy of the people. I am the enemy of plutocracy and of anarchy."

Some days later I found myself again at the White House in the office of the President. He spoke to me of one whom I had seen at Washington, of Senator Lodge, a friend whom he rightly praised for his energy and culture; also of the differences between French democracy and American democracy. As I said that in my opinion France suffered from an excessive weakening of the executive power in favor of the legislative power, he replied:

"That is probable. It is a common danger for a democracy, but it is not the only one. Here in the United States what is most lacking to us is to understand that we have interests in the whole world. I wish that all Americans would realize that American politics is world politics; that we are and that we shall be involved in all great questions."

I then remarked to the President that one of his compatriots, a Harvard professor, had explained this very brilliantly last year in Paris at the Sorbonne.

"Yes, yes," he said, "I know that that was the subject of the lectures of Cool-

idge, a man of ability. But the whole American people must become accustomed to this idea. They must be made to feel and understand these international interests. And, now, as for the fleet——"

The President here arose and went toward a large map of the world near a sunny window opening upon the garden. He turned the map until America was before us. Then he followed with his finger the course of Evans's squadron from Cape Horn, saying, "Here it was last week; now it is here." He added: "I despatched the fleet. In April it will be in San Francisco, afterward it will go to Hawaii, and then doubtless to Australia, and, by way of the Suez Canal, to Europe. Why have I done this? For two reasons; first, because I wish Americans to understand by an illustration that their navy is a very great and important thing, that they ought to love it and interest themselves in it. Of course, this is told them in books and in speeches, but it is not the same thing. The picture and the object lesson are more striking, more impressive. It is this naval picture that I want to impress upon the minds of Americans. That is my first reason."

The President stopped a moment. Then he said:

"The second reason is that I wish to show other nations the power of the United States."

I replied to the President that this double demonstration appears already to have produced its effect, and that people have been especially struck by the fact that, instead of sending two or three ships, he has despatched the entire fleet.

Mr. Roosevelt did not allow me to finish, and, with a gesture that is habitual to him, struck his right fist in his open hand, saying:

"Send a part of the fleet! No, never, never! I would not have done that. All in the Atlantic or all in the Pacific, but cut in two, never! That move has been too often condemned by experience. No doubt in the future we shall have two fleets, but until then no *petits paquets*, as they say in France."

He continued: "In America we say, 'Speak softly and carry a big stick' (*Parler doucement et porter un gros gourdin*). That is the best way for internal troubles. It is also the best in foreign politics. Prevention instead of repression."

The President then changed the subject and said to me:

"It only remains for me to express my best wishes for the future of France. We have a deep feeling of friendship for France, and it is an enduring sentiment which the new citizens of the United States feel as well as the old. For it is not true that emigration changes the feelings of a country. In one or two generations the emigrants are assimilated and they think like us. We assimilate them completely. We have a very good digestion."

These cordial words, which expressed exactly the thought of the President and of his minister, were the close of this last conversation. In leaving Mr. Roosevelt, I past between the two statues of Lafayette and Rochambeau, which, facing the White House, testify to the fidelity of American remembrance.

WASHINGTON, D. C., March 10th, 1908.

The Last of the Flock

(From Holger Drachmann)

BY MAURICE FRANCIS EGAN

HE came last; with a sudden dash
His wing-point cut into the air,
Then closed the wound in the time of a flash;
There seemed no swallow there.

COPENHAGEN, DENMARK.

The Prolongation of Life

IT is hard to do justice to Professor Metchnikoff's latest book* in a brief review, because it contains such an immense accumulation of facts gathered from varied fields of natural and human history and is so rich in original and suggestive ideas. Its scope extends from the proper interpretation of Goethe's "Faust" to the formation of the sulpho-conjugate ethers, and from the age of the baobab tree to the validity of the Kantian imperative. Yet it must not be thought that Metchnikoff is, like Haeckel, taking advantage of his eminence in biology to run amuck thru theology, ethics, history and sociology, expressing superficial opinions in a dogmatic manner. Metchnikoff's views may be as radical as Haeckel's, but he presents them in moderate language, after careful consideration of available evidence, and shows no anger or contempt for those who differ from or oppose him.

This volume continues his studies in optimistic philosophy, bringing additional facts and arguments to the support of the theory of life advanced in "The Nature of Man," and replying to the critics of that work. Both books are devoted to the propagation of the gospel of orthobiosis, the plan by which a human being, under the guidance of science, may complete the cycle of a normal and healthful life by a natural death at an age that now seems to us extreme. Of the three terrors of the human race—senility, disease and death—he believes that the two first may be conquered by science, and that the fear of the last may be removed, so that when death comes it will come as the satisfaction of

as natural an instinct as hunger or sleepiness.

He examines the whole range of life, from the lowest plant to the highest animal, to discover the reason for the wide variation in the duration of their individual existence, and reaches the following as his most practical conclusion in its relation to human beings:

"I infer from the facts that the more a digestive tract is charged with microbes, the more it is a source of harm capable of shortening life. As the large intestine not only is the part of the digestive tube most richly charged with microbes, but is relatively more capacious in mammals than in any other vertebrates, it is a just inference that the duration of life of mammals has been notably shortened as the result of chronic poisoning from an abundant intestinal flora."

This internal laboratory of auto-toxicants he regards as one of the harmful vestiges of our animal ancestry, and he shows that it can be removed without injury to the individual. However, he does not recommend this drastic remedy, but would have the tract sterilized or made innocuous as much as possible, partly by the avoidance of uncooked

PROF. ELIE METCHNIKOFF,
Of the Pasteur Institute, Paris.
From "The Prolongation of Life."

food, partly by the aid of the lactic acid bacilli, which make war on the harmful microbes, and so can be made useful scavengers of the human system. The lactic bacillus is to be had in sour milk, buttermilk, koumiss, kephir and sauerkraut, but as these also contain other microbes and their products, some of them harmful, he prefers the use of the pure culture. Milk is first boiled to destroy the tubercle bacilli and then soured by sowing it with the lactic culture, or the latter may be taken directly in the form of a powder or tablet. It should be borne in mind that many eminent physiologists believe that Professor Metchnikoff exaggerates the importance of this factor in disease and the effectiveness of his remedy for it.

*THE PROLONGATION OF LIFE. Optimistic Studies. By Elie Metchnikoff. English translation Edited by P. Chalmers Mitchell. New York: G. P. Putnam's Sons. \$2.50.

As an optimistic philosopher Professor Metchnikoff is obliged to explain not only disease and death, but also the existence of pessimism and the causes of the modern tendency to suicide, individual and racial, and from this subject he passes to a consideration of the foundations of morality and the development of society. He looks forward to a time when, thru the increase of knowledge, altruism in its extreme forms, such as self sacrifice, will become unnecessary, as in some forms it has already. "The more highly organized a social being may be, so also the more highly developed is his individuality." It is among the most primitive forms of vegetal and animal life and among insects that we find the most complete exemplification of the subordination of the individual to society, and on that account he regards the socialistic movement as chiefly reactionary in its tendency.

The book impresses one thruout, as do most of the writings of scientific investigators of the first rank, with a sense of the consciousness of power, the power that comes from verified knowledge, and has no need of frantic language and rhetorical vituperation to gain adherents. It seems that science is coming of age and beginning to assume the right to give advice upon the deepest problems of human life. The Pasteur Institute is doing more than any other organization, thru its experiments on animals, to take medicine out of the realm of guesswork by the study of immunity and the preparation of antitoxins, and Dr. Metchnikoff, as the head of the institute, is entitled to a respectful hearing even when he speaks, as he does here, on subjects that are as yet mostly outside the boundaries of the exact sciences. And he will get it, for the book is one that will be widely read by the general public on account of its frank and simple style, altho he makes no effort to dodge the use of scientific terms or to palliate his conclusions to meet popular taste.

Socialistic Storm and Sunshine

SOCIALIST preachers and socialist doctrine are as diverse and conflicting as Christian preachers and Christian doctrine. If an intellectual inquirer from Mars were to visit America to examine

its religion he might flit first into some old style revivalist meeting. There he might hear the preacher rage and roar as he shook his audience over the brimstone pit and terrified them into a profession of penitence. Stricken with horror that such a lurid discourse should represent the religion of a civilized people he might wander into some quiet church, where an elderly saint was enticing men to virtue with an appealing picture of the life of the Man of Sorrows. Hardly would he believe that the two sermons represented one faith.

An open-minded inquirer into Socialism who should read *The Iron Heel* and *New Worlds for Old* would be equally bewildered. Jack London is a boy buccaneer. He gloats over bombs, Gatling guns and war automobiles; over secret glens, Argus-eyed spies and traitors foiled, over heroes of spotless virtue and tyrants with horns and hoofs. To him capitalists are monsters red in tooth and claw. Society he shakes over the pit and with—oh! such gusto. So fond is he of fury, so obsessed with a mania for blood and battle, that he reduces his own argument to absurdity. He sides with the Marxians who hold that society is splitting inevitably into just two classes; that capitalist and proletarian will face each other presently in a final Armageddon, and that immediately thereafter a co-operative commonwealth will, hey presto, occupy the stage. But *The Iron Heel* pictures the failure of this prediction. Instead of the oppressed workmen winning, their revolts thru several centuries are drowned in blood. However, the drowning gives a good chance for painting a gory picture, an opportunity welcome to the boy buccaneer. We surmise that sane socialists pray to be saved from such rampant, uproarious friends. Semi-barbarians, to whom this sort of stuff appeals, may possibly tear down our civilization; they will never lay a single brick of a nobler civilization.

To read next *New Worlds for Old* is like passing from the pandemonium of a fierce street brawl into the gracious quiet and soothing spaces of a superb cathedral. To Mr. Wells, who speaks for the powerful body of writers, artists and

¹THE IRON HEEL. By Jack London. The Macmillan Company. \$1.50.

²NEW WORLDS FOR OLD. By H. G. Wells, The Macmillan Company. \$1.50.

statesmen in England, the Fabian Society, socialism means design, order, development. He is outraged by the social chaos which leaves thousands of children half-starved, physically feeble, mentally undeveloped. If our civilization has any rational aim it surely includes the evolution of a finer type of citizen, of men and women with beautiful bodies, mature minds, robust characters. But we leave the worst parents, the weak, the vicious, the careless, to rear almost unaided the children on whom such progress must depend. Parental love, home nurture and fecundity we penalize by throwing their cost upon the individual father and mother. To give all boys and girls a fair chance the state should become the over-parent, the mother should be endowed as generously as a soldier (for it is nobler to create than to slay), and industry should be patiently organized so as to guarantee to every adult a chance to work for a sufficient income. Such organization, the writer argues, is impossible so long as private ownership of lands, factories, railroads, mines and stores blocks the way. These things the people must operate collectively for the common good. Of course they can't unless their minds and characters are trained. Such training socialism proposes to give.

Altogether this is a most seductive, sane and sober argument. In style the book would be better if Mr. Wells had never submitted to the influence of Henry James; but at a time when much unripe dialectics is being printed in the name of socialism, a thoughtful person will be thankful for this work. Like all sociological studies made in Europe, it fails to hit American conditions exactly. Not till the Socialists issue a volume which smacks of the prairies and treats of the trusts will they catch the ear of Uncle Sam.

The Barrier. By Rex Beach. New York: Harper & Brothers. \$1.50.

Rex Beach has interpreted Alaska as Lawrence Mott has the land of the habitant, Norman Duncan the Labrador coast, and James B. Connolly the Gloucester fishing banks. Jack London, Elizabeth Robins and Rex Beach are apparently all working together to prove that in the coldest of our territories the passions

are the hottest. While the plot of *The Barrier* approaches the melodrama, and the sensitive reader is shocked by the brutal use of the English language, the vividness of the descriptions carries him bodily into the wilds of Alaska, and when the book is closed he feels as if he himself had shot roaring rapids, had been tortured by mosquitoes, and had looked down the threatening barrel of a Colt's .44. The story is of an Arctic enchantress, who captivates Lieutenant Burrell of the United States Army. Their marriage is rendered difficult by the supposition that the girl is a half-breed, but in a startling *dénouement* this

THE LIEUTENANT AND NECIA.
From Beach's "The Barrier."

is proved not to be the case. Poleon Doret, a muscular French-Canadian, is a well-drawn character. He loves the heroine, and when she is abducted in a rowboat by the villain he pursues in a birch bark canoe. All night long he paddles, stripped to the waist, and driving his canoe thru the water with feverish strength. Toward morning he discovers his quarry on a sand bar, and unarmed he attacks under fire, tearing the abductor to pieces with his naked hands, and returning the girl to Lieutenant Burrell. All the descriptions are given with a very evident knowledge of the details, and information about the laws and customs of the land is imparted in an interesting way.

Come and Find Me. By Elizabeth Robins.
New York: The Century Co. \$1.50.

Nothing is more wonderful than the way the power to dramatize meets the changing emergencies of the imagination. It is the pioneer faculty that goes

Far North that offer the Arctic to the rest of the world. We do not get the gold, but the sense of it, which is far more widening to the faculties. She lacks the peculiar polar ferocity of mind that has made Jack London's stories of this

Copyright, 1908, by THE CENTURY CO.

HILDEGARDE.

From Robins's "Come and Find Me."

before science and proves the incredible. It was the genius of men like Frank Norris, not the railroad magnate, who gave the Far West to those of us who will never live there. And it is stories like Elizabeth Robins's new novel of the

region so revolting and fascinating, and the book is weakened by too much character drawing in the beginning. Besides this, her power to dramatize is genuine, and not commensurate with her understanding of the new psychic phenomena

that changes the very spirit of man in this terrible land. But, notwithstanding these limitations, near the close of the book she reaches a new latitude of meaning—the Far North of mental thinking which gives the story a dignity strange and remote. Something of this is heard in the dying speech of Galbraith, the hero, who, having discovered the

resent the partition of that empire. It is the oldest on earth. I am glad I shall not see its passing.” He leaned back, and a grayness gathered on his face as he ended: “Many a man will be without a country, many a soul will be homeless when the last province of that kingdom yields.” It is this thrilling interpretation of a man’s patriotism for the un-

 THOMAS ALVA EDISON IN HIS LABORATORY.
 From Jones's "Life of Edison."

North Pole, prepares, according to his vow to the God of the North, to destroy the proofs of his discovery. Pointing to the far rim of the map marked "Unexplored," he said: "I feel like the son of that land. Like a man who sees his mother country filched from him bit by bit, parceled out and brought under subjugation. Yes"—he raised his voice suddenly to such a note as set the girl's nerves unaccountably thrilling—"yes, I

known that gives the story its peculiar significance, altho there are other interests developed with the painstaking delicacy of the true artist.

Thomas Alva Edison. Sixty Years of an Inventor's Life. By Francis Arthur Jones. New York: Thomas Y. Crowell & Co. \$2.00.

The inventor comes nearer to being the actual creator of new wealth than any

other individual. By how many hundred million dollars would the world be poorer if Edison had blown himself up in one of the chemical experiments that he used to try in the baggage car when he was a newsboy on the Grand Trunk Railroad at the age of fourteen? What is the value of his personal contribution to the practical success of the electric light, the phonograph, the telephone and the kinetoscope, in which billions of dollars are now invested? This is a problem that can never be solved, because we cannot tell how far the inventor was ahead of other men; whether, if he had not lived, the world would have had to wait a few months or many years for some one else to have discovered what he did or something as good. Bell, of Salem, and Gray, of Chicago, filed applications for a patent on telephony on the same day, February 15th, 1876, but the instrument had to wait for Edison's carbon transmitter before it was practicable. Edison is reputed to have said: "Genius is 2 per cent. inspiration and 98 per cent. perspiration," but other men perspire as much as he without producing as valuable results, so the profit evidently comes out of this extra 2 per cent. Without going into such speculations as these, Mr. Jones has succeeded in his purpose, which was obviously to make a readable book. He has accumulated all the interesting things that have been told about the personality and the inventions of Mr. Edison and written them in the lively style of the modern magazine. He never excludes a good story because it happens to be false, but puts it as an example of the reporters' "fakes." The value of the book is limited by the fact that his attitude is entirely uncritical. He describes Mr. Edison's methods of work at great length, but fails to show how they are responsible for his successes and his still more numerous failures. He makes no attempt to appraise the real value of his inventions, even where such information is much needed, as in the case of the cobalt storage battery, about which so much has been said and so little is known.

Lay Sermons and Addresses. By Edward Caird. New York: The Macmillan Co. \$2.00 net.

We are becoming accustomed in America to discourses on themes bordering

upon the religious by laymen who have been chosen as the heads of great educational institutions, but it is doubtful whether we have as yet in our output anything to match these thoughtful and truly spiritual addresses of the former Master of Balliol. Here are a dozen sermons—and to call them such honors that noun—on a wide variety of topics, from which the most thoughtful will receive inspiration and the most careless instruction. The limitations of socialism and of individualism, when taken each by themselves, could scarcely receive more illuminative treatment than in the first discourse on "The Two Aspects of College Life." The hackneyed theme of "Freedom and Truth" becomes fresh and vital in Dr. Caird's hands. The volume is, of course, fragmentary, as any book is bound to be which is composed of addresses delivered at the opening of a dozen successive academic years, but their essential unity in spirit and in fundamental conviction testifies to the poise and thoro ripeness of the author, and helps one understand the reputation of Balliol as typifying the best in British scholarship and manhood.

The Man Who Was Thursday. By G. K. Chesterton. New York: Dodd, Mead & Co. \$1.50.

"When all church bells were silent, our cap and bells were heard," Chesterton sings in the versified dedication to his latest and longest paradox: *The Man Who Was Thursday*, and we fancy the perplexed reader turning to the dedication more than once for elucidation of some obscure turn of the story. It is the tale of a detective who finds himself, while passing as an anarchist, elected to the inner council of the anarchists of Europe, "The Council of the Days," and the detective is as extraordinary as his predicament. He is a poet-police-man, born of extreme reaction against violent revolt:

"He came of a family of cranks in which all the oldest people had the newest notions. His father cultivated art and self-realization; his mother went in for simplicity and hygiene. Hence the child during his tenderer years was wholly unacquainted with any drink between the extremes of absinthe and cocoa, of both of which he had a healthy dislike. . . . Being surrounded by every conceivable kind of revolt from infancy, Gabriel had to revolt into some-

thing, so he revolted into the only thing left—sanity.”

At times the symbolism of the struggle between law and the lawless rises into dignity and something nearly approaching sublimity, and then we hear the jingle of the foolish bells and a burst of

faith from doubt, sit, like Kipling's "gentlemen unafraid," in the presence of the Policeman of the Universe, and hear the voice saying: "But you were men. You did not forget your secret honor, tho the whole cosmos turned an engine of torture to tear it out of you";

G. K. CHESTERTON.
Author of "The Man Who Was Thursday."

mocking laughter. Mr. Chesterton pays the penalty of the wit in not being taken seriously, even when most serious, as in the closing scene, when the men whose metal has been tested, who have rung true, who have hardily won peace from peril and

and when the real and only original Anarchist appears before the circle Seven Days of Creation to utter his eternal protest against the God of Things As They Are. Mr. Chesterton calls his book "A Nightmare," and the term is psychologically appropriate, for

as our dreams are made of scraps of our daily life, so this volume is a heterogeneous mixture of all the ingredients of current literature, adventure, paradox, symbolism, fighting, satire, the hunting of men, the unraveling of mystery, the painting of scenery, and the discussion of sociological problems.

Memorials of Thomas Davidson. Edited by William Knight. New York: Ginn & Co. \$1.25.

This volume of *Memorials of Thomas Davidson*, a collection of biographical notes, letters, personal estimates, recollections and lectures, interesting by its variety and reminiscent of Davidson by its inclusiveness, is a more satisfactory volume than to some of Davidson's friends seemed under all the circumstances possible. Among America's men of mark Thomas Davidson must be awarded a niche as a wandering scholar of prodigious erudition, a teacher with omnipotent memory, a knight-errant of the intellectual life. His influence endures on two continents. An aggressive individualist himself, it was his ironic fate to be a potent factor in the founding of the London Fabian Socialist Society, one of whose oldest members, at a recent meeting, recalling reverently his spiritual masters, said:

"Thomas Davidson had the high power of making one think for one's self. An hour's conversation with Davidson was a spiritual tonic. It is from Davidson that the Fabian Society derived its traditional dislike of exaggeration, its impatience of pretentious formulas and the critical attitude of its corporate mind."

Apparently Davidson found America more congenial than Europe to his individualism in philosophy, in habit and in salary-earnings. After wandering thru various countries equally at home conversing with the Pope in Latin, disputing with philosophers in German, living with monks in Italy and propounding a creed of the New Life in London, he settled finally in the Adirondacks. There he lived the happiest months of the latter years of his life, lost somewhat to the great world perhaps, where his amazing talents would have produced larger effects could he have worked in harness, but stimulating by lecture, talk, sociability and omnivorous friendship a stream of philosophers, students, disciples, by

whom, seven years after his death, his loss is still keenly mourned. In the ancient world Davidson, like Socrates, would have discoursed to the young men of influence in the State; in the middle ages he would have filled a high chair in some famous city of learning; but in our day he was an anachronism, not fitting into any chair our seats of learning hold, and thru his native incapacity for co-operation, unassimilable in a civilization which is becoming year by year more co-operative.

The Philosophy of Accounts. By Charles E. Sprague, A. M., Ph. D., C. P. A. 8vo, pp. ix, 161. Publisht by the Author. New York. \$3.00.

This volume, which is not the first Dr. Sprague has written on bookkeeping, has two merits; the one that it is a most thoro and critical development of the philosophy of accounts, and the other that the book is entirely printed in the simplified spelling recommended by the Board of that name. Hence "publisht" in the title. The author has had both experience and theory on the subject, being president of the Union Dime Savings Bank in this city, and the professor in the School of Commerce, Finance and Accounts connected with New York University. For the art of bookkeeping one must go to other text-books; this work is devoted to the scientific basis of all systems of accounts, and so belongs to the science rather than the art, and is meant for the student of the realm of accountancy. It has a multitude of general formulæ and equations, so having somewhat the relation to ordinary bookkeeping that algebra has to arithmetic—and yet is surprisingly readable, and not injured by the reformed spelling, altho we observe with regret that in the contents of Chapter XV the word *thru* is twice printed *throu*.

Airships Past and Present. With chapters on the use of balloons in connection with meteorology, photography and the carrier pigeon. By A. Hildebrandt. New York: D. Van Nostrand Co. \$3.50.

The systematic study of the possibilities of dirigible balloons for military purposes has been carried on more thoroly by the German Government than by any other, and large appropriations recently made by the Reichstag for

such experiments have attracted the attention of the world. This work by a captain and instructor in the Prussian Balloon Corps is therefore both timely and authoritative. We Americans are prone to regard ourselves as leading the world in inventiveness and enterprise, but in this matter of aeronautics we are obliged to confess that we are far behind Europe. Balloon voyages are much more of a rarity with us, and altho the Wright brothers are supposed to have the most successful aeroplane very

ing of the camera. All other matters connected with ballooning are discussed in the same practical manner, and the history of airships is narrated from Icarus to Santos-Dumont.

The Appreciation of Literature. By George E. Woodberry. New York: The Baker & Taylor Co. \$1.50.

From the critical point of view Mr. Woodberry's new volume is not particularly significant. It is one of those attempts, so numerous just now, to popu-

STOCKHOLM AS PHOTOGRAPHED FROM A BALLOON AT AN ALTITUDE OF 3,000 FEET.
From Hildebrandt's "Airships Past and Present."

little is known about it. In this country ballooning is more likely to be taken up and developed as a sport than for military purposes, and to this phase of the subject one of the most interesting chapters of the book is devoted. It is not so dangerous as polo, football or auto racing, and is much more novel and interesting. One of its attractions is the opportunity of seeing the world from a new point of view and taking photographs from above. Many such map-like views are included among the 222 illustrations of this volume, and advice is given as to the selection and mount-

larize literature and art—sometimes, indeed, it looks as tho the attempt were directed mainly to supplying the reader, at the smallest possible outlay of time and intelligence, with a number of easy generalities for use in conversation. At the same time, in spite of the faults inseparable from the undertaking—above all, the misleading assumption that this sort of thing is of any particular value in itself—such a volume may be of assistance to persons of a certain stage of culture who are not indisposed to be coaxed still farther by a little discreet encouragement. As tho to this end Mr. Wood-

berry begins with a discussion of "First Principles," in which he undertakes a definition, or rather a description, of literature in general, and after an account of the several literary "types," lyric, epic, drama, and so on, closes adroitly with a chapter of "Practical Suggestions."

Literary Notes

....The Rev. Oliver Huckel, of Baltimore, who is known thru his renderings of some of the Wagnerian operas into verse, delivered in 1906, at the University of Pennsylvania, the second series of Boardman Lectures on Christian Ethics, which are now published by the University under the title *A Modern Study of Conscience*.

....The lectures on comparative religion delivered by Professor Pfeiderer in Berlin in the winter of 1905 have been translated from the German by Dr. Daniel A. Huebsch and published under the title *Religion and Historic Faiths* (New York: B. W. Huebsch. \$1.50 net). The volume includes a sketch of the philosophy of religion as well as an examination of the principal historic faiths.

....In order to rescue from oblivion the early narratives of Indian captivities, a series of these will be reprinted by the H. R. Hunting Company, Springfield, Mass. The first volume contains the *Narrative of the Captivity of Mrs. Johnson. Containing an account of her sufferings, during four years, with the Indians and French. Together with an Appendix: Containing the Sermons, preached at her Funeral, and that of her Mother; with sundry other interesting articles*. Third edition, Windsor, Vt., 1814.

....Changes in the magazine world are many and sudden this year. Even the *Atlantic Monthly*, which has been regarded as the most stable of American magazines in its position and policy, is not unaffected. It will no longer be published by Houghton, Mifflin & Co.—hereafter to be known as "Houghton-Mifflin Company"—but by a new syndicate, the "Atlantic Monthly Company," of which the head is Ellery Sedgwick, of D. Appleton & Co., New York. With him are associated MacGregor Jenkins, the present business manager; Waldo E. Forbes and Roger Pierce, of Milton. We are glad to learn that Bliss Perry will remain editor, and that no change in the character of the periodical is contemplated, for the literary world would lose its bearings if the *Atlantic* lowered its standard. It was founded by Phillips, Sampson & Co., in 1857, so comes within nine years of being as old as THE INDEPENDENT.—*McClure's Magazine* and book business is now under the exclusive control of S. S. McClure thru the withdrawal from the S. S. McClure Company of Harold Roberts, who has been secretary, treasurer and minority stockholder in the two corporations.

....One of the best known art lovers and collectors of New York, Thomas B. Clarke,

more than twenty years ago began the collection of old English furniture. Recently Mr. Louis C. Tiffany became interested in this collection, and it was acquired by the Tiffany Studios, which publish a nicely illustrated catalog of it. Mr. Lockwood's valuable work on "Colonial Furniture in America" was published by the Scribner's seven years ago, and his expert knowledge of and interest in the subject have led him to write *con amore* in this descriptive catalog. Mr. Lockwood classifies the collection under the general heads: Flemish (1660 to 1700), Dutch (1700 to 1735), French (1735 to 1800); the last period, which he names the period of the cabinet makers, is subdivided into that showing the influence of the Louis XV school (Chippendale) and that showing the influence of the Louis XVI school, called after the designers, Shearer, Hepplewhite and Sheraton. Of the 423 plates that illustrate the catalog, 250 are of chairs, many of them rich with carving, and many rare ones showing the Chinese influence. The remainder represent a large variety of furniture, from clothes presses and chests of drawers to knife boxes, cellarets and wine coolers. Besides the articles illustrated there are 133 somewhat similar that are described in the text. The book will be of special service to the amateur who desires to obtain the date of his choice pieces of furniture.

Pebbles

[With mingled feelings of sadness and gladness we are obliged to report that there has been a great dearth of "Little Willie" poems published in the college funny papers lately. Annually for the past few years we have been able to cull a garland; but we fear this will be the last.—EDITOR.]

WILLIE got some Japalac,
Very shiny, very black,
Caught his little sister Sou.
Willie said, "This is on you."
Little Sou was dumb with fear,
So Willie left a souveneer.

—Harvard Lampoon.

Mickey Doyle was cut in twain
By the locomotive train.
On the wheels 'twas very rough—
Mickey was so awful tough.
—University of Pennsylvania Punch Bowl.

Baby wouldn't go to bed,
Tho his ma did ask it;
Papa soaked him on the head.
Baby doesn't need a bed,
Baby needs a casket.
—Yale Record.

FOOTBALL.

A rush and a sickening thud;
A crash and a fall in the mud;
A half a yard gained;
An arm or leg sprained,
And the loss of a gallon of blood.
—Columbia Jester.

Willie had a little tack,
Stuck it into Johnny's back;
And replied, when John objected,
"Don't be scared, it's disinfected."
—Cornell Widow.

The Independent

Entered at New York Post Office as Second Class Matter.
Publisher, Clarence W. Bowen.
130 Fulton Street, - - - New York.

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Easter

THE resurrection of our Lord is the promise of that of his disciples, but do we consider to what sort of a resurrection we are to look?

In the prophecies of Ezekiel is a weird picture of an open valley, full of very dry bones, which came together at the word of the prophet, amid thundering and an earthquake, and became living men, with flesh and sinews and breath. The vision meant no more than the restoration of Israel as a reunited and revived people in their old-time home. The prophecy has been understood, however, as an exact and literal description of the great event to which Easter looks forward. The resurrection has signified to many merely an event of the last day, a far off, distant happening, utterly marvelous, miraculous and strange.

But in the New Testament there is a more spiritual conception of the resurrection than that which the vision of Ezekiel so graphically embodies. Paul speaks of the resurrection in the past tense, and refers it to the experience of believers. He writes to his friends that they "were raised," that they "have been

quickened," referring unmistakably to something which has occurred already in their life. In John this thought is still further developed, and held more positively and clearly. That which is future and apocalyptic gives way before that which is present and personal. In the sorrowing Bethany home Martha says of her brother: "I know that he shall rise in the Resurrection at the last day." Then, in correction of that distant hope, comes the majestic testimony unto the life that is in truth eternal: "I am the Resurrection and the Life." The saying is not: "I will accomplish hereafter a resurrection." The true resurrection is in this present world; it is the spiritual elevation which is manifested in the rise from low-thoughted earthiness to a life of moral endeavor and self-sacrificing love. The Church has dwelt too much on the outward and physical, as well as the distant and strange, in its contemplation of the Easter message. She has taken the Gospel of the resurrection away from the practical and vital, whither Paul and John in their deep spiritual insight had brought it, and removed it to a remote period at the consummation of the ages. She has selected, not the highest plane of New Testament teaching, but the more spectacular and visionary conceptions which served to lead men up to higher and worthier thought. The widespread, popular idea of the meaning of Easter is not much beyond the imagery of Ezekiel's vision. More time for life, and life under conditions where its present severe duties and responsibilities do not obtain, and a less heroic manhood is sufficient unto ineffable bliss, is supposed to be the meaning of the greatest Christian festival.

The desideratum in life is not quantity, but quality. It is not how long a man lives, but how much he lives. In contemplation of the future it were of no use to indulge one's self in day dreams of impossibilities.

It is unprofitable to hope for a realm where helpful service does not demand painstaking thought and toilsome endeavor, together with the suffering of sympathy.

Exhausted with life's duties and hard work, disappointed with defeats where

they hoped to gain victories, despairing of finding a solution to the hard problems that confront them, men think some day to leave all this behind, and in the life of the Resurrection find joy without effort, love without sacrifice, truth without searching, spiritual bliss without moral struggle. This is both unmanly and un-christian.

How many people ever imagined themselves receiving yonder such counsel as Christ gave the young ruler, to sell all their possessions and go about in lowly service? How many have pictured their heavenly occupation as that of healing loathsome lepers by touching them, or giving life in the care of them? How often do the toils and sufferings of the Apostles, the agonies of the martyrs, enter into the calculations of those who sing "O, Think of the Home Over There!" People reach up after blessedness, and forget the toil and consecration under which alone blessedness can be secured. They sing of rest, in indifference to the fact that in the nature of the case there is no rest without wearying, depressing labor. They long for peace, unmindful of the eternal principle that peace is the result of victory, and its sweetness in proportion to the skill and courage by which one has overcome.

What a true man ought to want is grace sufficient to live in the world and be not overcome by it, neither overpowered by its temptations nor overwhelmed by its sorrows and burdens. One might be assured of ten thousand millions of years of life, by absolute demonstration—if such a thing were possible—and it would be of no use to him unless he could be brought to such quality of manhood as makes life in itself an inherently joyous and blessed thing. It is the man that lives, not how long he lives, that determines the worth of his life. In our manlier moments we want nothing better than the buffeting world and strength wherewith to fight it; the world of burdens, but of courage also to bear them. The heaven we really want, unto which we have a right to aspire, is the heaven of a purer heart and a nobler spirit. The men and women who have attained that heaven here have found the real message of Easter, and have already risen with Christ.

The Session of Congress

It is desired and proposed by prominent Republican legislators at Washington that Congress shall adjourn about four weeks hence. Until a few days ago very little had been done in either the Senate or the House. We do not overlook the work on appropriation bills in committee and on the floor, but something more was expected and should have been accomplished. It is difficult to resist the conclusion that additional legislation has been avoided by the party which controls both branches by great majorities, and that the recent political filibustering of the minority in the House was not, in the beginning of it, wholly displeasing to the leaders of the majority there, although in due time it led to much bitterness of feeling and expression. There is some evidence that these leaders were willing that time should be wasted.

In his annual message, and afterward in two special messages, the President made many earnest recommendations. It is expected now that nearly all of them will come to nothing. Undoubtedly, such will be their fate if Congress adjourns four or five weeks hence. There has been no movement for legislation to permit the making of railway traffic agreements, subject to the Commission's approval. Such permission should be granted. There is no expectation that the Commission will be authorized to pass upon the future issues of securities by interstate railways. Provision for a valuation of railroad property has not been made. It is quite well understood that there is to be no modification of the Sherman Anti-Trust law, although there have been hearings upon the new bill which embodies the President's recent recommendations. We do not think this bill should be enacted in its present form, but Congress should amend a law which prohibits all combinations in restraint of trade, whether the restraint be reasonable or unreasonable, harmful or beneficial.

An employers' liability bill has been past, but hastily and with expressed misgivings as to its validity. Beyond this, nothing has been done in the field of labor legislation. No attention has been paid to the recommendations for reason-

able modifications of injunction practice, although they are approved by the leading candidates of both the great parties as well as by the President. For the District of Columbia there is no child labor law whatever. A bill for such a law, to which no member of Congress can reasonably offer objection, was reported favorably in the Senate nearly two months ago.

It is quite plain that the dominant party intends to avoid action concerning publicity for campaign funds. Two Republicans deliberately broke a quorum in committee, last week, in order that there should be no vote upon a publicity bill which a Republican had introduced. Since the campaign of 1904 there has been abundant evidence that such publicity should be required by law. This evidence includes the record of the Harri-man contribution and of the payments made in behalf of life insurance companies, together with the recent incredible story about a contribution of \$500,000 by William C. Whitney, Thomas F. Ryan and their associates out of the treasury of the Metropolitan Street Railway Company. It appears to have been decided by Senator Aldrich, Speaker Cannon and other Republican leaders in Congress that campaign funds this year shall be collected and expended under the old conditions of secrecy and scandal.

A reasonable mail pay subsidy bill has been past in the Senate and disapproved in the House Committee, where, probably, it will die. In the Senate also there has been past an objectionable currency bill, which its sponsor sought to commend by saying that it was opposed by every bank and banker in the country! On the other hand, the House has a bill designed to revolutionize the entire currency system. If it should be past in the House, the Senate would not accept it. As the House will probably insist upon amending the Senate's bill in its essential parts, the only currency legislation now expected is provision for a commission to consider the whole question. This should be preferred to the enactment of the Senate's Aldrich bill. But there was an opportunity, and a demand, for good legislation to facilitate emergency issues in times of financial stress. Let us hope that there will be a competent commis-

sion to propose such legislation, or to include it in a comprehensive scheme of currency reform.

Mr. Roosevelt's repeated recommendation that the Government's coal and oil lands be withheld from monopoly ownership by the use of leases has been ignored. It may be that he will be authorized to appoint a permanent Waterways Commission; if so, the information has not been given to the public. It is said that a postal savings bank bill will soon be reported in the Senate. If Congress is to adjourn four weeks hence, no one will expect to see the bill past in both branches. The Senate has ratified several of the Hague Peace Conference treaties, and has been reasonably diligent with respect to these agreements. The most important questions to which neither branch has given due attention are those relating to combinations, railroads, campaign funds and labor.

In five of the last eight Presidential campaign years Congress was in session after the first of the national conventions. In one of those years it did not adjourn until October; in two it was in session until August. This year, the first of the conventions will be held on June 17th. It will not be right, nor will it be good politics, for the Republican majority to adjourn Congress four or five weeks hence with such a legislative record as has been made up to the present time, or with what promises to be the record then. The success of the party at the polls in November can be more effectively promoted by prompt and wise action in Congress upon important questions which have thus far been avoided or neglected, than by the campaign work, largely for personal interests, for which members would be released by so early an adjournment.

No "Quitter"

GOVERNOR HUGHES may be, as some declare that he is, no politician, but he is no "quitter." An accomplished politician must be skilled in making deals, balancing this man against that man, this measure against that measure, making promises and giving "plums" to those who will help him do what he wants. He must be a boss, able to do things in the dark

which other folks think they are doing in the light, a master of the "Amen Corner," where policies are decided and ways and means contrived to capture votes and secure legislation. It requires great knowledge of weak and wicked human nature, and the power to appeal to its worst motives and take advantage of them. It is a great talent, a great power. But Governor Hughes is no politician.

What he does he does in the open. He makes no bargains, conciliates no leaders, contrives no secret dicker. He has only one way, the public, straightforward announcement of his policy, and then appealing for it to the people. It is very simple, very crude, very frank, mere shirtsleeve politics, but it is all he knows or cares to know.

And he sticks to it. If it does not work, if his recommendations fail to be adopted, he is not discouraged. He stands by the same method, repeats his appeal to the people, with the same naïve confidence that the people will do what he thinks is right. He is not discouraged. One defeat does not dishearten him. He is in the fight to win. He is no "quitter."

He has such a case as might not come to a man in a dozen years. It is what he calls "fundamental." It is a question of morals and also a question of the constitution of the State. The worst gambling of this Empire State is at race-tracks. It ruins multitudes of men, makes thieves of them. The constitution of this State definitely forbids it to exist. The other neighboring States forbid it. There could be no plainer case of offense against both fundamental morality and also the fundamental law of the commonwealth. And yet, plain as the case is, the rich race-men, who are deep in politics and know its wiles, flout the morals and have given us a law which contradicts the law of the State. What care they? They are sped, and they are fed with gold.

While the Constitution distinctly forbids this race-track gambling and requires the Legislature to enact laws against it, by tricks that are dark the politicians that run the Legislature have secured an act to protect this form of gambling. It requires a notice to be set up at the track that betting is forbidden;

but it makes the infliction of a penalty impossible. For conviction there must be a written agreement with the parties betting, such an agreement as is never given by the bookmaker, and on conviction the penalty is the loss of the wager, which is no added loss at all. The effect and the purpose of the law is to make punishment impossible. Accordingly the sign stands, "Betting Forbidden," while the ear is dinned with the cry of those making bets. There, on the racing grounds, gambling is free, and is profitable to the rich scoundrels, high in politics, who own and run the track; but if one bets on a telegraph ticker outside, where they cannot grab the profit, it is a felony and strictly punished. That is the kind of law we have, which Governor Hughes is up against.

He has been beaten, for once. The Assembly past his measure almost unanimously, but it failed in the Senate by a vote of 25 to 25. The gamblers and the bosses are jubilant. Their money has won the day, this one day, and the Republican leader says that is the end of it, that he knows when he is beaten. But the Governor does not know when he is beaten. He goes right back to the people, tells them that the Senate has failed of its plain duty, and that the people must compel them to do it. He summons the Legislature in special session; he will call a special election for a vacancy; it shall be tried over again. He will trust the people to do right.

The gamblers and bosses—what fear have they? They don't know good people, only bad people, so they expect to win again. But they have no idea what is the deep, moral tone of the people. We believe the people will respond to the mandate of the Governor. We believe that every man who voted for the gamblers is a marked man who has no future in public life. The good people have waked up; the Governor has roused them from sleep. It is great to live in these days when great questions of morality and justice and equal rights are the concern of the people the country over, and when the people will honor the man who knows the right and knowing dares maintain, because he is no "quitter."

If this Legislature will not give us the act which will abolish gambling the next

Legislature will. The effort will bear fruit elsewhere also. Congress will pass a similar law forbidding gambling at the race-track in Washington. Even Louisiana threatens a similar law. If New York delays it means that the people will insist that Mr. Hughes shall serve another term as Governor, if not called higher; and he would hardly be allowed to refuse. The public weal has claims on any competent citizens beyond any private claims he might set up. The State which can draft a soldier can draft a Governor.

Property Owners Versus the Voters

THE American people have begun to see their system of constitutional government in its true light, as a finite product of merely human minds, and therefore not necessarily beyond mortal criticism. Among the multiplying signs of change, President Hadley's keen analysis in THE INDEPENDENT of this week of the constitutional position of property in America is one that cannot pass unnoticed. It will not be ignored by the beneficiaries of privilege, or by the plain man who is allowed to vote so long as we have supreme courts to prevent his vote from doing any harm to property rights.

What millions of plain men have inarticulately felt, President Hadley has turned into clean-cut phrases that will live for many a day. A state of affairs which plain men have felt the increasing pressure of, without being able to understand why, in a republic, the task of contending against it should turn out to be almost hopeless, President Hadley has explained so simply and so clearly that no citizen with any intelligence at all can fail to see precisely what it is that democracy in America is "up against."

For more than a hundred years the American people have sincerely believed that they were living in the unrestricted enjoyment of plenary self-government. They have cherished the dogma of the impeccable Constitution, as second only to the dogma of original sin in the mental equipment of a sober and chosen people. Neither the contest over slavery, nor the Civil War, not even the necessity

of resorting to a makeshift Electoral Commission to decide who should be inaugurated as President in 1877, quite convinced them that the fathers of the republic had not invented a perfect mechanism for the perpetuation of life, liberty and the pursuit of happiness. A dozen *Credit Mobilier* scandals would not have convinced them that Mr. Alexander Hamilton had completely succeeded in his avowed purpose of committing a great nation to a constitutional system under which the people might "reign," if they liked, but property owners would continue to "govern" in the good old way. It has required the decisions of the Supreme Court since 1882 to assure our twenty million voters that not one of them can possibly know, until the Supreme Court speaks, what political or legal proposition he is in any election voting for or against. President Hadley has rendered the great service of explaining in a simple and straightforward way just why these things are so.

And, as always happens when a bad state of affairs is clearly expounded, it turns out to be, on the whole, worse than most of us had imagined. There is one sentence in President Hadley's address that is undeniably ominous. Without exaggeration it places beyond further controversy the proposition that actual sovereignty in this country is passing to a group of artificial personalities enjoying State created privilege. Speaking of the effect of the Dartmouth College decision and of the Fourteenth Amendment, he says:

"Yet the two together have had the effect of placing the modern industrial corporation in an almost impregnable constitutional position."

The greatest service, however, that President Hadley has here rendered is his substitution, with unassailable logic, of a true theory of American politics for the traditional, orthodox and wholly imaginary theory. The fundamental division of powers in America is not, as the text-books tell us, into legislative, executive and judicial; it is into "voters on the one hand and property owners on the other." Could anything be more crisp than this proposition? And it is demonstrably true:

"The forces of democracy on one side, divided between the executive and the legisla-

ture, are set over against the forces of property on the other side, with the judiciary as arbiter between them."

It does not follow, however, that the outlook for democracy in America is hopeless. To know exactly what a situation is, is the first step toward changing it. To know positively that before we can have an income tax, or such legislation in behalf of the propertyless as progressive European nations are enacting, we must have a modified constitution, is to set in operation the forces that will insure modification. There is "a way out" which President Hadley has not suggested. Just as the Fourteenth Amendment introduced a constitutional bulwark of property which was not contemplated, so the Supreme Court in its interesting legal dogmas of "the police power of the State" and "private property affected by a public obligation" has brought forward, perhaps unwittingly, dynamic ideas by means of which our entire constitutional system can be turned upside down and inside out whenever the Supreme Court chooses to begin operations. The business of the voters is to see to it that as rapidly as possible the Supreme Court shall be constituted of men capable of grasping the idea that property, like the Sabbath, was made for man, and not man for property.

Orthography and Scoligraphy

THE second annual session of the Simplified Spelling Board was held in this city last week, and abundant discussion was held for three days on the ways of persuading the people to employ their common sense in the matter of preferring reasonable to unreasonable spellings. The argument does not need to be repeated; it is all one way.

What we want to get, for the sake of our children, and of foreigners who now have to learn what we ludicrously call our orthography, straight writing, but which is really our scoligraphy, crooked writing, is a better, a more rational, if not the best, the ideal spelling of our language. At present our method of writing our language is the worst in the world this side of China, and in China the phonetic romanization of the Chinese language is well begun.

The ultimate aim which every scholar ought to have in mind is a purely phonetic system. But that means a somewhat reformed alphabet. We have useless, or duplicated, letters in our language, such as *c* and *g*, and there are sounds that have no letters, such as *ch* and several vowels. Various bodies in this country and in England have tried to devise a perfect alphabet, but nothing as yet has general approval. It is impossible to have scientific spelling till we have a scientific alphabet, and that requires an understanding of orthoepy such as few people possess. It requires a knowledge of the nuances of pronunciation in different portions of the English-speaking world, and then the courage to disregard them. An international commission of orthoepists must take this in hand, and then we may try scientific spelling.

But scientific spelling is yet far ahead; not hopeless, but distant. Something can and should be done in the meantime, the special value of which is to get into the heads of the stupid public which imagines itself intelligent that there is nothing sacrosanct about the spelling which this twentieth century has inherited from the nineteenth. The English ignoramus of culture who lately wrote that Shakespeare's spelling was good enough for him, matches the objector to the Revised Version of the Scriptures, who declared that he would never give up the Received Version of Saint James. It is no sacrilege to change our spelling, which is not yet hoary with age. Shakespeare spelt his own name in various ways, and said "*Honor*," not *honour*, "is the subject of my story." It must be beaten into people's heads that our spelling can be improved. We must break the crust of prejudice; this reformers must always do. For this reason THE INDEPENDENT uses a large number of these simplified spellings, to accustom people's eyes to the better way and show them the absurdity of the old. Why say *though* when *tho* tells the story?

For we must not wait years for a scientific alphabet of thirty or more letters, and then for scientific spelling. There are definite laws of usage in our present spelling to which exceptions should be made to conform. This is mere simpli-

fication, and it is a great deal. Already in chemical terms the final *e* has been largely dropt from such words as *bromid*, *sulfid*, *iodin* and *paraffin*, and it is not long before the people will learn that the useless letter should be dropt from such words as *give* and *live*.

What is the better way to escape the confusion of *ie* and *ei* in such words as *receive* and *relieve* it is not immediately easy to say; and the disgraceful complexity of the *ough* combinations has not yet found simplification.

We trust the Simplified Spelling Board will go forward with its work. The phonetic business of getting up a scientific alphabet does not belong to it; but it can and should suggest simplifications which are in the line of the rules and analogies of our present spelling. If we write *lost* we ought also to write *crost*; if the adjective is *blest*, originally a participle, then let *blessed* as participle also be so spelt, and with it *prest* and *drest*. We thus come down to simplicity and sense. We would have the Board make a thoro study of the present rules and analogies, and then give—or *giv*—us a spelling-book, or dictionary, which we can follow as far as our courage will allow, and we may pray that courage will grow. For the people are really beginning to like the reform. They know it is right, and those who at first objected to it are saying, "We will never accept it for ourselves, but we are willing our children should take it." So much do old people hug the dear torments of their childhood which have become the pet pride of their years.

Tagging the Disagreeable People

WITH all our getting we do not get understanding. We mistake words for truth and qualities for qualifications. And in matters of judgment we make primitive rather than intelligent distinctions. For example, we still regard the person who breaks another's head in a momentary fit of anger as a worse man than the one who persecutes his wife for forty years with a disagreeable disposition. The one is tried and sentenced as a criminal, while the other may be honored in the community as being of an extraordinary righteousness. In our efforts

to discipline the crude, honest, outbreaking sinners we have neglected to chasten a certain class of perverse people who are no less at fault because they possess so many virtues. All the virtues do not make some people virtuous, just as all the wealth would not make a miser rich. And we have failed in this duty because more courage is required to deal with one mean, good man than with many bad men. There is something prickly about him which forbids a firm, right hand grapple with his particular fault. For one thing, his most exasperating qualities are invariably based upon his virtues, and his chief gift is the power to discover every other person's weakness, real or potential, which gives him the advantage of an offensive and accusing relation to them. And being in no need of a conscience himself, he exercises it vicariously, constantly and scrupulously for others. Nothing is more difficult than to indict a person for a fault who has already fixt his eye victoriously upon our own failing.

However, it is time to tag some of these people with the reputations they deserve. What they need is to contribute less to public opinion and to have more of it contributed to them.

Persons who bully public servants in public places are rarely punished for their viciousness. The instinct to persecute where there is no danger of retaliation is so strong in them that they will brave the silent contempt of the crowd about them for the pleasure of humiliating a clerk. Men who are brave enough to their equals show this kind of cowardice to their subordinates; and women distinguished for good breeding in their own social circles display virago qualities in dealing with their social inferiors. Women who hector shop-girls and grocermen on the ground that they pay their bills also belong to this class; so does the man who becomes obviously angry when a baby cries in a railway coach or other public conveyance where he happens to ride. Such persons should be reminded of the fact that the world, including the railways, all real estate and the future, belong more particularly to the baby. The rest of us are only regents of property, rights and government. He is the one person among us who has a natural

imperative advantage of the situation by reason of his extreme youth, inexperience and magnificent unconcern. It is not possible, therefore, to punish such an offender for his yells, because he has not arrived at an age to be affected by outside opinions, and it is the meanness of mortifying the infant's mother which indicates the peculiar quality of the disagreeable man's spirit.

The person in whom truth is a sort of niggardly trait for apprehending the honest, but more elastic and figurative, truths of other people as lies, is very objectionable and injurious to society, because he sets up a narrow, false and foolish standard of veracity, and is ever ready to fling his little fact like a stone in your face by way of contradiction. This person is the same who, being in the minority, contrives to make more noise with his outcries of defeat than the majority can with acclamations of victory. And this is because he lacks the honorable veteran quality which enables one to bear defeat no less sedately than conquest. His only element of strength consists in placing the other person, and as many other persons as possible, at a disadvantage; and being in that predicament himself, he is to be recognized by his impotent bellowings.

Religious people who love darkness rather than light belong to this order and are to be known by their paucity of ideas, by the narrowness of a critical spirit, and, above all, by their fear of knowing anything beyond the creed circle of their own catechism. Others also are to be mentioned here in whom righteousness is more a missionary instinct than a personal quality. They have a kind of peripatetic piety which urges them into a nagging relation to other people's souls, when really they are less likely than almost any of us to have souls of their own.

Many more might be mentioned, of course—the man who wants to argue till he proves the other person wrong; the other who imagines that he is a brilliant conversationalist because he can sustain a monolog longest at the expense of the rest of the company; and the woman in whom talking has become a sort of high treble hysteria. It will be observed that the two last-mentioned individuals never marry each other! No one ever saw a

bullying, brilliant, egotistical man with a vivacious talkative wife, nor an intellectually vain woman with a noisy husband. He is always her soft pedal.

And last, but by no means the least disagreeable, are the men or women who have an almost audible sense of their own nerves and a pessimistic vocabulary with which to interpret them. If euthanasia is ever admissable, it should be practised upon women who are perfectly willing to die, but who cling faintly to life, who have neurasthenia and prize it, whose disease is a selfish, physical obsession of the mind which exhausts the body; and it might also be practised with mutual relief upon men who are more interested in their vitals or their victuals than their business.

Vacation Pictures and Experiences

Until May 1st the offer we made in our issue of March 12th holds good; \$10 for the most interesting photograph, \$5 for the next best, and a year's subscription to THE INDEPENDENT for all other pictures that we can use in our next Vacation Number. We want also a great many of our readers to contribute half-page accounts of their happiest vacations, particularly where these point out some undiscovered corners of our own continent and some novel ways of turning leisure into pleasure. For each of these vacation stories we will give two subscriptions to THE INDEPENDENT, so you can extend your own by another year and with the other make a present to a friend or a bargain with some one who would like to take the magazine but cannot quite afford it. Even tho you are so constituted that you find it painful to talk about yourself, and especially to tell others about a good time you had once somewhere, this opportunity of helping out your periodical fund may in the present financial crisis be worth this slight infringement of your natural diffidence.

The Great Seal of the United States shows us an eagle holding with one foot a sheaf of arrows and with the other an olive branch. The motto of Massachusetts is "*Ense petit placidam sub libertate quietem*," "With the sword she seeks under liberty tranquil peace." Thus the rattle-

snake theory of peace, the venomous reptile with head erect, tail quivering, and seeming to say "*Noli me tangere*," is that which we have inherited from the age when every man was against his brother, instead of every man for his brother. This is the theory which requires four new battleships to be authorized this year to thunder out "Don't touch me!" and these to be added to by successive Congresses until we can raise our fangs as numerous on both the Atlantic and the Pacific Coast as the heads of the rattlesnakes to be lifted against us. Such a policy was necessary once. Every man had to go armed, and every nation. It begins to cease to be necessary now, and our business is to welcome and hasten the day. We now forbid men to go armed; soon we shall make it indecent for nations to go armed. The United States ought to be quick to see the better way. We should take the lead in discouraging armaments. We must still do something in arms; and President Roosevelt's earlier advice to be satisfied with replacing wornout battleships is perhaps the most practical. Congressman Hobson's argument for an enormous navy, his tirades against Japan, ought to tell against him. The report that the appropriation for public buildings is to be killed if four battleships are not consented to suggests a raid on the Treasury and a most vicious combine of greed and belligerency. Our people want a navy that is good, what there is of it; but they do not want to be pointed at as a mighty warlike Power. Possibly Congress might do something to build up a merchant marine before trying to have more warships than any other nation except Great Britain.

A Spring Vacation It is rare that a college row terminates to the mutual satisfaction of everybody concerned, as in the case of New York University. The eighty students of the junior class which had, contrary to the express command of the chancellor, hazed a freshman by ducking him in the fountain, were punished by being suspended for three days. The days were warm, bright spring days, when the budding trees and the smiling water and the young man's fancy all combine to make a vacation attractive.

The juniors enjoyed it. The faculty no less, for they were temporarily relieved of the juniors, and they had the proud consciousness of having done their duty in maintaining college discipline by inflicting a just punishment. Everybody, therefore, is happy, except, of course, the freshman over whom the quarrel arose. He has been twice roughly handled, and will doubtless have to endure hardship and contumely during the next three years. But college discipline is not the only legal fiction in which the satisfaction of justice does not imply relief to the injured party.

Faith Healing and Miracles

There is a considerable movement of thought, not confined entirely to what is called faith healing, or religious healing, which argues that as Jesus healed the sick, so we can heal the sick; and that neither in his case nor in our cases are the healings miraculous in any such sense that they are outside of natural law. That kind of position is taken sometimes to show the reasonableness of the biblical miracles, and sometimes to explain them away. The latter is the more logical position, for it ought to be clear to any careful, or careless, reader that the purpose of the writers of the Gospels is to show that what Jesus did was a demonstration that he was gifted with a power above and beyond nature, and that this was the proof of his Messiahship. To assert that what He did was in the line of the regular action of natural laws is to contradict the assertions and the arguments of the writers. There certainly are miracles recorded as performed by our Lord which are beyond all question a violation of nature's laws. Allowing that many were cures of special diseases, like the casting out of devils and various nervous disorders, which can now be cured and are cured in the same way as then, there are many others which no present-day faith can cure. Such are the raising of the dead, the restoring of sight by a word to one born blind, and the healing of lepers. One who makes all the miracles of our Lord depend on the impress of a strong mind and will on a weaker and controlled one, must simply deny the truth of the Gospel stories, or of some of them; and

that is the drift, if not purpose, of those who would have us believe that the miracles of our Lord were performed under natural law. It accepts some and denies other miracles.

A Lesson to Christendom

There was a most interesting, we believe absolutely unique, meeting held in Peking a few weeks ago which we fear could not be duplicated in any portion of Christendom; but why not in its spirit, if not in its wide representative character? There were eight hundred men present, invited to the compound of the American Board by the Chinese pastor of a Chinese Congregational church. The Rev. Jen Ch'ao-hai was troubled by the divisions he had seen between Christians in that pagan city, and he took the liberty to invite members of churches of every Christian name to come and salute each other, with not a word of discussion of their differences. They surprised him with their cordiality—not only all the subdivisions of Western Protestantism, but the Russian Greeks and Roman Catholics as well. A Catholic priest said he could not come, but was glad to have his people come. They had a program—a song by members of the Peking University, reading of Scripture by Pastor Jen, and after every passage the company said amen, followed by its intoning by the Greek Christians. Then Pastor Jen told them how he had grieved over the divisions between Christians who had a common Father and Savior. Then, after more singing, short addresses and congratulations were uttered by representatives of the Congregational, Methodist, Catholic, Greek, Anglican and Presbyterian missions and various colleges and institutions. Among the songs was one by two Chinese from the Catholic Cathedral, one of them officiating at the organ; and the singing of the Greek choir was most impressive. The service closed with the whole audience rising and repeating three times "Hallelujah," followed by the Greek Christians doing the same in their own stately music. The Greek priest, when asked to pronounce the benediction, modestly declined, saying he was unworthy of such a function, and it was pronounced by a missionary of the London Society. We can well believe *The Chinese Recorder*, which says the occa-

sion was "thrillingly interesting and uplifting," and it is hoped that this will be an annual occurrence. So we go to the yellow people, the new converts of the East, to see how they, like the Psalmist, are wiser than their teachers.

Ex-Governor Garvin writes us from Lonsdale, R. I., in defense of the single tax:

One sentence in your last editorial upon the Land Question calls for a response. You say, "We don't think that Mr. Garvin would find it easy to demonstrate that the scarcity of valuable land is caused by unwise laws which promote speculation rather than by the advance of civilization."

By scarcity I meant high price, and high price is due to our system of taxation. If the only tax were upon land, and amounted to about 5 per cent. of its present valuation, it would take for government purposes nearly all of the ground rent. The necessary effect would be to reduce the price of land to a merely nominal sum. Then you would have land "within a short walk of every town, and within a few miles of every city" by paying, in the form of an annual tax, its natural, non-speculative rent.

The argument for woman's suffrage cannot be more happily put than it was the other day by Secretary Taft, who said:

"I believe that woman suffrage will come eventually and that there is one fundamental principle that applies to the whole thing. Under a representative form of government the interests of any particular set of people are more likely to be advanced when represented by one of themselves than by one of another class, no matter how altruistic the efforts of the latter may be."

This is modern art-English. We take it from a leading daily in this city which enjoys much credit for its careful diction:

"Because he employs such a reticent color scheme, avoiding the obvious sonorities of painters' rhetoric, the exhibition of . . . is a relief to both eye and spirit."

The baseball reporter could scarcely twist words worse.

By the fearful conflagration on last Sunday, in a gale of wind, one of the pleasantest suburbs of Boston was almost burnt bare. Much sympathy and no little help will go to the people of Chelsea whose homes have been swept away, for it was a city of homes.

NEW BUILDING OF THE FIRST NATIONAL BANK OF BOSTON.

The First National Bank of Boston

THE First National Bank of Boston has just moved into its new building, at the corner of Congress, Franklin and Federal streets. The building is beautiful from an architectural standpoint and is an ornament to the city. The bank was organized in February of 1859 under the name of the Safety Fund Bank, with Abram P. Lowe as the first president and with a capital of \$600,000, which was increased in 1860 to \$1,000,000. In February of 1864 the bank became known as the First National Bank and Mr. Lowe continued as president until January of 1881, when he was eighty-eight years old. For the next seven months Samuel D. Warren was president, and he was succeeded by John Carr, who was president until 1903, the year in which the bank was amalgamated

with the Massachusetts National Bank. The present president, Daniel G. Wing, succeeded Mr. Carr, and in 1904 the bank was merged with the National Bank of Redemption and the capital was increased to \$2,000,000 and the surplus made the same amount. The surplus and undivided profits now amount to \$2,895,096.84 and the total resources to \$50,721,677.55. The officers of the First National, in addition to President Wing, are John W. Weeks, George G. McCausland and Clifton H. Dwinnell, vice-presidents; Frederic H. Curtiss, cashier, and Palmer E. Presbrey, Edward S. Hayward, Bertram D. Blaisdell, George W. Hyde and Charles A. Sawin, assistant cashiers. Among the directors are such well known gentlemen as Orlando H. Alford, Calvin Austin, Charles F. Brooker, Charles S. Mellen, Andrew W. Preston, Charles A. Stone, James J. Storrow, John W. Weeks, George R. White and Sidney W. Winslow.

Commercial Paper Security

IT is shown in the report of the loan committee of the New York Clearing House Association, issued last week, that there passed through the committee's hands, during the twenty-two weeks while loan certificates were outstanding, securities and commercial paper (as collateral for the certificates) to the value of \$453,000,000. Of this sum, \$330,000,000, or nearly 73 per cent., represented commercial paper. Only a little more than one-fourth was stocks or bonds. Of the merchants whose paper was thus accepted, not one defaulted. There is suggestion in this for those who seek the best method of providing emergency issues of currency. Why should not the certificates of Clearing House associations, based mainly upon commercial paper, be utilized as a basis for the issues? This experience shows that there is plenty of good commercial paper available. It is a better basis for emergency issues, which should have a short life, than the long term State, county and municipal bonds required in the Aldrich bill.

Railroad Control

A VERY interesting report has been prepared by the experts of the Interstate Commerce Commission, as the result of investigations designed to show how control of the railroads has in recent years been centralized by one company's investment in the stock of other companies, by holding companies, and by other devices. It appears that the par value of our railroad securities outstanding on June 30th, 1906, was \$9,342,961,476 in bonds and \$8,884,234,925 in stock, or a total of \$18,227,196,401. It will be noticed that this is considerably in excess of the sum heretofore accepted as the total. The Commission has ascertained that the railroad corporations themselves held, on the date named, \$1,440,360,507 of the bonds and no less than \$4,114,851,990 of the stock. Thus, while the public held 84½ per cent. of the bonds, it had only a little more than half (53½ per cent.) of the stock, which carries the voting power. This will probably surprise many who have believed that nearly all of the stock was held by "the public."

When to the stock holdings of the railroad companies themselves (46½ per cent.) are added the individual holdings of capitalists influential in directorates or the management, with those of industrial corporations allied in interest, it will be seen that the public really holds a minority, widely scattered, while the majority is in large blocks and can easily be massed for use. The report points out how holding companies have in some instances virtually established minority control, the most remarkable example being exhibited by the Rock Island system, in which the possessors of a majority, or about \$25,000,000, of the holding company's preferred stock, dominate 15,000 miles of road capitalized at more than \$1,000,000,000 in stock and bonds. These and other facts set forth in this valuable statement emphasize the need of effective official supervision and regulation in the public interest.

The Greenwich Savings Bank

WE wish to offer our hearty congratulations to the Greenwich Savings Bank, which celebrates this month its seventy-fifth anniversary. This bank was incorporated by the New York Legislature on April 24th, 1833. Its presidents have been George Suckley, Abraham Van Nest, William Mandeville, Francis T. Luqueer, D. A. Cushman, Benjamin J. Wheelwright, Washington R. Vermilye, Edward N. Pigot and John Harsen Rhoades, all well known New York men. James Quinlan, who has been identified with the bank for many years, succeeded Mr. Rhoades as president two years ago. The bank has over 91,000 depositors and a surplus of \$4,172,444.33. The amount due depositors is \$59,566,012 and the total assets on January 1st were \$63,739,534.12.

....The Borough Bank and the Jenkins Trust Company, both of Brooklyn, which suspended on October 25th, resume business this week. The new president of the Borough Bank is B. R. Shears, for some years past an examiner in the service of the State Banking Department. Harold A. Davidson is the president of the Jenkins Trust Company.

The Chelsea Fire

TEN thousand persons were made homeless and a property damage, according to provisional estimates, of not less than \$5,000,000, resulted from the greatest fire that has visited the Boston district, at Chelsea, Mass., in over ten years, which took place on Sunday, April 12th. Thirteen churches, five banks, the City Hall, factories and tenements went up in smoke. The number of deaths reported were few, but many persons were injured, and much suffering must result. Fire insurance men estimate their losses at \$3,500,000. The present year, in view of the Chelsea fire, bids fair to be a bad insurance season, and the losses of insurance companies must, in the very nature of things, be heavy, as Chelsea was regarded as a first-class insurance center. The local fire department was handicapped by a gale with a velocity of sixty miles per hour. Help from all the cities in the vicinity was quickly obtained, but even then the fire burned fiercely for over twelve hours. The Chelsea fire will tend toward the discouragement of new fire insurance companies.

Benjamin F. Stevens Dead

BENJAMIN FRANKLIN STEVENS, president of the New England Mutual Life Insurance Company for forty-three years, died at his home in Boston on April 11th. He was eighty-four years old, and had been in failing health for some time. He was born in Boston on March 6th, 1824. His first American ancestor settled in Braintree in 1634. He was the son of Col. Benjamin Stevens, sometime sergeant at arms at the Boston State House, who was born in Boston in 1790, and who married Matilda Sprague. Mr. Stevens on the maternal side was a descendant of Samuel Sprague, one of the members of the Boston Tea Party of Revolutionary days. He was, thru Joanna Thayer, of Braintree, likewise directly descended from Peregrine White,

the first white child born in the Massachusetts Bay Colony. His education was obtained in the Boston public schools. Leaving school in 1838 he was trained in mercantile life as a hardware clerk. His training covered a period of five years, after which he was attached to the United States frigate "Constitution," Holmes's famous "Old Ironsides," as clerk to her commander, Captain John Percival. During his service on this vessel he made a cruise around the world which lasted from 1843 to 1846. He then retired from the navy, and returning to Boston was presently elected secretary of the New England Mutual Life Insurance Company of that city. On June 14th, 1864, Mr. Stevens was elected vice-president of the company, and upon the resignation of Hon. Willard Phillips, November 14th, 1865, he was elected president of his company, an office which he continued to hold up to the time of his death. He was probably the oldest life insurance official in the United States when measured by time of service. He made frequent trips to Europe, and traveled extensively in the South. In his youth Mr. Stevens did considerable literary work as a book reviewer. He was also a theatrical critic at one time for the Boston *Daily Atlas*. He was a member of the Union, Algonquin, Temple, Boston Art and Merchants' clubs. He was a member of the Boston Common Council for three years. At the time of his death he was a director of the Boston Safe Deposit and Trust Company. He was a Republican in politics. He was a collector of rare prints, old books, etc. Mr. Stevens was married in 1850 to Catherine, the daughter of Ezra Lincoln, who, with one daughter, Mrs. H. L. Jordan, survives him. Funeral services were held at Trinity Church, Boston, on Monday, April 13th.

The following toast was pronounced at a firemen's dinner: "The ladies—their eyes kindle the only flame against which there is no insurance."—*The Tatler*.

Survey of the World

Only Two Battleships

The President sent to Congress on the 14th a long message, urging that an appropriation be made for four battleships. When the Naval Appropriation bill was taken up in the House, on the 15th, Mr. Hobson's amendment, increasing the number of battleships from two to four, was rejected by a vote of 83 to 199. For this amendment there were 57 Republicans and 26 Democrats. The vote for three ships was 64 to 208, but only 65 members voted to reduce the number to one. When the Senate acts upon the bill, it will vote for not more than two.—In his message the President urged that four were required because at the recent Hague Conference there had been no agreement for a limitation of naval armaments, nor any prospect of one "within any reasonable time"; also because the military nations had recently turned to the construction of ships of a size and armament which made their effectiveness at least twice as great as before. If we should now provide for only two, we should go backward in naval rank and relative power. His earnest advice was given in view of his solemn responsibility. A navy commensurate with our powers and needs would be the surest guarantee and safeguard of peace. We were negotiating arbitration treaties, it was true, which had a special usefulness:

"Yet it is idle to assume, and from the standpoint of national interest and honor it is mischievous folly for any statesman to assume, that this world has yet reached the stage, or has come within measurable distance of the stage, when a proud nation, jealous of its honor and conscious of its great mission in the world, can be content to rely for peace upon the forbearance of other Powers. It would be equally foolish to rely upon each of them possessing

at all times and under all circumstances and provocations an altruistic regard for the rights of others. Those who hold this view are blind indeed to all that has gone on before their eyes in the world at large. They are blind to what has happened in China, in Turkey, in the Spanish possessions, in Central and South Africa, during the last dozen years."

For centuries China had cultivated "the very spirit which our own peace-at-any-price men wish this country to adopt," with the result that various other nations were now holding large portions of Chinese territory, while there was an acute fear in China of absolute dismemberment. There were appeals continually to our State Department for interference in behalf of oppressed peoples and nationalities in other countries. He referred to them because of the great loss of life due to such oppression in time of peace:

"It is probably a conservative statement to say that within the last twelve years, at periods of profound peace and not as the result of war, massacres and butcheries have occurred in which more lives of men, women and children have been lost than in any single great war since the close of the Napoleonic struggles. To any public man who knows of the complaints continually made to the State Department there is an element of grim tragedy in the claim that the time has gone by when weak nations or peoples can be oppressed by those who are stronger without arousing effective protest from other strong interests. Events still fresh in the mind of every thinking man show that neither arbitration nor any other device can as yet be invoked to prevent the gravest and most terrible wrongdoing to peoples who are either few in numbers or who, if numerous, have lost the first and most important of national virtues—the capacity for self-defense.

"When a nation is so happily situated as ours—that is, when it has no reason to fear or to be feared by its land neighbors—the fleet is all the more necessary for the preservation of peace. Great Britain has been saved by its fleet from the necessity of facing one of the

two alternatives—of submission to conquest by a foreign Power or of itself becoming a great military Power. The United States can hope for a permanent career of peace on only one condition, and that is, on condition of building and maintaining a first-class navy."

There was, he said in conclusion, a rank due to the United States among nations which would be withheld, if not absolutely lost, by a reputation of weakness. If we desired to avoid insult, we must be able to repel it; if we desired to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we were at all times ready for war.—In the House debate, the President's arguments and appeals were opposed by Messrs. Burton, Tawney, Foss, Williams and others, who held that we could continue to rely upon our national strength and prestige and upon the justice of our attitude. It was also shown that two more ships would add \$24,000,000 to a bill already carrying \$107,000,000. Mr. Hobson was the leading defender of the President's policy.—The battleship fleet arrived at San Diego on the 14th, and at San Pedro (the port of Los Angeles) four days later. Its reception on the California coast has been marked by the greatest enthusiasm.

Race-Track Betting

The Republican Senators who voted against Governor Hughes's race-track betting bills have been subjected to great pressure by mass meetings at their homes and in other ways, but there is no sign that any one of them will reverse his vote. Disapproval of their action has been forcibly expressed in the churches. There is reported to be a Republican revolt in Albany against the rule of William Barnes, Jr., the local leader at whose direction, it is alleged, Senator Grattan turned from the Governor to vote against the bills. As to the approaching special election in the Niagara Falls district to fill a vacancy, it is said that the Democrats will make no nomination, desiring to avoid the responsibility which would be imposed upon them if they should elect a man who could break the Senate deadlock by voting for the bills. It is asserted in a prominent journal that one of the votes cast for the bills

on the 8th inst. will be cast against them whenever the race-track interests need it. One of the Republicans, Senator Burr, who opposed the bills, represents the district in which President Roosevelt's home is situated. The Congressman from the same district, Mr. Cocks, was asked to obtain from the President assurance that he had not exerted influence against the bills. This was to "correct a rumor" heard at Albany. Mr. Cocks replied that while he himself had advised Burr to stand with the Governor, the President had declined to have anything to do one way or the other with any legislation at Albany. It was not fair to assume, he added, that the President's attitude was indicated by the attitude of Mr. Barnes or by the vote of Senator Burr. During last week much hostility toward the Governor was shown in the Legislature, and it is evidently the purpose of the leaders to defeat or lay aside the pending measures in which he is interested and to which he has directed attention by special messages.—At Washington the Senate by unanimous vote has past a bill against gambling or race-track betting in the District of Columbia. This, if it becomes a law, will affect racing at the Bennings course, where the spring meeting recently closed.

Water-power Grant Vetoed

In accordance with the notice given in his message of March 25th, the President, on the 13th inst., vetoed a bill extending for three years the time allowed in the original grant (ten years ago) to a company for the construction of a dam across the Rainy River, in Minnesota. He did not believe, he said in his message, that natural resources should be granted and held in an undeveloped condition either for speculative or for other reasons, and there were no assurances that the grantees in this case were in better condition to utilize this opportunity promptly and properly than they were ten years ago. Moreover, every such permit should recognize the right of the Government to fix a term for its duration and to impose charges:

"The income derivable from this source would materially aid in the complete improve-

ment of our navigable waters, for which there is now such crying need. The chief of engineers of the Army reports that the bills now pending at this session of Congress permit the construction of dams in navigable streams capable of developing over 1,300,000 horse power. These rivers run every hour in the day and every day in the year. To develop this amount of power would, under average conditions, require about 25,000,000 tons of medium quality coal every year. This natural wealth is the heritage of the people. I see no reason for giving it away, tho there is every reason for not imposing conditions so burdensome as to prevent the utilization of the power.

"We are now at the beginning of a great development in water power. Its use thru electrical transmission is entering more and more largely into every element of the daily life of the people. Already the evils of monopoly are becoming manifest; already the experience of the past shows a necessity of caution in making unrestricted grants of this great power.

"The present policy pursued in making these grants is unwise in giving away the property of the people in the flowing waters to individuals or organizations practically unknown and granting in perpetuity these valuable privileges in advance of the formation of definite plans as to their use. In some cases the grantees apparently have little or no financial or other ability to utilize the gift, and have sought it merely because it could be had for the asking."

He then set forth his views as to the conditions by which such grants should be guarded. The grant should be a limited one, in the nature of an option, subject to annulment if not promptly or properly utilized; the maximum development should be assured by the plans; there should be a license charge, which, small at the outset, could be adjusted in the future so as to secure control in the interest of the public; and provision should be made for a termination of the grant or privilege at a definite time, "leaving to future generations the power or authority to renew or extend the concession in accordance with the conditions which may prevail at that time."—Mr. Jenkins, chairman of the House Judiciary Committee, has submitted to the committee a report to the effect that the bill appropriating \$5,000,000 for the acquisition of about 7,000,000 acres of land, to be held as the Appalachian and White Mountain forest reserves, is not constitutional, mainly on the ground that the national Government cannot invade a State to take possession of land for forestry purposes. It is said that a majority of the committee are in agreement with him on this question.

Railroad Questions Attorney - General Bonaparte has asked all the district attorneys to report concerning such practices of the railroads in their districts as may be in violation of the commodity clause of the Hepburn Rate law. In the Senate, Mr. Foraker has proposed an amendment which would virtually repeal the clause, so far as commodities (such as coal) are concerned which were acquired under the authority of a State law or charter prior to June 29th, 1906.—At Little Rock, last week, the Missouri Pacific and Iron Mountain roads were indicted for rebating.—By the opening of the Illinois Central's new Birmingham division, on the 19th, a continuous line from the Pacific to the Atlantic, controlled by the Harriman interests, was completed.—Two or three suburban stations on the Lackawanna road in New Jersey and near New York were recently closed by the company. One of them was at Wyoming. Commuters residing there made vigorous protest, and the State's Railroad Commission has decided that service at Wyoming must be restored.—The Senate past, on the 17th, a bill designed to restrict the granting of injunctions by Federal courts on complaints of railroad companies against State laws. It was suggested by the controversy in North Carolina, and it provides that a temporary injunction in such a case shall be issued only by a majority of three Federal judges, after argument heard by them, and after five days' notice to the Governor and the Attorney-General of the State immediately concerned.

Labor Topics Public meetings of workmen were held in many cities last Sunday evening for the adoption of resolutions emphatically expressing the purpose of the members of labor organizations to exert their influence in politics for the promotion of the national legislation which they desire. The chief speaker at the meeting in New York was Samuel Gompers, president of the American Federation of Labor, who said that the rights of workmen were menaced by recent decisions of the Supreme Court, and especially by the boycott decision in the Danbury Hatters' case. He insisted that by

this decision the court had declared that unions were Trusts, and that the agreements of unions with employers were cited against them as evidence of the existence of injurious monopolies. In the course of his remarks about the Supreme Court he said:

"I resent the imputation that the Supreme Court is prompted by any sordid or dishonest motive, but the fact remains that the men who constitute that tribunal are men who have been successful lawyers and jurists, and in the common acceptance of the term lawyers and jurists are men whose rearing, education and environment are not in accord with the spirit of the times."

He added that men who desire to become lawyers, and eventually judges, must pass examinations showing that they are "all right on vested interests." The resolutions adopted at this meeting and in other cities express the determination of workingmen to "exercise their fullest political and industrial activities" in behalf of candidates for the Presidency and for Congress who will "safeguard and protect the common interests of the wageworkers."—This week, 200,000 bituminous coal miners resume work, having made an agreement with the mine owners which provides that the old wage scale shall remain in force for two years more.—The Lake Carriers' Association, controlling 80 per cent. of the tonnage on the Great Lakes, has declared that the "open shop" rule shall prevail on their ships.—There has been much disorder in Chester, Pa., about twenty miles from Philadelphia, owing to a strike of the men employed on the street railways, following a reduction of their wages by 10 per cent. Strikebreakers were brought to the city, but at first they were not protected by the local authorities. Twenty of the State's mounted police were summoned, but their presence was resented by the local police, who appear to have been in sympathy with the strikers, and who interfered with the troopers' attempts to control the mob. On the 13th, a trooper had his horse shot under him. There were attempts to burn the car barns. On the 16th, two of the non-union men were shot, but their wounds were not serious. William Greismer, the company's claim agent, was shot in the leg. For some time the Mayor refused to call for more troopers,

but at last he consented, and three companies were ordered to Chester by the Governor on the 17th. As they were approaching the city, one of the troopers was shot in the hand by some one lying in ambush. During the entire week the car service was suspended. Whenever there was an attempt to run a car, its windows were broken and those in charge of it were driven from their places. On the 19th, however, cars were moved over the lines under the protection of the mounted police.—In Pensacola, Fla., the street railway employees are on strike because of a new rule requiring suspended men to report at the barns three times a day, without pay. For some days the cars were not in service. At the beginning of last week all of the State's militia were ordered to the city by the Governor and soon there were nearly 1,000 soldiers there. Cars have been running under their protection.

Guerra Commands the Cuban Army

Pino Guerra, who was at the head of the revolutionists in 1906, has been appointed by Governor Magoon commander of the Cuban army, which now consists of 500 artillerymen, but will be enlarged. On the 13th he assumed the office at the Cabanas Fortress, with much ceremony. The appointment is severely criticised, as Guerra has been merely a professional revolutionist, whose military record amounts to nothing. He is in accord with the Liberal faction that follows Zayas. The Rural Guards will be a separate organization, and will continue to be commanded by General Rodriguez, who opposed Guerra during the revolution.—Governor Magoon has removed the six provincial Governors, given their offices temporarily to six American army officers, and asked the several political parties to agree upon six Cubans who shall fill the places. No agreement has been reached.—In answer to a resolution introduced in the House by members who desire that the wreck of the "Maine" shall be raised, the Navy Department reports that of the \$200,000 appropriated soon after the explosion, \$145,000 has not been expended. One hundred and eighty-eight bodies were recovered, and sixty-six were left in or near the wrecked battleship.

Italian Demonstration Against Turkey

As was anticipated, the action of Austria in breaking away from the concert of the Powers in regard to Turkey by her railroad proposals has caused other nations to push forward their claims. Italy discovered a grievance in the refusal of Turkey to permit the establishment of Italian post offices in Turkish territory, and prepared a fleet to be dispatched to Asia Minor. Most of the European Powers have maintained national post offices in Turkey, and the Italian residents in Turkish towns have demanded similar privileges. Last month Signor Tittoni, the Italian Ambassador of Foreign Affairs, announced to the Porte his decision to open post offices at Constantinople, Salonika, Avlona, Smyrna and Jerusalem. The Porte refused, whereupon the Italian Ambassador explained that Italy's rights were incontestable, as they were based upon the most favored treatment clause in the treaty between the two countries. The Porte replied that the clause did not apply, because no such privilege had been officially granted to any of the Powers, altho the custom of independent post offices had grown up and Turkey had agreed to tolerate those in existence previous to 1904, it would not permit the establishment of any others. On April 14th it was announced that categorical orders had been given by the Turkish Government to prevent the opening of the Italian offices. Italy's reply was to order the dispatch of the fleet, giving the following in explanation of the action:

"In view of the grave and unjustifiable provocation the Italian Government has decided to energetically uphold its dignity and its rights by dispatching three naval divisions to Turkish waters with orders to hold themselves in readiness for any eventuality.

"Immediately on the arrival of the Italian warships in Turkish waters the Government will address simultaneously a note to the Powers and a note to the Porte, which will call attention to the violation of our rights and international treaties by Turkey, not only with regard to post offices but also with other matters in which the Porte has acted in a high handed and violent manner to the prejudice of Italy's rights.

The other grievances referred to, tho subordinated in this note, are supposed to be of even greater importance. They

relate to the measures taken by Turkey in opposition to the Italian policy of the peaceful penetration of Tripoli. The natives who have sold land to Italians in Tripoli have been persecuted by the Ottoman authorities, and Italian steamers have been prevented by force from landing and embarking merchandise at Tripoli. The murder of Father Pacini, an Italian priest, at Derna last month is also mentioned among the causes of irritation against Turkey. The Italian fleet numbers altogether thirty-two vessels, and is manned by over 8,000 men. There are twelve battleships, including the "Regina Elena," commanded by the Duke of the Abruzzi. On receiving news of the threatened demonstration the Porte promptly met all the Italian demands, conceding the right to independent post offices, the purchase of land in Turkish territory, and coast navigation and commerce. — France is also in conflict with the Turkish Government regarding the coal mines at Eregli, a town of Asia Minor, 128 miles from Constantinople, in which a French company is interested to the extent of \$15,000,000. The Turkish Government wishes to regain control of the mine, but the owners refuse to give up the concession until the Porte furnishes proof of its ability to provide money for the purchase. France will not make any Turkish loans until the matter is settled, and the French Embassy has notified the Porte that France will exact an indemnity of \$2,500 for every day that the settlement is delayed in addition to \$2,800,000 for losses incurred by the company thru the disturbances. It is maintained that \$140,000,000 of French money is invested in European and Asiatic Turkey, a greater amount than that of England, Germany and Italy. There are sixty French firms in Constantinople and four in Salonika. The French commercial firms in Asiatic Turkey have a combined capital of \$6,000,000, of which over two-thirds belongs to forty-five houses in Smyrna.

Chinese Boycott and Rebellion

The release of the steamer "Tatsu" in compliance with the demands of the Japanese Government, altho it was undeniably loaded with arms

for the revolutionists in China when it was seized by the Chinese authorities near Macao, has aroused a fury of indignation among the people of Canton against the Pekin Government. Mass meetings attended by 50,000 people were held to denounce the Government for yielding to the Japanese, and demand the impeachment of Yuan Shi-kai, of the Board of Foreign Affairs. The people tore off and burned their clothing of Japan manufacture, and the dealers in Japanese goods made bonfires of them. An extensive boycott movement was organized and seems to be very effective. Forty firms in Hong Kong have announced that they will not sell Japanese goods, and the Chinese Merchants' Guild has countermanded the orders placed in Japan and refuses to ship in Japanese vessels. The steamship "America" of the Toyo Kisen Kaisha (Oriental Steamship Company) sailed from Hong Kong for San Francisco on April 11th without a single package of Chinese cargo and with only twenty-five passengers. The same day the British steamer "Empress of India" sailed for Vancouver with 730 passengers. — A conspiracy against the Government has been discovered in Pekin and 100 men have been arrested on the charge of treason. Most of them have been educated abroad and four of them are high officials. Seven telegraph officials of the Foreign Office were convicted of betraying the secrets of the Government to a foreign legation, and they were condemned to life imprisonment at hard labor on the frontier. Incendiary fires in Pekin due to the revolutionists are numerous, and Yuan Shi-kai has been obliged to establish a personal police force under the direction of foreigners for the protection of officials and foreigners. — At Yun-Chow, in the Province of Shan-Si, a battle lasting forty-eight hours was fought between the provincial troops and the insurgents without a decisive result. — The Imperial rescript, issued in 1899, by the terms of which China granted official rank to the Roman Catholic hierarchy, giving a priest the rank of a prefect and a bishop that of a viceroy, has been canceled. Eleven hundred Roman Catholic missionary priests thus cease to rank as prefects and forty-six bishops lose their viceregal rank. — An

unsuccessful attempt was made April 18th by the Korean insurgents to wreck the train on which Marquis Ito was going to Seoul.

The Macedonian Question

The proposals made by Sir Edward Grey on December 18th to the ambassadors of France, Italy, Germany, Russia and Austria-Hungary for administrative reform in Macedonia were received unfavorably by these Powers. Sir Edward Grey, however, persisted in having the matter discussed, and his communications solicited from the Russian Government some counter-proposals, which rather unexpectedly agreed with some of the main points in the British plan. In particular the Russian Government acknowledges the responsibility of the Powers and the need for further action in the following explicit language:

"We entirely concur in the considerations set forth by Sir Edward Grey as to the moral responsibility which falls upon the great Powers in their efforts to alleviate the sufferings of the inhabitants of these provinces of the Ottoman Empire, to restore order in them, to insure the security of life and property, and to avert in this manner a danger to peace. Neither can it be contested that the present situation in the above-named provinces calls for the immediate application of strong measures, as Sir E. Grey points out."

The Russian Government also agrees to the extension of the powers of the Inspector-General and suggests that the other members of the Financial Commission should be given the same rights as those enjoyed by the Russian and Austro-Hungarian civil agents, all the members of this commission being admitted into the Ottoman service. Instead of increasing the gendarmerie, as proposed by Sir Edward Grey, the Russian Government suggests the creation of rural guards recruited from the inhabitants of the villages to be protected. The British proposal to relieve the Macedonian budget of its heavy burden by the removal of the Turkish garrison, the Turkish rights in that case being protected by a collective guarantee of the Powers, met with the disapproval of all the other Powers. In his prompt reply to the Russian counter-proposals, Sir Edward Grey expresses his willingness to accept the Russian suggestions for the reorganization of the foreign administration and

the establishment of the rural guards. He insists, however, that the financial difficulty on which the whole question of the reforms in Macedonia depends is not met by the Russian proposals. The amount desired for the Turkish garrison is now fixed by the Porte and the Inspector-General and the Financial Commission are obliged to turn over this sum, however much it may cripple the civil expenditures for the benefit of the people. There is now a deficit of over \$1,500,000 due to the enormous charges for troops, which, to say the least, do not contribute to the order of Macedonia. Sir Edward Grey proposes to reverse this procedure by first paying the expenses of the civil administration and the gendarmerie from the Macedonian budget and then turning over any balance to the Porte for keeping up such garrisons as it chooses to maintain. This would not necessarily increase the expenses of the Turkish Government, because it is already bound to make up any deficit. It would be optional with the Porte, therefore, whether it should continue the present large garrison of Turkish troops in the vilayets. The British Government has declared its intention of forcing the Porte to make good the deficit in the Macedonian budget by threatening to withdraw the conditional consent which Great Britain gave to the 3 per cent. increase in the customs.—The Russian troops on the Caucasian frontier have been raiding Persian territory in retaliation for the attacks of Kurdish bands on the Russian troops stationed at Belesuvar. A force composed of 400 Cossacks, a squad of sharpshooters and a battery of machine guns pursued the Kurds into their own territory and destroyed three of their villages, inflicting a loss of thirty-four killed and fifty wounded. One officer and seven soldiers were wounded on the Russian side. Forces dispatched from both Baku and Lenkoran have pursued the bandits into the mountains of Kara Dag. The Persian Government has protested against these invasions by foreign troops, but Russia relies upon the agreement with Great Britain giving her the right of intervention for the maintenance of order in Northern Persia. Other troops will be

sent across the frontier as soon as the flood of the Aras River permits their passage.

✻

Foreign Notes Sultan Abd-el-Aziz with 5,000 men and twenty pieces of artillery is marching from Rabat to Fez in order to regain his capital, which is now held by the troops of the rival Sultan, Mulai Hafid. The most westerly of the French posts on the Algerian frontier, located on Talzaza Hill, was attacked at daybreak, April 16th, by a band of Berbers numbering some 1,800 foot soldiers and 500 horsemen. The French, altho taken by surprise, repelled the attack, and, after an all-day fight, pursued the tribesmen for a distance of six miles. The Moors left 125 dead on the field and the French lost 28 killed, including one officer, and a hundred wounded. Several of the sacred green flags prepared for this holy war were captured by the French troops. —The trial of the anarchists of Barcelona for the attempts made to assassinate King Alfonso at Madrid and Paris resulted in the conviction of Jean Rull and six of his relatives and associates. Jean and Herman Rull and Maria Queraltó were condemned to death, José Rull to seventeen years' imprisonment at hard labor, Amadeo Trilla to twenty-four years and Francisco Trigueros to fourteen years. The capital sentences will be reviewed by the Court of Cassation. Jean Rull declared his profession of anarchistic ideas, but asserted his innocence of these crimes, and stated that he had been employed by the authorities in unearthing the plots of the terrorists. President Roosevelt's message is being used as an argument in favor of a new and more stringent law against anarchy.—In Denmark, on April 14th, the Folke-thing by a vote of 64 to 35 past the Government franchise bill, which had already been adopted by the other House, the Landsting. It gives all taxpayers, both male and female, over twenty-five years of age, and all married women whose husbands are taxpayers, the right to vote in all communal elections. In Sweden and Iceland women already have municipal suffrage and in Norway and Finland they vote in all elections.

Speaker Cannon and the Presidency

BY H. S. BOUTELL, LL.D.

[The following article by the Member of Congress from the Ninth Illinois District is the sixth in our series of "Presidential Possibilities." Sketches have already appeared of Governor Hughes, Vice-President Fairbanks, Senator Knox, Senator La Follette and Secretary Taft. Others will shortly follow.—EDITOR.]

THE Speakership of the National House of Representatives is the best training school for the Presidency, and Speaker Cannon has profited more by his training than any of his predecessors. He is, therefore, today the best equipped man in the country for President. The country should not lose the benefit of his ability and experience.

A little examination will show how the Speakership fits a man for the Presidency. In the first place, the Speaker knows the Representatives of the people from every district in the country. If a Speaker has the good fortune to serve more than one term, he becomes intimately acquainted with the leading Representatives on both sides of the House. He not only knows them socially, but he knows all about their individual capacity, their aims and ambitions, and for what work they are best adapted. Then, in making up the committees, the Speaker learns the needs and wishes of the people in every section of the country.

As the leader of the majority in the House, he is responsible for the character of the legislation that is enacted. He is constantly consulted by the President, Senators, Cabinet officers and other public officials respecting legislation pending or contemplated. Speaker Cannon, who is now serving his thirty-fourth year as a Representative and his fifth year as Speaker, knows well every man who will have influence in the councils of the nation in the next administration. This intimate acquaintance with the men who count, this knowledge of their ways of looking at men and measures, would be of the greatest possible advantage to the next President. It is a capital that no other man in the country possesses. We shall get the best conception of the extent of this capital when we recall that Speaker Cannon has served with President Grant and every President since his

time, and with Speaker Blaine and all his successors.

It is the duty of the Speaker to keep at all times thoroly informed as to the condition of the national revenues and expenditures, so that he may be able, so far as possible, by suggestion and counsel, to make the appropriations conform to the condition of the public finances.

Furthermore, all proposed legislation of a political nature, and many other measures of the first importance, are thoroly canvassed by the Speaker and the leaders of both houses in frequent consultations. No man in this country can equal Speaker Cannon in complete knowledge of the legitimate scope of Federal legislation. This is a matter in which the people of the United States are vitally interested. They have shown marked approval of the liberal interpretation that has been given by Congress in recent enactments to the "general welfare" clause, the interstate commerce clause and the revenue clause of the Constitution. We are now passing thru a most important epoch in our national development, establishing principles of constitutional interpretation fraught with the most far-reaching consequences. The evolution that is in progress will go on during the next administration, and it is a matter of the first importance that our wisest and most experienced statesman should take the leading part in guiding and molding this development.

Let us consider the present situation and its problems with some care, and see if we cannot discern why Speaker Cannon's promotion to the Presidency would be of inestimable value to the republic.

The history of the United States gives frequent proof that the will of the people can prevail even when restrained by the fetters of written constitutions and laws. Many statutory and constitutional provisions have, without any amendments to

their form, undergone changes in their execution that were not contemplated by those who framed them. These changes are the expression of the popular will. The evolution of laws thru their interpretation by public opinion is one of the striking features of the development of our institutions. The change that has taken place in the working out of the provisions of the Federal Constitution respecting the election of the President is the most familiar example of this sort of evolution. The Constitution provides that the President shall be chosen by electors and that "each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors equal to the whole number of Senators and Representatives to which each State may be entitled in the Congress." The framers of the Constitution did not intend to give to the people the right to choose the President by a direct expression of their will. He was to be chosen by a select body of men, who were to be *appointed* by the several States, and who would act upon their own unbiased and unrestrained judgment. In the earlier elections the State Legislatures appointed the electors in a majority of the States, and so late as 1876 one State made legislative appointments of her electors. Altho we still go thru the form of "appointing" electors, they are chosen by popular vote merely to register the will of their party. The elector who did not vote for his party's nominee would today be held infamous. So, thru the intervention of party conventions and pledged electors, the choice of President is now the expression of the people's will.

Just as laws and constitutions have been modified in their execution by popular interpretation, so, too, the attributes, power, dignity and influence of public offices have been diminished or augmented by public sentiment. The influence of the President is much greater today than it was a hundred years ago, not because of new powers that have been conferred upon him by law, but on account of the support and approval given by public sentiment to the fullest exercise of the powers that naturally attach to his office. When President Jefferson reported to Congress the treaty for the

purchase of the Louisiana Territory, altho its consummation was an imperious necessity involving the destiny of the republic, he did not feel justified in urging the Senate to ratify the instrument, or the House to appropriate for carrying it into effect. In the early days of the republic the people were extremely jealous of the power of the Executive. Even Andrew Jackson, who was seldom restrained and never embarrassed by technicalities, precedents or even conventionalities, in making his short cuts to the attainment of ultimate justice, felt constrained to say in his first inaugural: "In administering the laws of Congress I shall keep steadily in view the limitations as well as the extent of the executive power." Later, some of his opponents thought that he must have closed his eyes when he dealt with nullification and the public deposits. So late as 1859, Buchanan, in his third annual message, in referring to his recommendations, said, "This advice proceeds from the heart of an old public functionary." Since 1861 the people have renewed their faith in Hamilton's teaching that "A feeble Executive implies a feeble execution of the government. A feeble execution is but another phrase for a bad execution; and a government ill executed, whatever it may be in theory, must be in practice a bad government." The people of the United States will never choose another President who looks upon the advice of "an old public functionary" as the limit of his executive authority. The people want to see "energy in the Executive," and they demand that the President shall not only enforce existing laws with vigor, but that he shall back up his recommendations to Congress with those cogent reasons which his superior sources of information have disclosed to him.

Who is there who has anything like the equipment of Speaker Cannon for carrying on the splendid work of remedial legislation that has been inaugurated under President Roosevelt? As President, Mr. Cannon would display the same energy that he has shown in the House, where his vigor and tireless activity are a source of wonder even to his most intimate friends. He inherited that unlimited capacity for work which is the

foundation of all genuine success, and he has acquired the rarest attainment of the successful statesman, the art of saying "No" without giving offense. Few realize the importance of this latter attribute. Both the President and the Speaker are compelled often to refuse the requests or reject the suggestions of men whose cooperation on other matters in the future is essential to the success of their plans. No member of the House of Representatives has ever cherished any resentment against the Speaker on account of any disappointment which he may have suffered from the Speaker's decisions.

The people of the United States could feel assured that with Speaker Cannon as President no weak or unwise appointments would be made, no unsound policies would be advocated, personal motives would never triumph over public exigencies, and the great work of legislative reform now under way would be carried forward with sagacity and vigor.

Why is it, then, if the step from the Speakership to the Presidency is such a short one, that out of thirty-six Speakers only one has ever become President? Why is it that Clay, Blaine, Carlisle, Reed never realized their final ambition? For two principal reasons: First, because their appointments and decisions as Speaker created antagonisms on the part of many of their influential colleagues; and secondly, because from the very nature of the office the public often gets a perverted notion respecting the character of the Speaker—a false conception arising from the most faithful performance of his duties. The four men whom I have mentioned suffered in different degrees from both these causes. Speaker Cannon has nothing to fear from the first.

False and grotesque notions of him, however, are set afloat by his political opponents, and, I regret to say, given form and credence by some of his own party even in his own State. These false conceptions are embodied in certain familiar epithets. Those who know the foundation or the origin of these epithets may well say we love him for the names he has been called.

For epithets embody all the principal reasons that are weakly and indirectly given why Speaker Cannon, with all his

wealth of experience, wisdom and ability, should be set aside as a Presidential candidate. He is condemned by all the elements of danger which the imagination can conjure into the epithets of "ultra-conservative," "reactionary," "Czar" and "stand-patter."

The first title of ultra-conservative he won as chairman of the great Committee on Appropriations. For ten years, as guardian of the public funds, his strict surveillance of expenditures made him the terror of all those who sought to raid the treasury for exploiting private enterprises, and gained for him the sincere respect and gratitude of all right-minded men. To be ultra-conservative in the management of the public funds he regarded as creditable, as it would be in the management of private funds as a banker or trustee. The reputation which Mr. Cannon acquired, as chairman of the Committee on Appropriations, for scrupulous integrity, he has enhanced as Speaker by his conscientious vigilance. And so, because he refuses to lend his support to all sorts of wild and ill-considered schemes for spending the national revenues, he wears with honor the title of "ultra-conservative."

The second honor that has been unintentionally conferred upon him by his detractors is the title of "reactionary." As we have seen, this is an age when the scope of Federal legislation is being rapidly enlarged. It is, therefore, a time when those who have the best interest of the nation at heart should be extremely careful in advocating measures of doubtful constitutionality. The powers of Congress are taking a wide range. There is no danger that the National Legislature will shrink from the full exercise of its powers. There is a danger of the opposite sort, that Congress will consider and even pass ill-advised, crudely framed, hastily considered measures of doubtful constitutionality. No better illustration of such a tendency could be given than the flood of bills that swept into Congress on the opening of the Fifty-ninth Congress, designed to give Federal control over insurance companies. With all the downright sincerity of his strong character, Mr. Cannon, as a Representative and as Speaker, has always frowned upon all attempts to use the House of

Representatives for exploiting the frenzied vagaries of legislation that drift into the House on every wave of financial or industrial excitement. From his stand he cannot be shaken by any threats or blandishments of the press or of individuals in public or private life. He manifested his independence on the occasion of his first speech in the House thirty-four years ago. In that speech he said, with characteristic energy:

"I certainly have no desire to call upon myself the assaults of the city press or any portion of it. Nor do I fear it as long as I truly represent my constituents and act, in my representative capacity, for the interest of the people generally. Nor would I change the power of the press to assail my acts or those of any one else. On the contrary, every Member of Congress, or other agent of the people, should court a fair criticism of his acts, and if he vitally misrepresents the people, they should, and no doubt would, fail to continue him in places of trust. But no man is a proper person to represent the people unless he has the honesty and the backbone to stand and do what is right for the interest of the people, without reference to what any one may say of him, or what the action of the press may be in the premises."

Speaker Cannon's service in the House and his legal education and training would lead him as President "to hope," as Andrew Jackson said in his first inaugural, "for instruction and aid from the co-ordinate branches of the Government," and would help him to avoid recommending to Congress measures that could not pass the scrutiny of the Supreme Court. And in our admiration for the wisdom and soberness of his counsel we shall be glad to recall that his enemies had cause to honor him with the title of reactionary.

Perhaps the most foolish delusion entertained by thoughtless persons concerning the Speaker is contained in the epithet of "Czar," which is hurled at him with force and virulence at frequent intervals by demagogues of all ranks. The title was first conferred in the Fifty-first Congress on Speaker Reed, under whose administration the rules were amended so that a member who was in the House should be considered present for the purpose of making a quorum, altho he might refuse to vote, and so that the Speaker should have power to decide which member is entitled to the floor. The title was handed down to Crisp and Henderson, and is now held by Speaker Cannon. Our government is a government by par-

ties, and the party in the majority is held responsible for the conduct of affairs. So in the House the Speaker and the majority are responsible to the country for the legislation enacted. The rules, therefore, are designed to enable the majority to do business without successful intervention from the minority. But the Speaker's powers are limited to guidance and to the initiative of an order of business. The final determination of every question rests with the majority. It is not true that he can pass or prevent legislation arbitrarily. If, for example, the Speaker should recognize the chairman of the Committee on Post Offices and Post Roads, to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the Post Office Appropriation Bill, to appropriate over \$200,000,000 for carrying on the postal service for the coming year, and the House prefers to consider a bill to establish a fish hatchery on the summit of Mount Washington, all the House has to do is to vote down the motion of the chairman of the Post Office Committee and all other motions that may intervene, until the fish hatchery bill is reached. In other words, the so-called despotism of the Speaker is a despotism lodged with him by the majority of the House, who in turn are responsible to the majority of the people, who send their Representatives to Congress to carry out their will in a prompt and orderly manner. Even with the present rules the minority of the House have given, during the past week, an exhibition of what the procedure of the House might degenerate into without the guidance of a wise, independent Speaker. To those who are still inclined to insist that Speaker Cannon, by methods of a Czar, has prevented the passage of legislation which they think is for the interest of the public, let me suggest that, by the same token, they must give him credit for being a very wise and public-spirited Czar in forcing the passage in the last two years of such great, beneficent measures as the Railroad Rate Law, the Pure Food Law, the Meat Inspection Law, the Employers' Liability Law, not to mention those other acts that have been placed on the statute books in the last five years, to the great satisfaction of the public. If the Speaker's crit-

ics will insist on calling him Czar, let them at least display sufficient intelligence to recognize the scope of his powers and give him credit for what he has accomplished.

We now come to the terrible charge involved in the epithet "stand-patter." The origin of this name is lost in obscurity. Some say it refers to the upright, fixed attitude of one of the participants in a game played with fire-irons that was popular with the ancient Egyptians. However this may be, it seems to have been first used in modern times by the late Senator Hanna. In 1903, when preparations were being made for the Presidential campaign of the following year, and when the Democrats, in the casting about for some sort of an issue, suggested reviving free trade as something a little less frayed than free silver and their other heresies, Senator Hanna said that his advice to the Republicans, in view of the unsurpassed prosperity which the country was enjoying, was that they should not attempt any changes in the tariff of 1897 or the financial act of 1900, that they should let well enough alone; in other words, that they should stand pat. And in the election of 1904 the country stood pat by a wonderful majority. Again, in the Congressional elections of 1906 the people stood pat. Those who remember the terrible industrial depression that existed from 1892 to 1897, and witnessed the restoration of prosperity under the revenue and financial legislation of the McKinley administration, know the tribute that is due to the judgment of those level-headed men who refused to jeopardize our newly won prosperity by premature changes in an admirably working tariff. There has not been a term since the Dingley tariff became a law when it could be revised without doing more harm than good to the country. As President Roosevelt pointed out in one of his messages, it is of the utmost importance to the country that a tariff should be permanent. Of course, no tariff law is perfect, any more than any other long and complicated law is perfect. And it sometimes happens that a tariff, by lapse of time, becomes, thru changed conditions, more nearly perfect than it was at the date of its passage. So it has been with the Dingley law. It took some

months for our industries to adjust themselves to the new provisions. Then the law gave for ten years better satisfaction than any other tariff the country has had. And those who have been opposed to experimenting with a tariff that gave such general satisfaction both as a revenue producer and as a stimulus to production have within the past few years been spoken of with derision as stand-patters.

Changes in cost of production of almost every article of commerce have now altered the situation. In the opinion of Speaker Cannon and other experienced statesmen and economists the time has come when a new tariff can be substituted for the present one, with more advantage than harm to the industries of the country. The Dingley law has accomplished its purpose and we must now make over the tariff and bring it up to date.

In accordance with this view the Illinois Republican State Convention, on the 26th of last March, adopted this among other resolutions:

"It is now apparent that in order to maintain the scientific accuracy of the tariff, remove inequalities, and prevent injustice, some new schedules must be added to the law, some of the present rates must be raised, others must be lowered, while some must be repealed altogether. The very success of the present tariff demonstrates the wisdom of revising it to conform to the improved conditions which it has produced. We believe that the people of the United States will profit by a new tariff, but it must be a Republican tariff, a protective tariff, a tariff which recognizes in all its parts the difference between American and foreign wages, the difference between the high scale of living of American wage-earners and the scale of living imposed by insufficient wages upon foreign workmen."

These are Speaker Cannon's views, and resolutions of similar import will undoubtedly be adopted by the Republican National Convention. Speaker Cannon, with other Republicans constituting a great majority of the people, stood pat when they thought that a change of tariffs would do more harm than good; now Speaker Cannon and his State are in the front rank of those who believe that now a revision of the tariff will do more good than harm.

And so these four epithets which have been used to convey a censure, when we understand their origin become in reality titles of honor. They imply the possession of qualities that are essential in the

successful administration of the Presidential office.

In addition to his eminent qualifications for the Presidency, Speaker Cannon's unique and attractive personality makes him an irresistible candidate before the people. He is seventy-two years old, and in mental and bodily vigor the youngest man in the House. He is twelve years younger than Gladstone was when he made his last speech as Prime Minister.

Three States are closely associated with Speaker Cannon's life. He was born in North Carolina, crossed the mountains with his parents in a "prairie schooner" when he was four years old, lived in Indiana till he was twenty-one, when he settled in Illinois. He has lived for fifty-one years in the same district from which he was first elected to Congress thirty-six years ago. He comes from long lines of pious Quaker ancestry, but when he married he became connected with the Methodist Church. His wife died many years ago. One of his daughters is married, and the Speaker is more proud of his two granddaughters than of any political honors he has ever won.

An unmarried daughter is the popular mistress of his home in Danville and in Washington. His parents were strong anti-slavery Whigs, and the Speaker's first Presidential vote was for Abraham Lincoln, in 1860.

His long public life and many hard-fought political battles have left no trace of bitterness in his nature. His hardy constitution and regular habits give him a buoyant, cheerful nature that is inspiring to all who come in contact with him. Everything about him is delightfully healthy and normal, and he enjoys life like a boy. Yet he has the true wisdom that comes from long experience with men and affairs, combined with a modesty that reminds one of Grant. He is a splendid example of a self-made American who has turned out a first-class job and is too sensible to boast of it. All his life he has been too busy to think of doing anything for effect, anything that was not genuine and sincere. His equipment for the Presidency is complete, and his popularity as a candidate will increase daily during the campaign as the people learn to know his strong and charming personality.

WASHINGTON, D. C.

The Great Kinship

MRS. L. H. HARRIS

WE make too much of our human relations and not enough of our others. Every man is really more nearly related to the heavens and the earth than he is to any other man, but very few of them know it. We have not discovered the world, but only ourselves in it. We are the poor pioneers of love and life who have missed the right frontier. We are lost out of the great tribe of nature where the trees were our elder brothers and the flowers were little sisters of the soul. This accounts for our morbid craving for human companionship. We have lost the peace of mind that comes from another sort of communion—the easy, silent fellowship of green pastures and still waters. No man is lonely who can

think and love his way into a forest or a field. It is only the foolish, with but a partial sense of life and its relations, who find the solitudes less friendly than the friendliest friend. Blood and mortality are not the only marks of life and kinship. The Power which made some of us trees and some of us men never intended that the soul of the man should be so far divorced from the heart of the oak—not that the tree is immortal, or sentient, but it is *there*, so much alive, so beneficent and so intelligible, which is more than can be said of a human comrade. No man knows his friend, but the poorest and meanest can be sure of his forest brothers.

Little children have this tribal telepathy with nature. Give a child his will

and way from the first, into the greater world beyond the house-door of family kinships, and he will easily forget them. He will take up instinctively with the bees and flowers. He will form tender intimacies with little things in the grass. He will be a lover of the winds, a son of the skies. He will become silent, awkward, reserved to human beings, and ingeniously open hearted with the hills. His silence there will be frankness; his reserve sympathy. And he will become what we call "wild." But really he is not wild, merely right with nature, and far more intelligent concerning it than if he had been brought up to it from the wisest books ever written about it.

A man is more easily misled by his mind than by his instinct, because, over and above all his other instincts there is another, a higher one, that warns him against them. But the mind has no such fortification. Let reason get the start of us and it can lead us farther in the wrong direction than any faculty we have. So we are misled this way and that about how to live by bad reasons as well as by bad instincts.

Recently a young, restless fever-bred man from the city remarked with disgust upon the longevity of the inhabitants of a remote neighborhood in the country where he was spending his vacation. The sight of old, soil-nurtured, sun-ripened octogenarians sitting outside their cottage doors along the green roadsides annoyed him as it annoys some men to see so much water-power lost at Niagara. "The reason they live so long," he exclaimed, petulantly, "is because they do not live, they merely exist. They do no business, they only work. They have no enterprise, and they do not think!"

This is a common fallacy of the modern mind, to believe that much experience, ferocious energy and restless wits make a full life. These things really sterilize life of its best elements. To live best is to escape much experience, to have a peaceful, living energy, and to be in harmony with one's surroundings. This is impossible, except where nature predominates, where there is at least one field, a hill and a forest between the man and his city. Within the city itself he cannot have peace, but he must have fear and ambition, and energy over and above

his forced humanitarian duties. For these are the qualities men develop in one another.

There are other imperative reasons for our return to the bosom of the great family. We have associated with one another so exclusively that the time has come when we are more or less unbearable to each other. We worry our mankind priests, doctors, philanthropists, too much with troubles that would dissolve if we lived more in the fields and less in society. It is as foolish to be too much with men as it is to be too much alone in the desert. The hermit is the other extreme from the worldly man. And both have made the same failure of life.

Besides, men are sorry, inefficient, unreliable kinsmen at best. They are hampered by troubles of their own, by weariness, temper, selfishness and all manner of circumstances. It would not be wise to trust a man absolutely, because he is one. But we can trust the seasons, and we may cultivate relations with old Merlin trees that are satisfactory, because, whatever limitations Merlin trees have, they do not betray us, or fail us, or bear false witness anywhere against us. And they last. A man usually wears out more than one set of friends of his own kind in a life time; but when he is old, the same tree casts the same shadows upon the grass that it cast when he was a child and lay beneath it dreaming himself away into the spirit of the prayer leaves glistening green above him. And the rose that bloomed red then still blooms red. There is a sweet fortitude in the flowers; they keep faith with earth and sky, and so preserve their nature. But we do not; we have broken away, gone indoors and made strangers of ourselves to the grave, good elements that keep the trees sane and the roses red. We are not what we were, nor as good as we might have been because of this. We have even lost in a great measure the right kind of sense to comprehend and to enjoy these larger personal relations with our other kindred of the earth. We have developed curiously deformed humanistic faculties so far that we lack now the very elements of the common life in nature. We are for the most part a generation of stall-fed sorrow-makers trying to do right in the wrong direction.

The Militant Movement for Woman Suffrage

BY MRS. B. BORRMAN WELLS

[The methods pursued by the leaders in the militant movement for woman suffrage in England—popularly known as the "Suffragettes"—are so different from those which have prevailed in this country, that their aims and ideas have not been comprehended in this country. We have, therefore, requested Mrs. Borrmann Wells to explain the philosophy of the movement and to give the reasons which have led to its extension to the United States thru the founding of the new Progressive Woman Suffrage League.—EDITOR.]

IF I were asked to define the strength of the militant movement in England, I would say it is belief in the cause and trust in the public. Moreover, while the movement for woman suffrage previously sought conciliation and tended toward concentration, to inter-discussion of the question among already converted women, now, in its newer phase, it stands for attack, for expansion and for ever-increasing effort to make new converts. That is the secret of its success.

We have heard in England for years the pious platitudes of politicians such as Governor Hughes's recent remark that whatever is right will be ultimately established, but we have ceased to find much comfort in such axioms by themselves. Believing in progress, we believe, too, that the right, being right, has a better chance of final realization, yet all history teaches that the righteousness of a cause is in itself not sufficient. Many a measure of justice has been definitely postponed by apathy, many a reform movement has been crushed by opposition and died out for generations.

Therefore, while never doubting the inevitable success of the reform we champion, we have sought ways and means to hasten its advent. The pioneers in the militant movement have argued that the cause of woman suffrage languished *because the people did not think*, and they have worked on the assumption that it was only necessary to focus public attention on this great question to secure the adhesion and the support of all just-minded men and women. That their faith has been vindicated in part and will be vindicated fully no one can breathe the air of England for twenty-four hours and doubt. The methods chosen to make the public think have admittedly been

somewhat bizarre, somewhat daring, but they have been successful. To find an aggressive policy, clear, logical and easily grasped, was not easy, but it has been found, and that in itself is no mean achievement. Briefly stated, it consists of:

(1) The union of women of all shades of political thought and of all ranks of society on the single issue of their political enfranchisement.

(2) Action independent of all the political parties of men.

(3) And the undivided attack on the Government of the day, which, having the power to enfranchise the women, omits to do it.

Our first duty we recognize to be that of the education of the public and the popularizing of the issue. To do this we have had perforce to use methods of a sensational nature, even methods involving personal danger, which have shown the world that this is no mere academic question, but one on which we feel keenly, and that the reform is one for which we are prepared to pay. These methods have secured wide notice in the public press, and the interest thus excited has facilitated the formation of separate clubs or local organizations in every important town in the country. These local associations become in themselves educational centers, recruiting grounds for workers and reserves for volunteers when any spectacular demonstration is required. The second half of our program, viz., pressure for the Government, consists principally of direct intervention between the electorate and the Government candidates at by-elections. We find that, in playing upon the anxiety of the politicians for office, we have a powerful weapon, and as the ambitious place-

men, balancing themselves on the tight rope of public opinion, show little inclination to help us from a sense of justice, we have substituted a sense of personal interest. Having ceased laboriously collecting petitions they never read or waiting upon them with representative deputations they ignore, we have gone to the public itself, confident that in the collective sense of justice of the community there is a better guarantee of success. It is that sense of justice we are training against the politicians, and their increased interest in the question is very perceptible.

In addition, we mercilessly criticise their public actions and policy, and appeal to the electorate to vote against individuals and against a government refusing this measure of justice to one-half of the community.

In both directions, in applying persuasion to the public and pressure to the Government, our policy has been amazingly successful. The movement which two years ago started with ten members now has over 20,000 working adherents, and in the sixteen by-elections in the last eighteen months the voters have in nearly every case rejected the Government's candidate.

The London demonstrations, resulting in the imprisonment of nearly 300 women, have excited considerable interest, but have been much misunderstood. The women have usually been represented as seeking imprisonment in order to endure a spurious martyrdom. Such an interpretation betrays a total ignorance of the underlying motives. No, the purpose of the women has not been to secure arrest, but merely to show to the country at large and to bring home to the people forcibly the fact that women are excluded from direct influence in legislation at Westminster, and that if they dare to go there openly to claim their rights they are treated as felons. To demonstrate this the women have risked physical injury and have endured the all but intolerable hardships of imprisonment. If in so doing they have forced a certain amount of public odium on the Government party and helped to discredit it among the people at large, this has been all to the good of the cause, but it should be clearly understood that no "breach of the peace" has ever taken place that had not a polit-

ical object, and an intelligent purpose. If arrest and imprisonment were sought merely as a matter of personal notoriety the women could have broken street lamps or shop windows in their native towns without journeying up to London.

To understand the true inwardness of the movement one must have taken part in it—to see the women come with passionate hearts and willing hands begging for work, begging to be allowed to do something for the cause—it is pathetic and it is inspiring. Viewed thru the unfriendly medium of a newspaper report, seen and past thoughtlessly by in the street, many of their actions are silly, even ridiculous, but if one looks at the matter carefully, weighs the situation psychologically, one perceives an inner spirituality, a nobility which puts their actions on a higher plane. Just as in the crudities of some early Italian pictures we see the working of a human soul, with its aspirations, its longings for some imagined heaven, so the deeds of many of the women show that divine spirit of self-sacrifice which alone can save the world from callous materialism. It is no love of notoriety, no spirit of cheap advertisement, but something far higher that animates them.

I read in a London cable that some women have swept street crossings, one woman has played a barrel organ, to collect funds for the cause; that another has sung in the public streets. The mail has brought me a newspaper picture of a row of Suffragettes bearing sandwich boards. Among them is a friend of mine, a young girl, educated, refined, intelligent, with a soul as pure as ever existed. She is shown walking there in the gutter of a London street exposed to scoffs, ridicule, abuse and insult, and she would, I am convinced, go as cheerfully to her death for the cause. Is all this in vain? No, assuredly not.

It signifies and is part of the passionate revolt of womanhood against the meanness and littleness of their daily lives—think what the movement means to the mill girls, the white slaves of the factory towns, the overworked shopgirls and all the countless thousands of superfluous women in the homes of England, with their narrowing, soul destroying round of little duties, and their hopeless futures; think of what it means to them, this evan-

gel—that women can be free to come and go; to live their own lives and to be all that Heaven intended them to be, and if they exaggerate the potency of the spell, if they overestimate the greatness of the reform, one cannot blame them—they see now, perhaps for the first time, the glimmer of the light, and strive toward it with an eagerness which is eloquent of the darkness in which their lives have been spent.

Naturally, these militant methods have excited criticism, not only among men, even among English suffragists who have found the pace accelerated too much for their comfort, but all who can divest themselves of prejudice and judge impartially are on our side. For instance, Mrs. Millicent Garrett Fawcett, for so many years justly leader of the older suffragist body, in a letter to the *London Times* says:

“Every kind of insult and abuse is hurled at the women who have adopted these methods, especially by the ‘reptile’ press. But I hope the more old-fashioned suffragists will stand by them, and I take this opportunity of saying that, in my opinion, far from having injured the movement, they have done more within the last twelve months to bring it within the region of practical politics than we have been able to accomplish in the same number of years.”

Then, if proof as well as opinion be needed, has not the House of Commons, on the 28th February, 1908, given a woman suffrage bill a second reading and *actually voted*? Two hundred and seventy-one members, including seven members of the British Cabinet—the Rt. Hon. John Burns, Rt. Hon. Sydney Charles Buxton, the Rt. Hon. Herbert Henry Gladstone, the Rt. Hon. Sir Edward Grey, Rt. Hon. R. B. Haldane, Rt. Hon. David Lloyd George, the Rt. Hon. John Morley—voted for the bill, and only ninety-two, including three Ministers—the Rt. Hon. Herbert Henry Asquith, Rt. Hon. Lewis Vernon Harcourt, Rt. Hon. Captain John Sinclair—voted against it. This is a success to which all the years of patient work in the past have failed to show a parallel.

And the American movement, what of that? During my two recent visits to America I have advocated militant methods for the simple reason that, having taken part in them elsewhere and seen the astonishing success, I could not hon-

estly do otherwise. That my advocacy has strengthened the hands of many brave American women, who, independently, had arrived at the same conclusion, and that I should also be permitted to participate in the birth of the new progressive movement in America are matters of intense gratification to me. What is the future of the movement to be? I have no hesitation in prophesying a triumphant success for it. The standard of woman suffrage has been raised not merely in the clubs, but high in the public view. It is there not merely as an invitation to the women to come out and fight for better conditions, for enfranchisement, political as well as industrial, spiritual as well as economic, for themselves and their children; it is there as a constant reminder that a life of dull submission to evils that can be remedied, of patient toleration of wrongs which can be righted, is not merely weak, but cowardly, and that it is the duty of every woman, whatever her lot, to come out and take her place in the fight for fair play for her sisters and honest legislation all round.

Of course, some time is needed before success will be achieved, and, perhaps, it is well that this should be so, for this struggle for their rights is in itself a political training and education for the women, and will the better fit them for their duties in the state.

Meanwhile this agitation is sweeping the length and breadth of Britain, the length and breadth of Germany, Holland and France, and will yet sweep the length and breadth of the United States of America. When it has passed, and the women are enfranchised; when throughout the civilized nations of the world the women stand side by side with the men, I foresee a social state of greater freedom, greater justice and of a loftier morality. Not in vain shall the ideals of the women have been stirred in this campaign; not in vain shall their souls have been lifted in the fight; their yet unborn children shall evidence to posterity the power of a great idea, of a revolt for freedom as great as any rebellion that in the past has moved the conscience of the world and helped humanity along the thorny path of progress.

NEW YORK CITY.

Castaway

BY JAMES H. WILLIAMS

[It is not often nowadays that such a story as this can be told, yet Mr. Williams was actually shipwrecked on a desert island not so many years ago, and this is the first time he has ever told it in print.—EDITOR.]

"And he was cast upon a rock,
An island, far away!"

I READ "Robinson Crusoe" in my boyhood with absorbing interest and youthful delight. I never dreamed then, however, that I was even to be cast away on a rock that *was* really and absolutely bald and barren, entirely devoid of all vegetation, a rugged little peak in the midst of the Southern Ocean, whereon never a tree, a shrub or even a blade of grass found root, and where the solitary prospect was enlivened only by the dismal screams of the thousands of hovering sea fowl which came there to breed. Yet such was to be my misfortune, and with a solitary companion I was destined to be marooned by stress of circumstances on that barren, desolate peak for eighty-five days, with only the rushing wind among the crags, the monotonous booming of the sea, and the mournful croaking of albatrosses, cape pigeons and mollyhawks to remind us that we were still on the earth and of it.

But to begin this yarn properly, I must ask my readers to go back with me some months, till I explain how I first came to meet my now venerable old shipmate, and wreck mate, and solitary rock mate, "Good Old Summer Time."

We were a sorry-looking group as we rounded "Gaff Topsail Corner" that cold winter's morning, in the midst of a swirling blizzard. There was "Fingers," "Fourth of July," "Bluenose Jim" and me. We had all been paid off from a short West India voyage the day before, and were plodding and wading laboriously along thru the accumulated snowdrifts, piled in huge, peaked mounds of swirling, tantalizing, frost-laden, white particles of refined cloud dust, which, caught on the wings of the biting northwest wind, arose upward in stifling showers, like an Arctic blizzard, sweeping and rattling icily against the adjacent window panes, filling the wide curve of Dock

street with a blinding smother, and searching the collars of our closely buttoned monkey jackets, and clinging to our ears and eyes and stubby beards with aggravating persistence.

It was about 5 a. m., and except for the dazzling glare afforded by a few carelessly placed electric light globes, as dark as a coal locker for a circuit of a mile.

We were bound to the "Dutchman's Café," which always opened early, to procure "something warm" to counteract the ill effects of our homeward bound debauch of the evening previous. We were practical men in our line, and accepted literally the old Scotchman's advice in our present predicament: "Take a hair o' the dog what bit yer!"

Just as we rounded Gaff Topsail Corner we were astonished to see, in the cheerful glow streaming thru the glazed panels of the Dutchman's door, an odd figure, in shirt sleeves and an old battered straw hat, shuffling a sailor's hornpipe vigorously in the snow.

"Whatcher think o' that old cove, Cundel?" asked "Nosey," with a sputtering laugh, as he pressed forward against the searching wind and driving snow, with his hands thrust deep into his reefer pockets and nodding his head toward the shuffling figure in the snow.

"He looks like a hard case," I answered. "Let's take him and christen him."

"You're a great un on names, Cundel; whatcher goin' call him?" laughed "Nosey."

"Oh, I guess we'll dub him 'Old Summer Time.' He seems to act pretty lively for a morning like this, and, besides, he reminds us of warm weather."

"Bully for you, Cundel," shuddered "Nosey." "You oughter been a Baptist parson."

As soon as we reached the hard case dancer "Nosey" walked up and slapped him familiarly on the shoulder. "Bravo, old sport!" he exclaimed; "come on in 'n' get christened. Seen any polar ba'ars this mornin'?"

"Say, young feller, who in thunder be you tryin' ter take er rise out uv?" shouted our new found chum, belligerently. "Take me fer a dod-rotted idjit, don't yer? Laugh at me 'n' I'll knock seven bells outcher. I ain't nobody's gol darn fool, ef I be dancin' in er snowdrift! I got these yer gol darn chilblains on my feet," he went on, suddenly becoming a little more subdued in manner and attitude. "Got 'em frosted onct, long of Old Blow-'em-down Baker off the Horn. Ther mean old pirate kep' us driving 'round in field ice eleven weeks ter make us buy out his rotten slop chest stores, 'n' every man Jack on board was frosted, dod blast his old pictur'. I've hed these yer blasted chilblains every winter sence, 'n' I'll melt all the snow in Dock street ter cool my feet, 'n' nobody ain't goin' ter stop me."

Then he resumed his interrupted horn-pipe livelier than before. I had also had my feet frozen once, and had been troubled with chilblains for years in consequence, so I really sympathized with the poor chap and felt really desirous of helping him. I could tell by the "cut of his jib" as well as by his recent remarks that he was a thorobred sailor of the old school, and these observations attracted me to him all the more. "Come in, old chum," I said, persuasively, "and have a good drink to warm you up; we're sailors, too, so you needn't be bashful."

"All right, sonny," he answered, cheerily. "I'm with yer! Gotter excuse me this mornin' fer talkin' kinder loud. My feet burn so bad I can't take no comfort." We accepted his apology and all entered the Dutchman's Café together.

We seated ourselves around one of the disengaged bar tables, our new friend in our midst, and under the warm influence of a comfortable fire, the genial glow of the chandeliers, and sundry liberal potations of hot brandy, he soon thawed out and became quite tractable, and the smarting of his feet was soon forgotten. He was a rather spare-built, wiry man, of perhaps three or four and forty, with

strong features and a somewhat aggressive chin, relieved by a pair of kindly, twinkling, humorous blue eyes, deeply set beneath shaggy brows; large, bony hands and agile muscular limbs. It only required one glance at his weatherbeaten face and general physical make up to proclaim him a case-hardened old barnacle; a genuine "sailor of the sail."

As soon as we had gotten him coaxed into a suitable frame of mind to appreciate the humor of our intentions, "Nosey" signaled to me to proceed with the christening ceremony.

"Stand up, mate, and get christened. 'We've all been baptized except you.'"

"I been baptized onct," he answered, dubiously, as tho he did not grasp my meaning. "My name's Charles R. Page, 'n' I hails from Worcester, Massachusetts."

"Yes, I know, old chap," I said, as insinuatingly as possible, "but this is only a nickname. We've all got nicknames, and you ought to be dubbed same's the rest. Here's 'Fingers,' and 'Fourth o' July,' and 'Blue Nose,' or 'Nosey,' for short, and Cundel, that's me. Now, you don't want us to call you Mister Page in private, do you?"

Our prospective candidate broke into an uproarious laugh at the novel idea.

"Call me Mister! Well, I guess not. I ain't no mister nor yet a "greaser" on board ship, an' hanged ef I want ter be one ashore. Git out yer articles, boys!" he exclaimed, when his mirth had subsided; "I'll sign 'em!"

Then we all stood up and clinked glasses in turn with our new chum, while I repeated with mock solemnity: "In the names of Father Neptune and Aphrodite, and by the handle of the Great Horn Spoon, I christen you 'Good Old Summer Time.'" So we drank "Old Summer Time's" health, and proceeded to enjoy ourselves, after the ancient custom of men of our kind.

In the course of the desultory and somewhat boisterous conversation which followed, "Old Summer Time" suddenly leaned across the table, attracted by some chance remark of mine, and asked, as soberly as a judge, "Sonny, whar dew yer hail from?" I told him. Then he straightened somewhat, and inquired again, with increasing interest, my name.

I replied in full. "Say, boy," he almost shouted, starting to his feet and extending a horny palm toward me, "Say, boy, yer don't mean to say 't yer old Uncle Jim's son, do yer?"

"Why, bless yer, boy," he exclaimed, warmly, as he grasped my hand with a grip like a rigging screw. "I knowed yer daddy 'fore yer was born. Come across ther Western Ocean with him in the old 'Hudson,' last o' the old swaller tail fleet. Yer ought ter know her," he went on, reminiscently, as we both resumed our seats; "she went out er commission in '62."

Here I protested that, inasmuch as I was not born until '64, I could hardly be expected to remember a ship that had been relegated to the scrap heap in '62.

"By gum, yer right thar," acquiesced "Old Summer Time," joining in the general laugh. "I fergot. Yer see, 'cause I'm gittin' old I think everybody else is."

During the rest of our shore stay my father's old shipmate remained my constant companion and most honored guest. Such was the beginning of our acquaintance and the first source of our friendship, which has continued unbroken for twenty-three years and will endure thru-out our lives. About two weeks after our first meeting, "Old Summer Time" and I found ourselves on our way across the Western Ocean together, in a big "blue nose" bark, bound to Dunkirk with a full cargo of barreled oil. She was not a bad ship as Nova Scotiamen go, but she was heavy, and from the beginning we had terrible weather. That winter passage was, I think, about the worst I ever experienced. Thruout the terrible thirty-eight days our voyage lasted we never wore a dry stitch or got more than two hours below in any one watch. Night and day, all thru the passage, we were kept constantly at work alow or aloft, reefing, furling and bending stiffened sails, pounding ice from our rigging, splicing frost-broken chains or pumping ship for our lives. It was certainly a drill to be remembered. About four or five days out one of our crew died. He was a poor Norwegian who had been "shanghaied" and sent to sea by some scalawag of an arch crimp for the sake of his advance note when he should have been sent to hospital for his

health. The first night out he laid up, and the captain, perceiving that he was really dangerously ill, and not troubled with an acute attack of "Cape Horn fever," as is often the case under such circumstances, ordered the man to be removed to a room in the "half deck," where he could receive better attention and be out of the smother and turmoil of our washed out fore-castle.

Every possible attention was shown the sick man, but in spite of all that could be done he "pegged out." One morning the steward went to the room with a basin of hot broth for his breakfast and found him dead in his bunk. He had evidently been dead for some hours, and his body was as stiff and rigid as a capstan bar. So there was nothing for it but to sew him up in a canvas shroud and give him the shortest possible shrift to "Davy Jones's" locker.

The body was dressed in a good suit of heavy pilot cloth, which the dying man had kept wrapped and buttoned closely about him for comfort's sake, because in these ships there was never any artificial heat in the deck houses, excepting, of course, the galley. "Old Summer Time" and I had been detailed to sew up the body and prepare it for burial. When the mate came with the necessary canvas and sewing gear he looked at the corpse and said to "Old Summer Time": "Page, you're kinder schooner rigged an' they's no slop chest aboard. That fellow won't need them heavy togs an' 'sea boot stockings' no more when he goes below; it's a shame to waste good, comfortable sea gear on dead men in weather like this, when live men needs it. You better take 'em off an' wear 'em yerself."

The suggestion seemed a sensible one, to say the least, so laying aside all sentimental considerations, we set diligently to work to undress the "stiff." But the body was so stiff and inflexibly set in the last stages of *rigor mortis* that we could not undress it in the usual way, so, with the usual fertility of resource credited to seamen, we ripped up the seams with our sheath knives and got the dead man stripped in that way. "Old Summer Time" afterward sewed them together again and thus found himself possessed of a warm and suitable suit of clothes. And I do not think the grewsome remem-

brance of how he came by them ever caused him any serious qualms of conscience.

Men sometimes kill and eat each other in cases of prolonged and extreme privation. Nor is their cannibalism regarded as a crime. What wrong is it, then, to wear a dead man's clothes when you, too, are likely to perish with cold?

The dead man was duly sewn up and passed over the side with scant ceremony and less delay, for we all knew it was only a matter of chance whether or not we would join him before night.

"Old Summer Time" sewed his *new* suit together with sail twine in home-ward bound stitches, and put it on, together with the heavy seaboot stockings, which some fair nurse girl had probably spent days in making. But then, improvidently, he had no sea boots to match. So, with characteristic ingenuity, he invented a pair. Of No. 4 canvas he constructed them, "and daubed them within and without" with tar. They were not very close fitting, but practically water-tight, and "Old Summer Time" went splashing about the deck and clambering up and down aloft in his awkward-looking creations, as proud as a Dutch admiral in wooden sabots. Some of the boys thereupon attempted to rechristen him "Old Frosty," but it wouldn't work. First, because the majority wouldn't stand for the change, and second, because of his own belligerent resentment, which none cared to excite but once. So "Old Summer Time" he still remains.

"They love him well who call him so;
And whether he has another name
Nobody ever seems to know!"

In due time we arrived at Dunkirk and delivered our cargo "in good condition," as the bill of lading required, and received our hard earned francs, which had been earned at the expense of man-killing labor and vigilance, and a crew of frozen faces, hands and feet.

But at Dunkirk we were as much adrift as we had been in mid-ocean.

I think it was Darius Greene who sang:

"Never go to France, unless you know the
lingo;
For if you do, like me, I trow, you'll rue it
sure, by Jingo!"

and he was right, for all those who talked French confused us and those who talked English sought to rob us.

So we decided to get out of our present dilemma by going Board o' Trade to Cardiff. And no sooner said than done, away we went. Arrived at Cardiff we found clean and comfortable quarters at Mrs. Orth's, a Norwegian woman who kept a very respectable sailors' boarding-house in Butte Terrace. After sojourning a week or two to recuperate, "Old Summer Time" and I slung our hooks on board an English topsail schooner or "jackass" bark, bound to the Mediterranean, to escape further encounters with cold weather. After a pleasant and uneventful voyage we returned to Cardiff in June and resumed our old quarters with Mrs. Orth, in Butte Terrace.

At "Old Summer Time's" suggestion we decided to ship together for a "deep water" voyage as our next venture.

"Come on, Jim-may," he urged, when I seemed to waver; "le's go 'tall water,' out ter Chinee, er down ter the Col'nies, er 'round ter ther West Coast 'n' back, an' then we'll have a pay day!"

This course having been finally agreed upon, we set about replenishing our sea stock with part of our recent pay day. When we got our bags snugly stowed with good, substantial sea clothes and all the usual accessories indispensable to a sailor's comfort and well being afloat, we both considered ourselves pretty well found in regard to outfits and went off in search of a ship.

One day, while following our quest for a suitable berth along the line of docks, we came upon a stately looking, four-masted steel bark, which was being loaded with railroad iron and was bound to Newcastle, Australia. Her name was the "Wallerroo," of Glasgow, and a large canvas sign swinging from her head stays announced in big black letters the welcome legend, "Seamen Wanted."

Attracted more, perhaps, by her graceful lines, magnificent bulk and stately appearance aloft than by the pendent, flapping sign, "Old Summer Time" and I ranged alongside and proceeded with the admiring eyes of ardent connoisseurs to criticise the waiting ship alow and aloft, from truck to keelson, from stem to stern. While thus occupied the chief

mate, an elderly, grizzled, old sea dog, whose name we afterward learned was Foggie, happened to observe us from the quarter deck, and with brusque politeness invited us to "come aboard an' look her over."

We accepted the bluff invitation with alacrity and scrambled over the rail without further urging. We surveyed the ship from every standpoint as only sailors can, and pronounced her a beauty beyond compare.

She was certainly a large ship, with immense carrying capacity, but her trim and beautiful lines, her graceful yielding sheer, the long, lofty rake of her splendid masts, the symmetrical set of her spreading steel shrouds, and the broad sweep of her great, towering yards, all betokened likewise enormous sailing power and undoubted speed. She had two plain but safe and commodious forecastles, which, according to the official inscription, cut into the iron frame over the entrance, were "Certified to accommodate thirty-two seamen." Her after house or half deck was designed to accommodate eight apprentices, two bo'suns, a cook and cabin boy and four quartermasters. The poop fittings, wheel and wheel-box, railings, chart room, skylights, etc., were constructed of heavy teakwood, all bolted and fastened in the latest and most approved manner. Thru-out, the ship was fitted with the most modern arrangements and labor-saving devices then extant, and altogether she was a magnificent spectacle, lying quietly in her loading berth, clothed in all the superlative majesty of her beauty, power and grace—the most advanced and finished product of naval architecture as exemplified in the modern sailing ship.

Having finished our keenly expert if unobtrusive inspection of the great ship, "Summer Time" and I started toward the gangway, casting lingering sidelong glances here and there as we went.

But Mr. Foggie intercepted us at the "accommodation" steps. "Whatcher think of her, lads?" he asked, in his ready, bluff manner. "Don't see no 'Irish pennants,' nor 'dogs' ears,' nor 'flyin' tossles' aloft, do yer?"

"No, sir," we answered, with honest admiration. "No, sir; she's as trim and

taut and clipper as the Prince o' Wales's yacht."

"Right y' are, me hearties," exclaimed the old mate, with ardent enthusiasm, "an' a darned sight faster an' stronger an' more useful. How'd you like a berth in her?" he asked, rather cautiously, I thought. "We need men, but we want men as is sailors, yer understand. No dock rats, ner deck swabs, ner turnpike sailors 'll suit here. Ther old man's dead set on thet p'int! This here craft was built ter sail an' we wants men as can sail 'er. Not a lot o' lazy land lubbers as kin allers find their way ter ther bloomin' mess kid, but never can locate ther place where we belays ther boardin' tackle fall."

"No, lads," he went on, confidentially, "this ship is well built, well stored an' well found, and our old man, bein' some'at of a driver hisself, don't want a deck load o' Paddy West heroes ter comb inter sailors on ther passage out and chase ashore on t'other end. Now, if you chaps wants ter ship," he continued, much to our delight, "come aboard with yer dunnage whenever yer like, an' I'll turn yer too at five bob a day an' yer rations, twell we ready ter sign. Then yer gits what ye've ained an' a day off when yer signs on. Them's my orders from ther skipper fer every likely looking sailor as comes along twell our crew is full. What d'ye say?"

Next morning, punctually at 6 o'clock, "Old Summer Time" and I tumbled carelessly over the rail, dun and dunnage, prepared for duty.

"Good mornin', lads," cried the battered old chief mate, who stood loyally at the gangway as we vaulted on to the main deck. "Glad to see yer so punctchel. Go for'rard now an' square yersels up in ther fo'c'sle. I'll tell ther steward ter send yer bre'kfast. They ain't much o' anything ter do terday," he explained, cheerfully. "Can't do much on deck while ther lumpers and navvys an' stevedores has got charge, so ye's can go ahead straightenin' out yer quarters, an' ef I want a pull or a lift anywheres thru ther day I'll give ye's a call. One thing I kin promise ye, tho, boys," he added, as about to turn away, "yer'll git full an' plenty, an' watch an' watch an' yer

wages due on pay day on this packet so long's ther work's done."

We worked "by" the "Wallerroo" nine days before she was ready to sign. Of course, there was not much to do. She was well nigh perfect aloft, and we could do little on deck except look after the lines and shore fasts while her lading was in progress. Meanwhile our friendly old chief mate had "picked up" half a score of congenial shipmates for us, and everything went smooth. One morning, however, the old man came on board rather unexpectedly and informed us that he intended to sign on that day. The "old man" was a young fellow (startling paradox, eh?), with firmly set, unflinching features and a businesslike look in his intelligent, searching blue eyes.

Our first impression of his character did not belie the mate's estimate—a fearless driver, but a well-meaning, considerate man.

We signed that day and took our promised day off, and many and divers other interesting things occurred which space limitations forbid me to relate. But we sailed the following day and started on our fateful voyage, encouraged by the cheering throng of men, women and children, including Mrs. Orth, who swarmed upon the dock wall to bid us godspeed.

Our passage south was short and uneventful regarded from a deep-water sailor's point of view. Captain Duncan always exacted invariable and unremitting service in exchange for humane, considerate treatment and an ample supply of good, sustaining, wholesome food. And that was right! And we rendered the service and deserved and got the food. So, *pax nobis*.

We passed the Cape of Good Hope in early September and began to circle south and east along the run of the great arc that was to bring us down to the parallel on which we were to begin our easting down.

We kept on circling toward the south and east until we reached the forty-sixth parallel of south latitude, whereon Captain Duncan had decided to commence his easting, "because," he said, he "wanted plenty o' wind." Everything went smoothly for the first couple of days, and

the ship was making tremendous progress.

We had circled down to our chosen parallel on Mercator's projection and started our easting down, straight for the western coast of the Lone Continent, when the great storm which began and completed our destruction burst upon us.

Early one morning the wind, which had been blowing steadily from due west, began to haul gradually toward the southwest and came in powerful, fitful gusts, accompanied by squalls of driving rain. The sea birds hovered low in slow, sweeping circles close to the water, and the sun rose, a somber, blood-red disk behind a veil of drizzling mist, and was soon enveloped and completely obscured in a heavy mantle of lowering clouds.

Our prudent, observant old mate was a Manxman, and a natural-born, thoroughbred seaman from clew to earring. He saw what was coming and respectfully urged the "old man" to shorten down while there was time and prepare to "heave to."

But the skipper was a diligent commercial student, more concerned and better versed in counting-house returns, cent per cent. and general averages than in practical seamanship. So he turned a deaf ear to Mr. Toggle's entreaties and obdurately determined to hang on.

But the clouds continued to lower and the wind to rise with the obscured disk of the mounting sun, until by noon we were in the midst of a tempest of incredible fury and fearful power. Then the "old man" relented enough to order us to take in the royals and skysails and some of the other light sails, and single reef the topgallant sails, but otherwise he held on.

There is an old sea saying to the effect that a wind which rises with the sun will descend with it. But don't you believe it! That storm arose with the sun, as I have already reported, but it did not go down with the sun worth a cent. On the contrary, it constantly increased during the afternoon, so that by evening our three topgallant sails had been blown out of the reefs and tied up; and in spite of Captain Duncan's bravery we were driving under lower topsails, close reefed upper topsails, and

courses closely furled and secured with extra lashings to prevent the gaskets from bursting.

'Twas now, more than ever, our prudent old mate pleaded with Captain Duncan to heave too before it became too late.

The sea, which had been increasing all day before the fury of the storm, now towered mountains high, and on my word as a sailor, I don't exaggerate a foot. But the skipper still remained as obdurate and immovable as ever.

Shortly after nightfall the wind seemed to have reached its maximum velocity, but the sea still continued to rise and assail us on all sides with relentless energy and tremendous power.

About midnight a lowering cloud of appalling blackness fell over the ship, like a sable robe over a coffin, and then, at last, the "old man" lost heart and gave the order to make all fast and heave too.

After three hours of the hardest and most hazardous kind of work we got her shortened down to a "goose winged" lower topsail, laid our main upper and lower topsail yards against the lee backstays, pointed all our other yards with ends to windward, and then laid aft ourselves for "safety" on the poop. The wheel was rolled down, and gradually the noble ship answered. Responding slowly to the pressure of her "goose winged" topsail she rose her graceful bows high in the air, slowly answering her helm.

But just as she came broadside too she tumbled helplessly to windward, and slid sidelong down the steep slope of a receding sea, with her trucks pointed to windward at an angle of forty-five degrees or more, and her decks fairly presented to the battering energy of the "three brothers," three mountainous seas, which rushed toward us, one be-

hind the other, with incredible speed, wreathing higher than our topsail yards and destined to overwhelm and crush and destroy our devoted ship.

At the same instant we were all horrified by an ominous, metallic rumble from below, the terrible import of which we all recognized; our cargo of treacherous railroad iron had shifted, fetched away by the unusual careening of our ship; she was helplessly "hove down" on her beam ends and all was lost. For one brief, awful instant, as I stood clinging blindly to the topgallant rail, I felt and realized the awful lostness and helpless loneliness of our desperate situation. For an instant only, then my pride and courage returned, and I looked the situation fully and fearlessly in the face. I bowed my head over the rail, and in three words committed my soul to my Maker and my body to the deep. Then I gazed about at the awful scene around us in a transport of mental fascination, and thought: "We all must die!" For, tho a sailor must live like a dog, he can die like a man!

For one brief instant, tho it seemed much longer, I observed the towering, curling crest of the onrushing sea, rushing relentlessly upon us, gleaming in a jagged, straggling glow of phosphorescent light, which outlined the forms of my doomed shipmates in its ominous glow like "spirits in a dream." Then came a tremendous, booming crash, the snarling twang of sundered shrouds, and the mingled din of falling spars. I caught a fleeting glimpse of our severed rigging writhing and twirling and twisting like big black snakes in the darkness; then I felt a sudden pain in my head, and felt myself wafted away, away thru ethereal lightness and illimitable space, and one great thought seemed to possess my mind: "*This is death.*"

(Concluded next week.)

President Roosevelt's Report to the Senate on Venezuela

BY HERBERT WOLCOTT BOWEN

FORMERLY UNITED STATES MINISTER TO VENEZUELA

EARLY in 1905 I succeeded in inducing President Castro, President Roosevelt and Mr. Hay to agree to have submitted to arbitration all the controversies of the United States and of all other nations with Venezuela. In conformity with that agreement Mr. Hay promised to send to Caracas a protocol covering all of the said controversies. When the protocol arrived it was signed by Mr. Loomis and covered only the asphalt case, and it was subsequently learned that this Loomis protocol had been drawn up by the lawyers of the asphalt company. President Castro indignantly rejected the Loomis protocol, and his Minister for Foreign Affairs who had co-operated with me faithfully and enthusiastically during the preliminary negotiations, resigned in disgust. No apology nor explanation was ever offered by the Government of the United States for its astounding breach of faith, and from that day to this President Castro has absolutely refused to make any agreement whatsoever with the representatives of our Government.

It would have been a great relief to me personally to follow the example of the Minister for Foreign Affairs and resign, or to have accepted the promotion offered to me, but I had before me the still better example of Mr. Hay, who stated to one of his New York friends that his duty to his country and to his party compelled him to remain at his post in spite of the "indignities" to which he was subjected.

As the controversies to be arbitrated had been narrowed down by Mr. Loomis and the asphalt company to the asphalt question, Mr. Hay endeavored to induce President Castro to come to an agreement with him as to that matter and also several other American cases, but President Castro was obdurate in his refusals, and Mr. Hay's successor, Mr. Root, a diplomat of extraordinary tact and pa-

tience, after repeated attempts to get even a respectful hearing, threw up his hands in despair, and announced that he had exhausted every means in his power to bring President Castro to reason.

Thereupon the Senate called for the correspondence in the controversy. President Roosevelt forthwith submitted to that body all the documents asked for (except those relating to the Castro-Roosevelt-Hay agreement), and when printed by order of the Senate they appeared in a volume comprising 644 pages.

The contents are divided into three parts:

1. Memoranda of the Solicitor of the Department of State, covering the five American claims: That of Jaurett; that of the Orinoco Corporation; that of the Orinoco Steamship Company; that of the United States and Venezuela Company; and that of the New York and Bermudez Company.

2. Reports of Mr. W. J. Calhoun on the two latter claims.

3. Diplomatic correspondence in regard to all the claims.

The memoranda of the Solicitor of the Department of State show:

1. Jaurett, a naturalized American citizen, was expelled from Venezuelan territory, on the ground that he was "notoriously prejudicial to public order." The decree expelling him was published Saturday evening, November 12, 1904. On Monday morning, at 7.30, he was escorted by the police to the railway station. He had resided in Venezuela eight years. No time was given to him to settle his affairs. He was owner of a newspaper, correspondent of several foreign press agencies, and Consul of Panama. He claimed forthwith damages to the amount of \$25,000. When the claim was presented, President Castro declined to pay it, stating that Jaurett had "taken part in the political questions of the country," and Señor Churion later, in discussing

the case with Minister Russell, wrote that Jaurett was "a fugitive from France, his native country, and from the tribunals of justice of Mexico." After a careful examination of all the facts and the authorities, the Solicitor urges that "the indignity offered to Mr. Jaurett and the insult to the United States" be not "overlooked," and that "a demand should be made on the Venezuelan Government for the settlement of the claim in full," and he adds, "If the demand be met with procrastination or refusal, the dignity of this Government would seem to require prompt and vigorous action."

2. The Orinoco Corporation holds a concession to a certain portion of the delta of the Orinoco. In derogation of its rights, President Castro, it claims, has granted concessions to various strangers involving almost the entire property of the Orinoco Corporation. The Department of State has not pressed this claim, because it has under consideration the question as to whether or not the corporation has fulfilled its obligations under and by virtue of its concession.

3. The Orinoco Steamship Company protests against the award of the Dutch umpire, Mr. Harry Barge, who cut down the amount of the company's claim of \$1,401,559.03 to only \$28,224.93, and asks that the Government of the United States secure a rehearing of the whole matter before a competent and impartial tribunal. The claim arose upon a violation and an annulment of an alleged exclusive concession. Venezuela objects to a reopening of the case on the ground that the parties agreed that the decision of the umpire should be final. The Department of State answers that argument by maintaining that awards may be set aside when flagrant and palpable injustice has been done, and the Solicitor urges that this case be taken up and pushed to a satisfactory conclusion.

4. The United States and Venezuela Company has an asphalt mine in Venezuela and a concession for building and operating a railroad in connection with the mine. Taxes and duties in contravention of the concession have been imposed on the company, and President Castro claims that the concession is not valid, as it has not been approved by special act of the Venezuelan Govern-

ment. The Solicitor declares this "to be a case where flagrant injustice has been inflicted upon a company which has lived up, in good faith, to all its obligations under the concession, and recommends that the Department attempt to have it submitted to arbitration.

5. The New York and Bermudez Company obtained possession of its asphalt lake under three different titles, namely, the Hamilton concession, a mining title, and a wild lands title. President Castro dispossessed the company of its property on the ground that it had failed to carry out the provisions of the concession, and he secured an enormous judgment against the company for aiding the Matos revolution. The conclusions of the Solicitor of the Department of State in this case are these:

"It is submitted that the foregoing pages show that the property rights of the New York and Bermudez Company have been violated, in spite of the best efforts of the company to defend itself; that this result has been accomplished by gross misuse of judicial and executive authority, and that Venezuela should be held responsible therefor. The gravamen of the complaint is that the company went into Venezuela with a great capital, which is invested there, and as a result of procedure which has been a travesty upon justice is turned out of its property without a dollar; that its interests were made over to its business rivals, and that its mine, worth millions of dollars, which it has been working for years under valid and undisputed titles, has been wrenched from its possession by the violent hands of the Venezuelan Government under pretenses of legal process; that the irregularity of these proceedings has been brought time and again to the attention of the Venezuelan Government; that that Government, thru its courts and its Executive, has persistently ignored the appeals both of the complainant and of this Department in its behalf and that as a matter of fact the Venezuelan Government is itself the direct agent thru which these wrongs are being perpetrated"

The Solicitor then adds:

"Considerable thought has been devoted to the question of the remedy to be applied in this case. The conclusion reached is that the nearest to a correct solution of the question would be upon the basis of restitution of the property, to be followed by arbitration, preferably by The Hague Tribunal, of the question of title."

My suggestion to Mr. Hay in 1905 was that the entire case be referred to The Hague Tribunal, but that was not satisfactory to the company, which wants restitution first. Of course, Castro will never consent, for if he voluntarily re-

stored the asphalt lake to the company he would stultify himself, lose his prestige and perhaps his position. The restitution idea was the prominent feature of the Loomis protocol, and if presented again would be more obnoxious now than it was at first.

Mr. Calhoun's report is calm and judicial, and evidently was very serviceable to the Solicitor, who presents all five cases clearly, concisely and creditably.

The diplomatic correspondence takes up over half of the volume, and is particularly interesting, as it contains some notable dispatches from Mr. Hay and Mr. Root, and not a few remarkable state papers dictated by President Castro.

Heretofore the rival asphalt camps—the one in Philadelphia and the other in New York—have been able to thwart the purposes of each other when some final action was proposed that would not only put an end to the asphalt controversy, but render possible the resumption of

truly friendly relations with Venezuela. It is more than likely, therefore, that every possible effort will be made to induce the Senate to allow the whole controversy to remain unconsidered indefinitely, or to take some action that will prevent a final settlement from being made, but as the Senate never yet has contemplated a crisis in our international affairs with indifference, has never yet been inclined to subordinate our sovereignty to that of any other nation, strong or weak, and has never yet adopted measures, peaceable or warlike, for the solution of foreign questions that were inadequate, we may rest assured that it will now deal with this Venezuelan controversy in a large-minded way, that will insure the protection of all the legitimate interests of our claimants and of Venezuela, and that will permit our future diplomatic relations with the Venezuelan Government to be conducted in conformity with the principles of good faith and justice.

WOODSTOCK, CONN.

The Blarney Boy

BY COLETTA RYAN

THE blarney boy, the blarney boy,
The bright little blarney boy!
He's always fresh for a happy word,
And he hums around like a joyous bird.
The blarney boy, the rogue of a boy,
The rambling, raving blade of a boy!
He's brimming over with sparkling youth,
And he thrives on stretching the sad old truth;
But I love him well and I know to-day
His heart beats truer than he can say!
So I give him as good as he sends.
And oh, we're the very best of friends!
The blarney boy, the blarney boy,
The bright little blarney boy!

The blarney boy, the blarney boy
Lived once in a blissful clime,
Where things were brilliant and fair and sweet,
And genial flowers bloomed at his feet—
And the fairies spoke in rime;
But he fell one day to the sober earth
By the woful accident of birth.
And he has to speak in a golden tongue,
For all of the universe seems young.

Oh, he's just so full of the other-where,
He thinks it is drifting down the air—
The blarney boy, the blarney boy,
The poor little blarney boy!

The blarney boy, the blarney boy,
God bless the blarney boy!
O, not so much for the song he sings,
But *something within* that finds its wings
And flutters over to joy!
He's always fresh for a loving word,
And he hums around like a tuneful bird.
No trouble robs him of his wit—
He's cheerful, that's the best of it.
And he's true and bright,
And his heart's all right—
The brave little blarney boy!

The blarney boy, the blarney boy,
The bold little blarney boy!
I know him well—there are those who say
I have talked with him for a whole spring day—
And it's true, for I could not say him nay,
My own little blarney boy!

BOSTON, MASS.

Bank Failures: Causes and Remedies

BY WILLIAM H. BRYAN

[Mr. Bryan is president of the newly formed Hungarian-American Bank of this city. At one time he served as a National Bank Examiner, and he has had therefore exceptional opportunities to study the question of bank failures, as the following article shows.—EDITOR.]

IN view of the closing of so many banks, and the subsequent revelation of the reasons therefor, the question which suggests itself to the man on the outside, "Cannot all of this trouble be avoided?" is a most natural and pertinent one. As all bank failures are not due to one and the same cause, the same remedy would not apply to all, but that they might have been prevented in most cases is absolutely true.

When a private banker fails to meet his obligations and closes his doors, it is easily seen that the remedy lay in his hands alone, but when a regularly chartered State or national bank is closed, the blame and remedy are laid upon legally constituted officers whose duty it is to see that the banks under their immediate care are honestly and properly managed. This applies to Superintendents of State Banks and the Comptroller of the Currency, as well as to the officers and directors of banks.

It would be a long and tiresome task to consider all of the reasons for the failure of all of the banks which have recently come to public notice, but it may prove profitable if we take a calm view of some of the reasons for the failures of banks and try to find a way to avoid a repetition of the trouble.

After many years' experience as a national bank examiner, the writer ventures to make public the impressions he has received as to the causes of bank failures and to suggest a few remedies.

First, the banks which fail because of the peculations of one or more officers or clerks. Occasionally we hear of the failure of a bank for the reason just stated, but this only occurs where the amount stolen becomes so large as to practically wipe out the major part of a bank's resources, making it absolutely impossible for a bank to do business unless new capital is paid in by the stockholders, which they usually refuse to do.

Fortunately, these cases are quite rare. Can they be avoided? The answer is in the affirmative. If a bank is properly managed, defalcations should be made almost impossible. In every case except one which has come to the writer's notice they could have been prevented, and that case was where a teller deliberately filled his pockets with money from the vault of the bank and carried it away with him upon leaving. Such instances are very rare; most defaulters carry on their work for a long time, covering it up by false entries or no entries at all, until the amount grows to such proportions as to make the bank insolvent, and then they depart for other climes and the bank is closed.

Defalcations in banks can be almost eliminated, or their amounts so reduced as to make their effects when discovered scarcely worth considering.

As we all know, men become defaulters for one of a number of reasons, viz., spending on themselves and families more than they earn; speculating in stocks or real estate; gambling in various forms; associating with fast men or women, or with both. There may be other reasons given, but the above are the prevalent ones.

When a man enters a bank as an employee his character and connections, present and past, are carefully scrutinized, and he must further give a bond to secure the bank against loss from speculation; in most cases nothing further is done. He is put in charge of money and securities amounting to many times his bond, but no check is put upon him, and when the temptation to steal presents itself to him, if he loves money more than a clean character, he soon falls a prey to the tempter.

He might have been saved from the first step had he known that his work was to be regularly checked up by a competent auditor. Many boards of direc-

tors essay to have their banks examined once a year or more frequently by a committee composed of members of the board, but with very few exceptions such examinations are very poor and of little value.

Every bank should have a thoroly competent auditor make at least one audit every year of all its affairs. The board of directors should set aside a sufficient amount each year to pay for such an audit, and they, thru their committee, should examine all the notes and securities to verify the fact of the bank's ownership of the same, and the genuineness of the signatures on notes as far as possible, leaving the verification of the book entries to the auditors.

The most difficult and the least covered part of a bank audit is that of the liabilities of a bank as shown in the amount due its depositors.

Every bank should adopt a system of balancing its customers' pass books at least once a year, and insist upon the customers signing and returning to the bank a receipt for vouchers returned, as to their genuineness and as to the amount of balance due them.

The balance as shown on the pass books should be checked against the ledger balance by a clerk or officer who does not keep the ledger, and the receipt, when returned by the customer, should be received and examined by one of the officers before filing away, to see that it is properly signed.

If this course is pursued and the book-keeper is not allowed to handle the cash or receive deposits, the danger from defalcations in this direction is practically eliminated.

It is money well invested to have a bank thoroly audited, either continuously or periodically. As long as bank directors are too penurious to have their banks properly audited, just so long will there be defalcations and failures. In this direction, "A stitch in time saves nine."

In this connection it might be well to correct the false impression now held by so many as to the character and extent of the examinations made by national bank examiners. An examination may be so comprehensive as to become an audit, but such is not the case in the examinations which are made by national

bank examiners. Their examinations cover a verification of the resources of a bank and a partial verification of the liabilities, but in no instance do they take on the nature of an audit. Hence when defalcations come to light which are found to be of long standing, some editor will write an article condemning the examiner for not discovering the defalcation before, whereas, if he knew the system under which the examiner works, he would easily see that the examiner is not at fault. The system is faulty; it does not go far enough to produce the best results.

The examiners are paid according to the number of banks they examine, and, in the majority of cases, the pay is inadequate. The work calls for the very best auditors, and only such should be appointed examiners, and they should be compensated as well as other auditors for the same grade of work. Comptroller Ridgely has used every effort to secure legislation looking to a change of compensation from the present disgraceful fee system to that of a regular salaried one, but his efforts have been fruitless. It is difficult to get the average Congressman to see the need of a change of the laws relating to the compensation of examiners. Until a change is made, as outlined above, there will be faulty examinations and consequent losses thru the excusable failure of examiners to discover defalcations.

A bank should be audited and not examined. It cannot be audited in a day, but it can be examined in that time. The writer would not be misunderstood. All banks are not now examined in one day under the present system. Some banks require and are given more time by the examiner, but in many cases sufficient time cannot be given to the work under the present system unless the examiner be at pecuniary loss.

The examiners should receive credit for the vast amount of good work done by them which never reaches the public eye or ear.

Another cause for bank failures is found in the laxity of management on the part of the directors. While it is true that the internal management of the bank and the granting of loans must be left, in the majority of cases, to the exec-

utive officer or officers, this does not relieve the directors of their responsibility to inquire into the work of the executive officers, that they may correct any abuses which may exist.

In too many instances the directors are mere figureheads, the entire management is left to the executive officers, and the result is often disastrous, because of the bad judgment of the officers in the investing of the bank's funds.

If the directors would carefully inquire into the bank's investments they could correct many instances of bad and reckless investments, before they have gone so far as to jeopardize the life of the bank, but they are too careless of their responsibilities. They say they are too busy with their own business affairs to attend to the bank's interests, or they express much confidence in the judgment and honesty of the executive officers as an excuse for their failure properly to attend to their duties as directors.

Many bank failures have resulted because of the failure of directors to do the work they have sworn to perform. If directors were punished for failure to do their work there would be on the one hand fewer persons desiring the honorable position of director of a bank, and on the other hand fewer failures of banks. The Federal and State governments should enact laws throwing greater responsibility on bank directors, with suitable punishment for failure to perform their duties. Till such laws are enacted there will be a frequent recurrence of bank failures.

Still another reason for bank failures is found in the lack of power enjoyed by the Comptroller of the Currency at Washington and the Superintendents of State Banks in the several States. In many instances they are fully aware of the bad condition of the banks in their jurisdiction, but they are nearly powerless to bring about a better condition of affairs. When the examiner reports a defalcation, the existing laws are ample to end at once the defalcation and punish the defaulter, but there is no law for the punishment of directors who fail to do their duty, and no penalty for violation of the law relating to the limit placed on loans to any individual, corporation or firm; and until there is a penalty at-

tached to the violation of this law some banks will continue to grow from bad to worse, until their condition becomes so bad as to compel the Comptroller or Bank Superintendent to close them because of their insolvency.

Instances have come under the writer's personal notice where banks that are now closed could have been saved had there been ample laws to cover such cases, and no doubt there are banks in operation now which are getting in a worse condition every day, with no way open to stop their downward course other than to arbitrarily decide that the bank's assets are not worth what they appear to be, and as this course is not warranted by existing laws, nothing can be done to prevent their ultimate failure.

In cases where the life of the bank is being put in jeopardy by constant violation of the law on the part of the management, the Comptroller of the Currency can bring a civil suit against a national bank for the purpose of canceling its charter, but up to the present time no Comptroller has had the courage to avail himself of that power. He uses all of the moral force of his office in the form of request or threat, which in most cases avails, but there are cases where these do not accomplish the needed reforms. If the Comptroller would proceed against any one bank which is a flagrant violator of the laws, this would have a most salutary effect on all others. It would result in the immediate compliance with the law on the part of other law-breaking banks. They would cease making dangerously large and excessive loans. If this course were pursued there would be a marked change for the better in the condition of many national banks thruout the land.

There is a cause for bank failures that has been very much overlooked in the past, but made very plain by the recent failures of the banks in New York City, viz., the holding of a controlling interest of the stock of one or more banks by one person or combination of interests. Such holding is fraught with great danger if those who hold the control of a bank's stock are seeking their own selfish ends. The executive officers in such banks, if they retain their positions, are like pawns on a chess board, moved as the power

behind them dictates. Where this control extends to more than one bank the danger is intensified, as has been shown in New York City, where the Morse, Heinze and Thomas combinations wrecked more than one bank and nearly wrecked others because of their selfish and reckless use of the funds of the banks in which they held a controlling or dominating interest.

Very frequently we find that one man holds, or controls thru the holdings of other stockholders, a dominating interest in the bank. Some men are so well built that this dominating interest never becomes a menace, but rather makes for its good, but there are those so badly built that everything they touch shrivels and begins to decay. Against the latter class every step possible should be taken, because they represent at once the most dangerous of bank wreckers while holding high positions in the social and financial world.

It has been held that when the stockholders elect men as directors of the bank, there is no one in authority who has the right to deprive them of the power to manage it as they please. This is no doubt true to a large extent, and to meet and overcome danger at this point there should be legislation which would give the Comptroller of the Currency or the Bank Superintendent the right to step in and manage the bank (without having to resort to the expensive expedient of putting the bank in the hands of a receiver) when he is satisfied the bank is being slowly but surely wrecked.

The writer believes it is within the power of the Comptroller of the Currency or the Bank Superintendent, when

he knows a bank is badly managed, to notify all of the stockholders prior to the date of the annual meeting of the stockholders of the true condition of the bank, and to warn them against voting for the man or men who are jeopardizing its funds.

If this course had been pursued in the past many banks could have been saved, and if followed in the future others can be saved, because stockholders, as a rule, take it for granted the bank is being well managed, and so do not vote, or, if they do vote, it is by proxy and for those who are already in the management, whereas, if they were fully informed as to the condition of the bank and as to the methods pursued by the management, there is no doubt a large percentage of the stockholders would vote out the old and vote in a new management, provided their combined efforts could bring it about.

Some persons, no doubt, will take exception to this idea; they will say it is interference not backed by law. True, it may not have the backing of any written statute, Federal or State, but none can gainsay the necessity for the step, and where the interests of the many are to be conserved, the Comptroller or the Bank Superintendent would be justified in taking the action suggested.

The writer has hastily and briefly called attention to the prominent causes of bank failures, and pointed out how they might be largely obviated. The large number of bank failures in the recent past emphasizes the necessity for not only greater zeal on the part of the directors, but for better laws for the control of the management of banks by the Federal and State authorities.

Safe

BY RUTH STERRY

FROM foreign lands she sent the word
That she was safe from storm and tide
And happy on the other side.
And I who loved her smiled. To me
That one so dear had crossed the sea
Safe and unharmed was joy untold—
My lamb was safe within the fold.

From foreign lands they sent the word
That she is safe from wind and tide,
And happy on the other side.
But strange that I who loved her well
Should weep as if some wo befell—
Should weep when far from storm and sea
My friend is safe as safe can be.

ROSELLE PARK, N. J.

The Cedars of Lebanon

BY JULIE M. LIPPMANN

You stood upon the hights of Lebanon—
Proud Lebanon, whose kingly cedars fell
In humble service of the Lord, and won
Renown the centuries cannot quell.
The Syrian azure air, so clear
The vision pierces far therethru,
Made distant sapphire sea seem near
And turquoise sky bend low to you.

'Twas here the subjects of wise Solomon—
The glory of the Temple in their souls—
Labored and toiled in centuries ago,
Forgetting each his own heart's dreads and
doles.

And now the hungry, long-eared flocks
Go wandering, nibbling day by day
Along the bare face of the rocks,
To win what sparse reward they may.

And lo, and listen! It would seem, the trees
Do mourn the majesty of ancient years!
There is a sound of sighing in the breeze,
And on the ground the fall of heart-wrung
tears.

Do they, then, too, perceive the days
As hungry herds that crop and chew
Frail seedling hopes, that else might raise
Crowned power some day to the blue?

You stood upon the hights of Lebanon,
And saw at least one seedling spared the fate
Of others—for a briar-rose had spun
A mesh of safety round about her mate,
Telling again the ancient tale
Of death's o'er mastery by love:
Of Force protected by the frail,
And all things guided from above.

NEW YORK CITY.

Education for the Man Behind the Plow

BY BOOKER T. WASHINGTON, LL.D.

PRINCIPAL OF TUSKEGEE INSTITUTE

AMONG the negro farmers in Alabama and in the South generally there is a period, after the cotton is picked and marketed, extending from the Christmas holidays until the 1st of February or thereabouts, when, ordinarily, the regular work of the plantation stops. The thrifty farmers make use of this time to fix up their barns and fences, or, better still, to begin breaking up the land for the next season's crop. But the "hands" are mostly idle during this time, spending the money they have earned, while they are looking about and bargaining for wages or rations to carry them thru the next season.

This is the period of greatest temptation and danger for the negro farmer and the people generally in the farming districts. It is just this period between the picking and the planting seasons, when the country people have money, leisure and nothing to do, that most of

the time and the money that might have been used to get ahead and accumulate a little property and a little intelligence, is wasted.

Four years ago we started at Tuskegee, in order to put this wasted time to some good use, what we called the "short course" in agriculture, designed especially for negro farmers. It began January 1st and lasted for two weeks, and the people from the surrounding country were invited to come in and spend that time at the school. It gave them an outing and filled up the time with pleasant and useful occupations. They had opportunity to look thru our barns and over the farms in a thoro and leisurely way and to learn something of our methods and the reasons for them. The first year we had 11 persons enrolled in the class, the second 30, the third 70, and this year we have had 490. During the two first years only the older

people attended. This year there were something over 400 young men and women in the classes.

At the present time there is a real enthusiasm among the farmers in our region for education and progress along agricultural lines, and this sentiment is spreading. It seems to me that I can see signs of a general awakening among the masses of the negro farming population. The importance of this change of sentiment is my excuse for undertaking to write something of the methods by which it was brought about in our community.

The first positive effort to bring the school at Tuskegee in touch with the negro on the farm began, I may say, some sixteen years ago, when the first negro conferences were started. In 1897 the teachers in the agricultural school established a farmers' institute, which has held meetings every month since that time. These and the other forms of extension work by which the school has sought to extend its influence over the country have helped to prepare the soil for the later work, in which the results are more tangible and the influence of which has been more widespread.

Two years ago, with money given for that purpose by the late Morris K. Jesup, we fitted up an agricultural wagon, an agricultural school on wheels, and sent it out into the country districts in charge of one of the teachers in the Agricultural School. With the aid of this wagon, it was possible to go directly to the farmers, demonstrate to them the use of improved machinery, give them tests of soil, answer questions as to the best methods of preparing the soil, and the kind of fertilizer it was necessary to use. The wagon aroused great interest among the country people, largely because of its novelty, but still more because of the practical demonstrations it was able to give.

Last year, under the direction of Dr. S. A. Knapp, of the Agricultural Department at Washington, and the General Education Board, we began what is known as the demonstration work thruout the county. This work was carried on under the direction of T. M. Campbell, a graduate of the Agricultural School, as field agent. He chose from among the more thrifty farmers of the

county 135 with whom he signed contracts by which the United States Government agreed to furnish the seed provided the farmers would farm certain chosen tracts of land under the direction of the field agent. This demonstration was to serve as the nucleus for a farmer's school in that neighborhood. Other farmers, known as co-operators, were invited to follow the methods of culture prescribed in the demonstration, as it was called, using, however, his own seed. Mr. Campbell used the agricultural wagon for the purpose of instruction at the meetings which he held at the various demonstration farms thruout the year.

In the fall a county fair was held at Tuskegee, in which the results of the year's work were exhibited. Dr. Knapp was present and made a speech to the farmers. The result of the year showed the negro farmers for the first time what the soil was capable of under proper cultivation. For instance, the average yield of lint cotton thruout the county under the old method had been about 160 to 180 pounds to the acre. Under the old method the yield of corn was but 18 bushels per acre. Under the new, the best yields of corn were 60, 50 and 45 bushels to the acre. The best yields of cotton were 637, 560 and 510 pounds per acre.

I am quite sure that the increased number of farmers' boys and girls who have taken the "short course" of agriculture this year is directly due to the interest stimulated by the agricultural wagon and the demonstration work. Partly, however, it is due to the general interest which the whole country is now taking in the subject of agriculture, to the encouragement of the white people who urge their tenants to attend the course, and to the enthusiasm of the lecturers who have come from Washington and from the neighboring Agricultural School for white boys at Auburn, to assist in and encourage the work of the school.

One of the most difficult and important tasks of the industrial school in the South has been to reach and touch the farmer's boy and convince him of the opportunities and possibilities that exist for him on the soil. The average boy who comes off the farm wants to learn almost any-

thing but farming. He sees nothing to learn and little but drudgery ahead of him there.

The interesting and important thing about the work we are doing in the "short course" is that it reaches the boy on the farm before he has arrived at the point of leaving home to go away to school; it turns his mind to the interest of his daily life; he sees with his own eyes the benefits and practical bearings of the things he has learned; in short, it educated the man behind the plow.

In slavery times, when all work was looked upon as degrading, the work of the field hand was the lowest grade of labor a slave was compelled to do. The tradition still exists in the country districts, where tradition is always strong. The ordinary education which the average country boy has been able to get in the average country school has not helped to change to any extent this notion about the dignity and worth of labor on the farm. It was not until it was possible to bring education in touch with the actual life on the farm; not until the negro farmer could see for himself that the soil would respond to intelligence as well as to labor, that the idea of an agricultural education took hold of him.

The nature of the instruction given in a two weeks' course is necessarily extremely simple and practical, and the talks are well sprinkled with good sound advice, such as the country farmers need and appreciate. There were this year courses in poultry raising, in which the farmers are taught not merely how to raise and care for the chickens, but how to keep accounts and make the business pay. There was a course in fruit growing for farm and home use, in the care of live stock, dairying, and the growing of farm crops. In giving this instruction the school has had the advice and assistance of Dr. E. V. Wilcox and Prof. J. A. Canover, of the Department of Agriculture; of R. J. Redding, of the Experiment Station of Georgia; Dr. H. E. Stockbridge, editor of the leading farm journal of Atlanta, Ga., and of Prof. C. A. Carey, B. B. Ross, State Chemist, and and H. E. Hinds, all of Auburn, Ala.

In addition to the talks from these men the school had the benefit of the practical advice of successful colored farmers, who

were able to discuss some of the special difficulties that the negro farmers meet. One of these was Mr. Ben Reynolds, who owns a large farm near Talladega, Ala.; another was Mrs. C. J. Calloway, one of the early students at the short course, who explained to the students how she had been able, with a small number of hens, to sell \$152.95 worth of poultry and eggs during the previous year.

As indicating the interest the short course has aroused among the farmers, I have on my desk a number of letters. One of these is from a farmer living a few miles from the school, who writes that he has been attending the short course for three years and that he is now raising seven bales of cotton where he used to raise only three and four "to the mule." He will finish paying for his farm this year, he adds.

The following is a copy of a letter dictated by an old farmer who cannot read or write, but who wished to send his testimonial to the school of the benefit that he has obtained from what he was able to learn at the short course:

JANUARY 20, 1908.

MY DEAR SIR—I have been attending the Short Course for three years. I am fifty-seven years old and cannot read nor write, but now that I have been permitted to come to this school, my mind has been opened, and I feel like a young man. Three years ago I had nothing but my wife; since coming here I have purchased forty acres of land. I own my horse and wagon, orchard raising potatoes, and have plenty of corn in my crib. I am much improved; even my old gray mare seems to be learning. She drives better. When I came to this meeting, I was called old Giles, but since I have me a nice home and a plenty of everything, I am called Mr. Hill. I am graduating this year, says my teacher, and I am going home at this late day in life to do young things and new things in farming, these things that I thought I knew all about. Yours truly,

(Signed) GILES HILL.

This letter may not say much for the intellectual value of the teaching, but it indicates the sort of enthusiasm that the school has aroused among the masses of the people, who have been greatly encouraged, also, by the fact that the Government has taken an interest in them, and they are much impressed by the fact that the wise men have come all the way from Washington, D. C., as well as from Auburn, Ala., to talk to them and instruct them.

TUSKEGEE, ALA.

Literature

Ibsen

WHAT is caviare to one generation is breakfast food to the next. Fifteen years ago a man who read Ibsen's plays in this country was regarded as an eccentric, and if he also professed to admire them, he was suspected of affectation or worse. Now Ibsen's plays have been more called for at the New York public libraries for many months than any other books outside of fiction. This is often ascribed to the personal popularity of a Russian actress, but Madame Nazimova has not been able to secure for other plays the crowds that come to her Ibsen. "Ghosts" was first produced in New York at a little, out-of-the-way theater in 1894, thirteen years after it was published. Mr. W. D. Howells called it then "a great theatrical event—the very greatest I have ever known," but it was five years before the experiment was repeated. It is still prohibited by the censor in England. "The Doll's House" and "Hedda Gabler," however, have attained permanent vogue on the American stage. Audiences and actors had to be taught to forget all that the term "theatrical" connotes; the spectacular scenes, the poetic language, the dramatic climaxes, the involved plot, the brilliant costumes, the extravagant gestures and the romantic affectations. They had to learn that plain, middle-class people, living in flats and talking ordinary language, have struggles and emotions that are as worthy of attention as those of the gods, heroes and smart set.

Because the Ibsen plays are not dependent on satin dresses and spot lights for their effectiveness, they have a wide circle of readers who have never seen one of them acted. It is only on the

stage that one can appreciate their wonderful technique, but it is only on reading and rereading them that one can comprehend their deeper significance. Fortunately, we have now a complete translation of Ibsen's works,¹ with new introductions by William Archer, giving the biographical details which have come to light since the death of Ibsen. For thirty years Mr. Archer has labored to introduce and interpret Ibsen to the English-speaking world, and, as he stood almost alone as the defender of Ibsen when his name was the object of ridicule and obloquy, he should now have a share in the applause. In many American towns where no plays worth seeing are ever given, a not altogether inadequate substitute has been devised in the custom of "reading round," each person in the club taking a different character. For this purpose the Ibsen dramas are well adapted, since the parts are few and the action slight. Some of the plays rarely seen on the stage are the best for reading in such a circle of friends; say, "The Enemy of the People," for its defense of the literature of exposure; "John Gabriel Borkman," for its picture of the ruthless modern financier, or "The Master Builder," for its presentation of the eternal struggle between youth, which demands its opportunity, and age, which would keep its established position.

Mr. Gosse's life of Ibsen² is well fitted to supplement the running commentary of Mr. Archer's introductions. He, also, includes the posthumous material which has made Ibsen somewhat less of a sphinx and more of a human being than he used to be, altho his letters reveal the secret of his personality less than those of almost any other prominent man. As Mr. Gosse says:

"With rare exceptions he remains thruout them tightly buttoned up in his long and legendary frock coat. . . . The correspondence [shows us] Ibsen with his hands clenched, his mouth tightly shut, rigid with determination not to 'let himself go,' the eyes alone blazing behind the gleaming spectacles."

¹THE WORKS OF HENRIK IBSEN. In 11 volumes. I. "Feast at Solhaug," "Lady Inger," "Love's Comedy." II. "Vikings," "Pretenders." III. "Brand." IV. "Peer Gynt." V. "Emperor and Galilean" (2 parts). VI. "League of Youth," "Pillars of Society." VII. "Doll's House," "Ghosts." VIII. "Enemy of the People," "Wild Duck." IX. "Rosmersholm," "Lady from the Sea." X. "Hedda Gabler," "Master Builder." XI. "Little Eyolf," "John Gabriel Borkman," "When We Dead Awaken." New York: Charles Scribner's Sons. \$1.00 each.

²HENRIK IBSEN. By Edmund Gosse. New York: Charles Scribner's Sons. \$1.00.

As this extract shows, Mr. Gosse does not adopt in his biography the usual humble and worshipful attitude of a disciple. His criticism seems to us unduly harsh at times, as, for example, in what he says of the epilog, "When We Dead Awaken," which goes much better on the stage than his words would imply. But, of course, the book is interestingly written, and we have in English no other which gives what we need to know about the man and his methods to understand his achievements. Such a paragraph as the following explains why Ibsen's characters seem so real:

"His zeal for elaboration as an artist led him to collect a mass of consistent imaginary information about the personages in his plays who became to him absolutely real. It is related how some one happening to say that Nora in 'A Doll's House' had a curious name, Ibsen immediately replied, 'Oh, her full name was Leonora, but that was shortened to Nora when she was quite a little girl. Of course, you know she was terribly spoilt by her parents.' Nothing of this is revealed in the play itself, but Ibsen was familiar with the past history of all the characters he created. All thru his career he seems to have been long haunted by the central notion of his pieces and to have laid it aside, sometimes for many years, until a set of incidents spontaneously crystallized around it. When the medium in which he was going to work became certain he would put himself thru a long course of study in the technical phraseology appropriate to the subject."

The fascination of an Ibsen drama lies in the fact that one catches a new and deeper meaning in it each time he reads it, and realizes the significance of what he had before past over. It is like Peer Gynt's onion, layer beneath layer, until finally—but we will not carry the simile so far as Ibsen did. His involved system of symbolism is much like Wagner's use of leading motives; one may enjoy the music to a certain extent without consciously identifying them, but the pleasure is enhanced by the ability to recognize their recurrence and meaning. As an aid to this they may be played over on the piano before going to the opera. So the Key³ provided by the Professor of English Literature at Smith College will be of value to many readers, especially elementary Ibsenites, not because it tells what the symbols are and mean, but because it tells how to track

them. Besides, there is the additional pleasure of disagreeing with Mrs. Lee on difficult points of interpretation.

Business Organization. By Samuel E. Sparling, Ph. D. New York: The MacMillan Co. \$1.25.

This addition to the excellent "Citizens' Library" which Prof. Richard T. Ely edits breaks new ground in essaying to describe "modern business activity from the point of view of organization." It is clearly written, with no pretension to style, as befits a business treatise. Tho it is valuable chiefly to the young man who purposes entering an occupation which will involve the knowledge of values and of buying and selling, some of its pages are of interest to all broad-minded citizens. We learn, for example, that "farming of necessity is a small business. Farming on a large scale is the exception. From 1850 to 1900 the average size of farms in the United States decreased." This statement disposes of the chain of reasoning of some economists, built upon the supposed multiplication of huge bonanza farms. At present 35.3 per cent. of the total number of farms of the United States are occupied on the tenancy system; but whether the slight increase of that system since 1880, which these figures show, indicates that the old owners have been driven out by poverty or that they have retired to the towns on their savings, is not shown. The chapter on advertising contains some startling information: "It has been estimated that the total annual outlay" (on advertising) "in the United States is about six hundred millions"—twice the value of the wheat crop. How much of that is wasted? Most of it goes to newspapers and magazines. It is stated that a Philadelphia firm uses a page per day in the leading dailies of that city at a cost of a thousand dollars per day, and that long-time contracts for the last cover page of a popular home magazine have been made at something more than four thousand dollars per issue. Most newspapers and magazines are maintained chiefly by the advertisements. We get our newspapers for two cents, tho they cost, say, five cents to produce. We pay five cents for a cake of soap that it costs only two cents to make. But the

³THE IBSEN SECRET. A Key to the Prose Dramas. By Jennette Lee. New York: G. P. Putnam's Sons. \$1.25.

soap manufacturer hands over three cents out of the five to the newspaper for his advertisement. When we buy soap we really pay, therefore, for the newspaper which, if our soap were sold to us at cost and advertising abolished, would of necessity add the three cents to the price which it now gets from us via the hands of the advertiser. The real waste in the system consists of so much of the value of the paper and the printing used in the advertisement as is not necessary ideally to inform the dull public of the merits of the goods at their disposal. This is, of course, a small percentage of the dollar cost of the advertisement. The last page of the home magazine would not cost more than a few hundred dollars to print. The balance of the four thousand dollars makes it possible to sell the magazine at fifteen cents while returning a handsome profit to its shrewd and fortunate proprietor.

The Desert and the Sown. By Gertrude Lowthian Bell. New York: L. P. Dutton & Co. \$5.00 (cheaper edition \$3.00).

We have here a book that has a reason for being. It is about Palestine and Syria, and a hundred tourists have traveled it and written it; but no one has so carefully written the people. Mrs. Bell talks Arabic. She had an aim in taking unusual routes, in the back ways of the land, for she was intent on archeology, but she was as much interested in the people, the guides, soldiers, tradesmen, farmers, governors as in inscriptions and Roman roads and old ruins. So she tells what they say, what they think, how they talk, what is the prejudice or the superstition or the popular wisdom of the common people, and a fascinating volume it is. Here she tells how she talked with a bright Druze boy at the home of Og, King of Bashan; and there of the reason why a Christian woman at Baalbek, whose husband is seeking his fortune in America, would not go to her Lebanon mountain home. "There," said she, "they take an onion, cut it in three parts, and use one part each evening to flavor their cracked wheat, while I throw a handful of onions in the dish every night." So, throwing in a hundred and fifty pictures, this delightful volume opens the life of the people of the desert

and the sown land, in all their shrewdness and simplicity. The author's route began with Jerusalem, crossed the Jordan to the Hauran, then wandered about northerly along the edge of the desert to Damascus, then past Homs and Hamath to Aleppo, and thence westward to the coast at Alexandretta. With the volume is by far the most minute and accurate map of Syria yet published. Mrs. Bell has made no little reputation for geographical and epigraphic studies, in Syria and Asia Minor, which have been published in archeological journals, but the reader is not invited to bother here with them.

A Gentleman of Fortune. By H. C. Bailey. New York: D. Appleton & Co. \$1.50.

Here is a good roystering tale of life and love and of a heart's high courage in a gentleman of fortune during the sixteenth century—not, you understand, a strong book, but whimsical and full of conversations so short and keen that the sparks of spirits fly between retorts. Raoul "of all the world," as the hero called himself, marked out his salvation in a series of adventures so unscrupulous at times that a narrow twentieth century moralist is more likely to call him a scamp than any kind of gentleman. If it appeared that something good was struggling for manifestation, Little Raoul clapped his hand to his sword and said, "God is doing something!"—and hurried to lend a mortal hand to the achievement. If the Devil seemed most active, he was equally ready to bear his share in the undertaking according to his own theory of rectitude in dealing with the Devil. In order to produce an acceptable historical romance the author must not only have excellent material such as the histories furnish of the wonderful Raoul, but he must have a spiritual sense of the times in which his character lived. And in this Mr. Bailey has been very fortunate. His elastic mind comprehends the wider liberty of a former age, the license which an unfettered spirit, a good blade and a brave heart gave a man. And he has produced a character singularly rounded both by good and evil reports. Also he has the dusty, blood-stained and ragged velvet vocabulary so essential in depicting such a life. Some of Raoul's

words shine for us like yellow coins that were scattered far down the dusty road of the centuries—by a gallant rogue in pursuit of adventure.

Original Narratives of Early American History: Voyages of Samuel de Champlain, Narratives of Early Virginia, Bradford's History of Plymouth Plantation. New York: Charles Scribner's Sons. \$3.00 each.

The series of reprints which Mr. J. Franklin Jameson has been conducting for some time has been increased by the addition of three volumes, all of which continue the tradition of clear, neat letterpress, convenient size and moderate price which was established at the start, and which, indeed, is the justification for the series. We have already noticed the earlier volumes, expressing our conviction that the work of providing the classics of American history for general library use has fallen into worthy hands. We have no reason now to modify this judgment. In the first of the new volumes, the new Beit Lecturer on Colonial History of the University of Oxford has been called upon to supervise a republication of the journals relating to the *Voyages of Samuel de Champlain*. In one of the rare instances of modern archeology, these journals made possible the identification of the St. Croix River, thru the discovery at the mouth of the stream of earthworks described by Champlain and remaining observable long after the river had ceased to bear the name which he ascribed to it. President Tyler's collection of *Narratives of Early Virginia* gives us easy access to a group of familiar but somewhat inaccessible originals. He covers the years 1606-1625, with some thirteen selections from authors as diverse as the redoubtable Captain John Smith, the Spanish Ambassador Don Diego do Molina, and the Jesuit Father Pierre Biard. His footnotes, in explanation or reference, are suggestive and well arranged. In connection with the "Records of the Virginia Company," which the Library of Congress published in 1906, this volume brings early Virginia within reach of every student. Most recently has appeared a reprint of Bradford's *History of the Plymouth Plantation*, under the editorship of Hon. W. T. Davis, of Plymouth. The story of the Pilgrims is al-

ways new, and its history has deserved a new dress for a decade. Few books on American history have had so interesting a career as the manuscript of this volume, which was returned to the Commonwealth of Massachusetts in 1897, after a century of exile in England, whither some pilferer had carried it during the period of the Revolution.

A History of Sculpture. By Ernest H. Short. New York: E. P. Dutton & Co. \$3.00 net.

The title of Mr. Short's book is rather too pretentious. Some other would have served his purpose better, for he has not even attempted a "history" in the usual acceptance of that term. He has produced a readable essay in support of his contention that "the great schools of sculpture were created, not by individuals of genius, but by the peoples to whom they appealed." In attempting an interpretation of sculpture that shall animate it and give the reader "a glimpse of its most potent force—its mysterious power of arousing echoes in his own heart," he traverses the meteoric rise of the art in Greece, which culminated, in the short space of half a century, in the marbles of the Parthenon; the "Golden Age" in which sculpture "expressed the whole nature—physical, mental and spiritual—of the most complete men who have ever lived"; the art of the Alexandrian and Roman empires; the great revival of sculpture in the city-states of Northern Italy; and finally, thru a consideration of the sculpture of monarchical, imperial and republican France, is led up to "the works of our own time and the final problem—how near such a sculptor as Rodin is to assimilating and expressing the strange and wonderful experiences arising from the stress of modern life." While the author's critical qualifications are not of the highest order, and his style is often slipshod, he yet succeeds in taking sculpture out of the region of the archeological catalog of technical and dry discussion, and in describing many of its masterpieces as the expression of national or local feeling, and even in some of his pages in quickening the reader's sense of plastic beauty. The exposition is aided materially by numerous illustrations from photographs reproduced in half tone.

Fennel and Rue. By William Dean Howells. Harper & Brothers. \$1.50.

Mr. Howells has not forgotten how to invent a situation, half-psychical, half-sentimental. The old skill is not lacking, nor the young girl who long ago won the doubtful distinction of being "one of Howells's girls." Of course she is indiscreet and indirect to a degree. "We will describe Miss Shirley as a *waving line*," is the author's chivalrous euphemism, for a young woman who tells lies and has a nervous fever over the consequences. We can forgive Mr. Howells much for old love's sake, but what we cannot forgive is his assumption that Miss Shirley is an adorable young woman. The closing sentence: "Men do not love women for their goodness" may be true, but it is extremely unflattering to both sexes. That a man may prefer complexity to innocence is comprehensible, as he might, understandably, prefer caviare to custard, but that he should see a pathetic loveliness in the liar who manages to lie gracefully, that is not to be paliated or condoned.

The Canon and Text of the New Testament. By Caspar René Gregory. New York: Charles Scribner's Sons. \$2.50 net.

The Formation of the New Testament. By George Hooper Ferris. Philadelphia: Griffith & Rowland Press. 90 cents net.

Professor Gregory, who, altho an American, holds a professorship in the theological faculty at Leipzig, is a well-known authority on the textual criticism of the New Testament, and his contribution to the International Theological Library has been awaited with interest. It is a learned work, heavy with facts, and containing a mass of information, not otherwise readily accessible, about the gradual formation of an authoritative body of Christian Scripture, and concerning the ancient and medieval manuscripts and the formation of a critical text by modern scholars. Professor Gregory has written for general comprehension, not for specialists only. He takes pains to define at length just what is meant by the canon, possibly having in mind the old lady who said, at the close of a learned lecture on this subject, that she had not known before that they had

such big guns in those old days. The effort to be entirely clear to everybody, together with a complicated style, full of interjected phrases and clauses, has made the treatise somewhat cumbersome. The reader has a right to complain that he is unduly delayed in arriving at the point. Since so large a treatise must make its appeal chiefly to students, it would seem that the author would have done better to write for scholars only, with greater conciseness, more frequent abbreviation, and consequent emphasis upon matters of real importance. No such criticism can be brought against Mr. Ferris's forceful and enlightening study of the motives and movements in the early Church which resulted in the formation of the New Testament. This author wastes no time in explaining that which is manifest, and yet a reader of small experience in early Church history may follow his earnest pages with fascination and delight. The explanation is that Mr. Ferris is moved deeply by the practical consequences of the process he is describing. He feels that the closing of an authoritative list of Christian Scripture was fraught with serious consequences to practical religion, under which the Church is still suffering. Books which were written to foster spiritual life have become the instruments by which unspiritual ecclesiastics have quenched and stifled religious freedom and power. Theological and ecclesiastical interests were dominant in the formation of the canon, and they, rather than the interests of spiritual religion, are fostered by the traditional conception of a fixed and unchangeable norm of Christian truth. The New Testament Church was a Church without a New Testament, and return to the fire and devotion of New Testament days can only be thru return to the free spirit which is partial to no particular age and to no specially favored men. As a graphic recital of the manner in which the New Testament as a body of writings came into existence, and as a tract for these times on the basis of the facts brought to light by a survey of the formation of the canon, Mr. Ferris's volume is highly useful. It should establish the author's reputation as a writer on religious history who can at the same time master facts and exhibit their vital bearing.

Literary Notes

....That the life and thought of these modern days is not unfriendly to Christian belief when rightly understood is the thesis of Prof. Charles Gray Shaw, of New York University, in *Christianity and Modern Culture* (New York: Eaton & Mains. \$1.25 net).

....Mrs. Annie Trumbull Slosson has collected some quiet stories under the title *Simples from the Master's Garden* (The Sunday School Times Company, \$1.00). Mrs. Slosson is best remembered as the author of "Butter an' Eggs" and "Fishin' Jimmy," and in homely phrases she sends out many a truth which might be ignored in more costly dress.

....We have always heard that the common people could not be induced to read either metaphysics, science or books of plays. Yet the New York Public Library reported last week that the books most in demand outside of the fiction class were James's "Pragmatism," Metchnikoff's "Prolongation of Life" and Ibsen's plays. What has become of biography, history and travels, which once monopolized popularity?

....That missionary activity is not inconsistent with serious literary endeavor is shown once more by *The One Christ: An Inquiry into the Manner of the Incarnation*, by the Rev. Frank Weston, Canon of the Cathedral and Principal of the Theological College of Zanzibar (New York: Longmans, Green & Co.). Mr. Weston is an earnest opponent of all Arian and kenotic theories and holds fast by Athanasian orthodoxy. One needs to be well trained in theological distinctions to follow his argument or to ascribe reality either to his terms or his conclusions.

....In *Contrasts in Social Progress*, by Edward Payson Tenney, a former president of Colorado College (New York: Longmans, Green & Co. \$2.50 net), one finds a large collection of facts as to the social usages and moral practices of different nationalities and the adherents of various faiths as illustrating and practical consequences of diverse religious beliefs. It was the happy thought of the author to study the contrasts in civic condition, in education, in home building and in other respects exhibited in the customs of many nations, and to draw deductions from these as to the influence and worth of their several religious systems.

....One cannot help observe a waking up of interest in theology as indicated by the strength of the *American Journal of Theology*, published by the University of Chicago, and the new theological quarterly from Harvard University. For some years theology was under a cloud in the scholarly circles, while men were settling certain historical and critical questions involved. Now theology is coming to its own again as queen of sciences, embracing both philosophy and history. We see it in the admirable number of the Chicago number for April, just issued, and we particularly commend the careful reviews of scholarly works in various languages.

....Now that communistic and co-operative plans are again being put forward, the appearance of a new edition of Hinds's *American Communities* (C. H. Kerr & Co., Chicago) is especially welcome. It includes the record of practically all of the attempts that have been made to establish centers of co-operative living in this country. It is a discouraging list of test-tube experiments in sociology, most of them undeniable failures, none of them so successful as to inspire emulation. This revision has to record the failure of the most promising of all the colonies in its inception, that of Topolobampa.

....We have picked out a shelf-ful of books of quotations from the stream of volumes that flows thru our office, but still we never have enough of them. It is annoying to have to feel around in the mind for an apt phrase that we know is there but can't quite reach, or to have to use that humiliating locution, "As some one has said." Of recent works of this class Benham's *Book of Quotations* (Lippincott, \$3) we shall certainly want to keep at hand, for an astonishing number of quotations are packed into the single volume, about 28,000 we should guess, with a very valuable index containing twice that number of references, quite eclipsing Bartlett. Modern and ancient languages are included and much space is given to proverbs. There does not seem to be the same reason for the existence of the volume of *English Quotations* (Dutton, \$2.50), compiled by Robinson Smith. The selections are too short for reading and not numerous enough for reference. They are taken chiefly from the most prominent English poets, Shakespeare and Milton taking nearly a third of the space.

Pebbles

LAISSEZ-FAIRE

BENEATH the softly swaying trees
I love to dream about romance,
And eat the various kinds of cheese
From France.

And while I'm there, my folks in mobs
Come galloping across the lea,
To offer simply splendid jobs
To me.

Clerk in a famous downtown bank,
Cashier in Broad street—same in Wall—
Scribe, editor—I merely thank
Them all.

And then in anger most profound,
In ire that really is the goods,
They gallop round and round and round
The woods.

They quite forget reserve and tact,
They wave their arms like weather-vanes.
And yet, in spite of all, the fact
Remains—

Beneath the softly swaying trees
I love to dream about romance,
And eat the various kinds of cheese
From France.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The President's Defeat

By an overwhelming vote of 199 to 83 the House of Representatives disregarded the President's second urgency message asking for four of the biggest battleships, "of the most advanced type," and consented to only two. This is a defeat for the President, for it is impossible that in the passage thru the Senate any amendment will restore the larger number. There was no division on party lines; both Democrats and Republicans were at one. The ridiculous part of it was that it was the defeat of Hobson also, Roosevelt and — Hobson, Hobson who went to Congress to get a big navy, whose ambition it was to be on the Naval Committee, and who got it by the grace of John Sharp Williams, Democratic leader, who in the debate gently poked fun at him, declaring that God never made a nose, an eye, or an ear to satisfy a medical specialist, and no nation could build a navy big enough to please a retired naval lieutenant; we might add, an ex-Assistant Secretary of the Navy.

Approving the action of the House, we do not approve the President's message, and yet it is fair to give full consideration to his reasons. He is a man of peace,

believes in peace, has received the Nobel Prize for peace, and he assures Congress that he "cannot too emphatically declare that this is a measure of peace and not of war." He recalls—for it has been thrown at him times enough—that it is only a year ago that he told the people that one battleship a year, just enough to replace worn-out vessels, was enough; but he says that was when he had hopes thru The Hague Conference that there might be an agreement of the Powers to limit naval expansion, while now that hope is blasted for years. But his hope was not then at all strong. In his letter to the National Arbitration and Peace Congress, held in this city in April of last year, referring to the coming Hague Conference, he said:

"One of the questions, altho not to my mind one of the most important, will be that of the limitation of armaments."

Not only did he regard this as one of the less important questions, but he did not seem to anticipate any action, for, referring first to our very small army, he continued:

"The circumstances which enable us to be so are peculiar to our case and do not warrant us in assuming the offensive attitude of school-master toward other nations."

Accordingly our delegates did not even urge the proposition at The Hague. Nor did he seem to expect any naval reduction, for he said:

"We are no longer enlarging our navy. We are simply keeping up its strength, very moderate, indeed, when compared with our wealth, population and coast-line; for the addition of one battleship a year barely enables us to make good the units which become obsolete. The most practical step in diminishing the burden of expense caused by the increasing size of naval armament would, I believe, be an agreement limiting the size of all ships hereafter to be built; but hitherto it has not proved possible to get other nations to agree with us on this point."

He did not then expect other nations to cease building other and larger battleships; and yet he was content with one new battleship a year.

But he says he has since had new light, for he tells Congress that since he wrote the words above quoted a new class of much more powerful battleships has been built by other nations, which will leave us far behind if we do not keep full flush with the leaders of the procession. He takes that as an incontrovertible premise,

which he nevertheless proceeds to defend.

His sole argument is that despite all arbitration treaties "it would be foolish to rely upon other Powers' possessing at all times and under all circumstances and provocations an altruistic regard for the rights of others." He points us to the conduct of those Powers "in China, Turkey, in the Spanish possessions and in Central and South Africa during the last dozen years." It is true that Africa has been regarded as a No-man's-land, which the Powers could take and divide as they pleased; but that is not true of the United States nor of any of its possessions. It is true that Turkey and China have been half-civilized nations, having no competent courts and unable to repress outbreaks and massacres, and the Powers have taken advantage of occasions to intervene, on the good or bad pretext of order and protection; but there is no danger of any such pretext against us. China had no army or navy, he tells us, and she has suffered from nations possessed of more battleships than altruism. True, but Denmark and Holland and Norway and Belgium and Switzerland have no navy or army to amount to anything, and very greedy neighbors do not touch them; for they are civilized and the world would disapprove. We are not weak like them, and would not be even tho we were third or fourth in size of navy, instead of second. We are far safer than Belgium is from France, or Holland from Germany, or Norway from Russia. There is absolutely no danger of any great European Power wantonly attacking us and refusing arbitration. We are safe even without the two new Dreadnoughts proposed.

And really this is all there is in the President's message. The implication is, that in some sudden fit of passion some big nation, with a bigger navy than ours, might pounce down on our shores, with no reason, refusing arbitration, knowing that we should resist and protect ourselves in the end. Not once since 1783 has any nation thus declared war against us. In every case we have declared war, with good or bad reason, and there is less danger in the future.

We have declared war against Great Britain, against Mexico, against Spain. We wish to avoid doing it again. We may have to, as we joined in the late cap-

ture of Pekin, but with a civilized nation we can well enough settle difficulties in the modern and decent way by arbitration; for uncivilized nations a small navy is sufficient. And we must remember that a big navy and army is itself provocative of war. Fighting men want to fight. They wish to justify their profession. And we can imagine that at some time in the future we might have a President who was a retired army or navy lieutenant and had less discretion than our Presidents usually have had, and he might manage to plunge us unwittingly in war trusting to the force at his hand. The giant's strength is liable to be used in a giant's way.

But the President seemed to have some other and more definite argument at hand which he could only present confidentially to a few chairmen of committees—and to Mr. Hobson. His private letter is refused for publication, but sensational as it may have been it did not frighten the cool heads of the House. They knew there was no sort of danger from Europe, and they had no fear that Japan would suddenly seize the Philippines or Hawaii, or batter down what of San Francisco has been spared by the earthquake.

Two battleships this year are enough. We suspect that despite his messages President Roosevelt has got about all he looked for. We believe one would be enough. We believe that a very moderate navy will give us sufficient force to protect our citizens and commerce abroad, and that more is a peril. The era of peace is at hand. Peace is to take the place of war, arbitration of armies and battleships. Let the United States have the honor to lead in the rivalry of good will and disarmament, of commerce and industry, and not in that of larger armies and mightier armadas, of vaster war debts and more crushing conscriptions.

Liberty to Keep the Laws

"HERE is a place where you can't go anyway!"

"But I do not *want* to go there, so I am in no danger of the penalty."

The first speaker was a Russian lad who was surprised that the Capitol, the White House, public buildings of all kinds in Washington, were open to the world, without even the formality of ask-

ing permission. The second speaker was the American friend who was showing him the city; and the forbidden spot which they at last had reached was the grass in a park, with the sign "Trespass forbidden, under penalty of the law."

"But your President can go there."

"Oh, no," was the reply; "he would not want to walk there and spoil the grass; and he would not break the law anyway."

"What!" said the boy. "Does your President have to obey the law?" He gasped in surprise at such a thought.

"By all means," replied his cicerone. "The President must obey the laws, of course."

"He *must*?" cried the boy. "That is queer! Our Czar and Grand Dukes never have to obey the law."

At the close of the day the lad was taken into the Congressional Library, where scores of men were bending over magazines under the pleasant evening lights. He caught the arm of his friend as tho he saw a ghost. "See! a soldier! a soldier! and he has no gun! and he is reading! You could not see that in my country."

It had been a surprise to this boy, right from Russia, where every railway station has its corps of soldiers, and where to the stranger there seem more armed than unarmed men, that in his long day in the capital of the country he had not seen one, and now at last here was a man in uniform, with no gun, quietly reading like any other citizen. His naïve remarks were illuminating. They revealed in a flash the lurid surface of Russia, as a flash of lightning sometimes reveals a bit of dangerous road to the benighted traveler.

On the other hand, the boy learned in that one day what liberty to do right may mean, and that one may obey law because one chooses to, not because he must. He also learned that a soldier may be a man, as well as a fighting machine, and that intelligence and courage are comrades in the best soldiery.

If one could only import enough bright Russian lads to learn these things and then send them back to their distracted country, what would be the consequence? A hundred thousand of the men and women who have learned them

without coming hither, the best of the land, are now in prison or exile because they would like to see just such liberty as was everywhere apparent in Washington. The bill which Hon. W. S. Bennett has reported to Congress, and which will soon come up for action in the House, is designed to show that Americans deplore the condition of things in Russia because they retard the progress of the nation toward this, the highest ideal of liberty.

The Political Campaign

OF the 522 delegates to the Republican convention who have already been chosen, Mr. Taft has nearly one-half, or four times as many as are assigned to his nearest competitor in the list as it stands today. The other names in this list are those of Messrs. Knox, Hughes, Cannon, Fairbanks and La Follette. But little support has been drawn thus far to any one of these "favorite sons" from any State except his own. This should be borne in mind by those who are attempting to forecast the result of the balloting at Chicago. Moreover, only two of the five, Mr. Knox and Mr. Fairbanks, have been able to secure all the delegates in each of their States. In the States of Mr. Hughes, Mr. Cannon and Mr. La Follette there are delegates who will vote for Mr. Taft. The list shows not only that he has about as many as his five competitors have obtained, but also that he is the only Republican candidate whose canvass has been national in its scope and in its gains. His competitors have won almost nothing outside of their own States. On the other hand, from the States of three of them delegates have come to him.

While the record of the canvass up to the present time does not indicate that Mr. Taft will have a majority on the first ballot, there is warrant for the prediction that on that ballot at least 400 delegates will vote for him, and that the strongest of his competitors will then probably have less than 125. There are no signs of a movement for a combination of their delegates in support of any one of them. If there should be such a combination, the beneficiary of it would probably be Mr. Knox or Mr. Hughes. But it seems

more probable that after the first ballot both of these candidates, as well as Mr. Cannon and Mr. Fairbanks, will lose delegates to Mr. Taft. We are making no predictions, but those who study the situation carefully will not be surprised, we think, if they see Mr. Taft nominated on the second or third ballot.

Governor Hughes has been a public officer of the highest type. He has never swerved from the course which he marked out for himself at the beginning of his term. Resolutely declining to use the power and patronage of his office to promote legislation in the public interest, he has sought good results by showing the justice of his cause and by appealing to public opinion, rather than by resort to political intrigue. His successes, with respect to reform legislation, have not been of sufficient importance to make a sharp impression upon the public mind outside of his own State; his failures have not been overlooked, altho they have been in no sense to his discredit. Inevitably a public officer true to so ideal a conception of his duty repels politicians and is disliked by them. During a Presidential canvass politicians are very active and influential. It is quite manifest that not many of the Republican politicians in New York really desire to support the Governor's candidacy at Chicago. That was seen at the State convention. It should also be said that in the public addresses virtually announcing his candidacy and setting forth his platform, the Governor did not appeal forcibly to those outside of New York who had been waiting to hear from him. They were excellent addresses, and the platform was sound, but neither the speeches nor the statement of issues did full justice to his real power and vigor. These appear to be the reasons why, during the canvass, Governor Hughes has not gained any considerable support in the country at large.

Until a few weeks ago, no one had come forward to compete with Mr. Bryan for the Democratic nomination. He must now take into account the activity of Governor Johnson, a vote-getter who has twice carried a Republican State by good majorities. Some of Mr. Bryan's zealous political friends have been saying unkind things about the Governor, and it is re-

ported that Mr. Bryan himself has not refrained from expressing his disapproval of the Governor's candidacy. This accounts for the asperity with which the Governor comments upon the opinion of one of Mr. Bryan's intimate associates that his candidacy is an "impertinence." The nominee of the Democratic convention must have two-thirds of the 1,002 delegates. There are not so many as that in sight now for Mr. Bryan, but the prevailing impression is that he will be nominated. The Governor is making a vigorous canvass, and if all the opponents of Mr. Bryan stand together for him they may control more than one-third of the convention. While he insists upon preserving the rights of the States, especially in railroad legislation, he holds that tariff reform is the paramount issue. Judge Gray's vote in the convention will probably be a small one.

It is not expected that the present session of Congress will add anything of importance to the Republican legislative record. The President has been told that nearly all of his recent program must be laid aside. The railroad companies will not be authorized to make traffic agreements, nor will the Commission be empowered to supervise the issue of railway securities. The Sherman Anti-Trust law will not be amended. Injunction practice in labor disputes will not be modified. Wood pulp will not be placed on the free list. Probably there will be no currency legislation, unless provision for the appointment of a commission be made. But there is some expectation that a child labor law for the District of Columbia will be enacted. It is a blunder to avoid nearly all the legislative projects recommended by the President.

The Tactics of Woman Suffrage

WE have given a good deal of space of late to the new and more aggressive form of the movement for the enfranchisement of women; on February 20th, to the rousing message of Mrs. Cobden-Sanderson to the women of America; on April 2d, to Mrs. Ida Husted Harper's bitter indictment of man, and in the present issue, to Mrs. Borrmann Wells's exposition of the aims of the British move-

ment, now spreading to this country. These all manifest a growing spirit of impatience at the long-continued delay in the granting of their just demands, and a determination to resort to more violent methods to arouse men and women from their lethargy. Like all embryonic movements it is impossible to tell what form it will take or how much it will accomplish, but on the whole it is encouraging to see this new life coming into the cause, to see the younger generation applying their energy to the completion of the work of their heroic mothers. If the new leaders show too little appreciation of what these pioneers did for them and are inclined to be contemptuous of their methods and achievements, we must remember that this is natural, and readily to be forgiven as soon as they have demonstrated their ability to do as much for their sex with the newer weapons they are taking up.

We do not wish to dampen the ardor of these new leaders or to check their initiative, but we must advise them to be careful in their choice of weapons, taking those that have proved serviceable in preference to those that are more showy but untried. Mrs. Wells speaks of the "success" of the militant movement in comparison with the patient work of the past. So far as we can see the militants have not achieved any success at all except a complimentary vote in the House of Commons, and women have always had compliments enough—too many, in fact. On the other hand, the real success in Finland, Norway, Sweden, Denmark, Australia, New Zealand and four of the United States has been attained by other and quite opposite tactics. All the experimental evidence that exists is, therefore, against the methods of the militants.

We do not venture to say what tactics are likely to be successful in England. British politics is so absurd any way that an additional absurdity does not matter. A people that will maintain a King, a House of Lords and an Established Church is outside the range of rational criticism. We cannot blame the women of England for adopting the political methods of the men there, even tho they seem outrageous to us. The custom of heckling a speaker, a favorite weapon of

the suffragettes, is a common practice in England and not regarded as objectionable. But Americans believe in free speech and fair play, and it is rare that a speaker is interrupted by impertinent questions, jeers or insults. Even when the audience is decidedly hostile he is usually given a respectful hearing. We hope, therefore, that there will be no attempt to import this disgraceful feature of British politics into America in the name of reform. A woman who is trying to obtain the rights of a man should not violate the principle of equality at the outset by trying to do something that no man has a right to do.

Nor do the other tactics of the militant wing appear desirable in this country. It is true our streets need sweeping and our barrel organs are turned in too jerky a manner, but we do not think it necessary for our women to undertake these functions, altho we have no doubt they would be better done than they are. In any efforts they may make for the suffrage they will get enough of "scoffs, ridicule, abuse and insults" without stepping into the gutter for it. Woman's capacity for self-sacrifice for a cause is so abundantly demonstrated in history that it may be taken for granted; her devotion to this particular cause may find more profitable opportunities for manifesting itself.

Of course revolutions are not made with rose water, not even feminine revolutions. To free and enfranchise negro men cost 450,000 lives and it was paid right willingly. If bloodshed were necessary to bring about the freedom and enfranchisement of the women of all races there would be no shirking at the sacrifice. One cannot, therefore, condemn the militants merely because they have past beyond the limits of propriety and even legality. If we admit that violence is ever justifiable in redress of political wrong, surely the crime of depriving half the adult population of the right of representation is great enough to excuse it.

There is no reform of equal magnitude which can be so easily accomplished as woman suffrage. The use of the words "can be" is only justified when one can truthfully substitute for them in the sentence the words "has been," and it is in this sense that we use it. Millions of

women have been enfranchised within the last twenty years without coming seriously into conflict with a policeman or even with Mrs. Grundy. A cause that is making such astonishing progress as this with so little opposition cannot be in need of a fundamental change in tactics. We fail to see the necessity of importing the British methods. The third of the three principles enunciated by Mrs. Wells, that of attacking the Government and working against it at the by-elections is, of course, only applicable to a country like England, where the administration carries thru the legislative program. The first, the union of all women on the single issue, apparently ignores the two most vital facts; first, that the cause of woman's enfranchisement is man's as much as it is woman's, and that it is ultimately by him that it is to be accomplished; second, that the acquirement of the ballot is only a part, tho we believe it is an essential part, of woman's struggle for liberty and equality, for control of herself and for equal opportunities. The idea of "the duel of the sexes" should be left to the erotic novelists and Nietzschean playwrights. What the women are striving for is to get rid of sex prejudice, and they must by all means avoid increasing what they want to abolish.

Government Railways in Switzerland

SWITZERLAND, the most democratic of republics, has an exceptionally satisfactory railway service, as all travelers know. Of the 2,111 miles of steam railways in that country, 1,529 miles, or nearly three-fourths of the total, are owned and operated by the Government. The chief line that is still a private enterprise is the direct route from Lucerne to Milan by way of the St. Gothard tunnel and the lakes Lugano, Locarno and Como. Government ownership of this line has been delayed by the necessity of obtaining release by treaty of concessions made to Italy and to Germany when the line was constructed. This difficulty will soon have been overcome, and the St. Gothard line, like all the other important roads, will become a public property.

Consul R. E. Mansfield, stationed at Lucerne, has furnished for the consular reports a clear and informing account of the governmental railway service of Switzerland which Americans will do well to read. It is universally admitted that under Government management the roads as physical properties have been greatly improved; that the service has become more satisfactory than it was under private ownership, and that freight and passenger rates have been not only equalized on good democratic principles, but also have been greatly reduced.

American travelers can testify to the truth of Mr. Mansfield's statement that the Swiss railway schedules are well arranged, that the trains usually keep to the time table, that employees are universally polite and attentive to passengers, and that the strict enforcement of rules prevents accidents under conditions which American carelessness and negligence would make perilous. In 1906, 64,874,109 passengers were carried, of whom only 53 were killed and 1,137 were injured.

As elsewhere in Europe, provision is made for first, second and third class passengers. The first class fare is 3.22 cents per mile, the second class is 2.25 cents per mile, and the maximum rate for third class is 1.6 cents per mile. The Swiss people themselves generally patronize the third class coaches, which are much like American passenger cars, with a center aisle. The seats were not upholstered, but there is ample space for hand luggage, and always a lavatory, and the heating is carefully regulated. These third class coaches are in every respect as comfortable as the cars on our elevated railways. While the first and second class coaches are still generally divided into compartments, they are nearly all corridor cars, well lighted, well ventilated and well heated, and the toilet arrangements are almost without exception more decent than those found on American railways, except in our extra-fare parlor and sleeping cars.

If only so much could be said for the Swiss Government railway service, it would be quite sufficient to answer the sometimes unintelligent and sometimes unscrupulous assertion that government business management is always more un-

satisfactory than private enterprise. In fact, however, there is something still to add, and it clearly reveals the immense superiority of government railway operation in respect of certain highly important matters of public convenience. All the chief roads being government enterprises, there is no reason for compelling passengers to travel over one line rather than another in exchange for a certain amount of money. The passenger tickets, therefore, give the traveler the option of making his journey over any one of the different lines to a certain destination where the difference in distance is not great. On regular return trip tickets the reduction in price is 32 per cent.

In addition to all this the system provides time tickets called *abonnements*, which are good for exceedingly cheap travel in all parts of the country. They are issued in the name of the purchaser and must have his photograph attached, but they are not mileage books. They are issued for a designated period of time, and within that time the owner may travel anywhere and just as much as he pleases. The fifteen day ticket costs, second class, \$10.61; third class, \$7.72. The one year ticket costs, third class, only \$66.58, and second class, only \$93.60. Let the self-satisfied American imagine, if he can, being able to buy for less than \$100 a ticket on which he could travel for a year anywhere in the United States within a district as large as Switzerland and in as good day coaches as those of the Empire State Express; or for \$133.17, a ticket on which he could in like manner travel for a year in our best Pullmans!

The general railway policy of the Swiss Government is to equalize revenues and expenses, and not to accumulate a surplus. The people thus get in lower fares the benefit of all improvements and economies.

Of course these results are not attained by the governmental methods with which we are familiar in American politics. The law governing the Swiss federal railways is carefully drawn to prohibit and to prevent political influence in the management, and it works. In other words, strict civil service principles are applied and are lived up to.

Swiss public policy teaches that a peo-

ple can be democratic and at the same time diligent in business if it wants to be.

The Venezuelan Trouble

WE publish this week an article by the Hon. Herbert W. Bowen, late United States Minister to Venezuela, in which he sums up the documents presented to the Senate by the President, which look toward some sort of forcible action to compel Venezuela to yield arbitration on a number of complaints by American citizens. On that matter we are obliged to take the facts as fully presented in the documents, the conclusions of the law officer of the Department of State, and the report of Mr. Calhoun, Special Commissioner; and from these we can draw no other conclusion than that in some of these cases serious wrong has been done to American citizens, and that it is the duty of our Government to see to it that they receive protection and reparation.

This does not mean that there has been no wrong on the part of some of them, for that is clear enough; but in such a case as that of the United States and Venezuela Company, the evidence given makes it clear that the company has suffered very serious wrong, while in that of the Bermudez Company, the case is mixt, and there is apparent wrong on both sides.

If now the Senate finds that President Castro has proceeded against the American companies in a high-handed way, has deprived them of their property without due process of law, and has refused arbitration, its plain duty is to take such steps as may be requisite to secure justice and proper respect to our own Department of State. The country has confidence enough in Mr. Root to believe him when he declares that further argument is useless. Mr. Hay was of the same opinion, and a more patient and just man never lived. It is a great complication that in the main issue involved two American companies are the real claimants for the right to exploit the Bermudez Asphalt Lake.

Accepting, then, the facts as officially given in the documents presented to the Senate, and the refusal of Venezuela to arbitrate, the controversy involves the question of our national honor. The

whole situation should consequently be cleared up. Argument being useless, the Senate must now decide either to ignore the rights of our American companies and to permit our Department of State to be humiliated to an extraordinary degree, or to obtain justice from Castro. In all probability a peaceful blockade would within a week's time induce Castro to submit all our controversies with him to arbitration. A settlement honorable to all parties would then be effected, and Castro would have received a lesson that would inure to the benefit of every nation that has dealings with him. But he is nothing if not astute, and the chances are, therefore, that he did not refuse arbitration until he had received evidence that he had sufficient influence in this country to prevent any hostile action from being taken against him. What the Senate should do is one thing. What the Senate will do is, perhaps, another thing. We shall see.

Mr. Keir Hardie's Observations in India

MR. KEIR HARDIE is a Member of Parliament. He is also a distinguished leader of the Labor party. He has been visiting India, and what he saw that surprised and displeased him he tells in the *Labour [sic] Leader*.

He was at Tanjore Castle, where the Ranee, widow of the ruling chief, attended by the two young princes were, apart from the servants, the only natives present at the party in honor of the birthday of King Edward. When he asked why there were none of the distinguished natives present he was told that the King's birthday party for the natives would be held next day.

Mr. Hardie entered a railway compartment at Madras. There were two native gentlemen in it, and one of them rose and asked, "Shall we move into another compartment, sir?" Mr. Hardie did not understand what he meant, and was told, "English gentlemen, as a rule, do not like to travel with natives." He says he knew that in America the color line is strictly drawn (which it is not in the larger and more civilized portions), but he was not prepared for that kind of thing in India.

Mr. Hardie tells of a young, handsome

Mohammedan gentleman, a barrister of a high family, educated at Cambridge, who, on his return to India from England, entered a first class railway compartment not reserved, and was forced to leave by the insults of two Englishmen.

Here is another incident:

"A native gentleman, lately knighted, a Christian, and an active supporter of missionary work, happened to be traveling, and was joined at a certain station by his son—who, by the way, is married to an English lady of good position. The son is darker in complexion than his father, and when he entered the carriage where his father was one of the other passengers objected. The father pointed out that there was plenty of room, and that he desired that his son should be beside him. This was the response: 'Look here, we tolerated you because you don't look so bad, but I'll be damned if we allow that black dog in beside us.' Father and son went out, and one can imagine their feelings."

There are plenty of cases, Mr. Hardie testifies, in which men and boys are whipt on the highway and otherwise punished for not making proper obeisance when some petty Government official passes. He tells of one case in which a native gentleman of good position had a case in a local court. During a pause in business he approached the magistrate to ask when his case would come up, and for that offense he was ordered to stand in the court with his face to the wall for three hours.

Is it strange that in a country where such treatment is accorded to the people, men who have feelings, and some pride of history and ancestry, there is a growing estrangement of the people toward the English ruling class? Education is developing ability and self-respect, and a sensibility toward insults from people in no way superior to themselves, but who assume and assert superiority. Will not Englishmen learn that it is only the recognition of human brotherhood that can maintain their rule in India?

Opium

WITH the month of March the sale and use of opium in the Philippine Islands for any purpose except as a medicine came to be strictly forbidden. Three years' warning had been given, so that those addicted to the drug had abundance of time to cure themselves of the habit if they wished to do so. Henceforth they must go to China if they want to smoke opium,

or must obtain the drug in some clandestine way.

But in China itself the use of the drug is discountenanced, and even forbidden. A decree from the throne issued a year ago declared that within the space of ten years all use of opium must end. Notices were to be set up all over the Empire, opium dens were to be closed and the cultivation of the poppy discouraged. This was a great program, for over large portions of China three out of five use the drug to a seriously injurious extent, and three out of four indulge more or less. Further than this, the governors of provinces, who have no great initiative in devising new sources of revenue, depend much on the opium tax for their income, and the loss would be personally felt. It is a governor of much altruism and patriotism who will sacrifice himself for his people.

But the report of the first year since the promulgation of the edicts is really very hopeful. In most of the coast provinces a real and honest effort has been made to execute them. In Manchuria, Chihli, Shantung, Fokien and Kiangsu, which include the cities of Peking, Tientsin, Suchau, Fuchau and Shanghai, the dens have been generally closed, sales in the shops have been reduced, the area in which the poppy is cultivated has considerably diminished, and the movement is generally popular. This cannot be said so generally of the interior provinces. There the pressure from Peking was not so strong, and the officials have financial temptations to ignore the edicts, which were posted, often to be forgotten.

Beyond question the first year has recorded quite as much success as could have been expected. But so long as high officials are themselves addicted to the opium habit, and even raise the poppy and make the opium, we cannot expect the honest enforcement of the edicts. We know how it is in this country where grafting is done by officers of the law. Last week even a policeman's combine for housebreaking was discovered and punished. In this city we have had much experience of dives and other lawless resorts protected by the authorities required by law to suppress them; and we can expect nothing better in China.

When a rule is enforced that no man shall be appointed to office who uses opium, and when an intelligent financial system is adopted, it will be easier to suppress the evil which is the most damaging of all to the Chinese people. There has already been a remarkable decrease in the public use of the drug. China's most intelligent people are trying to do there against opium what we are trying to do here against alcohol. The difference is that here it is a popular revolt which is driving out the saloons, while in China it is the effort of the throne which is closing the dens.

The Exodus From Nashotah

There is one of the Episcopal theological seminaries, that at Nashotah, Wis., which is peculiar for the great importance it gives to the etiquette of religion. It emphasizes the value of orders, forms and ritual. In this respect it is in marked contrast with other seminaries of that Church, such as those at Cambridge, Philadelphia and the General Seminary in New York, the latter of which has been High rather than Low or Broad. And it is only some of these very small Western dioceses, like that of Fond du Lac, Wis., or that of Springfield, Ill., in which Ritualistic, or Sacramentarian, teaching prevails. In some of the large Eastern dioceses there are extreme Ritualistic churches, but the prevailing sentiment of both clergy and laity is opposed to extreme Sacramentarianism with its resultant Ritualism, and its teaching of the exclusive character of the clergy. It will be long before the magnificent display at the consecration of the assistant bishop at Fond du Lac is forgotten, for the photograph was widely published. Nowhere has so much indignation been expressed as at Nashotah at the action of the last General Convention in allowing clergy of other bodies to speak in Episcopal pulpits. They declare that it gives ministers a quasi recognition as priests, and their bodies of followers as real churches. Two of the teachers at Nashotah have already shown their disapproval by joining the Catholic Church, and other priests there, or of the diocese, are reported as under Catholic instruc-

tion, while quite a number of students have left the seminary. Their departure is not likely to be regarded as a serious loss.

The Brownsville Case

There are two bills before Congress for the restoration of the negro soldiers who are charged with the "shooting up" at Brownsville. One of these, known as the Warner bill, follows the suggestion of the President, and proposes that such soldiers shall be reinstated, with full back pay, who can prove satisfactorily to the President that they had no part in the "shooting up." The other, the Foraker bill, proposes that soldiers be reinstated on their oath that they took no part in it. Senator Foraker's speech was very strong, so far as this distinction is concerned. He says that the President has over and over again shown himself a prejudiced man, and so, by all rule of law, not competent to act as judge. He says that he would, however, have to depute the individual investigation to others, and that duty would fall to the Secretary of War. But Mr. Taft has, says the Senator, expressed his agreement with the President, and is equally excluded. Yet he, as a very busy man, would have to delegate the actual investigation and judgment to General Garlington, who has declared that he would not believe one of the soldiers on oath. We wish that the soldiers could be restored to duty on taking their oath that they had no part in the raid. It is certain that most of them took no part in it, and it is by no means proved that any of them did.

The Pestiferous Mosquito

Here is an argument for exterminating the mosquito that is new to us, historical as well as hygienic, patriotic as well as physiological. It is in a book by W. H. S. Jones, an English scholar, and endorsed by Major Ross, who is an authority on the mosquito malaria, and who won the Nobel Prize for that work. It was the mosquito, they say, that was a principal cause of the decay of the intellectual and moral force of the ancient Greeks and Romans. In the fourth century B. C. began a great deterioration of the Greeks. A little before this time,

they say, malaria was probably introduced, very likely when the Athenians were engaged, 425 B. C., on the island of Sphacteria, at present a noted center of malaria; and three years later Aristophanes first speaks of the fever, *puretos*, a word which soon became common, as also *melancholia*, or "black bile," a disease which Hippocrates remarks prevails in the autumn, which is the malarial season. The prevalence of the new disease is likely to have weakened the people, just as Mauritius has suffered infinite evil from the introduction of malaria in 1866. The author thinks that malaria did not much exist in Italy before 200 B. C., but was prevalent after 50 B. C., and was probably introduced by Hannibal's mercenaries; but from Greece we do not see. As in Greece, so in Rome it affected the national character:

"Malaria made the Greek weak and inefficient; it turned the sterner Roman into a bloodthirsty brute—*atra bilis* made its victims mad."

The moral for us is plain. Malarial districts lose enterprise and vigor. Drain the swamps; kill the anopheles.

It is not to be expected that an anarchist journal will urge violence, for that would exclude it from the mails, and endanger imprisonment; but it can excuse it, which is practically the same thing. Alexander Berkman was arrested for inciting the late Union Square tragedy, and in his magazine he makes this apology:

"The bomb is the echo of your cannon, trained upon our starving brothers; it is the cry of the wounded striker; 'tis the voice of hungry women and children; the shriek of those maimed and torn in your industrial slaughterhouses; it is the dull thud of the policeman's club upon a defenseless head; 'tis the shadow of the crisis, the rumbling of suppressed earthquake—it is manhood's lightning out of an atmosphere of degradation and misery that king, president, and plutocrat have heaped upon humanity. The bomb is the ghost of your past crimes."

That is about as far as it would be safe to go.

An American girl is to marry an Italian prince of very high rank, who is declared to be "a bully good fellow," but the King of Italy refused to give the consent his cousin asked unless the girl

would consent to be converted. In this country the father cannot convert her by force any more than he can marry her off by force, and she did not want to be converted. But she did want the marriage more than she wanted her faith, and so she consented to give up her faith with her name. So she follows her husband's nominal religion. We do not feel as much disturbed over it as we would be if her fiancé had happened to be a Turk and the Sultan had insisted on her becoming a Mohammedan. Possibly she may retain a little secret "modernism."

One English authority says that the American boy is far ahead, in schooling, of the English boy; and another equally intelligent says that the English boy is far ahead. Neither knows, for generalization is impossible. Both English and American boys are far behind what they would be if it did not take such a needlessly long and wearisome time to learn to read our wretchedly spelt language. The man who says that the reason for the backwardness of American boys is that they have women teachers has allowed his premise to create his conclusion. He begins by saying that women cannot teach boys; therefore our boys are backward.

Some Catholic priests are at least practical in their instruction. One of them, in this leap year, told the young women of his congregation to pray for husbands. Another blamed his people because in his large congregation he had had but one wedding in three months. Under such conditions, he asked, how can the Church grow? Another told the girls they ought to be willing to marry, and when they told him there were no available young men he posted up in the vestibule the names of two hundred such men. But why scold the women? Why not talk to the men?

It is good news that the Chinese Government has plucked up courage to withdraw the privilege of rank from Christian priests and bishops. Hitherto Catholic bishops have been accorded the rank

of viceroy, and priests that of a local governor. It has done great mischief, and scarce anything else has so excited animosity against foreigners. Now that France ceases to protect the Church, and Japan has grown so strong, China does not fear to remove this invidious distinction which other missions have refused to accept.

The racing season has begun in this State, and the Jockey Club has made an effort to make an absolute reform in the manner of the gambling. Thus, those that take the bets now must stand on the ground instead of sitting at a table or standing on a box; and the small betting must be stopped—that is, at the stand no bets will be taken for less than five dollars, and none in the field for less than two dollars. Does not the reader readily see that this will propitiate Governor Hughes, whom they are afraid of, and the ministers, whom no intelligent politician has any care for?

In Switzerland the citizens can snap their fingers at the undertakers, as a man can die at no particular expense to his relatives. There are four public crematories. At Basle and Zurich a citizen of the town can be cremated with no charge, at St. Gall for \$6, and at Geneva for \$10. For citizens of other cantons the charge is from \$12 to \$20. This sensible manner of disposing of the body grows rapidly in favor, and in this case municipal ownership works well in improving the customs of the country.

The Interparliamentary Union, by the meeting of the members of the Parliaments of various nations, will do more for peace than four battleships. We therefore approve the moderate appropriation by Congress for the expenses of travel of the members of the Congress.

They say that certain saloons in Wattertown, N. Y., are discouraging the patronage of the negro soldiers quartered there. This is the most beneficent phase of the race injustice we have heard of.

Quiet Election in the New York Life

THE activity of the International Policy-Holders' Committee was a marked feature of the insurance elections last year. This year the committee made no protests, and the work it did last year was conspicuous by its absence. In consequence the twelve directors on the administration ticket of the New York Life were unanimously elected on April 8th last. Under the law of the State of New York the election was required in 1908 of twelve directors of the New York Life Insurance Company (one-half of the full board), said directors to serve for a period of one year. The full board of twenty-four directors will be elected in April, 1909, and serve for a period of two years.

There being no opposition at the 1908 election, the administration ticket of twelve directors was unanimously elected, as follows: John E. Andrus, Yonkers, N. Y.; Julius Fleischmann, Cincinnati, Ohio; Thomas P. Fowler, New York, N. Y.; A. Barton Hepburn, New York, N. Y.; Rowland G. Hazard, Peacedale, R. I.; Granger A. Hollister, Rochester, N. Y.; William R. Innis, New York, N. Y.; Woodbury Langdon, New York, N. Y.; Robert J. Lowry, Atlanta, Ga.; Henry C. Mortimer, New York, N. Y.; William B. Plunkett, Adams, Mass.; Elbridge G. Snow, New York, N. Y.

Ten of the above twelve directors were thus re-elected. Two, Mr. Rowland G. Hazard, Peacedale, R. I., president Peacedale Manufacturing Company, vice president Solvay Process Company, Syracuse, N. Y.; member of American Board of Commissioners for Foreign Missions, and Mr. William R. Innis, general manager Studebaker Manufacturing Company, New York, are new members of the board. These gentlemen succeed Mr. Alexander E. Orr and Mr. Clarence H. Mackay, who retire from the board at their own request.

It is significant that out of 600,000 policy-holders with the New York Life, only sixty-two took occasion to exercise their right of franchise.

"This election," as the New York *Commercial* remarks editorially, "was in reality a vote of confidence in the management of the New York Life Insurance Company by 'six hundred thousand' non-voting policy-holders, for all but sixty-two of them—and these principally officers or employees of the company—were perfectly content to let the administration make its own choice of officers."

FOLLOWING the death of Benjamin Franklin Stevens, to which some reference was made in this department last week, the board of directors of the New England Mutual Life Insurance Company of Boston met and elected Vice-President Alfred D. Foster president, to fill the vacancy caused by the death of Mr. Stevens. Secretary D. F. Appel was advanced to the vice-presidency, and Jacob A. Barbey was elected secretary.

Financial

....The Columbia Trust Company, formerly at No. 26 Nassau street, has removed to No. 135 Broadway. This concern was organized about two years ago, largely thru the instrumentality of Clark Williams, who was vice-president until his recent appointment as Superintendent of Banks, and is known as an independent company. Willard V. King, sometime vice-president of the New York Trust Company, is now president of the Columbia Trust Company, and A. Barton Hepburn, president of the Chase National Bank, is chairman of its executive committee.

....The Chicago, Indiana & Southern Railroad Company, which owns 329 miles of road, with an equipment of 121 locomotives, 19 cars in passenger service and 5,362 cars in freight and work service, is on the point of enlarging its plant. In this connection the company is issuing \$15,150,000 in fifty-year mortgage 4 per cent. gold bonds, the principal and interest having been guaranteed by the Lake Shore & Michigan Southern Railway Company by indorsement on each bond. These bonds are being marketed by J. P. Morgan & Co., of this city, and Drexel & Co., of Philadelphia, and are offered at 91 and accrued interest.

No. 3100

Survey of the World

National Politics

At the beginning of the present week, about 600 of the 980 delegates to the Republican national convention had been chosen. To Mr. Taft one prominent daily paper gives 299 of these; another assigns to him 261. The managers of his canvass say that he will surely have 505 on the first ballot, and this is more than a majority. According to reports from Washington, the President is confident that on the first ballot more than 600 delegates will vote for Mr. Taft. The latter will start for Panama on the 30th, expecting to return on May 20th. The Republicans of New Hampshire, in their convention last week, gave no instructions to their delegates. A resolution in favor of Mr. Taft was rejected, only 25 of the 763 members voting for it. More than half of the State's delegates, however, are said to be in favor of his nomination. At the Illinois Democratic convention a resolution of instructions for Mr. Bryan was adopted. It is asserted that the convention was under the control of Roger C. Sullivan, who is one of the delegates at large, and it is remembered that Mr. Sullivan has been publicly denounced by Mr. Bryan, who urged the Democrats of Illinois, two years ago, to permit him no longer to exercise any authority in the party. Mr. Bryan has sought to conciliate the warring Democratic factions in the State of New York. Those who resent the domination of Mr. Murphy and Mr. Connors at the recent State convention have held a conference and appointed a committee. It is now said that a second convention of bolters will not be held.—At the Louisiana election, on the 21st, the Democratic nominees were elected by 40,000 majority. Constitutional amendments were adopted, increasing the power of the Railroad Commission and prohibiting foreign railroad corporations from tak-

ing their cases to the Federal courts.—When Mr. Bryan was in New York, last week, he was asked whether, now that he had become rich and was receiving a large income, he thought he was still a good representative of the common people. In reply he made the following statement:

"My income is derived mainly from my lecturing, with some addition from articles written for other publications and something from my own paper, but the amount has been very much exaggerated. I make more speeches for nothing than for pay, and devote more time to public work than to private gain. The income that I have received has come from the people who attend my lectures and who read what I write, and therefore my obligation is to the whole people rather than to any special class. The best test of the effect of my income is to be found in the things that I advocate. My views have not changed upon public questions. I am contending for the same things now that I did then, and I think no one will deny that I could make more by siding with the corporate interests that I have opposed than I have made out of lecturing.

"My political prominence has been an advantage in that it has given me a larger reading circle and a larger audience, but I could have used the prominence in other ways to greater pecuniary advantage. For instance, I was offered \$25,000 a year as counsel for a corporation, but it would have taken me out of the political field. By lecturing and writing I can make what I need in half the time and have the rest for public work. President Cleveland found his law income larger after he was in the White House than before. So did President Harrison. This was the experience of Speaker Reed after his service in Congress. Secretary Shaw found his services more valuable after he had been in the Cabinet.

"Political prominence is an asset in any kind of business. I could not have turned my attention to anything where it would not have been an advantage, and, had I used all of my time lecturing and writing, I could have made twice as much as I have. The question is not whether I have made more than I did before I was nominated, but whether I have made it in a legitimate way, and I think no one will deny that my income has been derived from a legitimate source. The next question is

whether the increase in my earning power has changed my views on public questions. No one, I think, will contend that it has."

Speaking at Cooper Union, he explained why he opposed Socialism. In answer to questions concerning his views about the disfranchisement of negroes in the South, he said, according to the published reports:

"The white man in the South has disfranchised the negro in self-protection, and there is not a Republican in the North who would not have done the same thing under the same circumstances. . . . I want to say right now that the white men in the South are giving the negroes better laws than the negroes would give to the white men if they were making the laws. Why, right in Washington they disfranchised every negro, even if they had to disfranchise some white men to do it. The white men of the South are determined that the negro will and shall be disfranchised everywhere it is necessary to prevent the recurrence of the horrors of carpet bag rule."

Railroad Rates and Lands

It is expected that the leading railroad companies of the country, by concerted action, will soon increase by about 10 per cent. what are called the class rates upon freight. General commodity rates will not be disturbed. This proposed increase has been the subject of conferences in New York and Chicago. The companies hold that they must have additional revenue, owing to the recent reduction of traffic and to the effect of legislation upon profits and the cost of operation. Freight rates, they say, have not advanced in recent years with the general advance of prices.—The House has past the joint resolution (already past in the Senate) authorizing the Attorney-General to bring suit for a forfeiture of the Oregon & California Railroad Company's land grant. This is one of the Harriman companies. The vote in the House was 245 to 8. Mr. Fordney's amendment, for the protection of lumber companies whose land, it is alleged, was sold to them in violation of the terms of the grant, was rejected by a vote of 43 to 227. About 2,000,000 acres of land, taxed at a valuation of \$18,000,000, and said to be worth twice as much, are involved. The Attorney-General says that 800,000 acres were sold unlawfully prior to 1902. It was required by the granting act that the company should sell to actual settlers only and at

a price not exceeding \$2.50 per acre. Since 1902, the 2,000,000 acres then unsold have been withdrawn from the market.

Governor Hughes's Fight for Reform

One of the Senators who had voted for Governor Hughes's bills to suppress race-track gambling was disabled by illness on the 22d. This left no hope for further action upon the bills at the regular session of the New York Legislature, as the session was to end on the following day. At the final adjournment, on the 23d, there was in both Houses an extraordinary exhibition of hostility toward the Governor, hisses and hooting greeting every mention of his name. The session's record shows that substantially all of the important reform bills advocated by him were rejected or ignored. His bill placing telegraph and telephone companies under the supervision and control of the Public Service Commission was past in the Senate just before adjournment, but the House (or Assembly) declined to consider it. Probably this had been foreseen in the Senate. It was the published comment of newspaper correspondents who admire the Governor and are in sympathy with him that he had no friends in either branch. One argument used in support of the bill relating to telegraphs and telephones was that the power to be granted would enable the Commission to suppress the betting poolrooms, which could not do business if telegraph and telephone facilities should be withheld from them. The Governor has called an extra session of the Legislature for May 11th. Senator Grady, leader of the race-track opposition, says that the new Senator to be elected in the Niagara Falls district (whose vote might break the deadlock) will not be admitted. That is to say, he asserts that a majority will hold that the special election is unconstitutional. The Republican who has been nominated in the district has promised to vote for the Governor's bills. It is expected that Senator Owen Cassidy, who voted against the bills, will vote for them at the extra session. It appears that he thought he was following the advice of Congressmen Fassett and Dwight. They sent him from Washington a telegram urging him

to support the Governor in this matter. The telegraph operator (who has since been dismissed for the offense) inserted the word "not," so that the telegram urged Cassidy to vote against the bills. He was a delegate on the 24th to the convention at which Congressman Fassett was renominated, and he voted for resolutions calling for the passage of the Governor's race-track bills. One vote is enough to turn the scale. It is reported in the press, however, that the racing interests rely upon the aid of one or two Senators who voted against them three weeks ago. Before the beginning of the extra session Governor Hughes will make a tour of the State, speaking in support of the bills.

Tornadoes in the South Great loss of life was caused in the South last week by a series of tornadoes, moving eastward from Oklahoma and Texas to Arkansas, Louisiana, Mississippi, Alabama and Georgia. Owing to the wrecking of telegraph lines, full reports from some places have not been received, but it is known that at least 350 persons were killed and three times as many injured. The heaviest losses were in Mississippi and Louisiana. In the first of these States the town of Purvis was almost completely destroyed. Of about 400 dwellings only seven were left standing. This dreadful work was done in a few minutes at about 2 o'clock in the afternoon of Friday, the 24th. The towns of McCallum and McLaurin were practically wiped out. There is a long list of villages in which lives were taken and property was destroyed. In Amite, La., more than fifty were killed. One of these was the Rev. Father Rumpf, who was crushed by the falling walls of the bell tower of his church. In Georgia, twelve were killed at Chipley, nine at Cave Springs, and about forty in the entire State. Half the buildings in Hector, Ark., were wrecked, and there were casualties in Tennessee. The path of the storm in some places is said to have been two miles wide. A large majority of those killed were negroes. Railroad, telegraph and telephone companies suffered considerable loss, and the growing crops were injured.

Philippine Islands Bands of Moro outlaws in Mindanao have recently been attacked by the troops and the constabulary. A stronghold of one of these bands, near Lake Lanao, was captured last week. Two companies of infantry have undertaken to disarm the Moros on Basilan Island.—On the 24th, at the Bilibid Prison in Manila, two bandits, or leaders of fanatical natives, were hanged. One of these, Omongo, started the Pulajan uprising in Samar. The other, Fernandez, was a leader of a similar movement in Leyte. The execution of two prisoners of the same class, who were to have been hanged on the 24th, has been deferred for one month.—From time to time the application of our coastwise navigation laws to trade between the islands and the States has been postponed. By a statute enacted in 1906 it was provided that these laws should become effective, with respect to this trade, in 1909. But now, by a bill passed by the Senate in March and by the House last week, the coastwise laws are virtually repealed, so far as the Philippines are concerned. This bill says:

The provisions of law restricting to vessels of the United States the transportation of passengers and merchandise directly or indirectly from one port of the United States to another port of the United States shall not be applicable to foreign vessels engaging in trade between the Philippine Islands and the United States.

It also authorizes the insular Government to regulate transportation from one island to another, and thus clears the way for a free use of foreign vessels in this local trade.

Attack Upon Guatemala's President Another attempt to assassinate Manuel Estrada Cabrera, president of Guatemala, was made on the 20th. As he was entering the Palace, to receive there the new Minister from the United States, he was fired upon by a party of cadets from the Polytechnic Institute, who had been stationed at the entrance as a part of his body guard. Cabrera was wounded in the left hand. His nephew was killed. All the cadets were captured and were promptly tried by court martial. A few hours later fourteen of them were shot, together with eight of the men who had been under

sentence of death on account of the attempt to kill the President in April, 1907, by an explosion of dynamite which had been placed in a tunnel under a street in which he was riding. The summary execution of these men was prevented last year by the intervention of the resident Ministers from other countries. These Ministers appear to have approved the executions of last week, for they have sent to the President an address, congratulating him upon his escape and saying that they sincerely pray "that Providence may continue to protect your life, which is leagued with the prosperity and progress of this beautiful country, and that such execrable and universally reprobated outrages may cease." President Cabrera asserts that there is an extensive conspiracy against his Government, and he gives notice that additional conspirators are to be shot. For some months past he has rarely been seen in public and has always been carefully guarded. Guatemalan exiles in Mexico predict that eventually he will be assassinated, because powerful enemies have sworn to take his life at any cost. There were reports that the cadets had been employed by Honduras to attack him. Señor Bustillos, the Honduran Minister of Finance, had been in the Guatemalan capital on a confidential mission. When he set out to return he was intercepted at San José by the Guatemalan authorities and taken back to the capital. There he appealed for protection to the Mexican Minister, by whose aid he was enabled to make his way to Honduras.

Various Topics At the recent Republican primaries in Oregon, Senator Fulton, who sought a re-election, was defeated by H. M. Cake. The Senator had been repeatedly attacked in public speeches by Mr. Heney, formerly employed by the Government in the Oregon land fraud cases and now the prosecutor of bribers and bribe-takers in San Francisco.—The Supreme Court of Nevada has decided that a boycott in any form is illegal and that the injured person may recover damages. The decision of a lower court that a union, being an unincorporated body, could not be sued, was reversed.—At Toledo, Ohio, on the 23d, William N. Cleveland, convicted a

year ago as an agent of the so-called Bridge Trust, was sentenced to pay a fine of \$500 and go to jail for five days.—The President has signed the Employers' Liability bill. After a careful examination, Attorney-General Bonaparte assured him that it was constitutional.—In the Senate, last week, the new arbitration treaty with Great Britain was ratified.—By the unanimous vote of the House committee to which it was referred, the McCall bill, requiring publicity for campaign funds, has been reported favorably.

Winston Churchill Defeated

The by-election in the Northwest Manchester district was strenuously contested by both parties, because it was regarded as a crucial contest of the strength of the new Ministry. Winston Churchill, having been promoted to the Asquith Cabinet as President of the Board of Trade, was obliged to appeal to his constituency for re-election. He was opposed by his former competitor, Mr. Joynson-Hicks, the candidate of the Conservative party. The result showed an increase in the Conservative vote since last election in this district, in 1906, of 1,019. Mr. Joynson-Hicks received 5,417 votes, Mr. Churchill 4,988, and Mr. Irving, the Socialist candidate, 276. Since Manchester was supposed to be the stronghold of free trade sentiment Mr. Churchill made his principal attack upon the protectionist policy of the Conservatives. Mr. Joynson-Hicks, on the other hand, altho admitting that he favored a tariff, devoted most of his attention to an attack upon the Government measures, rallying to his support all those who opposed the bills restricting the number of public houses and the reforming of the educational system. Mr. Lloyd George, Chancellor of the Exchequer, took the unusual step of entering actively into the campaign to prevent the defeat of a fellow member of the Cabinet. John Redmond, speaking for the Nationalists, at first appealed to the Irish voters in his division to oppose Mr. Churchill, because the reorganized Cabinet was supposed to be less favorable to Home Rule than that of Campbell-Bannerman, but later, being satisfied with the tone of Mr. Churchill's speeches, he withdrew his op-

position. The Catholic vote was, however, largely cast against the Liberal candidate on the education issue. The most powerful influence in this, as in the previous by-elections, was the liquor interest, which is fighting the licensing bill with all its might. The Suffragettes also worked against Mr. Churchill, altho he declared himself personally in favor of woman suffrage, in accordance with their policy of opposing all members of the Government so long as it will not give women the right to vote. A large increase in the Socialist vote was anticipated, for a strong effort was made by Mr. Keir Hardie to secure the labor support, but the result, however, showed that the Socialist candidate was not an important factor, as he did not receive enough votes to have turned the scale in this contest between the two great parties. The rival candidates are good friends, and Mr. Churchill, accompanied by his mother, who was Miss Jerome, of New York, was the first to congratulate Mr. Joynson-Hicks and his wife. The Liberal papers regard the election as a severe blow to the cause of free trade. The Government can remain in power for about three years, even if all the by-elections go against it, but it is discredited to a certain extent, and its claim to represent the people better than the House of Lords will no longer be unquestioned. Mr. Churchill will be elected by some strong Liberal district, possibly Dundee, which gave Mr. Robertson, now elevated to the peerage, a plurality of 2,443 at the last election.—At the by-election in Dewsbury, Walter Runciman, now President of the Board of Education, was re-elected, altho his former majority was reduced by 2,294.—Sir Henry Campbell-Bannerman, who was recently relieved of the Premiership, died on the morning of April 22d, of heart disease, at the age of seventy-two. An official funeral will be held at Westminster Abbey. The interment will be at Neigle, Perthshire, near Belmont Castle.

The Baltic and North Seas Agreement
the rivalry of the Powers having terri-

tories along the North and Baltic Seas has been allayed by the adoption of two Conventions for the maintenance of the *status quo*. The North Sea Treaty was signed at Berlin on April 23d by the German Secretary of Foreign Affairs, the British and French Ambassadors, and the Danish, Dutch and Swedish Ministers to Germany. It is a general declaration by which the signatories bind themselves to make no changes in their respective territorial possessions in regions bordering on the North Sea. Should the *status quo* be menaced by any event whatever the signatories undertake to confer for the purpose of taking concerted measures for its maintenance. Simultaneously with this a similar agreement in regard to the Baltic Sea was signed at St. Petersburg by the representatives of Russia, Germany, Sweden and Denmark.

A Fight on the Afghan Border

The northwestern frontier of India, near Peshawur, has been troubled of late by raids of the tribes across the border. Arms and ammunition have been smuggled in thru Persian Baluchistan on an extensive scale and the Amir of Afghanistan has apparently made no attempt to prevent his own subjects from joining in the raids for looting the villages. Over 10,000 natives were reported to have been assembled and armed between the Swat and Kaful rivers. Sir James Willcocks, who recently suppressed the Zakkakhel insurrection, was placed in charge of the British forces for the purpose of breaking up the disorderly bands. Three brigades of troops, numbering 10,000 men, British and native, were placed at his disposal. Two of the brigades were marched to the frontier and the third was held in reserve at Peshawur. The Mohmand tribesmen made an attempt to cut his lines of communication, but were attacked in force by both columns, and after a hard fight were dispersed. The loss to the British was seven men killed and forty-seven wounded, among the latter being four officers.

—The demand for famine relief continues to increase, assistance now being furnished by the Government to about 1,500,000 persons. About three-quarters of these are employed on public works; the rest receive gratuitous relief.

Professor Controversy in Germany

The election of Professor Deissmann, of the University of Heidelberg, to a New Testament chair in Berlin, with the understanding that he is to become the successor to the veteran Bernhard Weiss, now eighty and soon to retire, and the election of Professor Drews, of Giessen, to the chair of practical theology in Halle, as the successor of Professor Hering, who now retires, has stirred up a controversy that is agitating the Protestant Church of Germany from center to circumference, has found its way into Church, and political papers, and even into Parliamentary debate, while synods, conferences, etc., are vigorously discussing the problem. Not personal methods, but principles, are involved. As both Weiss and Hering are conservatives, and Deissmann and Drews are advanced men, the conservatives are protesting that two of the leading theological chairs in Germany have been taken away from them, and that the "parity" of the confessions has been violated. Dr. Weiss has published a statement to the effect that he fully consented to the election of Deissmann, and the conservatives reply that he has been unfaithful to his positive principles. In order to allay the excitement, the new Cultus Minister of Prussia, Dr. Holle, has called to Halle, as the successor of the veteran mission authority, Dr. Warneck, the missions inspector, Dr. Hausleiter, a recognized conservative. At bottom of the controversy is to be found the old question whether fidelity to the Church or scientific attainments, irrespective of doctrinal standing, shall decide on the merits or demerits of a theological professor. Even conservative men are insisting upon the latter. Professor Kawerau, recently called from Breslau to Berlin, and also a member of the Prussian Church government, recently published an attack upon Professor Seeberg, of the University of Berlin, for having insisted upon the rights of the positive faction in the selection of professors. In reply Professors Bonwetsch and Stange, both conservatives, have addressed a public letter to Seeberg, defending him and attacking Kawerau.

The Kongo Debate

The debate on the Annexation Treaty, which began on April 15th in the Belgian Chamber, will continue until May 9th. It is not expected that any vote will be taken until after the new election, when a special session will be held. The debate is being conducted with great moderation and good temper on all sides, considering its contentious subject and the importance of the interests involved. M. Schollaert, the Premier, in presenting the question to the Chamber, traced the history of the Kongo from 1878 until the present day, showing how much had been accomplished by the initiative of King Leopold and the efforts of Belgian soldiers, explorers and missionaries. He denied many of the allegations made by the reports of the British consuls in regard to the monopoly of traffic on the Upper Kongo and the unfair and forced labor. He said that money was being introduced into the country and the native was free to pay his taxes in currency instead of labor if he preferred and was able to. He asserted that the machinery for the administration of justice in the Kongo compared favorably with that of other central African possessions, and that the Government was firmly determined to fulfill scrupulously all the international obligations resulting from the Conventions, and especially from the Treaty of Berlin. He was followed by other annexationist speakers, who told of the mineral and agricultural wealth of the Kongo, and of its value to Belgian trade and industrial development. The attack of the Socialists is chiefly directed against the scandals of its administration and finance. They claim that its annexation would bring a heavy burden upon the country, the annual deficit being estimated at \$3,000,000. Objection is made to the many charges which the treaty will bring upon the Belgian treasury, especially the list of pensions and the obligations which the King insists upon for the improvement of the Kongo and the embellishment of Belgium. A special fund of \$9,000,000 is to be created for the building of roads and the improvement of royal palaces and the works which are intended to make Ostend the world's greatest watering-place. A sec-

ond fund of \$10,000,000 is to be expended by the King "for various works on behalf of the Kongo for the use and welfare of the natives and for the benefit of the whites who have done good service in Africa. Belgium also, according to the Treaty, undertakes to respect the concessions made in 1906 by the Foundation de la Couronne to the American Kongo Company and the Compagnie Forestière et Minière. In both of these the Thomas F. Ryan group own a large proportion of the shares. The American company was given the right for sixty years to collect rubber and other vegetable produce over an area of about 2,471,000 acres on the left bank of the Kongo to the north and south of the Kasai. The Free State also agreed to give it two blocks, each of about 12,000 acres, to the east of Lake Leopold II and in the basin of the Maringa respectively, for the purpose of experiments in collecting rubber, etc., by mechanical and chemical methods. It has also the option for ten years of buying 1,235,500 acres at not exceeding 20 francs a hectare. The Compagnie Forestière et Minière has the sole prospecting rights for some years and is entitled to the concession of all mines discovered in an area of some 9,000,000 acres. It has also the right to select and work for ninety-nine years 1,335,500 acres of waste land in the Domaine for the establishment of forests, as well as 494,200 acres for cultivation of various kinds. Secretary Morrell, of the Kongo Reform Society, is responsible for the following statement:

"If by June next Belgium has not annexed the Kongo Independent State on acceptable terms, the British Government is determined, with the co-operation of the American Government, to take measures which will compel the Kongo Government to observe its treaty rights, which have been openly and persistently violated."

Foreign Notes King Manuel of Portugal has won the admiration even of the Republicans by announcing his intention to refund to the royal treasury the value of the jewels which were taken from it by his father, King Carlos, amounting to \$750,000. When King Miguel was deposed and banished in 1834 the Crown

jewels, valued at \$2,000,000, were confiscated by the State and deposited in the Bank of Portugal. The Republican press recently charged that some of these were sold by the late King for private purposes. King Manuel ordered an inventory to be taken and discovered that a diamond and ruby belt, several bracelets and a pearl necklace were missing. The governor of the bank stated that they had been sold to pay some of the heavy debts of King Carlos, with the approval of the Government. As soon as he learned the truth, King Manuel called the Minister of Finance and announced his intention of refunding the amount to the State from his own personal fortune.—The lockout in the Paris building trades came to an end two weeks after it was begun, with a victory by the employers. The masons and bricklayers in large numbers abandoned the Central Workmen's Syndicate and made terms with the contractors.—The defeat inflicted by the Russian forces on the Persian brigands has not disheartened them, and they are reported to be collecting in large numbers in the mountains for a renewed attack upon Beliasuver. The situation of the Russian forces in Persia will therefore be serious until reinforcements, which have been ordered from Tiflis, reach the scene of the disturbance. The Persian troops at Tabriz are not able to offer any assistance in the restoration of order. In the Urumiah district the raids upon the villages and the looting of the sheep and other property continues unchecked.—The Russian Duma has past the bill authorizing the construction of the Amur Railroad for the purpose of getting an all-Russian route to the Pacific. In the debate in the Duma on the annual contingent of recruits for the army, the Extreme Right advocated the exemption of Jews from military service on the grounds that they form a too pernicious and revolutionary element.—The Chinese boycott against the Japanese is extending around the world. The Chinese at Fuchow, Amoy, Swatow, Hong Kong, Manila, Sydney and other ports are not sending any goods by Japanese steamship lines. The merchants at Hankow and interior towns refuse to accept the banknotes of the Yokohama Specie Bank.

The Conservation of Natural Resources

BY THOMAS E. WILL

[The author of the following article is Secretary of the American Forestry Association, and a well known American educator. At one time he was President of the Kansas State Agricultural College. He has written much on economic and social questions and especially on the conservation of our natural resources, which is fast becoming a vital issue.—EDITOR.]

A MEETING of vast importance is about to occur in Washington. It has been called by the President. It will meet in the White House. Its date is May 13th to 15th. Its object is to consider what the President calls

have used them, destroyed them, thrown them away. Note some examples.

In the early seventies we practically exterminated our buffalo. Untold millions of fish are poured from irrigation ditches over meadows and grain fields

LANDSLIDE ON PITTSBURGH & LAKE ERIE RAILROAD

Stopping traffic. Force of workmen clearing track of slide debris, near Collinsburg, Westmoreland County, Pa.

“the greatest issue before the American people”—namely, the conservation of natural resources.

We are prone to forget that man is a land animal; that his subsistence comes from the earth, and that the earth's resources are limited. We have treated these resources as tho they were as inexhaustible as the ether filling space. We

in Western States to perish; myriads elsewhere are slain by blasting and city sewage. Natural gas and oil have been treated as tho abundant as sea water. By hydraulic mining mountains have been brought low and valleys filled, with results disastrous to agriculture, stream-flow and natural beauty. We leave about half our coal in the mines in such condi-

tion as to make its future mining impracticable. We utilize about 5 per cent. of the potency of the coal we actually mine. Under present methods of use and waste our soft coal will last about a century, and our hard coal about half that long.

By over-grazing we are reducing by one-half the forage value of our public lands, occasioning, at the same time, soil erosion, forest destruction, deterioration of water supply and impairment of quality and weight of animals grown on over-grazed lands, the total damage exceeding estimate.

Forest destruction affords chief food for thought. The wood question alone is momentous; related questions are more so.

Under present policies our forests will last from twenty to thirty-three years. Then the lumber business will disappear. The building industries will suffer. The prices of mineral products, including coal and iron, will greatly increase; with them

will increase the cost of transportation, lighting and manufacturing. The effects will be felt by every American citizen, rich or poor, old or young.

The connection of the forest with stream-flow is intimate. For countless reasons this flow should be equable, even, regular. To this end it must be regulated. The forest on the slope is Nature's great regulator. It breaks the force of rain fall, holds water from rushing suddenly over the surface, passes it into the interior and permits its slow exit by underground circulation, clear and non-eroding, into the streams.

Denudation of slopes operates in the other way. It permits the water to rush suddenly over the surface, filling the streams with sediment and debris and opening a Pandora's box of evils.

First among these evils is the flood. In 1901-02 floods in the South, fed from the Appalachian region, did a damage estimated at \$18,000,000. In the Piedmont section of South Carolina \$18,000,-

Which has been badly washed and gullied and which is being slowly and scantily restocked by young hardwoods. The soil has become very thin and impoverished. Jackson County, N. C.

ooo more, invested in cotton manufacturing plants, are constantly endangered by the flood situation. The annual flood damage in the United States exceeds \$100,000,000.

Following the flood comes soil erosion. A billion tons of earth, 90 per cent. soil, and equaling the annual tonnage of all our railroads and river and lake vessels, is washed annually into our streams. In bulk, this earth equals one-fifth of a cubic mile. Spread one-fourth of an inch deep, it would fertilize our first tier of Atlantic Coast States from Maine to South Carolina, inclusive, and our second tier from Vermont to West Virginia, inclusive. Its value is one billion dollars. Its removal is largely traceable to forest destruction.

Note, next, the effect on navigable streams. Our railways first sought to supersede our rivers. These rivers they crippled in many ways. Floods com-

pleted the work. While the potential commercial value of our inland waters is beyond computation, their actual value is petty. To rehabilitate these streams is one of the nation's great coming tasks. That this task must be performed is conceded publicly by great railroad presidents themselves, for the railroads are no longer able to handle the nation's traffic. But to restore these streams requires not simply the dredging out of an infinite mass of earth and sand; it necessitates also the prevention of future inflows of such materials. To this end the forest is essential. Ambassador Jusserand said: "No forests, no waterways. . . . If the Mississippi is the 'Father of Waters,' the forest is the father of the Mississippi."

The water-power question comes next. We have been living in the age of steam; we are entering the age of electricity. A prolific source of electric power is water-

power. Of this, 1,600,000 horsepower runs idly each year over Government dams. As United States Hydrographer Leighton points out, rented at \$20 per horsepower this would yield annually \$32,000,000. Capitalized at 3 per cent., it represents an investment of more than a billion dollars. Compared, however, with other water-power, used and unused, in the United States, this amount is small. But to utilize this power, floods and low water must be prevented, and equable stream-flow in-

sured. This necessitates forest preservation.

Manufacturing follows. Note two manufacturing centers. In the Little Merrimac Valley may be found property assessed at \$240,000,000, mills worth \$100,000,000, and a population numbering 350,000, of whom 80,000 are earning annually \$37,000,000 in wages.

In the Carolinas and Georgia are water-propelled cotton mills worth \$40,000,000, utilizing 105,895 horsepower, turning 2,711,375 spindles, consuming

FALLS OF THE CATAWBA RIVER,

802,357 cotton bales, worth, manufactured, over \$70,000,000, employing 60,000 hands and supporting 240,000 people. These typical industries, North and South, demand regular stream-flow. Those especially of the South are men-

The drainage question is involved. We have in swamps some 80,000,000 acres, equaling the combined areas of New England, New York and New Jersey. These obstruct travel and breed mosquitoes to disseminate disease. The soils

THE WASHING OF EARTH FROM AROUND THE TRESTLE AND ABUTMENTS OF THE BRIDGE AT CATAWBA STATION ON THE SOUTHERN RAILROAD, CATAWBA COUNTY, N. C.

aced by floods. By these, great cotton mills have been wholly destroyed. They look to forest preservation for salvation.

National irrigation is a boon. It is transforming a desert into a watered garden. In six years it has redeemed a quarter of a million acres, now supporting 20,000 people. In another decade it may be expected to reclaim 2,000,000 more acres, which will maintain 250,000 additional people. But irrigation is scarcely more dependent upon water than is the water supply upon the forest. Director Newell, of the Reclamation Service, says:

"The water for this work comes chiefly from streams rising in mountains. To maintain the supply of this water it is essential that forests be maintained upon these mountains. To this end, national forests are indispensable."

thus withheld from use are among the richest on the planet. Tilled in American style, they will maintain from 10,000,000 to 15,000,000 people, and in the style prevalent in the great reclaimed swamps of Holland, 55,000,000 people. But to reclaim our swamps we must not only remove the water now upon them; we must prevent other water from settling upon them. To this end, we must, in many cases, prevent overflows from rivers, and here again we encounter the forest problem.

Finally, the public health is involved. Modern industrial development is sweeping our people in increasing numbers into the cities. Here the strain of life grows daily more intense. The need for change and relaxation is imperative. This is

best met by at least a temporary sojourn, from time to time, in woods and mountains, where strength and nervous tone may be restored. But progressive forest destruction steadily and rapidly narrows this opportunity.

The Old World has tested fully the effect of deforestation. It has seen mountain streams turned into raging torrents bearing destruction before them. It has seen huge earth masses precipitated in the form of landslides from mountain slopes to destroy whole villages. It has seen Edens turned into deserts. As in China, it has seen whole populations swept away by river overflows, and other myriads destroyed by resulting famines. Wise nations, like wise individuals, will learn from the experience of others. The cause of the

of this principle. The Romans taught that "the public safety is the supreme law." The promotion of the general welfare was one of the prime objects sought by our Federal Constitution. Under the operation of the "let-alone, each-for-himself" principle, the general welfare is trampled under foot as are weak women and children in a burning theater. The general welfare must be cared for by society itself, acting in its organized capacity.

This necessitates the application, in ever-widening fields, of the principle of public ownership as against private, and of administration for the public good rather than for individual profit. European countries are applying this principle to the forest problem with most beneficent results. We are doing the

Most of the dead timber down. Medicine Bow Range, Colorado.

ravage and waste of our natural resources is clear—it is unregulated private activity; it is the legitimate fruit of the old political economy of "Each for himself and the devil take the hindmost."

The cure necessitates the repudiation

same. In the West we have 164,963,555 acres of national forest land. This is being administered in the interests of the whole people. The results are beneficent and most encouraging.

Imperative need exists for applying

the same principle in the East and South. The forests of the White and Southern Appalachian mountains are being stripped, and, as has been amply and repeatedly proved, the effects are disastrous. The remedy is the establishment of national forests in these mountains. This requires Congressional legislation. For this public-spirited and far-sighted people have worked for nine years, at times approaching the very border of the promised land, only to be driven back by bourbonism and special privilege.

Early in the present session the Appalachian-White Mountain bill was introduced into both houses. In the House it went to the Committee on Agriculture. Here, on January 30th, was had a hearing which should have convinced the most skeptical that the measure was fundamental and imperatively necessary. The ghost of "unconstitutionality" was, however, raised, and the bill was sent to the Judiciary Committee, known locally as "the graveyard of progressive legislation." Here a hearing was had on February 27th and the constitutionality of the bill demonstrated. Then came the inevitable delay, not yet ended. Meanwhile the Speaker, master of the House, has publicly pooh-pooed such legislation; and the chairman of the Judiciary Committee, appointed by him, has formulated an adverse opinion, so sweeping as, apparently, to wipe out even the ex-

isting national forests. Other members opine, in type, that Government may buy forest lands, but only for "the improvement or conservation of the navigability of rivers." To protect the nation against timber famines and their consequences is beyond the power of the nation. In other words, the nation is impotent for self-defense. How the majority of the committee will stand is uncertain.

The Senate Committee on Forest Reservations and the Protection of Game reported the bill favorably on April 2d. On April 15th it was called up, but went over indefinitely on the objection of Senator Teller, who has repeatedly declared himself against the bill. Six New England and six Southern Governors, not to mention an army of individuals and representatives of great organizations, industrial, civic and philanthropic, are urging prompt action, and Congressional leaders are discussing whether to adjourn on May 9th.

Historically, the situation strongly suggests the closing years of the old *régime* in France. In each case we have a nation aroused, on tiptoe and eager for action; and in each, the representatives of a purblind ruling class, incapable, apathetic and "standing pat"—a spectacle to gods and men.

The field lies open to the White House conference and to the people. Their utterances we may well await.

WASHINGTON, D. C.

Castaway

BY JAMES H. WILLIAMS

[Last week Mr. Williams took our readers as far as the shipwreck. This week he concludes his yarn with his experiences on the desert island. We doubt if there are many men alive today who can truthfully relate such an adventure.—EDITOR.]

THEN came a period of oblivion which seemed a thousand years, when my mind was an absolute blank. But at length I heard a throbbing, ringing sound in my ears, as I did once at the hospital when about to succumb to the last effects of an anesthetic; I felt some one tugging persistently at my body, and heard a sonorous voice

urging me in strident tones to "Hang on, Jimmay; hang on, Jimmay." "And this," I thought subconsciously, "must be the resurrection!"

Then my eyes opened, not in heaven, but on a wild, breaking, bewildering sea, a lowering sky, and myself adrift with "Old Summer Time" on a floating spar, to which he was trying manfully to lash

me with the end of a gasket to prevent me from slipping off.

"For God's sake, where am I and who are you?" I inquired, as my senses slowly returned and I tried to gaze thru the intense blackness, only lighted here and there by the phosphorescent break of a climbing sea.

"This is me, *Jimmay!* Don't yer know me, 'Old Summer Time'?" answered my companion. "The ship's gone and we're adrift on a spar, God knows where. But bear up, sonny," he went on, encouragingly, "ther wind's goin' down an' ther sea's smoothin' out! Bim'by it'll be daylight an' some one may see us and pick us up. I guess you got a thump on the nut when the riggin' come down, but yer seem ter be comin' 'round all right, thank God! So hang on, boy; hang on!" And hang on I did, with blind, instinctive desperation.

At length the morning came and the sun arose over a chaos of endless smother, and an endless vision of fitful, lumpy, climbing seas.

We surveyed the horizon all around, but there was never an object in sight. We kicked off our heavy sea boots and discarded our oil skins and outside clothing during the day and drifted along in scant array. We talked little, but thought much. Toward night "Old Summer Time" began to weaken and showed evident signs of ultimate despair. But, by the same token, I began to strengthen and rise to the distressful occasion. Twenty years of constant servitude makes a power of difference in a man's ability.

The pain in my head and the ringing in my ears had ceased, and I had recovered my normal senses, with every faculty trained and devoted to our ultimate salvation. My woolly hair was a solid mop of clustered blood mingled with sea water, but my youth bore me up.

The spar to which we were clinging was the mizzen to'gallant yard, a big pitch pine stick, nearly sixty feet long. It had evidently broken clear of the mast in the late catastrophe and was now floating clear, with a tattered sail bent and furled, and all its sundered attachments dragging in the water.

All day long we drifted helplessly

along, without sight or sign or signal of a passing sail.

The storm had subsided, leaving only a lumpy, troublous cross sea to mark its course. In fact, I think it must have blown out in that awful climax which marked the destruction of our noble ship. What occurred after the three great seas fell across our decks with the violence of Niagara I do not know for certain. But according to the testimony of "Old Summer Time," I was knocked overboard by something falling from aloft, and in spite of my dazed, semi-conscious condition, I managed to clutch the floating spar and cling instinctively to it, and he leapt overboard and joined me. The ship did not founder immediately after broaching. Her fabric was too strong and enduring for that. She still continued afloat for a time and continued to forge ahead before the combined stress of wind and wave, leaving her wreckage some distance astern before she took her final plunge, else we must have gone down with her in the mighty whirlpool of her loss.

"Old Summer Time" says he saw her disappear; I did not.

As the day wore on the pangs of hunger and thirst began to assert themselves, for it must be understood we had eaten nothing for full twenty-four hours before the disaster, because the weather had been too heavy to make cooking possible.

The inquisitive sea fowl hung and circled and hovered above us in tantalizing flocks, and oh! how anxiously I longed to grasp one, so that I might gorge upon its flesh and blood!

At length the night shut in over a dark and troubled ocean, leaving us two unfortunates adrift in all the horror of our pitiful desolation.

During the night "Old Summer Time" began to weaken. His head fell limply forward across the spar, and I had to hold it up to keep his face out of the brine. Then he talked in a rambling, aimless fashion about fields, and orchards, and meadows, and "Betsey," and called down such frightful imprecations on the head of his erstwhile frostbite skipper, "Old Blow 'em down Baker," that I feared his reason was adrift.

I lashed him securely to the spar with

one of the inner gaskets, and loosing a portion of the sail cloth, wrapped it around his face to keep him from drowning. Then I hung on thru the stifling, clinging, almost tangible darkness of that awful night, with my raving shipmate, "and wished for the day!"

And at length, after a seemingly interminable night, the day broke and a blood red sun arose slowly from the horizon and glowed feebly thru a murky bank in the east.

Naturally I gazed in every direction for a hoped-for sail. But to the north and south and west naught could I discern but tumbling sea and lowering sky, and fluttering, white-winged mollyhawks and Cape pigeons. But when I trained my gaze to the eastward I noticed a dark, jagged, irregular object, strongly silhouetted against the sun's red disk, which was slowly rising from the water's edge.

I gazed long and intently at the dusky object looming opaquely against the sun's wake and wondered what it was.

Was it a tangible, solid object or a mere figment of a feverish, overwrought imagination? Was I about to be gladdened by an actual realization, or crushed and saddened by an optical illusion; a mere maddening, cruel trick of fancy? Such were the tempestuous thoughts which assailed my agitated mind.

But as the sun rose slowly and silently above the sullen sea, that dark, peaked object still remained outlined against the gloomy horizon, like a monument rising from the midst of the mighty deep. Yes, there was no longer any doubt, it was, it was *land, land, land!* *Solid, firm and stable land!* Barren and inhospitable, perhaps, but LAND! And if we could only reach it we might yet be saved!

Once satisfied that the evidence of mine eyes was a tangible fact, and not the distorted fancy of a disordered brain, I could not refrain from giving vent to my exuberation in a succession of ringing, joyous yells of "Land! oh, land, land, land!"

My shouts startled the big sea birds feeding among the waves and even aroused "Old Summer Time" from his lethargy.

Raising his head slowly from the folds

of canvas in which I had enveloped it, he started at the sound and inquired excitedly, "Land? Land? Who said land? Whar away, Jimmay? Whar away?"

I pointed out the dark object in the eastward to my shipmate, and he fixed his trained blue eyes upon it intently for some moments in silence before he spoke. Then he reached out his hand and said very quietly, but earnestly: "Yes, Jimmay, it's a spur o' some kind; there must be lots on 'em hereabouts, but how're we goin' ter get to it? How d'ye know we ain't driftin' away from it?"

"I know," I said, "because it wasn't there last night, and it was there at sun up this morning. And besides, it is higher now than when I first sighted it. The wind here is steadily from the westward and I believe the current sets the same way, towards the east."

I tried hard to be convinced of the soundness of my own reasoning, tho God knows that, except as to the direction of the wind, I had little foundation for my faith. But I wanted to encourage my companion and keep from being discouraged myself. So, in spite of my own uncertainty, I strove to maintain a vaunted show of cheerful optimism.

"We'll drift up there by noon," I told my shipmate, cheerfully. "Let's watch how fast we gain!" Of course I had heard of the great currents in the Southern Ocean, but I possessed a very vague and indefinite notion of either their general trend, their rate of motion or their extent. We could only depend on guesswork and trust to luck.

One thing we could do—watch the island and so estimate the direction and velocity of our drift. The wind, at least, was fair, and, with the help of the sea, could be depended upon to heave us eastward.

So we both glued our eyes to the rock and continued to gaze at it for full two hours. Then, to our infinite joy, we perceived that it loomed higher and higher above the water, and that it steadily grew larger and its rugged features more distinct and clearly defined. We reckoned that we must be drifting at the rate of about three knots per hour, and so should pass the rock, we thought, in about three or four hours longer. But how near? That was what troubled us

now. Would we pass close enough to make a landing by swimming? And then the horrible thought suddenly flashed across my mind like a shock, "Could 'Old Summer Time' swim?" To the uninitiated the thought may seem a strange one, but it is not when we reflect that the proportion of deep-water sailors who can swim or sail a small boat is scarcely greater than the same proportion among haymakers.

"Old Summer Time" and I had somehow never touched on personal aquatics in any of our conversations, so I was ignorant as to his ability in that line. Once or twice I caught myself on the point of blurting out the brutal query, "*Can you swim?*" but managed to check the unspoken thought in time.

As we slowly approached nearer to the island we could see, by ranging, that we were drifting to the southward, notwithstanding the wind and sea both set directly toward the rock. Then it occurred to me that by clinging to the end of the spar and swimming deeply it might be possible to keep her headed across the current and allow the wind and sea to do the rest.

I had often towed a heavy yawl boat in the same manner, and I knew by experience that it required but very little power exerted steadily in a given direction to move a very heavy object floating in the water. Anyway, I would try the experiment. I slipt out to one end of the yard, and grasping the brace pennant, began to swim as strongly as possible to the northward, and soon had the satisfaction to find the spar coming with me. My limbs were so stiff and cramped from long exposure that at first my exertions caused me intense pain. But gradually I became limbered up and began to apply more vigorous strokes to my self-imposed task.

At length I loosed the yard arm gasket and made a hawser by making a bowline in its end and throwing the loop over my shoulders like a harness. This not only made my work much easier, but enabled me to change my position in the water whenever I chose and exert my power to better advantage. A heavy shower passed over us during the forenoon which was a veritable godsend. We tore the flannel lining from inside of

our sou'westers, which, besides our belts and underclothes, were the only things we retained when we jettisoned our wearing apparel to reduce weight, and caught the crowns of the big, black tarpaulins nearly full of water. The life-giving fluid revived us wonderfully, for by this time the awful pangs of fearful, consuming thirst had become well-nigh maddening, and our lips and tongues were parched and swollen and thickly encrusted with accumulated particles of salt. After the shower passed and the sky cleared, we saw to our intense delight our island looming, black, somber and spectral, not more than a mile and a half away. During the last hour or so "Old Summer Time," revived by the shower, had got off the spar and helped me tow, thus setting aside all my doubts as to his ability as a swimmer.

Having now effected a comfortable margin to the northward of the rock, we could afford to rest on our oars, so to speak, and allow the natural trend of the current to drift us ashore.

As we neared that gaunt and awful peak we observed on its northwesterly side a small cove or beach of dark-colored shingle about an eighth of a mile in extent and extending inward for perhaps a hundred and fifty feet. This small depression, extending down to the water's edge, was buttressed on either end and all around by great black boulders and towering cliffs that appeared practically inaccessible. Therefore the cove seemed to be the only available place to land, and since we were not very well equipped for surveying operations, we decided to make for it instead of carrying our explorations any further.

At length one end of our unwieldy but faithful raft bumped sullenly against the western spur of the rock, and caught in a tide rift which seemed to run very strongly to the southward along the western edge of the cliff and went crashing and thumping against the jagged crags toward the South Pole, the last abandoned memento of the wreck of the "Wallerroo."

As soon as the first contact occurred "Old Summer Time" and I slipt our lashings and swam for the little cove, scarcely a hundred feet distant.

With the final energy of exhausted

men we dragged our aching bodies to a safe distance above high-water mark, and, throwing ourselves down among the shingle and stones, immediately fell into a heavy slumber. We could not have slept more than a few hours, however, for when we landed it must have been about 2 o'clock and when we awoke, aroused, no doubt, by the intolerable gnawing at our inwards, it was not yet dark. We both arose feeling exceedingly faint and weak, and our one mutual, ravenous desire was for food. But what can you find to eat on a barren rock; a rock which really *is barren?*

I have never been fastidious in the matter of diet. Anything, digestible or indigestible, "clean or unclean," which I could manage to chew and swallow, has always served me for food, and I have never had the slightest quarrel with my commissary department yet as long as I could manage to secure sufficient ammunition of some kind for filling.

In Bering Sea I gorged on whale blubber and train oil until the drippings fairly oozed from the pores of my skin. At "Desolation," in the Antarctic, I waxed so fat and impudent on a protracted diet of blubber seal and penguin pork that the officers all detested me. In the Sandwich Islands once I reveled for six weeks in the delicious aroma of esculent dog steaks baked à la Kanaka, in a hole in the ground. I must also confess to the casual assimilation of certain repulsive-looking but sweet-tasting reptiles, not to mention insects, and I know from experience that tallow candles are not half bad. "Old Summer Time" tells me he once sailed in a ship where, on Christmas Day, the steward killed and skinned three cats to make "rabbit pie" for the cabin dinner. I see no reason to doubt my voracious shipmate in this particular, for I myself have sailed in some of those tall-water ships

"Where pussy cats and long-tail rats
Were never to be seen;
We ground them into sausage meat
In Dunderberg's machine."

But "'vast heaving!" I am spoiling a good sea-yarn by sheering off into a long disquisition on gastronomy.

"Old Summer Time" and I were nearly famishing and the "clamor of our stomachs" was too incessant and painful

to be endured, so we started in an aimless way with feeble steps in quest of food.

Crawling down to the water's edge, we were delighted to observe that the whole beach below low-water mark was thickly strewn with large, white conch shells. It was about half tide, but we waded out to the conch bed, and, by ducking under, secured a number of the big mollusks sufficient for our supper, and at once proceeded to discuss them. We smashed the big, flinty shells on the rock, and after dragging forth queer-looking creatures, proceeded to pound them between two stones into a tough, grisly pulp, which we at once greedily bolted. But our weakened stomachs rejected this unusual diet, and in ten minutes we had voided all we had eaten.

We must have derived some nourishment from the substance, however, even in the short time it remained with us, for immediately afterward we felt stronger, and started off together to investigate our water department.

After a short search along the bluffs we came upon a circular, dish-shaped, concave hole in the living rock, which had evidently been churned out in remote ages by the action of the sea, and it was full to the brim with clear, clean water, which, glory be to God, *was* fresh. And I may as well mention in passing that in the course of our subsequent explorations we discovered scores of these prehistoric water holes in various parts of the island, all of them filled with rain water, and many of them at a considerable altitude from the sea level. All of which goes to confirm the theory of archeological difference in terrestrial conformation. Either the sea level must have been higher or the rock formation lower when those holes were dug, or they could not have been *ground* out. However, their present existence and condition suited our necessities admirably, and "Old Summer Time" and I plunged into the water-filled cavity like frogs into a pond, and scrubbed and laved, and bathed and drank until surfeited, nor ever paused to reflect that this might be the only available water hole on the island. Then, feeling wonderfully invigorated and refreshed after our bath, we gathered a quantity of dried seaweed from the beach and made us a bed under

a sheltering shelf of rock, and lay down gratefully to sleep.

We slept soundly the whole night thru and when we awoke the sun was two hours high. After a drink and a dip in our "well" we repaired again to the shore to try another session with the conches. This time we took more pains to pound the pulp up fine and eat it more deliberately, and soon found that we could retain it without trouble or internal distress. We each ate the whole contents of a conch shell, and afterward felt quite like ourselves again.

Then we started out on a general tour of exploration. Our island home was a mile or a mile and a half in circumference, a mass of solid rock, evidently of volcanic formation. To the southeast and northeast, only a few miles away, we could see two other peaks, similar in all respects to the one we then inhabited, and obviously of the same origin and group. The three isolated peaks are probably the protruding pinnacles of a great submarine mountain. As we afterward learned, they are known to geographers and navigators as the Crozet group. They lie near the 46th parallel of south latitude and a little to the eastward of the 50th meridian of east longitude.

Being barren and of no commercial value, they are never visited. They lie in the track of vessels running their easting down on the higher parallels, and are sometimes sighted from a distance by an occasional skipper desirous of making a landfall for the purpose of correcting his chronometers. But they are never visible from ships passing below the 45th parallel. Hence the great majority of sailors have never even heard of their existence.

The south side of our island rose almost sheer from the water to an altitude of 100 feet or more, and the top sloped gradually northward in an undulating series of ragged crags and great boulders of blackened rock. Except for the cove I have mentioned, the whole island was an upright pinnacle of somber, frowning rock, heavily buttressed on all sides and practically inaccessible from the water.

On the higher levels multitudes of sea fowl assembled and filled the surrounding air with the incessant din of discordant cries. After a pretty stiff climb we man-

aged to reach their roosting place, and what a place it was! The top of the cliff was covered with bird deposits for a depth of many feet, abundantly mingled with the bones, whole skeletons, feathers, beaks of departed patriarchs. Above all this accumulated mass of vile collections were hundreds of nests, strewn helter-skelter all over the cliff. These nests were stuck together in the most reckless and shiftless manner of whatever débris became available. There were thousands of chicks waddling feebly about over the bones of their ancestors, waiting to acquire the strength to fly away to seaward. There were also scores of superannuated old patriarchs, waddling helplessly about with drooping wings, waiting for the time to die. Some of these we dispatched for mercy's sake, but we soon found our applicants for mercy too many for us and so gave up the task. Many of the nests were found filled with nice fresh eggs, and we promptly cracked and gobbled a number of them, to the great distress of their rightful owners, who hovered, fluttering and screaming indignantly, above us, until the myriads of soaring forms almost obscured the sky.

After a day spent in rambling over the rocks we returned to our retreat at the cove, ate our frugal supper of sea conches, and "turned in," abundantly satisfied that, if we ever died on that rock, it would not be from starvation or thirst. Thruout our sojourn on Crozet Rock we were compelled to eat our conches raw because we had no means of kindling fire. Besides these staple articles of diet we discovered a very acceptable substitute for vegetable food in a species of rock-weed, which hung in clusters from the base of the rock around the water's edge. It was really a seaweed, which attached itself to the rock. It grew in little spreading branches from a parent stem, and the ends of the branches produced little globular berries, which we found to contain a pasty, gelatinous substance, which was far from unpalatable, and I have no doubt fairly nutritious.

We carefully gathered the sea spume on flat stones and placed them in sheltered places among the rocks, and thus obtained salt in minute particles by evaporation. This was the only condiment we had.

One of our first and most natural thoughts was to set a signal for passing ships to see, in the hope of being rescued.

This we accomplished by attaching the leg of an old pair of under-drawers to a small stake, which we providentially found among the seaweed rolled up on the beach, and setting it on the very highest pinnacle of the island.

No signal was ever better or more diligently attended, and no tattered war banner was ever more faithfully or religiously preserved.

Every morning at daybreak one of us climbed that steep cliff and set our little signal; and every evening at dusk the other went up and took it down, and it was as carefully folded and stowed away every night as a man-o'-war's most treasured ensign.

"He set a cross upon the beach,
Lest time should go astray,
And with his knife he cut a notch
To mark each passing day."

We couldn't follow Robinson Crusoe's ingenious device in this regard, because we had absolutely nothing wherewith to make a cross. But nevertheless we were minded to keep track of the passing days.

At the eastern end of the cove, about ten feet above the gravel, we found an oblong shelf of rock with a level top. This we called "Almanac Rock," and every morning, while one of us went up to "Lookout Peak" to set the "colors," the other went and placed a small stone on top of "Almanac Rock."

"And there to shield him from the storm,
And keep him safe and sound;
He built a hut, and thatched it o'er,
And fenced it, round and round."

Here again De Foe's redoubtable hero had the best of us, for our bare and desolate rock afforded none of the usual materials for hut building. Could we have saved the big, three-ton spar on which we landed it would have been a source of almost endless wealth as well as constant usefulness and comfort to us. The big sail bent to its jack-stay would have made us an ideal and enduring shelter; the resinous pitch-pine of which the spar was made would have provided both fuel and the means of striking fire; from the wire rope and pennants and remnants of sailcloth we could have made fish hooks and lines and small weirs. The blocks

and sheaves and great iron bands—in fact, all the ironwork and roping—would have been invaluable to us in a hundred ways. But vain regret; We landed almost too exhausted to drag ourselves, much less a three-ton spar and all its numerous and weighty attachments, from the water.

But as the season advanced the rains increased constantly, both in frequency, duration and volume of precipitation. Therefore it became obvious to both of us that if we were to exist the season thru, some kind of shelter was an imperative necessity. The temperature was not severe to men like us, but the incessant drenchings were intolerable.

So we set about to build a house with such materials as we had. Rocks and seaweed were both abundant, but, in the nature of things, difficult to amalgamate into a concrete and abiding whole. But where there's a will there's a way, so we went to work industriously to build our house. And, by the way, that was the only house in which I was ever even a part owner.

We selected a level place in the lee of the western cliff, high enough up so that the rain water would be sure to run off quickly; then we spent a whole week gathering dry seaweed and wet seaweed to dry, and dragging heavy stones such as we thought best suited to our purpose, to our building site.

I think we spent fully three weeks erecting that primitive little dome. We built the walls in circular form, after the model of an Eskimo igloo, filling in the interstices between the irregular surface of the stones with seaweed pounded down as hard as possible.

But it was the roof which taxed our amateur architectural skill the hardest. Of course, we wanted to draw it together so that it would be reasonably tight and at the same time safely self-supporting. But, owing to the uneven shape and size of the stones procurable, we found this an impossible feat. So we built a pillar of stones straight upward thru the center of our hut and let the roof rest upon it. Then we packed it as tightly as possible on top and surveyed our house with pardonable pride. On the east side we left a small opening, just large enough to crawl thru. Then we crawled in and

lay down together on the thick couch of specially selected dry seaweed which we had provided, and called it "HOME." Nor was ever monarch or mighty emperor on his gilded throne more happy and blissful than we!

During all our stay on the island we kept ourselves perpetually occupied with something, whether useful or useless mattered not—always busybodying with this or that to pass away the time and divert our thoughts from our lonely and desolate position.

But above all, never did we relax our vigilant lookout. A hundred times a day we closely scanned every inch of the horizon in the vagrant hope of sighting a passing sail.

On several occasions we did observe passing ships, but none of them ever saw us. Who ever heard of finding anybody on the Crozet, or, as "Old Summer Time" still persists in calling them, the "Croquet" Islands!

But while we were lonely and anxious to escape from our island prison, we never lost heart. We were assured of our daily food, and surely some day or other some good ship would pass close enough to see us or observe our signal.

In the course of time we had torn away and eaten all the "millet weed" available from the shores of our cove. So, having gradually acquired a fondness for this marine plant, I got into the habit of making frequent excursions to gather it by swimming around the end of the rock.

One day, while so employed, "Old Summer Time," who was observing me from the beach, suddenly uttered a wild, exultant yell:

"Come in, *Jimmay*; drop ther darned weed and come in quicker'n lightnin'! Here's a ship right abreast the rock, hove to ter take us off!"

I dropped my armful of weed, and, with a few rapid strokes, reached the beach. There "Old Summer Time" met me, and, grasping me excitedly by both shoulders, dragged me rudely, by main strength, from the water's edge. Then he pointed solemnly over my shoulder with one hand, turning me around meanwhile with the other. "Look thar, *Jimmay*!" he exclaimed, excitedly; "look thar!" And there, almost at my feet,

was a big, shovel-nose shark, about eighteen feet long, with his long nose and gleaming jaws protruding nearly a third of his monstrous length upon the gravel. As I picked up a stone to throw at him he slid off the beach into the water, where, for fully ten minutes, the disappointed brute swam eagerly along my course thru the water, just as accurately as a hound will retrace the track of a lost quarry.

"*Jimmay*," said "Old Summer Time," gravely, as the shark glided stealthily away, "*Jimmay*, we on'y got two lives ter lose and can't spare nuther on 'em!"

If we had only possessed a set of "granes" or a harpoon and about ten fathoms of good whale line that day, we might have enjoyed some rare sport and that ravenous man-eater would have been man-eaten, for a change.

But our terrible experience on the rock came to a sudden and unexpected termination. In fact, a most satisfactory end.

One morning we went as usual to the top of the cliff to set the colors and take our customary morning observation and bring back some "hen's" eggs.

It was my turn to set the "almanac" for the day and gather conches for breakfast. The morning was thick and misty, and I recollect that when my comrade came back he reported that there was nothing in sight, and that it was so thick he could not even see our neighboring islands.

Now, this is exactly what took place that blessed morning. While we were busy getting our breakfast the mist suddenly lifted, but we did not notice it at the time. The observant skipper of a big, four-masted bark passing to the southward of the rock meanwhile noticed our signal, and, growing suspicious and uneasy in his mind, he braced up and came down the eastern side of the island on the port tack, where the cliffs still obscured the great ship from our view. Still unsatisfied, the noble skipper hauled his wind and stood back against his course until he "opened" the cove and saw us both standing on the beach thru his trusty glass.

When we saw that great ship standing hove to in the offing we went into a delirious transport of unrestrained and unconcealed joy, which few men have ever

felt and none can describe. When we saw a large boat shoot from under her lee counter and make, with long, sweeping strokes, direct for our cove, we nearly went insane, and cut up the most ridiculous didos imaginable. We danced and yelled and clawed each other like a pair of madmen. The moment the boat's keel grated on the beach we rushed into the water up to our waists and dragged her bows high and dry ashore. The boat was in charge of the second officer of the ship, a certain Mr. Hawes, and was manned by four able seamen.

Mr. Hawes and his boat's crew all jumped out on the beach, and proceeded to fire all manner of questions at us. Then we learned that the boat and crew belonged to the bark "Constant," of Glasgow, and that by a strange coincidence she had been a sister ship to the "Wallerroo."

"How long have you been here, lads?" asked Mr. Hawes sympathetically, when we had answered his brief inquiries with equally brief responses.

"Dunno, sir, eggsactly," answered "Old Summer Time." "I guess we'll hev ter read ther almanac fust 'n find out."

"Almanac!" exclaimed the officer, mystified. "Did you save an almanac?"

"Come on, sir, and we'll show you," I said.

Then we led the party to "Almanac Rock," and "Old Summer Time" and I sat down and counted our tallies as gravely as two priests performing a most sacred religious rite. Eighty-five stones besides the day just begun, but never to be finished. After the party had inspected our little shelter they took us to the boat and pulled off to the ship. The boat was immediately hoisted in and we squared away, and long before night the Crozet Islands were out of sight astern.

I have no more of importance to relate. A month later we arrived in Melbourne, where our arrival was a nine days' wonder and furnished a sensational story of shipwreck, privation and heroic rescue that was published and commented on by every newspaper and "marine" editor in Australasia.

But in parting I must not neglect to pay a tribute, however small and insignificant, to the brave, kindhearted captain and gallant crew of the clipper bark

"Constant." Nor do we owe them more for effecting our rescue than for uniform generosity and kindness with which we were treated afterward.

"Summer Time" and I were absolutely destitute of all material belongings. We had tucked and tucked the last remnants about us as well as we could for decency's sake; but when they found us our appearance, in so far as personal concealment went, was dangerously near the truth.

In less than ten minutes after we boarded the "Constant," however, we had more clothes, pipes, tobacco and notions than any two men in the ship. The men fairly fought for the privilege of giving us their clothes.

Captain Block also took us aft and presented us with complete new outfits from the slop chest, which, I should add, were never charged to us.

Our joint statement concerning the loss of the "Wallerroo" was carefully written down and attested, and we were duly entered in the log book as part of the "Constant's" crew.

But, further than that; thru Captain Block's intervention at Melbourne the owners, "out of the goodness of their hearts," consented to allow us full wages from the day we left Cardiff at the rate of £3 10s. per month, and compensate us for the loss of our clothes and belongings, to the value of £10 sterling.

This was done because our arrival set aside all controversy concerning the loss of the "Wallerroo," and enabled them to demand the immense sum for which she was insured without further delay or the payment of further premiums for reinsurance.

Never in this world have there been two healthier or hardier or harder looking men than "Old Summer Time" and myself were when rescued. We were fit to fight for a king's ransom. We were as bronzed as South Sea Islanders. The soles of our feet were thickened to a good inch of genuine horny hoof from constantly climbing over the rocks, and we were as surefooted and agile as mountain goats. We were both naturally hairy men, and under the influence of the climate, and unhampered by any unnecessary chafing gear, the hair on our bodies and limbs had grown to most abnormal

lengths, in places completely concealing the epidermis.

My hair stood upright, like the tassels on a fodder shock, and "Old Summer Time's" hung down over his shoulders like the "Wild Man of Borneo," while our beards clustered over our cheekbones, concealing everything except our eyes and nose.

In fact, as one of our rescuers re-

marked, "We looked like a pair o' dummed ol' gerrillas."

If I had an athlete to train today for any great contest calling for strength, agility and endurance, I should just take him down to Crozet Rock, set him ashore and let him shack. I'll guarantee that at the end of three months he would be either a first-class athlete or a very dumb dummy.

NEW YORK CITY.

The Fleet

BY EDMUND VANCE COOKE

THIS is the song of the thousand men who are multiplied by twelve,
Sorted and sifted, tested, tried and muscled to dig and delve.
They come from the hum of city and shop, they come from the farm and field,
And they plow the acres of ocean now, but, tell me, what is their yield?

This is the song of the sixteen ships to buffet the battle and gale,
And in every one we have thrown away a Harvard or a Yale.
Behold here the powers of Pittsburg, the mills of Lowell and Lynn,
And the furnaces roar and the boilers seethe, but what do their spindles spin?

This is the song of the long, long miles from Hampton to the Horn,
From the Horn away to the Western bay whence our guns are proudly borne.
A flying fleet and a host of hands to carry these rounds of shot!
For behold they have girdled the globe by half, and what is the gain they have got?

This is the song of the Wasters—aye, defenders, if you please,
Defenders against our fellows, with their wasters, even as these,
For we stumble still at the lesson known since ever the years were young,
That the chief defense of a nation is to guard its own hand and tongue.

This is the song of our folly, that we cry out a glad acclaim
At our slaughtering ships, in the shadow of which we should bow our heads in shame.

And we crown men brave who on land and wave fear not to die, but still,
Still first on the rolls of the world's brave souls are the men who fear to kill.

This is the song of *our* smallness (for the fault is not theirs, but ours)
That we chain these slaves to our galley-ships as the symbol of our powers,
That we clap applause, that we cry hurrahs, that we vent our unthinking breath,
For oh, we are proud, that we flaunt this flesh in the markets of dismal death.

CLEVELAND, OHIO.

MUSIC

ART AND DRAMA

Operatic Retrospect and Prospect

If Oscar Hammerstein had not built the Manhattan Opera House it would be inevitably inferred that French opera in New York is on its last legs. The list of performances given at the Metropolitan during the season which closed on April 18 included 74 by Italian, 45 by German, and only 11 by French composers. But the Manhattan presents quite a different aspect. There the French composers (if we include among them Offenbach, who was a German, but wrote all his operas in Paris) had 59 performances, as against 61 by Italian masters and 3 by the Austrian Mozart. What is more, three of the French operas—"Louise," "Les Contes d'Hoffmann" and "Carmen"—led in the number of performances, notwithstanding the sensational success of Tetrassini, and "Thais" was heard seven times. More surprising than all this is the fact that Debussy's "Pelleas et Melisande" was also given seven times, to crowded houses, which is more than it achieved in Paris during its first season.

The success of this opera, from which melody is deliberately banished, in the vocal parts as well as in the orchestra, would be a deep mystery were it not explained in part by its splendid and truly Parisian performance and by the appeal which Maeterlinck's strange play made to the public. Horatio Parker said at a recent dinner that Wagner's "Tristan" is an opera which is seven-eighths music, whereas "Pelleas" is an opera which is seven-eighths a play. There is much truth in that remark, and yet Debussy's music was needed to make Maeterlinck's

play a success! The situation presents a very interesting dramaturgic problem. There are plays which simply clamor for a musical setting, and this is one of them.

The neglect of French opera at the Metropolitan is what strikes one first in reviewing the five years' activity of the retiring manager. Whereas Grau made a specialty of French opera (especially if we include among the French Meyerbeer, who, to be sure, was, like Offenbach, a German Jew), Conried gradually shelved Meyerbeer entirely, and during his last season even "Carmen" was missing, the only two French operas sung being "Faust" and "Mignon."

It has also been charged against Conried that, during his *régime*, the Wagner standard of his predecessor was not maintained. This is not altogether true. If we have had no Lilli Lehmann, no Jean and Edouard de Reszke lately, that is not Conried's fault. He gave, nevertheless, many Wagner performances equal to the best in the past. His "Parsifal" was in most respects superior to Bayreuth performances of Wagner's last work; and this year "Tannhäuser," "Walküre," "Siegfried," "Rheingold," "Tristan" and "Meistersinger," have been well done. The public has not demanded as many repetitions of some of these works as in other years, and this has led to foolish talk in the newspapers about the decline of interest in Wagner's operas. The truth regarding this matter was summed up by Alfred Hertz, the conductor of most of these operas, when he said:

"I can't see that the interest in Wagner is decreasing. Rather do I find that the interest

in Mr. Caruso is increasing. It is not a great interest in the Italian opera, but a great interest in Caruso that fills the opera house. Go to the opera on Italian nights when that tenor is not singing, and you will find smaller audiences than on the German nights."

Paradoxical as it may seem, the engagement of two gentlemen of Milan—Gatti-Casazza as general manager and Toscanini as one of the conductors of the Metropolitan—is likely to help the Wagner cause. Under their guidance "Rheingold," which is usually given only once or twice in New York, has been sung in Milan nineteen times in one season, and both of these men are enthusiastic partisans of German music. It is quite likely that "Lohengrin" will be done in Italian next season, with Toscanini at the helm and Caruso as Lohengrin. He sang the rôle in South America some years ago and ought to be quite ripe for it now. The return of Morena, the engagement of Destinn, the fiery Bohemian soprano, and the probable re-engagement of Nordica will add further fuel to the Wagner flame, while Maria Gay will come to the rescue of "Carmen," and Selma Kurz will be here to vie with Sembrich and Tetrazzini in coloratura rôles.

It is likely that Goldmark's "Cricket on the Hearth" will be done in English next year. Other novelties promised are D'Albert's "Tiefland" (the reigning sensation in Germany), "Habanera" (the latest Parisian success), Smetana's "Bartered Bride," Bruneau's "L'Attaque de Moulin," Tschaikowsky's "Pique Dame," Humperdinck's "Königskinder," and a revival of Verdi's "Otello." Some of these had been *promised* before, but it is likely that Hammerstein's success with novelties will have its influence in persuading the new Metropolitan managers to keep their word.

Hammerstein accomplished the probably unprecedented feat of producing in one season four absolute novelties—"Thais," "Louise," "Pelléas et Mélisande" and "Siberia"—and all but the last with brilliant success. For next season he promises more French novelties, among them several of Massenet's—"Sapho," "Manon," "Le Jongleur de Notre Dame" and "Griselidis." Possibly, too, Mary Garden may be heard and seen in the audacious "Aphrodite,"

and she is to be the Salome in a production of Richard Strauss's sensational opera under the composer's direction. Tetrazzini, of course, will be here again, in her old parts and in several new ones. Mention must be made of the production of Giordano's "Andrea Chenier" during the last week at the Manhattan for only a single performance. It had been heard here before, and the object of producing it was to give *éclat* to the annual Campanini night. On this occasion the great conductor (of whom it has been said that he is "half the show" at Hammerstein's) brought forward his wife, a sister of Tetrazzini, but her singing days are over.

The only new production at the Metropolitan since our last writing is the Mahler version of Beethoven's "Fidelio." In the staging of this work the eminent Viennese conductor made changes which give it more of the coherence which we expect in an opera today. Mahler also conducted the "Walküre" and "Siegfried" evenings of the Wagner cycle, which closed the season and the Conried régime. The packed and enthusiastic audiences which attended this Wagner festival showed that the Bayreuth master is as much beloved as ever. The Bayreuth festivals, by the way, are more popular than ever. The tickets for the twenty performances to be given in July and August were all sold several weeks ago!

Concerning Concerts

As compared with Boston and Chicago, which have generally found one or two weeks of opera a sufficiency, while concerts flourish throughout the season, New York has always been an operatic town, and this condition has been aggravated by the addition of a second opera house. Nevertheless, local concert enterprises do not seem to have suffered so much as might have been expected. The subscription lists were somewhat affected by the fact that the financial crisis occurred just about the time when they were made up; but in the concert halls, as in the opera houses, there has always been a large audience when the offerings were what the public wanted. The Philharmonic Society followed up its usual

group of eight double concerts by another pair devoted to Tschaikowsky, and, thanks to the popularity of this composer and his inspired interpreter, Safonoff, the audiences were nearly as large as at the regular subscription concerts. Nor did the Boston Symphony Society suffer because its last two programs were of a nature to raise doubts, one being devoted entirely to American composers (Converse, Loeffler, MacDowell) and the other to three symphonies by Haydn, Mozart and Beethoven, with no soloist. The Damrosch Saturday evening and Sunday afternoon concerts ended with a deficit, but that was expected from the beginning, because of the great expense of keeping together a permanent orchestra thruout the season. Funds are now being collected to ensure the continuance of these concerts for three more seasons, and half the sum needed is already in hand. Of the other orchestral concerts, the most praiseworthy are those of the People's Symphony Orchestra, under Mr. Arens, which have provided wage earners and students with opportunities to hear the very best music (chiefly modern), well played, at very low prices. This series deserves the utmost encouragement.

An event of exceptional interest was the MacDowell memorial concert, in Carnegie Hall, at which his compositions were played and sung. Carreño, May Mukle, Corinne Rider-Kelsey, Bispham and Safonoff gave their services generously, and the profits are to be devoted to the furtherance of a plan for a local MacDowell House for concerts and studios, which the composer's widow has much at heart.

Chamber music is not popular in New York. The Kneisel String Quartet has, indeed, crowded houses at all of its admirable concerts in Mendelssohn Hall, but the same cannot be said of other organizations of very high merit, notably the Olive Mead and the Flonzaley quartets. All these and other quartets are, however, kept busy playing profitably in other places and at private houses. In connection with this it is worthy of note that the former violoncellist of the Kneisel Quartet, Alwin Schroeder, who went back to Germany last spring, tired of America, has returned, convinced that,

after all, there is a better atmosphere for him here! With the concertmaster of the Boston Orchestra he is about to start a new quartet, to rival the Kneisels.

Now that the operatic and the Damrosch Sunday concerts have ceased, Victor Herbert has begun his usual spring series at the Broadway Theater. These are attended by audiences more eager to hear Victor Herbert's music than any other, and it must be admitted that it is very good music to hear. Next season there is to be still another Sunday concert enterprise, Hermann Klein having undertaken to provide a series at the new German theater now being built.

Oscar Hammerstein has a plan for summer concerts, and opera, too, next year. New York is becoming more and more the summer rendezvous of advanced students of music (many of them teachers themselves), and provision is to be made for these and the rest of the floating population.

The Close of the Art Season

All of the principal art societies in New York have completed their winter activities, and by May 15th most of the artists will have perfected summer plans, and galleries and studios will be deserted. The splendid exhibition of sculpture in Baltimore closed April 25th, and the great interest it has aroused has induced the National Academy to decide that at the next exhibition in the Fine Arts Galleries one of the three rooms will be devoted entirely to sculpture. The Academy Exhibition this spring was remarkably well attended, and the sales amounted to nearly \$12,000. The period of depression in business thruout the world has not been deeply felt by the art world, and prices have kept up well, and in one case at least a record was made—that of the sale at Christie's, in London, last week, of a mezzotint engraving from Reynolds's "Portrait of Lady Bampfylde," by Thomas Watson, for 8,000 guineas. Watson sold his own mezzotints in Bond street in 1779 for a few shillings; by 1806 they were worth a pound, and three years ago one fetched 1,200 guineas. The Blakeslee sale realized a total of \$110,495 for 158 pictures. The highest price was \$5,300 for Law-

rence's "Hon. Maria Liddell." Romney's "Hugh Scott of Harden" brought \$3,800; "Mountains in Norway," by Ruisdael, brought \$4,300; Beechey's "Mrs. Marshall," \$3,200; Lawrence's "Lady Ogilvie," \$3,950, and Beechey's "Miss Lennox," \$3,600.

The International Exhibition of Paintings and Sculpture opens in Pittsburg April 30th, and remains open for two months. The Minnesota State Art Society opens an exhibition in Minneapolis May 23d to June 7th, and in Duluth June 20th to July 7th. The Worcester Art Museum has its annual summer exhibition May 29th to September 20th, and the Cincinnati Museum shows pictures May 23d to July 20th. Much has been done this season to develop facilities for forming traveling collections, and next year many interior cities will have exhibitions of work from the larger centers.

Paintings by Women

The Woman's Art Club held its seventeenth annual exhibition at the Fifth Avenue Art Galleries during the month. The prizes were awarded to Adelaide Deming, Susan M. Ketcham, Abastenia St. Leger Eberle (for sculpture), Alice Schille (water colors), and A. Wigand. The average was rather higher than usual, but nothing in the exhibition suggested a reason for the existence of a separate club for women painters.

At Knoedler's are, until May 2d, a group of 82 more pictures by women painters, most of which have been seen here and there before. Looking hopefully here for some personality among the painters, Helen M. Turner's sensitive pictures, "The Brooch" and a small landscape, suggested a very serious and charmingly delicate skill in color selection. The construction of the head in the figure picture is not convincing, but the treatment is in excellent sympathy with the whole. Brenetta Crawford's "Knitting, St. Briac," and "Twilight, Bruges," are also sensitive things. Clara MacChesney's "Good Story," with its several medals and honors, holds perhaps the strongest place in the exhibition.

The National Arts Club is showing a

mixed exhibition of works in all the arts by its members to April 25th.

Portraits and Landscapes

Knoedler's have had Ben Ali Haggin's brutal but sometimes clever portraits, notable among which was one of Miss Mary Garden, and portraits by Laszlo of a serious kind, tho often badly drawn as to the figures. One of President Roosevelt had an excellent head and virile pose, but the right arm joined the collar bone in the middle instead of at the end, and in one portrait of a young woman the proportion of the lower to upper arm was very strange indeed. The painter's color is not very sympathetic, but he has much more promise than many who are free of his faults. Works by Mortimer Lichtenauer were shown at the same time. He is still feeling his way and is at a stage not easy to define.

The greatest pleasure of the month, to one critic at least, was given by a small group of works shown at Schaus's, by Charles Hawthorne, who was Chase's strongest pupil, but he passes Chase in at least two things here. He has been abroad for some time and shows traces of influences from here or there, but so much as he has borrowed he has made over into new material thru his own power as a brushman.

The last exhibition at Mr. Montross's was that of twenty-one works by W. L. Lathrop, who seemed in a sadder mood than usual this year. All the landscapes had the usual perfect rendering of subtle values, but the days chosen were generally gray, and a slightly dreary feeling was dominant.

At Macbeth's will be continued for some time a group exhibition of American paintings, among which is a good new Luks.

Small Works of Art

At the Hotel Gotham was held, April 1st and 2d, a private exhibition of miniatures and medals which was so popular among those invited to see it that the crowd was too great to allow a comfortable view. Most of the miniatures had been seen in the regular miniature exhi-

bition. The four medallists exhibiting were Brooks, whose things were seen last month at Bauer-Folsom's; Brenner, best known of American medal-makers; John Mowbray-Clarke, whose medals,

one of the little known Syrian poet, Khalil Khayat, as well as others of interest for reasons aside from personality. The fourth exhibitor was Mr. Spicer-Simpson, whose portrait of May Sinclair

HAWTHORNE'S "BOY WITH WINE" AT KNOEDLER'S.

like those of the fifteenth century, are modeled in the size cast, and whose portrait of Mrs. Cobden-Sanderson appeared in THE INDEPENDENT in February. He showed one of Leopold Stokovski and

was interesting and whose portrait of his wife was charming as well.

At the Colony Club, April 16th and 17th, miniatures that were real rarities and covered many periods, snuffboxes,

and fans, and textiles were shown to friends of members, and an especial treat was given to lovers of these special objects.

The Grolier Exhibition

A remarkably complete collection of etchings and dry points by D. Y. Cameron began at the Grolier Club with a private view on April 23d. The catalog contains 218 numbers, and Mr. Cameron's progress as an etcher is shown by means of the chronological arrangement of the prints adopted in the exhibition. It is curious to note the pronounced tendency of this artist that has been developed toward intensifying his shadows. In his earliest work he was strongly influenced not only by Rembrandt, but by Seymour Hayden and James A. McNeill Whistler. His work now shown at the Grolier illustrates one of the most interesting traditions of the graphic arts—namely, the part which architecture has played in pictorial inspiration. Mr. Cameron's etchings are constantly growing in favor with American collectors, and it will be a long time before another opportunity will be presented to see so nearly complete a collection of them as that now shown at the Grolier Club. The exhibition will continue until May 16th.

The second annual exhibition of the work of the Guild of Book Workers, including illuminating, printing, binding, edge gilding, type, book covers, book plates, etc., was held at the old Tiffany Studios, No. 333 Fourth avenue, from April 21st to 25th, inclusive. The exhibit of art bindings was particularly noteworthy.

The Drama

The struggle for existence among plays has been fierce this year, and the few that have succeeded have had some clear reason for it. We should select the

following as the best that have been produced this season: "The Servant in the House" had a deeper ethical motive than usual. "The Witching Hour" fell in with the current semi-credence in telepathy. "The Grand Army Man" gave David Warfield a chance to present a new type of American character second only to his "Music Master." Mr. Sothorn revived the part of Lord Dundreary, made famous by his father, and more re-

WALTER HAMPDEN AS MANSON,
The title role in "The Servant in the House."
By Charles Rann Kennedy, Savoy Theater.

cently presented Don Quixote in the most spectacular manner. Madame Nazimova achieved an unexpected popularity for Ibsen's "Master Builder." And the strains of the hand organ outside our window will not allow us to forget that "The Merry Widow" is the most catching light opera since "The Mikado."

"The Servant in the House," by C. R. Kennedy, undoubtedly deserves the most attention from the serious public of any

new play produced in America this year. It is the author's first play, and instantly puts him in the front rank of contemporary playwrights, for both in literary style, histrionic construction and dignity of theme it is remarkable. Mr. Kennedy is a young Englishman who takes his

age and all the characters are out of joint. The vicar has gained his success in life by the sacrifices of his brother "Bob," who on that account sinks down to the discontented labor class. Altho the vicar is considerable of a scholar, his church is not very successful, and his

E. H. SOTHERN AS DON QUIXOTE.

theater seriously. Like all the men and women who have achieved eminence in the last few years, he has been affected by the world spirit of the day, which is perhaps nothing else than the fearless search for truth in the realms of human relations, authority, custom and convention to the contrary notwithstanding. Consequently, when his play turns out practically to be a plea for Christian Socialism, introducing Christ as the Bishop of Benares for the central character, one realizes that Mr. Kennedy is another of the fast multiplying signs of the coming of a new moral and literary renaissance. The action of the play takes place in an English county vicar-

wife is dissatisfied because he and she do not get worldly recognition fast enough. Her brother, the Bishop of Lancashire, is a smug hypocrite, and the vicar's adopted daughter (really the daughter of his scapegrace brother "Bob," now a drain mender) is unhappy because she wants to know about her father, whose whereabouts and name have been kept from her. Into this group the Bishop of Benares, the older brother of the vicar and "Bob," comes as The Servant in the House. Serving under the name of "Manson" as the butler, he exerts his influence in the exigencies of the play until finally they accept him as Master of the House, but not until the Lord Bishop of

Lancashire is driven out bag and baggage, "Bob" and his daughter are reunited, the vicar is touched by the spirit of his two brothers, Christ and labor, and his wife forsakes ambition for humility. If the part of Christ falls short of the ideal it could hardly be otherwise. Suffice it to say, however, that the simple, eloquent and impressive acting of Mr. Walter Hampden never offends. The other parts are admirably taken, except Tyrone Power's impersonation of "Bob," which makes labor unnecessarily offensive, and Rogers, the page boy, whose alleged humor is rather obtrusive. Mr. Kennedy, in "The Servant in the House," adopts the symbolism of Ibsen, the deftness of Jones or Pinero, and the modernity of Shaw. Its theme is daring, its treatment is masterful and reverent, and its lesson is elevating. It is the nearest approach that has yet been made in America to depict Christ on the stage.

Mr. Sothern seems to be tracing backward the history of comedy, first resurrecting Lord Dundreary of fifty years ago, then Don Quixote of four hundred. We may infer from this that he will bring out Juvenal next fall and Aristophanes in the spring. It cannot be said that Mr. Paul Kester has made much of a play out of the book. Perhaps nobody could. Cervantes himself was a failure as a dramatist. That is why he took to the writing of romances of both the romantic and unromantic kinds. But the play is not the thing; it is the figure of the Knight of the Sorrowful Figure that interests us, and here there is no disappointment. Mr. Sothern has never done better work as an actor than in bringing to life the tall, cadaverous form of this last of the knights-errant, who maintains his dignity in the most embarrassing of situations and wins our sympathy while we laugh at him. Nor has there been any play of the year staged more elaborately, with twenty-eight named characters and a host of retainers drilled to perfection in the *melée* scenes. In the last act, where Don Quixote dies in his library fighting the dragons and specters that his life enemy, the magician, has

conjured up, all the latest lantern effects are utilized. We are only disappointed that the stage manager did not borrow the red mill from Messrs. Montgomery and Stone. With the exception of the very satisfactory Sancho Panza of Mr. Buckstone, none of the other characters are worth mentioning, and the play, like the book, is too long, confused and extravagant to suit the modern taste.

The season closes with two attempts to attract the sophisticated Broadway audiences by a display of primitive passion; of one, "Marta of the Lowlands," the scene is laid in the Pyrenees, and of the other, "The Wolf," in the Hudson Bay country. Neither can be regarded as successful. If the way is to be paved for the introduction of D'Annunzio, it will have to be by other means. The Spanish play is mounted with Mr. Fiske's customary good taste, and Madame Bertha Kalich, who gained her reputation on the Yiddish stage, acts with an earnestness and abandon that carries her safely thru the most violent scenes. "The Wolf" is a melodrama of a cruder sort, not in the least resembling "Paid in Full," the play by which the author, Mr. Eugene Walter, became famous in a single night a few weeks ago.

Cyril Scott, in the De Mille play, "The Royal Mounted," at the Garrick, charmingly presents a clean and very interesting story of the Canadian Northwest and one of its logging camps, in which Irish wit, sacrifice, love and devotion appear as motifs. A novelty in this play is the effective falling of the curtain before the actual finish of the several acts.

"Bluffs," at the Bijou, is a new farce with an old plot. Mistaken identity is responsible for all the situations, and if it were not for Mr. Ditrichstein and an able company, the farce would be as stupid as most other mistaken identity farces have been. If one is in a critical mood a pleasant evening may be spent at the Bijou criticising the construction of the farce. If one is not in a critical mood, a pleasant evening may be also spent watching the really clever acting of Mr. Ditrichstein and Miss Bishop.

The Powers and the Peace Movement

BY E. T. MONETA

[The author of this article divided, this year, with Prof. Louis Renault, of Paris, the Nobel Peace Prize. Signor Moneta was born in Milan in 1833. When a mere child of fifteen he took part in the Italian revolution against the Austrian yoke, and later fought with Garibaldi. He has written historical works and for twenty years was editor-in-chief of one of the great Italian dailies, the *Secolo*, of Milan. He is now editor of the fortnightly review, *La Vita Internazionale*, a very able peace organ, and is president of the Milan International Peace Society, which has just established an annual peace prize of its own named after Moneta. In addition to the famous prize and to the diploma of merit, the Norwegian committee also conferred a large and beautiful gold medal, which bears on one side the portrait of the generous philanthropist, the founder of the prize, and on the other symbolic representations of Peace, consisting of three men who form a garland with their arms fraternally interlaced. THE INDEPENDENT takes pride in the fact that the Nobel Prize winners, Frederick Passy, Elie Ducommun, Albert Gobat, Sir Randall Cremer, Baroness Von Suttner, Theodore Roosevelt and E. T. Moneta, have all contributed to its columns.—EDITOR.]

DURING almost the entire nineteenth century Europe appeared to be divided into two plainly distinct camps in relation to the questions of peace and war. On the one side

E. T. MONETA.

rancor and hostility with regard to sentiments for one another, delighted in neighboring powers, and as they considered preparing for war as the principal aim of their existence, they looked upon armed conquests as constituting the greatest glory of the state; on the other hand, the democracy of all degrees saw in the end of national hatreds and of wars, and in an era of true and stable peace, the basis of every great reform, a pathway open to regular and continuous progress, and, in a word, the guarantee of justice and prosperity for every people.

The long propaganda of the pacifists, altho unsupported by the doctrinaire journals, or by erudite academicians, or by government parties, obtained results, and that in a few years, which its most ardent supporters would not, at the beginning of the movement, have ventured to hope.

The preachers of hatred, the eulogists of warlike and heroic enterprises, gradually began to perceive that their rhetorical declamations were no longer to the taste of the crowd, and so they defended war, not as the providential source of the rarest virtues, but as a painful necessity; and public opinion, instead of being proudly nationalist, as it was in the beginning, grew, year after year, more and more impregnated with the pacific spirit.

To this result had contributed, outside the work directed by the friends of peace, the greater spread of education, the fact that military service had been rendered obligatory in all the states of the Euro-

monarchies and governments, even at the very time they were professing friendly instilling into their subjects feelings of

pean continent, and the ever increasing ascent of the people of the lower classes in political life. Moreover, the augmentation of warlike expenses, which became larger and larger almost every year, contributed also, as a necessary consequence, to the weakening of the warlike spirit and to the constant advance in vigor and strength of humanitarian and patriotic sentiments.

The fact is that, because of different economic, political, moral and social reasons, because of the conquests made by the democratic spirit over the old principle of state policy, because of the awful effects which a new war between civilized nations would produce, in consequence of the terrible new means of destruction and because of the force of public opinion, always becoming more and more animated with humane and anti-warlike sentiments, the attentive observer has for some years been a witness to the fact that the tendency of the policy of governments is directed toward a future of peace and international concord.

At first this tendency was manifested by treaties in which the various states entered reciprocally into a contract with one another to settle by peaceful arbitration such difficult questions as might arise among them; then by the mutual visits, growing year after year more frequent, of the heads of states who had for so long a time been absolutely rivals, and who now outvie one another in the most solemn protestations of friendship, resolute to avert future perils, however remote, to avoid conflicts in their colonial possessions, to enter into compacts for the exact delimitation of their respective spheres of influence, and also to aid one another in resisting the aggressions of semi-barbarous tribes.

We have not yet reached that juridical state which will declare the rights and duties of nations toward one another. This has been and continues to be the supreme ideal of international pacifists; but those conventions and those amicable intentions mark new stages on the road which leads to that ideal.

At present we are witnesses of this very strange spectacle.

While the governments, more or less spontaneously, either from a lofty sentiment of civilization or from timidity,

have placed themselves on the pathway that will conduct humanity to a greater international equity, the difficulties or antagonisms that are encountered rise either from a part of the populations or from the very bosom of the most advanced democracy.

Another strange anomaly is presented in England.

After the visit of the Emperor and Empress of Germany and the pledges of loyal friendship exchanged between Edward VII and William II, and confirmed by that hospitable country, as was shown by the cordial reception given to the latter by the people of London and by the highest personages in England. Thanks also to the policy of the British Cabinet especially, inspired as it was with the strongest feelings for justice and peace, there was every reason for believing that all fears and threats of a return to sentiments of profound distrust between the two countries, which, at intermittent periods, had been manifested during the last three or four years, were now dissipated forever. Yet, when such a thing was least expected, lo and behold, a cry of alarm arose all of a sudden from the banks of the Thames against the supposed "Teutonic peril." This peril consists, as far as England is concerned, of the annual increase in the expenditure which the German Government devotes to naval constructions.

When one thinks that the imperial navy of Germany is today inferior to that of Italy, and that to place it on an equality with that of Great Britain would require a period of at least twenty years, supposing the same amounts expended on it that have been expended on it during these last years, it will be evident that the dreaded Teutonic peril is altogether imaginary.

But the strangest thing of all, a thing no one would ever have believed possible, is that the cry of alarm should have come from the editor of the *Review of Reviews*, that very William T. Stead who, in 1898 and afterward, had made himself famous by championing with extraordinary fervor and by the use of arguments sometimes of a most singular character, the cause of disarmament and peace.

He demands that for every new ship

built by the money voted by the German Parliament, two new ships shall be placed in her dockyards by England. It is a program that would cause, in the single year lately begun, an expenditure of half a milliard of francs; it is a program which no liberal and no statesman in England will ever take seriously.

This, however, does not alter the fact that the unexpected apostasy of W. T. Stead has served as a pretext for the jingo press to proclaim loudly the dissolution, the bankruptcy, of pacificism.

But, in fact, pacificism responds to such numerous and important interests of our time, both moral and material, that the defection of a single man, however illustrious he may be—like the great Stead, for instance—cannot arrest its march, even for a single day, to the lofty goal which stands before it. We have been acquainted with another man who, for more than half a century, wielded the scepter of the most widely diffused press in the world. His name is Emile Girardin, and he had invented the odd theory that a good newspaper ought to give to the public a new idea every day. Free from every moral principle, furiously eager to make a noise, impatient for results, after having for many years supported, with irresistible logic, the necessity and the duty of peace, and shown the immense losses which France had suffered from war, he changed his attitude all of a sudden, in 1870, and did his best to arouse hatred against Prussia, just as today Stead is doing his best to arouse hatred against Germany; and flattering, as he was able to do effectively with his marvelous art, the sentiments of national pride instinct in the French people, he contributed more than any one else to render inevitable a war that cost France 150,000 dead soldiers, the capture and imprisonment of her armies, and the loss of Alsace and Lorraine.

In England similar consequences will not happen, because there greater difficulty is experienced in seducing the people by patriotic rhetoric, and politicians and statesmen are much given to reflection. But the eventuality of a war with Germany would some day or other be realized if the alarmist campaign, which today the great Stead conducts, should

unfortunately drag in its train a large part of public opinion.

In Italy we have had in past days another example of the facile mutability of purpose of a part of the most advanced democracy.

After the encounter which took place in the territory of Lugh between our soldiers and a column of Abyssinians, it was feared that, in addition to the losses incurred, certain grave complications, in view of the character of Menelek, perhaps a new state of war with the Negus, must surely arise. Yet the answer of the monarch to the querulous expostulations of our representative was that not only did he deplore the invasion by Abyssinian subjects of the territory occupied by Italy, but he promised also to search out and punish the guilty.

It was said that this satisfactory result was brought about by the immediate diplomatic intervention of France and England, on the one side, and of Germany on the other, all of which powers, if we were to believe the rumors prevalent at the time, supported energetically the protests of Italy. Altho the promised satisfaction was obtained, however, before this friendly intervention happened, does it not yet prove that the network of amicable relations, which we have already dwelt upon, is being formed in our days between all civilized governments? It is the principle of the construction of that solidarity in defense of civilization which is an ancient program of democracy.

Well, then, we have seen workmen who, instead of rejoicing at such a sign of real progress, and a progress that has been almost their own conquest; workmen who, until now, were regarded as representatives of democratic and socialistic internationalism, actually cry aloud against the humiliation and abasement of our country in becoming the pupil of other nations!

Who could ever have supposed that the very men whom we have regarded as the soundest and most puritanical among the democratic parties should have afterward, from a spirit of discontent, plagiarized the thoughts and phrases of those sham patriots they have so often combated and scouted!

Literature

Makers of Plots

THE scientific spirit has killed the romance of exploration. From Herodotus to the end of the seventeenth century, travelers credulously and gladly told the stories that others told to them, the more marvelous the better, while maps of the world of that period of many centuries presented a wealth of mysterious information, whose potency is all the more felt today, just because we realize that we have lost the blessed gift of believing what they told: "Terra Incognita," "Land of the Unicorns," "Cyclopes"—what suggestions for the imaginative to be their own weavers of romance in the security and comforts of home! Nowadays it is different. The geographical romance of the discovery of the North Pole has already been discounted by science. More ice and snow will be all the reward of the ultimate victor, and even if he should find an ice-coated ship or the frozen corpse of a predecessor, he would be comforted on his return by some novelist who had already foreseen this possibility and familiarized us with it. Darkest Africa has in many decades yielded nothing new but the okapi; the headwaters of the Amazon are even more barren of results; the north coast of Australia will probably reveal nothing but the existence of flourishing secret Chinese settlements; the imaginative Rougemont was exposed even before his book came from the press. Siberia has presented us with little but a mastodon or two. There remains Lhasa, it is true, but it does not promise romance. Atlantis disappeared from the map long ago, and it was followed by Manoa and the Fountain of Youth, whose waters are nowadays prosaically and conveniently put up in bottles and offered for sale to the persistently credulous in beauty parlors.

Only Mars remains, just now, everybody's planet, to be mapped in the sixteenth century spirit, but even here the novelist has already far outdone the ex-

plorer in his observatory. The earth has been meekly surrendered by the traveler, the geographer and the cartographer to the romancer, who takes at will their work and fashions it into food for our starving imagination.

Mr. Edward Barron,¹ for instance, invites us to believe in the existence of a survival of Maya civilization in the region of the sources of the Amazon. It is not probable, but it is possible, and that is all with which he needs to concern himself. The characters in his story all credit the tale and continue to believe in it almost to the very end, entertaining the reader mightily on the way with their adventures in search of *The Lost Goddess*. The quest proves in the end but a nail on which to hang an ingenious tale, whose greater merit lies in the deftness and firmness with which the author handles a love interest that has depth and strength.

Robinson Crusoe, Masterman Ready, the Admirable Crichton, the prototypes of the hero of Mr. Robert Ames Bennett's tale,² are many—the inferior of civilization, who, face to face with life in the raw, reveals the powers of leadership. An Englishman, the daughter of an American millionaire and an uncouth American adventurer, these are the three characters that play their parts in a far from uninteresting *variation sur un air connu*, that of the castaways on an inhospitable shore, shipwrecked with nothing but the clothes they stand in. The Englishman burns up the five or six matches left to them in lighting cigars, then ingenuously proposes to make fire by friction; the American produces it by means of the sun and a magnifying glass, the only bit of direct assistance he receives from the author. Thereafter the ruffian takes command and sees the woman thru, teaching her in the process that "a man's a man for a' that."

¹THE LOST GODDESS. By Edward Barron. New York: Henry Holt & Co. 8vo. \$1.50.

²INTO THE PRIMITIVE. By Robert Ames Bennett. Chicago: A. C. McClurg & Co. 8vo. \$1.50.

Mr. Gouverneur Morris bases the first of his eleven stories³ on a possible prehistoric Chinese settlement on the Pacific Coast of this continent, and, to employ a vulgarism, "gets away with it." It is to him also that we owe the suggestion, in another of these tales, of the possible discovery, by the conqueror of the North Pole, of a row of the corpses of his successful predecessors, who paid for their victory with their lives. These two tales alone link his volume to the books under discussion here. The others deal with a variety of subjects, from an eighteenth century buccaneer to the wedding of a waiter at Sherry's, and all of them are good work, but some of them are marred by cynicism. Only two of the stories are new—"A Carolina Night's Dream," which is delightful, and "The Execution," which is strongly dramatic. Here and there one finds a suggestion of models; of Mr. Quiller-Couch, for instance, in the capital "Stowing Away of Mr. Bill Ballad."

It was Jack London who told an ingenious story of the adventure of a prospector in the Arctic Circle with a living mastodon. Mr. Samuel Hopkins Adams goes considerably farther back in paleontology in *The Flying Death*,⁴ which overtook a number of people on Montauk Point and long defied discovery. There is considerable ingenuity in the main idea, the complication of the knife-throwing juggler is well invented, the *dramatis personæ* have been selected with considerable cleverness; in short, the story has been well planned in all its details and elaborated with patience and understanding of what will serve best the purpose of mystification, but yet the final impression is not all that it ought to be. One smells the lamp here and there; the effort the book has cost is perceptible.

Thus far the geographical and paleontological plot-makers. Now for a little history in the inventing. The Ruritania idea has borne rich fruit; it has outlived the historical novel proper, the final development being the American mixed up in all sorts of imaginary conspiracies in the Balkans, in Russia, in South America, wherever you will. Such an Amer-

ican pops up in the very first chapter of *The Stem of the Crimson Dahlia*, on Galata Bridge, in Constantinople, the most promising of all capitals of the world for intrigue and adventure, when it is not Belgrade, St. Petersburg, Athens or Sofia. Morocco is still to be heard of; Richard Harding Davis employed it in "The King's Jackal," but that was before recent developments. To return to our mutton, however. Mr. Locke provides all the ingredients proper to the mixing of a tale of this kind in good quality and quantity; the conspiracy, the accident by which the hero becomes mixed up in it, the woman, the other woman, the villain, kidnapping, fighting—all you expect in stories of this kind. It has all been done a hundred times before, of course, but that is no reason why it should not be done a hundred times more, so long as it serves its irresponsible purpose. Mr. Harold Morton Kramer goes a step further in his tale; instead of taking his American hero to the conspiracy, he sends him halfway and then brings it to him, in *The Castle of Dawn*,⁵ which is situated in the heart of the Ozarks. Here, indeed, is mystification; a journalist sent out to expose the land grabbers in Texas is kidnapped because he is suspected of being on the trail of a South American revolution, cooped up in a millionaire's whim, a palace in the mountains, and kept there by the rifles of the mountaineers, who have been told that he is an internal revenue man looking for moonshiners. And, of course, there is the woman, and again the other woman, and a third woman for good measure. Gen. Charles King's later stories all resemble each other, but then, so did his earlier ones, those chronicles of the *commerages* of army post life of twenty years ago. His latest, *To the Front*,⁷ is a book for boys, dealing with military life and service in the Western mining districts, the Bad Lands and on the trail of bad Indians.

The good Indian is to the fore in Mary Holland Kinkead's *The Man of Yesterday*,⁸ a book that owes nothing to

³THE FOOTPRINT. By Gouverneur Morris. New York: Charles Scribner's Sons. 8vo. \$1.50.

⁴THE FLYING DEATH. By Samuel Hopkins Adams. New York: The McClure Co. 8vo. \$1.50.

⁵THE CASTLE OF DAWN. By Harold Morton Kramer. Boston: Lothrop, Lee & Shepard. 8vo. \$1.50.

⁷TO THE FRONT. By Gen. Charles King. New York: Harper & Bros. 12mo. \$1.25.

ingenuity of plot or to its author's imagination, but is a page of passing American history, or, at least, an important footnote. Mrs. Kinkead draws the life of the Indian Territory as it was toward the close of the last century, of the civilized Chickasaws and Choctaws, of the whites living among them, and of the half-breeds sprung from intermarriage. The Indian's conviction, awakened by the absorption of civilization, that he is the true American aristocrat, a member of our real "oldest families"—his pride of race—is strongly insisted upon by the author, who wields a clever, trained pen in the service of an unmistakable minor literary talent.

The Cities of St. Paul. Their Influence on His Life and Thought. The Cities of Eastern Asia Minor. By Sir W. M. Ramsay, Professor of Humanity in the University of Aberdeen. 8vo, pp. xv, 452. New York: A. C. Armstrong Son. \$3.00.

After the manner of the Englishman who went to Arabia for material as to the life-history of the camel, Professor Ramsay has gone to Asia Minor for the needful study of the life of St. Paul; and also like the Frenchman and the German he has ransacked the libraries and searched out all his own inner consciousness; and the latter, the imaginative, projecting element, is no less valuable than the two others. No one knows Asia Minor more thoroly than does Professor Ramsay, and, as the learned public knows, this *Cities of St. Paul* is but the latest of his series of volumes which have added so much to our knowledge of the physical, social and historical surroundings which affected the great Apostle's character and work. To reach this material the author must not only see and picture the hills, valleys and rivers, but must most carefully study the roads marked by Roman milestones, the funerary and other inscriptions, and learn the religion, the ethnic relationship and the political succession of rulers of various States. Thus there may have been at one coast city an early Ioanian population, then a native Hittite succession, to be followed by Assyrian, Persian, Greek, Roman, and later Arab and Turkish rule, all of which

have left their mark; and it is no small study to learn how the Jewish immigrants were affected all this time. The five cities which this volume considers are Tarsus, to which a third of the volume is given; Antioch, Iconium, Derbe and Lystra, and there are four maps, eighteen plates of views and fifty-four illustrations in the text, mainly of local coins. Large portions of the volume have been read in *The Contemporary Review* and *The Expositor*. Of general interest are the opening and the closing chapters. In the former the author accepts Paul's view of the fall of man as against the modern view of human development from a brutal stage; and in the latter he treats of the relation of the Christians to the Roman power, which Paul seems to have honored, while in the Apocalypse it is their hateful foe. This and other works of Professor Ramsay are of the first value for the biblical student. It is interesting to observe the great value he puts on Dr. Thomson's "Land and the Book," and the full credit he gives to another American scholar, Professor Sterrett, for the discovery of Lystra. If one were to criticise any lack in this work, it would be that in his study of religion he confines himself too much to comparison of Greek divinities, and does not sufficiently consider the early Anatolian (Hittite) and Assyrian gods. Thus the name of Teshub is not mentioned, and the arch over the deity on the coins and the projection over the shoulders (which were originally quivers, not wings) are not traced back to their sources.

Memoirs of the Countess De Boigne. Edited from the original MS. by Charles Nicoullaud. Vol. III. New York: Charles Scribner's Sons. \$2.50.

This volume completing the *Memoirs* was in part written earlier than those reviewed in our issue of December 7th, for the account of the revolution of July, 1830, was put on paper in 1832, three years before the Countess undertook to write the whole history of her life. She was intimately associated with the leading men and women of both parties to the struggle which culminated in the triumph of the Citizen-King, and chats about them in her usual free and lively style,

⁸THE MAN OF YESTERDAY. By Mary Holland Kinkead. New York: F. A. Stokes & Co. 8vo. \$1.50.

uninfluenced by malice or the illusion of grandeur. The glimpses of "that cunning old lame man" Talleyrand, of M. de Chateaubriand, with a red-and-green bandanna handkerchief around his head, composing thunderbolts directed (but never launched) against the Duc d'Orléans, and of the Duchesse de Berry, with her ermine cloak wrong side out looking "like a drowned dog," will gratify all those who enjoy seeing distinguished people *en déshabillé*, and that includes most of us. The author carefully restricts herself to being "the careful chronicler of the impressions of the moment," and resists the temptation to interpret events in the light of after history. As the witness and participant in two revolutions her observations as to the duration of disinterestedness are worth quoting:

"During the first three days in 1814 and in 1830, good feeling, loyalty, disinterestedness and patriotism were predominant. But from the fourth day onward evil passions, ambition and personal interest became paramount, and were able in twenty-four hours to taint all those influences which previously had appealed to the loftiest hearts."

Henry Hudson. *His Times and His Voyages.* By Edgar Mayhew Bacon. New York: G. P. Putnam's Sons. \$1.35.

It seems wholly proper that Henry Hudson, the Englishman who failed when in the employ of his countrymen, but succeeded (as we see now) with the Dutch, tho the greatest of his achievements attracted little attention at the time, should be reckoned among American "Men of Energy," since he helped to make their home. Hudson's one aim in life, after he had become a true student of geography as then known, was to find the Western passage to China. He did not plunge into Arctic seas or poke his prow into various indentations of the North American continent at random. He had some reason to think, from those who had gone before and told him, that somewhere beyond Virginia was an outlet to the Pacific. He nobly perished in quest of his aim. Had he been able to talk Dutch, he might have been a true commander, but with mutinous seamen, both Dutch and English, he was rather servant than master. One pleasing element in this work is the thoro knowledge

of the Hudson River, past and present, displayed by Mr. Bacon, who has written lovingly of it before. Without conspicuous signs of profound research, Mr. Bacon has gathered together what is known of Hudson, whose name and fame on this continent are forever sure, and has detailed his voyage up the Empire State's noblest river. With a capital introduction for a background, and with maps, illustration and index, the author has made a creditable book, which, while unsatisfactory to the severely critical student, will be warmly welcomed by the ordinary reader.

Life and Times of Stephen Higginson. By Thomas Wentworth Higginson. Boston: Houghton, Mifflin & Co. \$2.00.

Colonel Higginson gives a notable picture of his Federalist grandfather, who was a member of the Continental Congress during its final year (1783), and in that capacity, on April 11th, 1783, voted to approve the proclamation for cessation of arms in "the seventh year of sovereignty and independence." His life is presented in a series of episodes, following upon a description of the old Salem families from which he originated. Having married at the age of twenty-one in opposition to the wishes of his family, he established his home in Salem in 1765, and by that time was already in command of one of his father's ships and making voyages to London. At the opening of the Revolutionary War, the captain, like so many of the Salem shipmasters, became a privateer, and made considerable sums for the time in this way. He then removed to Boston, formed a partnership, and is reported to have been worth half a million dollars at one time, tho he was worth only about a quarter of this sum at his retirement in 1812. Higginson was second in command in suppressing "Shays's Rebellion," in 1786, was a strong advocate of a more efficient government than the confederacy of the States could afford, in 1787, and, while declining an election to the convention of that year, was a principal factor in bringing about the adoption of the Constitution. Over the signature "Laco" he is understood to have published a series of letters attacking the motives of John Hancock. He took an

honorable part in municipal affairs, and past his last years in stately retirement at Brookline, a suburb of Boston.

Literary Notes

....The catalog of etchings and engravings published by Frederick Keppel & Co., New York, is of interest to the general reader on account of its many fine reproductions in miniature, as well as to the collector from its biographical and technical notes.

....Dr. Crapsey's heresy does not appear so very startling in his latest volume, *The Re-birth of Religion* (New York: John Lane Company. \$1.50 net). He endeavors to show that modern conception of the world and scientific methods in historical investigation have undermined the supports of the classic dogmas, but he contends very earnestly that a new and brighter day for spiritual religion is fast on its way. The special doctrines for which Dr. Crapsey was condemned are not considered.

....*The Commuter's Garden Record*, compiled and designed by Amy Carol Rand, has about a hundred pages of very thick paper, each decorated in light colors. First, something less than twenty pages is given to general hints and directions as to how the city man with a little home in the country shall make his flower garden. Then follows an alphabetic list of flowers and bulbs, with information as to when and how to sow, time in bloom, color, height, etc. Then follows a series of pages devoted to the record of the flowers, time sown, sprouted, blooming, etc. (H. M. Caldwell Co., Boston.)

....The decision of the United States Supreme Court in the *Curt Muller vs. State of Oregon*, upholding the constitutionality of the Oregon Ten Hour Law for Women, and the brief for the State by Louis D. Brandeis, is published for free distribution by the National Consumers' League, 105 East Twenty-second street, New York. It is a very concise and complete résumé of the whole question, giving abstracts of the legislation for the protection of women in the several States and foreign countries and quotations from numerous authorities on the evil effects of long hours on the health of women and their children.

....The Memorial of Edwin Davis French, the publication of which was announced in these pages on December 19th last, has been sent to subscribers. The edition is limited to 475 copies, and the printing has been done by the DeVinne Press. Mr. Ira H. Brainerd has written a very pleasing biography of Mr. French, in which he has carefully avoided saying too much and has not left unsaid anything vital. The book contains a complete list of French's bookplates based in part on the admirable Paul Lemperly list published in 1899, and includes many examples of Mr. French's work as an engraver printed from the original coppers. (New York: Ira H. Brainerd. \$7.50 net.)

....The new edition of *Who's Who in America*, 1908-9, adds a new feature of great

value, a geographical index of 130 pages. According to this, about 3,500 men of note live in Greater New York; Boston and Washington are tied for the second place with 1,200 each, and Chicago contains 850. We shudder to think of the misery and contention which this index will cause in the numerous towns and cities where only one or two names are included, not always those whom the citizens would elect as their most distinguished men. Nevertheless, great praise must be given to the way the publishers have accomplished their delicate task of preparing this indispensable handbook of addresses and biographical data. [Marquis & Co., Chicago, \$4.]

....The librarian of a large library has declared his intention of not buying any more copies of De Morgan's novels because he represents the action of the publishers, Henry Holt & Co., in making the price \$1.75 instead of the customary \$1.50. This is quite unreasonable. "Joseph Vance" and "Somehow Good" are novels of the old-fashioned, generous kind, of the days when pies and slices of bread were an inch and a half thick, and if fiction is to be sold at a fixed rate per thousand words, as is just, the boycott should be directed, not against De Morgan, but against the vicious habit of certain publishers in padding out a short story with thick paper and marginal scrawls and selling it for \$1.50, and in charging \$5 for a big, heavy volume of biography or travels that does not contain so much printed matter as a five-cent Sunday daily.

Pebbles

AN APPEAL TO POWER.

THE BUNNY—Now that Easter's coming on again, I wish the President would get after the nature fakers who say I lay eggs.—*Puck*.

VISITOR—What is the best way to get the President's ear?

White House Attaché—Catch hold of the Loeb.—*Harvard Lampoon*.

"WOMEN feel where men think," said the female with the square chin.

"Yes," sighed the man who had been married three times; that's why men become bald.—*Ex.*

A BARREL FULL.

"If an empty barrel weighs ten pounds, what can you fill it with to make it weigh seven pounds?"

"Have to give it up."

"Fill it full of holes."—*Sacred Heart Review*.

STEADY JOB.

HALLOO, Bilkins! Who are you working for now?

"Same people—a wife and five children."—*Tit-Bits*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Senator Hale's Plain Talk

SENATOR HALE is sane; and when he tells us that 70 per cent. of the revenues of our Government are expended on preparation for war he tells what the people should apprehend. The military establishment is being enormously increased, to the prejudice of all other claims and appropriations. The revenues, he tells us, are waning, and we are likely to be confronted with a deficit. The Appropriation Bill covers thousands of items that ought to be paid, but the Appropriation Bill cannot be passed. The River and Harbor Improvement Bill does not happen to be a war measure, and so it cannot have a hearing. Military expenses are increasing so rapidly that the very vital matters involved in running the Government must be put off. Said the Senator:

"When you begin to build a navy you only begin to spend money. You commit the country to repairs and maintenance, making necessary an increasing appropriation, and if you go on at the present rate we shall have, in the course of three or four years, an annual appropriation for the navy of one hundred and fifty millions."

He added that he hoped this enormous, unreasonable and wicked program would

not be carried out. He did not believe that we must be saddled with any such expense, in order to make our nation safe in carrying on its peaceful avocations.

"To double the army would require an annual appropriation of two hundred millions, and nothing short of that will satisfy the army."

In other words, the army and the navy have become immensely aggressive and determinative forces at Washington. We have talked peace at The Hague, but at home we are spending our national revenues on war—imaginary war. Senator Hale voices the will of the whole people that this program of enormous expenditure for brute force display shall not be carried out. We are facing a deficit in our revenues at the same time that the demand for a reduction of the tariff is imperative. Where shall the money come from—indirectly from the people or directly? For from the people it must come sooner or later, in one way or another. Meanwhile, what are we going to do with our post office enlargement, postal savings banks and parcels post service? Are they to be cried down because of a possible deficit in post office revenues? It will be a startling fact to bring home to the people that this year we have to face a deficit of thirty-eight millions, while last year we had receipts in excess of expenditures to the amount of fifty-two millions. There are now before the Senate bills calling for one hundred millions; what is to be done with them? Some of them may be wisely thrown out of the account, but we know that this amount does not begin to cover the demands that are calling for settlement. No man can safely present himself to the American people for election to the Presidency who advocates doubling our army or navy. We have gone too far already in this direction. But let it be understood that we have gone a good deal farther with Theodore Roosevelt than we will with any other President. The people have shut their eyes to a very few errors of our present Executive because they believe immensely in his sincerity. His fighting qualities were needed, and we could afford to indulge him in some very "rough riding" views and experiments. It is far more likely

that the American navy and the American army will very soon be placed on a peace footing, and be kept there.

The American people are not being drawn away permanently from their moorings; at least, we hope not. We are spending a great deal too much on war taxes and on war pensions—the latter has now climbed for the first time to a figure over one hundred and fifty millions. The Civil War debt is not yet paid. Gallatin laid down the principles of sound business when he told us that a national debt was exactly like a private debt—invariably a source of weakness and a menace. The energies of the people should be bent toward measures that constitute a peace footing, the development of industries, and the payment of debts. If we cannot have our national waterways and a doubled army and navy, then by all means let us have the waterways. It is vital to our prosperity and progress. If we cannot find means for carrying on a great forestry movement and a naval display in the Pacific, by all means let us give up the naval display. The Panama Canal is on our hands with a probable expense of five hundred millions, and a possible cost of double that amount. Where are the American people drifting? Our business affairs are by no means in a sound condition. Our railroads are far from having ability to meet the requirements of the people. We are rushing toward another harvest without tonnage to carry our crops to market.

Meanwhile, our neighbors are drawing in their forces, and colonial wars are less and less popular. France is trying in every possible way to bring its national budget within the bounds of economy, while Germany refuses to build more cruisers for the Kaiser. Italy is already swamped by its struggle to be a world power, and it is suspected that Japan is playing a good deal of its game with Quaker guns. The whole civilized world is buried under a débris of deficits and war debts. Sanity demands that the temple of Janus be closed, and that the talk of peace for all the world be something more than talk. Fortunately there is not the slightest probability of any great war. Our navies are likely to rot twice over before a ship of war will be needed. We must develop our resources,

create an industrial temper, get ready to meet a severe social struggle, and lead the world in establishing a permanent régime of peace. A determinative step in this direction would be worth a good deal more than another Hague Conference—conducted as these conferences have been conducted, without the faiths of the governments behind them. As Professor Dutton, in *THE INDEPENDENT*, says: "The civilized world has outgrown the garment, yet cannot cast aside the tradition and the habit of war."

It is time to find out whether our policy is fundamentally industrial and peaceful, or whether our whole financial and constructive system bends to a traditional fear of our neighbors. Our foes, at present, are at the worst imaginary. A war with any industrial people is forbidden by the instincts of civilization. Our safety is in not being burdened in peace time with war preparation. Nothing is so expensive as standing armies and floating navies. As President Eliot suggests, we are now spending on naval display alone enough to equip every university in the United States with all the requirements to meet the highest demands of education. Let us study Thomas Jefferson.

Accomplishment and Longevity

A VERY interesting article in the April number of the *Century*, by Dr. A. Newman Dorland, of Philadelphia, discusses the "Age of Mental Virility" by an inquiry into the records of achievement of the world's chief workers and thinkers. The life history and the records of the work of some four hundred men whom every one would acknowledge to be among the world's greatest men have been carefully analyzed. The purpose of the article has been to undo the false impression that is responsible for the tendency—visibly increasing in this country—of relegating the older and middle-aged men to the oblivion of an innocuous desuetude, in order that the more progressive and aggressive young men may be given a clear track in the rush to the front. There can be no doubt at all after reading this article that to relegate men of sixty, or even much older, to inactivity, is almost surely to de-

prive the world of some great accomplishments.

Perhaps even more interesting than this idea which has been the main purpose of the article is the suggestion which inevitably presents itself after the reading of the article, that work has nothing at all to do with the shortening of life, and that evidently the superabundant vitality which enables a man to do mental work of supreme character is also an important factor in making him live longer than other men. Most of the world's great workers have lived beyond seventy, not a few of them even to eighty, in the full possession of their intellectual faculties, and no inconsiderable proportion to the age of ninety and over, with undiminished mental vigor. Not only have they been able to do work, but as a rule they have rejoiced in their work, and old age has brought to them few or none of the evils that are supposed to flow inevitably in its train. Many of them would doubtless re-echo in their hopefulness the words of the late Pope Leo, who, on the occasion of the celebration of his ninetieth birthday, when some one hoped in a toast to see him still alive at his hundredth birthday, asked deprecatingly: "Why put the limit at one hundred?"

Some of these men, indeed, did their masterpieces when beyond the Psalmist's three score years and ten. There are some people who consider that Verdi's master-work is his "Falstaff," composed at eighty-three. Music is often thought to be the special forte of the young, and its cultivation is sometimes said to be extremely wearing on the nervous system. At eighty-five, however, Verdi was still composing, and there is no sign of any deterioration of genius in such wonderfully beautiful compositions as his "Ave Maria," his "Stabat Mater" and his "Te Deum." Just as striking an example in the sister art of painting is Michel Angelo, who at eighty-nine was still doing magnificent work, while his great contemporary, Titian, at the age of ninety-eight, painted his famous "Battle of Lepanto," and had filled with ceaseless activity the nearly thirty years by which he exceeded the Psalmist's limit of ordinary human life.

The same thing is true in every order

of human thinking and accomplishment. Chevreul, the great French chemist, was still actively working at the age of one hundred and three. Lamarck, at the age of seventy-eight, completed his greatest zoölogical work, the "Natural History of the Invertebrates," and lived without suffering from mental deterioration for some seven years afterward. Humboldt did not begin the crowning work of his life, his "Kosmos," until he was seventy-six, and he worked on faithfully at it for fifteen years. Laplace, the great astronomer, died at seventy-eight, working faithfully, but fondly and hopefully, on until the end, and proclaimed with his last breath: "What we know is nothing; what we do not know is immense." In a word, long years of diligent study and application had not dried up the well-spring of vitality in these great men, but, on the contrary, their very occupation with deep thoughts in which they were profoundly interested seems to have helped them to put off the inevitable termination until long beyond the ordinary term of life.

Some of the great workers did die when comparatively young. In nearly all these cases, however, it is very clear that it was not in any sense of the word their application, tho all of them were very hard workers, that brought about their early death. Most of such deaths are accidental. After all, it must not be forgotten that it is quite as much of an accident to run into a bacillus as to be run over by a railroad train. Either of them may prove fatal, tho one may survive either incident. The victim, however, is very likely to be maimed for life afterward, and the expectation of life for most people depends on the avoidance of such unfortunate incidents. The impression, however, that work shortens life in any sense of the word is evidently entirely wrong, and those who are interested in some subject which may occupy them in their maturer years should surely rejoice over that fact, rather than look forward to the time when they can enjoy their ease doing nothing. A machine is much more prone to rust out than to wear out. It is a well-known principle in ordinary life that a vacant house deteriorates much more rapidly than one which is occupied.

The main lesson of this interesting study of men and their accomplishments, however, seems to be that it is the original gift of vitality which is the important thing, not only for longevity, but for accomplishment in life. Those who have a heredity of longevity are likely also to have a heredity of talent. Those who are destined to do good work are almost sure to live long, unless there is some unfortunate accident of disease or something more crushingly material. To counsel men to give up work when they are sixty is evidently a medical fallacy prone to do harm not only to those who take the advice, but also to the community, since such men still have in them a precious possibility of accomplishment that we have a right to look to from them.

New York's Street Railways

MANY of the offenses of the controlling capitalists and officers of the New York street railway combination were shown to the public by an official investigation in October last. The record of that inquiry was one of the darkest chapters in the history of American public service corporations. It has now been made even more disheartening and repulsive by the testimony, recently published, of several of the officers and one of the capitalists before a special grand jury, which reports that it could obtain no evidence sufficient to warrant an indictment. The testimony, which would fill a book, is published by the grand jury apparently in its own defense; in addition, Mr. Thomas F. Ryan, the capitalist of whom we have spoken, has issued a long statement, at the close of which he asserts that the surface railroad combination was not "looted," but was "throttled," mainly by State interference. As a sample of his explanation may be cited his assertion that "the special franchise tax alone almost doubled the system's burden of taxation." The truth is that not one dollar of this tax has been paid!

The discreditable transactions brought to light by the inquiry which Mr. Ivins conducted were considered again in this testimony before the grand jury, together with others now laid before the

public for the first time. Concerning the \$500,000 said to have been loaned to the late Mr. Whitney, and to have been repaid by the company to the lenders by means of the purchase of Brady's "paper road," it was explained that Mr. Whitney had expended the money "for the benefit of the property," and it appears to have been understood that this sum was used for political purposes, possibly in an attempt to prevent the nomination of Mr. Bryan.

It is quite convenient for several persons that Mr. Whitney is dead. In 1902, it was alleged, he gave \$60,000 of the company's money to one of the campaign funds in the State of New York; in 1903, the company paid \$20,000 to the Republicans and \$16,000 to the Democrats. Responsible officers testified that large sums were paid to somebody in the city, in order that permits for opening the streets might be obtained. These expenditures were a continual drain from the treasury. No attempt appears to have been made by the jury or by District-Attorney Jerome, who conducted the examination, to ascertain by whom these bribes were demanded and who received them.

We shall not go thru the mass of evidence to point out all the indications of bribery and corruption. The substance of it is that the combination of surface roads paid great sums of the stockholders' money to campaign funds, to politicians, to lobbyists, and to local public officers. In all probability, campaign funds were used as a cover for other expenditures of a much more objectionable character. Why was this done? Simply because the company, or the group of speculators controlling it, was vulnerable. Rarely does an innocent and upright man submit repeatedly to blackmail.

Those who set out to enrich themselves in crooked ways by the manipulation of property based upon public service franchises must share the profits with dishonest men outside who know what they are doing and who have the power, thru public office or otherwise, to interfere.

This explains nearly all these transactions of the New York street railway combination. It was necessary to pay

hush-money. Some of it went to politicians, some to public officers, and the foul use of a part of it has been covered up by the destruction of eleven years' books, by the pretense that hundreds of thousands were spent to prevent the absolutely certain nomination of Bryan, and by pointing to the coffin of William C. Whitney.

We have said that manipulators of public service franchise property must share with others the money which they gain. But it does not follow that the sum paid to outsiders must be a large part of the profits. In this instance, if we take into account the operations of the syndicate that bought and "turned in" the constituent roads, and also the increases of stock and bonds accompanying the numerous consolidations and fresh incorporations, it will be seen that the profits of the manipulators were enormous. A million or two paid into "campaign funds" could have been only a small price for the privileges or the immunities procured by such a tax. And there were not only petty meddlers and greedy public officers to be appeased; there were also envious rivals seeking the same opportunities, and these had to be barred out. As one of the witnesses before the grand jury said, New York was an attractive and "very fertile clover patch," despite the ruinous burden of "State interference" and of taxes never paid.

Is it surprising that many who are familiar with the history of these street railway transactions turn to municipal ownership and operation as a remedy for the abuses and corruption that are followed by no punishment? When one reviews what has taken place before grand juries and elsewhere, can he reasonably expect that there will be indictments and prosecutions for such offenses in New York? We cannot have here a Heney or a Folk; we have only a Jerome.

We have only begun to apply the remedy of official supervision and regulation. It is still to be tested here. Much will depend upon the work of the new Public Service Commission. Only by thoroly effective official regulation in the public interest can resort to municipal ownership be prevented.

While we do not believe that large sums of street railway money were really

paid into national campaign funds or used either for or against national candidates, it is plain that contributions to State committees and local political bosses were made. Probably the story about great expenditures for national political purposes was told merely to conceal something. In either case, the incident points to the need of legislation for complete and prompt publicity as to all campaign receipts and expenditures, and the testimony should be cited in Congress by the advocates of such publicity who ask for the enactment of the pending McCall bill.

How We Read

THE complicated process of reading requires a great deal of our time, but receives very little of our attention. When a man is playing golf once a week he becomes very critical of the hang of his clubs and is always trying to lengthen his swing and improve his stance. The reader, however, will tolerate almost any kind of printing, and makes no attempt to improve the habits of reading into which he happened to fall in his youth, altho it might be possible to reduce the time and energy he expends in reading by half or three-quarters. That such an economy is attainable is indicated by investigations in the psychology of reading that have been recently carried on in many laboratories in this country and Europe. These show that ease and rapidity of reading depend more upon the knack of managing the movements of the eyes than on intellectual ability or quickness of perception. Among men and women of the same degree of education some read four or five times as fast as others, and in general the rapid readers can remember more of what they read and also reproduce it with fewer mistakes than the slow readers.

Reading seems to the casual observer to consist simply in running the eye along the lines of print and recognizing each letter or word as we come to it, but when the motion of the eyeball is observed or automatically recorded it is found to be very different and much more complex. We do not read while the eye is in motion. It has to come to a full stop and focus at intervals of ten letters or so. It

is the same as with the motion pictures. If the ribbon of photographic films were run thru the machine continuously there would be only a blur on the screen. Each picture has to be brought to a full stop for an instant and then the films jerked along to the next. And the quicker the jerks and the longer proportionally the stops the less the headache to the spectator. Now in reading the eye is at rest much more than it is in motion; about ten times as long.

What the reader of this column is now doing—if he is that average reader for whom all things are written altho he never can be found—is just this. He first fixes his eye on a point just inside the left end of the line, say about the third letter, altho it may happen to be a space, for about the fifth of a second. Next he shifts it to about the middle of the line, which takes him about a fiftieth of a second. Then he moves to a point near the end of the line but a little further from it than the point where he began was from the other end. Here his halt is a little longer than the middle stop but shorter than the first; then he sweeps his eye back to the corresponding point near the beginning of the next line below and begins again, this long jump taking about twice as long as the short jumps between reading points. If he is a slow reader he may make four pauses to a line of this length, or sometimes three and sometimes four. The rapidity and ease of reading is chiefly dependent on acquiring and maintaining the most economical rhythm of these movements. If the lines are of unsuitable length, and especially if they are irregular, as those alongside of inserted cuts, the reading is slow and tiresome. The best length of line has been found by laboratory tests and practical experience to be that adopted in THE INDEPENDENT and the best newspapers; that is, about 64 millimeters. A line longer than 90 millimeters should never be used, altho if the type is enlarged in proportion and the page is held far enough away the angular movement may be the same.

But it requires more time to read the same number of words in a long line than in a short one, and the eye is frequently confused on swinging back to the left in finding the proper line. Be-

sides this, the eye is strained in reading in a wide column, because the focus has to be changed from the ends to the middle, and differently for the two eyes, especially if the book is not held squarely in front.

Theoretically a still shorter line than those here used would be better. Professor Huey, in his interesting book on the "Psychology and Pedagogy of Reading," to which we are indebted for most of these facts, believes that the Japanese and Chinese are wiser than we in reading perpendicularly instead of horizontally. A column of less than half the width of this one can be read downward without any lateral movement, thus reducing the labor of the eye by about three-fourths. But the typographical difficulties in the way of justifying such short lines are too great, and our reading habits are too fixed to make such a change possible. But it would be practicable to change the forms of certain letters that are difficult to recognize and modify others, so as to make possible a phonetic spelling. This alone would greatly reduce the labor of acquiring knowledge. More reading is demanded of each succeeding generation, and the strain thus put upon the eyes is the cause not only of the increasing myopia, but also of many of the nervous disorders of the times. The subject is, therefore, one of very great importance, and demands thoro study and still more the practical utilization of what knowledge we do have about it.

The Catholic Centennial

THIS week the Catholics of New York are celebrating the centennial of this archdiocese, separated in 1808 from the original see of Baltimore. The Primate of Ireland, Cardinal Logue, has come over to help Archbishop Farley in St. Patrick's Cathedral, and has had occasion to rejoice in the multitude of Irish faithful who support the Church.

We cannot afford to do without the Catholic Church. It is Christian. It teaches positively the great Christian duties and doctrines. If it teaches some other things, true or untrue, that is what other churches have done, with the result that the good overbears the evil.

Compare the lowest Christian land in the world, Protestant, Catholic, Greek or Abyssinian, with pagan countries, and the supremacy of Christianity is evident.

The Roman Catholic Church in this country has had an extraordinary history. The Western Continent was discovered and then settled by Catholics. Catholics have the full precedence, for there was at first no Protestantism. Then England came to be the first Protestant Power, after more than a century of Catholic conquest. Our own country was settled by Catholics from Spain and France for a century before the English Protestants landed in Jamestown. The precedence of the French along our northern frontier appears yet in so many French names of cities in Maine, Vermont and New York, to the Lakes, so that even Vermont and its capital are French in name. Then the hardy French ruled the Mississippi to the Gulf, as St. Louis and New Orleans and Louisiana and dozens of other names testify. On the eastern coast Maryland was the one English Catholic colony, and Florida was Spanish, as were Texas and the whole Californian coast inland till Spain joined France. It is thus true that more than three-fourths of our territory was preempted by Catholics; but that it was the greater virility of the English people which gave Protestantism the victory we may not claim, but we believe that religion is the greatest factor in the development of national character, and that the independent self-assertion of Protestantism implied in its name, its resistance to authority, has much to do with its past success, which now gives us forty-six States, from French Canada to Spanish Mexico, and from the Atlantic to the Pacific, and not one of them predominantly Catholic.

But the days of Catholic decadence are ended. No longer, as in this State a century ago, are Catholics banned or banished. George Washington's noble words asking for equal privileges, and bidding our people never forget that it was Catholic France that came to our aid against Protestant England, have been obeyed. But it was the Irish immigration that reconstructed the Catholic Church in this country. Old

men remember how despised the Irish brogue and bog were in those early days. But they clung to their faith. They built churches and schools. Their children multiplied faster than the children of the Puritans. They got education and wealth and office. Then followed the flood of European Catholics, German, Austrian, Hungarian, Italian, until now Catholicism proudly claims nearly fifteen million adherents, well provided with clergy, churches, seminaries, convents and parochial schools, beside ten million in our dependencies. In this very province of New York there are 250,000 children in the parochial schools. The old New England States, long strictly Protestant, are rapidly becoming Catholic, and Boston is a Catholic city, and Massachusetts and Rhode Island are very nearly Catholic. Archbishop Farley may well feel a holy pride in the growth of his Church.

In no country in the world is the Catholic Church more loyal to Rome or more dear to its members. They are no matricide people, as in France and Italy, ready to rend their mother. Our American Catholics are the most intelligent, most moral, most patriotic body of the faithful which the Church of Rome can claim in any portion of the world. The Pope feels a special joy in his children of the faith in the United States, and he also knows that in no other country will the Church have fairer treatment from the Government. May we not also add without offense on this happy occasion, that the effect of prevalent Protestantism of a high type has been an influence for good not to be denied?

The Catholic Church in this country will grow stronger, and so will the Protestant. Which will relatively gain with the reduction of immigration it is hard to tell. Something will depend on the liberality of the Church in a more and more liberal age. We do not believe that a greater Catholic birth rate will have much effect, for we observe that Catholics are not marrying any younger than Protestants, and large families are few in all circles. What we do expect is a closer approach of Protestants and Catholics, due chiefly to the silent change in the Catholic Church thru the gradual

sloughing off of those non-essential but hitherto destructive superstitions among the illiterate, too often cultivated for financial advantage. In both branches of the Church the essential Christian faith will be more and more emphasized, and the non-essentials will be minimized, with full liberty of more than tolerance. A Chief Bishop in the Vatican can still be accepted as well as one in Canterbury Cathedral, each leading and neither enslaving his followers. The Catholic Church in this country has a worthy history, and we hope for it its full part in holding our country to the Christian faith.

The Slump in British Politics

By a slump in politics we mean the falling away of a people from the high ideal of what is fair and right for themselves and for other nations. We mean the reversion to the choice of lower pleasures, to selfish aims and the preference of personal advantage over the claims of justice. It comes from the temporary success of the mass of unethical people, who for the while overbear the high-minded and conscientious. The progress of popular sentiment is toward what is good, or better than the past; but in that progress the evil-minded, whether of what we call the upper or the lower classes, sometimes find their special privileges dropping from them, and in their passion they unite vigorously and successfully to resist the encroachment; and we see a deplorable defeat of those who have urged reform faster than the people could follow.

In Great Britain, as in Russia or France or Germany or the United States, there are always these two movements, one for more general human rights, and the other for maintaining the special privileges of favored classes. It is well expressed in the words liberty, fraternity, equality, the watchwords of the French Revolution, the high aims of which were too advanced for the time and suffered a terrible and bloody slump. Yet those words lack a little of expressing the higher ideal of that altruism which seeks the moral regeneration of society. This regeneration as well as equality of oppor-

tunity is what the British Liberals have sought.

It was a magnificent victory which the Liberals gained at the last British election. They proclaimed justice in the colonies, morality at home, and equality of opportunity for the world, and they secured a magnificent victory, a victory almost too complete. Since then every by-election has gone against them. They have suffered defeat after defeat and lost every seat that was contested. The last defeat is the most humiliating of all, that by which Winston Churchill, called to the Cabinet, was, by an absurd British custom, required to appeal to his constituency for re-election and was defeated. He will have to seek another constituency which is too thoroly Liberal to reverse its vote.

The principles of the British Liberals are too good, or, rather, there are too many of their proposed reforms, to be safe with the electorate. Any one of them makes enemies of those who like the rest. It is only decent and right that the control of purely Irish matters should be in the hands of the Irish people. That is home rule, the proper sort of rule. That is what we have always had in this country, and we would have no other. But England stoutly refuses; and because the Liberal leaders do not constantly put this reform into the foreground the Irish members and people fight their only friends.

But the Liberals have put in the foreground equality of privilege in the schools, declaring that public funds shall go only to public schools, and that denominational schools shall be paid for from private funds, the good and fair American doctrine. This the Anglicans oppose, because they have enjoyed the privilege hitherto of having their schools supported by taxation, and for the same reason the Catholic electors have joined with them. In the last by-election but one, where the Liberals lost a seat, nearly five hundred Catholics pledged themselves for this reason to vote against their party. It is not strange that there was a slump.

Then there is the Liberal proposition for insurance against the disabilities of old age. It is a noble plan, but it costs something, tho probably not more than

supporting the same persons by the poor rates. But it is attacked as Socialism, and with it the local experiments, sometimes a failure, at the public ownership of public utilities. This frightened the selfish rich and the easily moved poor, and again there was a slump.

In this last Manchester election the temperance program of the Liberals had much to do with the defeat of Mr. Churchill. The bill proposed to reduce the number of public houses, gradually, but surely. This was attacked as a wrong to good, honest men who make their living out of these saloons, and to the barmaids who serve the liquor, and most of all, to the clergymen and teachers and widows who have invested their money in the great capitalized breweries. Of course, there are always those who make their living out of the vices and weaknesses of the people, and if we must defend their vested interests there could never be a reform. But those who make their profit out of public vice must always be ready to lose. Of course they resist, and put on an honest face, cry of their rights and their wrongs, and are not concerned for the morals of the people. Here in New York we have just heard of the thousands whose income would be ruined by the enactment of the anti-racing bill, and they have succeeded for the while. This has been a great factor in the defeat of the English Liberals. The appeal was made by the stockholders in the breweries to the lowest and most vulgar element of the people who frequent the public houses; and, joined with the other enemies of reform, they have gained another temporary victory.

One more element among the forces which have combined for the present slump is the new effort to overthrow the free trade policy under which Great Britain has secured her commercial supremacy. Chamberlain and Balfour are one in the effort to give special privileges to British trade. Protection is of necessity sectional and selfish. It gives favors to one's own people, which it forbids to other people. Our Constitution interdicts any tariff as between our States. Between the several States there must be absolute free trade; but we can shut out the trade of those of other countries, and this we do. Of course this is

not altruistic, but we defend it. The British Liberals stand fast to the free trade altruism, altho they claim from experience that it is best for their own people that they be allowed to get their food and other goods where they can buy them cheapest. But there is a slump in British feeling; they are talking more of special privileges that are not altruistic, and this has a considerable part in the defeat.

Perhaps the Liberals presented too wide a platform, offered too many reforms. They have a hard time before them, and are likely to be defeated in the next general election. But it has been their fate to present reforms when in power, to be defeated, and then for the Conservatives to accept half the reforms and take the whole credit.

On a Business Basis

SOCIALLY we are divided in our energies between State, Church and school. We are taxed to support these three social functions, and the tax often falls heaviest on those who are least benefited. It is true that the Church undertakes to support itself by pew rental; but not one church in a dozen succeeds. The balance is made up by all sorts of religious and irreligious methods—not sure to be helpful in their influence. From the record of five churches (selected from what may be called the middle class) we find that not one of them moves without financial embarrassment. Four of them do not know from one end of the year to the other exactly how they will be able to meet obligations. The territory occupied by these five churches could easily be covered by one or two, but even in that case there would be no provision for meeting expenses on an ordinary business method. In Chicago there is a large block, five stories high. It stands at the corner of Oakland and Langley avenues. The two upper stories are rented as offices, and to these it is projected to add two or three stories more, for the same purpose. The rental goes to support the three lower stories as an organized institutional church. The salary of the pastor and of the choir is provided for; and besides this there are classrooms and libraries and a thoroly furnished study and workshop. It is a church up to date

in its purposes; but, what is better, it is run on a business basis.

Is this impossible as a rule in our larger cities: and if so, why? Is it not possible to dispense with a crowd of buildings, all of them sustained at a high cost, and closed to the public for six days out of seven? In smaller towns we cannot see that the difficulty increases. Why shall there not be a substantial business block in which there shall be placed an auditorium and classrooms, the same to be sustained by the rental of the rest of the building? If four or five sects must be provided for, there certainly is no reason why they shall not, at different hours, use the same auditorium. The tendency, however, would be, we think, to eliminate most of these organizations, and unite the people in what might be called a town church. There is no excuse for a vast system of untaxed buildings, not one of them self-supporting. These untaxed churches withdraw from public income the amount of over four hundred millions annually. What can we possibly lose by the plan suggested? Certainly not the sanctity of the building; altho the pink teas and fairs and cooking sales, and other financial expedients to which the churches resort, create a certain atmosphere of social godliness. We should lose the church spire, and possibly the church bell. How greatly this would work to the injury or annoyance of the people we are not prepared to say. The auditorium, with its accompaniments, would be well located for the masses. The probability is that there would be fewer churches, but these better attended.

Approach the school question from the same standpoint. Our schools are paid for by the State, and the State provides for these by taxation. So the question is merged in the larger one of State and town finances. Yet is there any reason why this system shall not be modified? Until recently every family paid for its share in the school. Free schools are a very modern invention. And now comes, as one of the very latest thoughts of the age, the Garden School. We see no reason why this is not a thoroly workable proposition. It may go very far, not only in a practical education of the children, but it ought somewhat to help us solve

the financial part of the problem. We see no reason why a boy taken from his home work and set at school work should not do so compensatively. Were half of each school day given to manual application of acquired knowledge, we should have fifteen million workers added to our productive ability—for half of each day. That is, we should add to our American industry seven millions of days' work, in connection with our schools. We do not undertake an exact estimate of the product. It would be equal at least to one million days of labor of strong adults. Put this in cash, and we have each school day not less than two millions of dollars added to our American productive capacity. It is only fair to count this into the estimate of cost. In other words, our schools can be put upon a partial business basis. In country districts the two problems become one, for nothing could be more rational than the use of the school auditorium for church services on Sunday. Meanwhile, the young people are not only taught to memorize, but to use acquired facts in practical work, and to work at the best advantage. We shall turn out from our schools a steady increase of industrial helpers.

We can name a few towns that, as towns, own railroad and other bonds. These bonds pay so large a share of the annual tax assessment that individual taxation is greatly reduced. We have in mind one town where the reduction is about one-third, and this is paid for by railroad bonds. We do not see why this is not sound business, and why it cannot be generally applied. Is it impossible for this sort of investment to be combined largely with local improvements? Why not make all of our franchises permanent sources of income by holding a part of the stock? A trolley running thru a town should be made a permanent investment on the part of the people. Whether the franchise be permanent or limited, a percentage of the income could be reserved for the common benefit of all citizens. It is not impossible to extend the application of this principle to counties, and even to States. Taxation would be reduced to a minimum, and in some cases wiped out altogether. In other words, we believe that we are working awkwardly, and that society could read-

just itself profitably and easily to a business basis.
